This, however, is not a task for statesmen and politicians, nor can they bring about its performance, although they may be able to make some slight contribution. We undoubtedly overestimate the importance of legislation in our social fabric and what it can accomplish. No truer statement than that attributed to the late Speaker, Nicholas Longworth, by some of his colleagues has ever been uttered. He is reported to have said upon one occasion after a long-drawn-out and bitter parliamentary battle in the House of Representatives: "After 18 years of active service in Congress, I have come to the conclusion that after but a short lapse of time it makes no difference whether the bill passed or not. The legislation which we considered so important during the heat of debate often proves to have but slight bearing upon our fortunes as a people after it has been placed upon the statute books. Our welfare and condition as a people is determined by numerous other factors." These were truly words of wisdom spoken from the lips of a great statesman This, however, is not a task for statesmen and politicians, nor truly words of wisdom spoken from the lips of a great statesman out of a life of rich and varied experiences. It is a truism which cannot be too often repeated that our most serious economic and social problems cannot be permanently solved by legal enactments or by the expenditure of moneys from the Public Treasury. Their solution cannot be found within the realm of legislation and forum of our lawmaking bodies. Our pressing social and economic problems can and must and will be solved by the cooperative and united effort of the leaders of industry, labor, agriculture, finance, and government. The problems to be solved are basically and fundamentally for engineers, scientists, builders, business managers, and administrators to solve.

Veterans' Bill, H. R. 5452, Explained

EXTENSION OF REMARKS OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 2, 1939

ANALYSIS OF BILL BY THOMAS KIRBY

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD I am inserting an analysis of the veterans' bill (H. R. 5452), which passed the House on yesterday. This analysis was prepared by Capt. Thomas Kirby, legislative representative of the Disabled American Veterans of the World War. Captain Kirby is as well informed on veterans' matters as any man in America, and he has rendered the Congress and the veterans a great service by preparing this brief analysis.

Many Members will be getting letters inquiring about the effects of this legislation. I suggest that they simply clip this statement of Captain Kirby from the RECORD, or secure additional copies, to mail to their constituents in response

to such inquiries.

The matter referred to follows:

NATIONAL SERVICE DEPARTMENT,
Washington, D. C., May 1, 1939.
The House this afternoon passed and sent to the Senate for consideration the Rankin bill (H. R. 5452) to amend the World War Veterans' Act, as follows:

1. Would provide benefits for the city.

War Veterans' Act, as follows:

1. Would provide benefits for the widows and children of all veterans who die of non-service-connected disabilities if they had service-connected disabilities of even less than 10 percent.

2. Would add to the persons entitled to payments under the foregoing item certain dependent mothers and fathers.

3. Would increase the rates of the class of beneficiaries described in items 1 and 2 to \$30 per month for the widow with no child

and \$38 per month for the widow with one child, with present rates remaining unchanged for other children. Also establishes for dependent mother or father a rate of \$45 per month or, if both are

pendent mother or lather a rate of \$45 per month or, it both are living, \$25 per month for each.

4. Would change total compensation payable from \$56 to \$64 monthly, such limitation being applicable on the payments to widows and children, but exempting the parents from such limitation.

5. Would provide the definition of the term "mother" or "father"

to mean the natural mother or father or the wider of a veteran through legal adoption.

6. Would increase the rates for dependents of those who die from service-connected disabilities so that the widow under 50 years would receive \$37.50 per month; the widow 50 years or over, per month; and extends the total for widow and children to

\$82.50 per month; and extends the total for widow and children to \$82.50 per month.

7. Would provide that for anatomical loss of one hand or one foot or one eye the rate (including the \$25 increased award under existing law) shall not be less than \$100 per month.

8. Would provide for the payment of compensation on a basis of permanent partial 10 percent for wounds incurred in line of duty in active service during the World War and covers cases where the existing schedules provide a rating of less than 10 percent

9. Would reduce the rate of interest charges on any loan on Government insurance from 6 to 5 percent, effective the date of

It is estimated that approximately 150,000 veterans and their dependents would be benefited by this bill at annual cost of about \$19,000,000.

THOMAS KIRBY, Director.

Drifting Toward Dictatorship

EXTENSION OF REMARKS

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

STATEMENT BY MATTHEW WOLL, VICE PRESIDENT OF THE AMERICAN FEDERATION OF LABOR

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Matthew Woll, vice president of the American Federation of Labor:

DRIFTING TOWARD DICTATORSHIP—FOR LIBERALS WITH COMMON SENSE: ONE MAN'S WARNING TO THE UNITED STATES OF AMERICA

(By Matthew Woll, vice president of the American Federation of Labor)

The Old World seems to be plunging toward war, bankruptcy, or social revolution. The cause threatening these alternative evils is nationalism run riot, or the totalitarian idea, the dictator

These were vivid convictions from a European trip, which events of months since only strengthen. I'm asked if this "reads a lesson" for Americans. Definitely, yes; and a grave one, because of trends affecting your jobs and your lives.

For better understanding, glance first at the world picture. The dictatorships as commonly thought of are Germany, Italy, Russia, and Japan. Their dramatic and ruthless actions hold the eye, thus tend to obscure a vital truth, which is the fact that so many other nations have become, in varying degrees, superstates. Depression crises, fear of war, actual economic wars—such things have led to successive extensions of power. Peoples have yielded up rights in exchange for the hope of security.

Even great democracies, such as France and England, depart from tradition—as in nationalizing or managing war industries and in many new kinds of control. This trend sweeps the earth, and we are both startled and concerned to find its manifestations among neighbor republics of South America; while, in Mexico, what is essentially the totalitarian idea stands at our very doorstep.

what is essentially the totalitarian idea stands at our very doorstep.

This puts a question: Can we stand against this world trend to supergovernment? Another: Have we done so?

I have no fear of dictatorship in this country. When the idea is personalized—as in thinking of Hitler, Stalin, or Mussolini—of course it is distasteful to us. We want no such absolute "boss." We dislike what we see of the brutal methods of dictatorship. Our attitude is, It couldn't happen here.

However, I think the time has come when we should, and must, stop to see how far along that road we have traveled—before it is too late to retrace our steps.

we have have have have have have the have have the highest before he is too late to retrace our steps.

We became the richest and most advanced nation, sustaining the highest general standard of living, during a century and a half of growth while having the least government of any people. That kind of freedom gave us the greatest initiative and enter-

Then, in the midst of a great economic crisis, our people were desperate in their desire for safety and recovery. They were willing to accept almost any proposal involving more Government

ing to accept almost any proposal involving more Government power and authority.

Understand that I am not questioning motives. The whole drive to extend the authority of the state has had as its aim bringing greater opportunity to the masses of the people. Let us be clear about this, too: Labor, agriculture, industry, Democrats and Republicans alike, turned to Government for help—for solutions.

Like the peoples of Europe, we surrendered rights in exchange for the hope of security. No more than they did we realize the relentless thrust of government power, once it is permitted to start growing. I believe we begin to see more clearly now that we were too willing to accept promised gain at the price of loss of liberty and self-reliance.

Not many years ago we were being warned of the peril of big business. We were told it was a great invisible power which sought to control the processes of government. We now see the menace of big government. It seeks to control business, agriculture, labor. It seeks self-perpetuation. It expands through newly created agencies; and these constantly extend Government power by functioning as judge, jury, and prosecutor. Thus increasingly it tends to make the individual the pawn of the State. Here, as in Europe among the outward menifestations of hig government are Europe, among the outward manifestations of big government are mounting deficits, swollen budgets, increased tax burdens; and where this may lead us no one can tell.

I know from my journey through Europe that business enterprise was paralyzed there by such bondage. We know that business here is alarmed at the intrusion of government into so many parts of our economic life.

of our economic life.

But, some say, has not labor fared well under big government?

Ostensibly, yes; but let's examine that.

Samuel Gompers constantly preached to us that labor unions should not appeal to the state. He warned employers of the dangers of their use of the powers of the state to balk the labor movement. But employers persisted in their opposition to unionization until finally, in the great distress of a few years ago, labor did appeal to Government. As a result, in the Wagner Act there was enacted as a law what should have been an operating principle of industry. The use of Government power proved to be a two-edged sword, because Government, which in the past had been a buttress for the employer and an oppressor of labor, now has become a buttress for labor. The shoe is on the other foot. But should we rejoice over that? A growing number of workers recognize that if labor's destiny is to depend upon the whim and fancy of those temporarily in power, that control may be prolabor recognize that if labor's destiny is to depend upon the whim and fancy of those temporarily in power, that control may be prolabor today—and something else tomorrow.

How much better it would have been if employers, by giving recognition to labor as copartner in industry, had made it unnecessary to pass the Wagner Act at all!

American labor knows what growing bigness of government may mean to the labor movement. That lesson is written large in

Europe.

In old Germany there flourished one of the greatest labor-union organizations of the world. The great change there may not be generally recognized. You read of the labor front today; and it is represented to be the union of all the workers enthusiastically behind the Nazi cause. The truth about that heroic title is that the German worker is virtually the slave of the state. He has lost all voice in determining where, at what kind of a job, and for what pay he will work. With these basic human rights the old living standards also have vanished. A trained mechanic is paid only \$12 or \$15 a week. The average wage for less-skilled workers—after deductions, including social insurance—is less than is paid to prisoners in many States in this country.

In Italy there were some powerful labor unions which had won

In Italy there were some powerful labor unions which had won partner status, sharing in industry's profits. Mussolini first "directed" them, then absorbed them into his "corporate state"; and the worker today obeys Fascist edicts like a good soldier—or else. The first workers, railroaders, to strike in Soviet "proletarian paradise" were shot. That was insurrection against the state. Only recently a Moscow dispatch reported that in a large sector of Soviet industry a general wage cut and speed-up had been ordered. In Japan the worker apparently gets enough rice to keep him reasonably efficient; that and the glory of serving the Emperorstate.

Such conditions arise under the banner of national socialism, of whatever brand. Personal and property rights are either vastly diminished or extinguished.

I would like to point out that American organized labor never has asked for anything which would disturb the basic structure of private property, private industry, and private profit. We do not want all industry to become a Federal any more than a private monopoly. The American workingman does not want this country to become another Russia, controlled by a vast bureaucracy. He wants no traffic with any type of European despotism. All of these have destroyed free trade-unionism and freedom of private enterprise, as well as freedom in social, political, and religious fields.

The totalitarian idea, the system, makes despotic oppression necessary and inevitable. That kind of a system, all-powerful government, cannot endure if free expression of independent thought and critical viewpoints is permitted. From what sources or groups is critical thought likeliest? Why, from the press, the church; from business or social organizations, or a cohesive racial minority; or from independent trade-unionism. The totalitarian system must not be questioned; therefore all free institutions

must come under control or be suppressed. It is simple logic.

We should understand it.

Haven't we seen strong trends of that logic in the intolerance and despotic acts of some of the bureaucrats of our own self-expanding big government? It is inherent in the very nature supergovernment that such trends will grow—unless we stop

them.

I would say that the positions of workers and employers in the face of encroaching Government power should be, and in fact are, identical. Both are threatened.

Equally with business, organized labor views with alarm the spread in this country of boards, commissions, and committees; of rules, regulations, restrictions, and limitations. Control of industry inevitably affects workers in industry. If labor is ruled by edict, that reacts upon the rights and interests of employers. Such control means that deadening precedent and red tape retard the vital processes of the Nation. Initiative and enterprise are strangled. When employees or employers, or both, must goosestep, industry cannot flourish and produce a greater wealth of goods for the use of all. Low living standards in totalitarian states prove this.

Workers and employers should unite to protect each other—and our industries and our people—against the autocratic usurpation

of power by big government.

of power by big government.

Unless both are alert in common defense against such aggression, we may find later that the time has passed in which we can retrace our steps. Because, when trends like this are given headway, they increase momentum at startling speed. The peoples of Germany and Italy saw no great changes in the beginning; but the conditions of their lives were made over in 2 or 3 years.

Happily, within the last few months there have been increasing evidences that American public opinion is becoming aroused to the potential dangers surrounding us and is drawing nearer to unity upon the essentials of a program for recovery and the safeguarding of democratic institutions.

of democratic institutions.

Perhaps most dramatic is the statement of the executive council

Perhaps most dramatic is the statement of the executive council of the American Federation of Labor, issued February 15, 1939, giving complete recognition of the large area of interest which employers and workers share in common. Here we have a demand for the reversal of the notion that the national salvation lies in deficit spending and business baiting, and the call for a Government attitude of trust, good will, encouragement, and cooperation toward industry as well as labor.

Another encouraging sign is the apparent change of governmental representation, as expressed first by Secretary of Agriculture Henry A. Wallace in his appeal for a joint council of labor, industry, and agriculture, voluntarily organized, and designed "to map a united program for the general welfare of the Nation." The omission of governmental regulation and control is especially significant. And, finally, there is the recent appeal of Secretary of Commerce Harry L. Hopkins for "recovery" and a dramatic change in the Government's attitude toward business.

In all of this there is to be found much of encouragement and hope. However, pending performance, I would like to say some-

In all of this there is to be found much of encouragement and hope. However, pending performance, I would like to say something that may seem surprising, coming from a labor leader. I would like to see in this country bigger, better, and stronger organizations of employers. But I would also like to see bigger, better, and stronger unions of workers. Then let the two sit down together and solve problems in the democratic way: through discussion, use of simple common sense, and in fairness to each other and all the people, with Government cooperation but without Government dictation.

But if some employers feel they must still oppose collective

But if some employers feel they must still oppose collective worker action, let them consider. If workers feel forced to make further appeal to Government, they can always win, because they have the votes. But that would mean yet bigger Government. further appeal to Government, they can always win, because they have the votes. But that would mean yet bigger Government. Ultimately we would find ourselves quick-stepping along the road which leads to autocracy; to the downfall of private enterprise, the collapse of rights and liberties.

I plead for a return to the American way, the democratic way, the common-sense way. Through intelligent collective cooperation, let's make big Government as well as big business domination unnecessary and impossible, and avoid the calamities which seem to face Europe.

Address of Welcome to the Finlandia Male Chorus

EXTENSION OF REMARKS

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 2, 1939

ADDRESS BY HON, FRANK E. HOOK, OF MICHIGAN

Mr. HOOK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of

welcome delivered by me to the Finlandia Male Chorus on May 2, 1939:

Mr. Minister, Mr. Hurja, members of the reception committee, members of the Finlandia Male Chorus: The world today, in this

members of the Finlandia Male Chorus: The world today, in this time of grave fears and uncertainty, needs more than guns and battleships; it needs more than political leadership; it needs good fellowship, understanding, faith, and confidence among nations and with each other.

It is indeed a pleasure and, I assure you, a distinct honor to extend a sincere welcome to the Finlandia Male Chorus to Washington, our Capital City, and to the United States of America. It is more than a welcome to your fine chorus—it is a welcome to each one of you individually. In doing so, I want you to know it is because of the deep respect and friendly feeling we have for your beloved country of Finland and all those sons and daughters of your fair land who have become respected citizens in the United States of America.

It is our fondest hope that you enjoy your visit here. We are

It is our fondest hope that you enjoy your visit here. We are grateful that you have come, not only for the opportunity of hearing this splendid chorus but for the friendly and neighborly spirit which it exemplifies between the people of two great powers of the

which it exemplifies between the people of two great powers of the world.

I understand you men are practical businessmen as well as fine artists, representing the best male voices in Finland. Our appreciation will only be surpassed by our enthusiasm to serve you.

We have long held in high esteem the people of Finnish descent and the nation of Finland. Our country has come to regard the terms "democracy," "honesty," "integrity," and "intelligent government" as synonymous with Finnish-Americans and Finland.

While many nations in Europe are on the verge of weakening before the onslaught of dictatorships Finland stands as the finest example of true democracy. At a time when nations look with distrust upon the motives and actions of many of their neighbors, at a time when treaties have again become a "scrap of paper," at a time when the whole world is tense and bewildered we see Finland standing by faithful to those precepts of civilization which some nations appear to have forgotten.

standing by faithful to those precepts of civilization which some nations appear to have forgotten.

The Finns have particularly impressed upon the consciousness of the American people their integrity. Americans immediately think of Finns as a people with an alert mind in politics who have in an extremely intelligent manner worked out a form of government embodying the true principles of a true democracy.

Although the Finnish language is so very different from ours, there are so many other common interests and ties between the two peoples that this has never been a barrier between us. Those of us in America who are familiar with the innumerable fine qualities of the Finns, those of us who have lived among them in America and who are acquainted with the many great contributions they have made to the cultural and public life of our country are proud to point to Finland as the country in Europe where the humanitarian and intellectual principles of liberty and justice are working in reality.

where the numanitarian and intellectual principles of floerty and justice are working in reality.

I extend to you my hearty greetings and trust that when you return to your native land you will carry with you a spirit of friendship and good will that will last throughout the ages.

The United States and Finland are at peace with the world and at peace we shall remain. Thank you.

P. W. A. Program Popular-National Survey Reveals Bond Elections Carried in 81 Percent of the Communities Voting on P. W. A. Projects

EXTENSION OF REMARKS

HON. HERMAN P. EBERHARTER OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

Mr. EBERHARTER. Mr. Speaker, information is available that 81 percent of the communities voting in P. W. A. bond referendums have approved the P. W. A. program by declaring their voluntary desire to assess themselves as taxpayers for the local contribution required from sponsors on all P. W. A. projects. This covers the percentage in the 1938 P. W. A. program. It is my understanding that 3,210 elections were held to determine whether these communities should issue bonds to take care of their share of the project cost. Two thousand six hundred and twenty-five of these elections carried; that is, in this many communities bond propositions received a majority vote. In the 585 elections where the propositions were turned down are included instances where majority votes were obtained but regulations of the community required more than a majority vote to carry a referendum of this kind. The Public Works Administration informs me that many of the propositions also were

on bonds repayable from revenues generated by the project only and not from general taxes, as in the cases of toll bridges, waterworks, or power plants, but in such instances the voters were also usually the prospective users and payers.

The communities in which these elections were held are scattered throughout the country and cover various types of projects, such as schools, hospitals, municipal buildings, waterworks, sewage-treatment plants, and so forth.

I think the vote of confidence in P. W. A. is significant and should be brought to the attention of Congress. We are all interested in knowing of the popularity of any Government program, and it is gratifying to know that this particular agency is approved by the people we represent.

Administrator Ickes announced only recently that 1,000 local P. W. A. projects valued at \$33,927,000 have been completed 14 months ahead of the time required by Congress in the current program. This is somewhat of a record, too, and should not go unnoticed. It is my understanding that this represents one-sixth of the entire non-Federal P. W. A. program. It is unusual to find that a Government program of this magnitude is ahead of its schedule. The law provides, of course, that the projects must be completed by July 1, 1940, but we find that 1,000 of them are already completed and are actually in use.

All of this means that P. W. A. has done a splendid job. It is one agency of Government which has never had to come to us for a "deficiency" appropriation, and this is also a record in itself.

An estimate of the construction money released each week in P. W. A. projects during the first 13 weeks of this year is placed at \$20,000,000. In addition, other large sums have been released for industrial orders which provides employment at the mill and factory.

In this connection a statement appearing in the Engineering News-Record recently is of interest. This publication re-

Construction closed its first-quarter books with an over-all gain over 1938 of 22 percent. This means a volume of \$801,000,000, of which \$592,000,000 was public work, the highest first quarter on record of public construction. Private awards, at \$209,000,000, were 27 percent below a year ago.

This is evidence that P. W. A. is stimulating construction.

I thought these facts and figures should be brought to the attention of Congress since we will soon be called upon to consider legislation to extend the Public Works Administration and appropriate additional funds to construct projects for which applications have already been submitted and approved. If the sentiment of the people of the United States means anything to us we will lose no time in extending the authority of the P. W. A.

Address at Dedication of Post Office at Bordentown, N. J.

EXTENSION OF REMARKS

HON. JOSEPH W. MARTIN, JR. OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

ADDRESS BY HON. D. LANE POWERS, OF NEW JERSEY, APRIL 29,

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered last Saturday by the gentleman from New Jersey [Mr. Powers] on the occasion of the dedication of the post office at Bordentown, N. J.:

Honored guests and Bordentown friends, it was a distinct pleasure to receive, down in Washington, the hearty invitation from your postmaster, my good friend Jim Magee, to attend the dedication ceremonies today for your new post office.

We are busy in Washington these days. In fact, this is one of the most hectic and important sessions of the Congress I have attended during the 7 years I have represented you in the Nation's Capital. But, busy as I am, I was glad to be able to arrange my schedule so that I could be with you today and say a few words of congratulation on your new post office and a few words of commendation for the men who have made this new building

possible.

The king city of Bordentown has, I see, fittingly observed the solemnity of this occasion. The splendid parade we have just seen is ample proof of the importance which the public-spirited members of your community attach to these ceremonies. It is not often that a community has the privilege of opening a new post office. To many of us here it may be the only time in our lives that we shall be able to observe such ceremonies in Bordentown.

The building we are dedicating has a twofold importance. The new facilities it houses are useful to its patrons and its employees. To the patrons, they are assured a speedier service, a greater accessibility to the facilities of the Postal Department. To the employees this new structure represents their modern workshop. The labor-saving devices installed here, the handler arrangements for the discovery of the modern workshop. posal of the mail, both in-coming and out-going, will be to the employees a constant source of delight. To them, also, is given an opportunity to work in a lighter, more airy structure. Their aesthetic senses will be pleased by the grace of this improved architecture.

We are so often prone to look upon new postal structures as the gift of a beneficent government. That is entirely erroneous. These new buildings—in fact, all the new construction work being done by

new buildings—in fact, all the new construction work being done by the Government—are not gifts from the Government itself but from the taxpayers who make up that Government, the taxpayers whose funds are used for these various public works.

This building is therefore a gift to the people of Bordentown from the people of the United States. But you who are the patrons of this post office have done your part to earn this gift, else you would not have received it. Because, let us bear in mind once and for all, our Post Office Department is a great governmental business, larger than any other governmental enterprise and greater than any individual or private corporation in the world.

individual or private corporation in the world.

When the Postal Service was first started it was a private enterprise. Couriers took funds from individuals to transmit their messages to other individuals, guaranteeing a more or less sure and certain delivery. From such humble beginnings came the Post Office Department, the first Government civilian monopoly in this country. This monopoly was founded upon the theory that only the people of this great country could afford to operate the ramifications of a postal service which would embrace the entire United States and would tie in with the postal services of the other countries of the world.

States and would tie in with the postal services of the other countries of the world.

When the Federal Government reserved to itself the right to carry the mails the Postal Service was created. It was planned from the beginning as a service to the public—with every connotation embodied in the word "service." Originally the mails were carried on foot and by wagon. Then later the slow train helped carry the mails into our more populous cities. The romantic pony express, the dashing, bouncing stagecoach all have played their part in the development of this Service.

Today our Post Office Department has progressed to the point where it is the largest employer of labor in this country. Its personnel now represents nearly one-half of the total of all Government employees. It employs about 400,000 persons. The United States mail has grown so that now approximately 26,000,000,000 pieces are handled yearly. This enormous volume has an estimated total weight of nearly 6,000,000,000 pounds a year.

Our Postal Service today comprises our largest savings bank, our largest express business, our largest system for the transfer of money, and our largest agency available to the people for the investment of their savings in Government bonds. Practically every known means of transportation today is utilized by the Postal Service. Mail is carried on foot, on horseback, by carriage, by bicycle, on steamships and river barges, by train, by motorcycle and automobile, by airplane—yes, and in the remote fastnesses of the North it is still carried by dog sled.

That should give you a comprehensive, if brief, picture of the great business which is our Post Office Department. But no men-

That should give you a comprehensive, if brief, picture of the great business which is our Post Office Department. But no mention of any organization is complete unless we give special attention to the men and women who make that organization possible.

In its origin the Postal Service brought into its employ men who were willing to consecrate themselves to the principle that, come

what may, come disaster or good fortune, come sun or storm, the mails must go through. Men have died on our prairies to protect the mail sacks they were carrying. Airplanes which were hurtling through the skies have plunged to the earth, and when the pilot was found he was clutching the precious sack of mail he had sworn to deliver.

Spectacular as those events may be, they are nonetheless important than the men and women who devote their daily lives in the quieter and less risky pursuits of the postal businesss to seeing that you get your mail on time, delivered courteously and promptly.

These men and women of the Postal Service, working in their quiet way, effect the miracle of our routine mail delivery. They are the ones who make it possible that when you spend 3 cents for a stamp and paste that stamp on an envelope your message is de-livered to me in Washington the next day, or to your correspondent in California or Alaska or England or Afghanistan with every promptness possible.

History books have recorded the names of great generals, or great admirals, or kings and queens and princes, whose actions and conquests have changed the face of the world. Men and women who are busy doing their daily work, with efficiency and dispatch, are never mentioned in the annals of human events, but their deeds are just as important in their way as those of the great leaders and conquerors. No; there is little mention in history of the post-office personnel who, with an unfalling cheerfulness, assures to you that your mail will go through. They brave and conquer the elements in their unassuming way. No; these people of the Postal Service are not the stuff of which romantic novels are written, but I feel sure that every postal employee within sound of my voice cherishes sure that every postal employee within sound of my voice cherishes

sure that every postal employee within sound of my voice cherishes deep within his own heart a knowledge of a daily job well done, of a daily service to the public well and efficiently rendered.

Therefore, let us today do more than dedicate this imposing structure to the use of the patrons of the Bordentown Post Office. Let us also dedicate ourselves to a keener appreciation of the work of our postal servants. Let us show them, in our daily contacts, that we are truly grateful for their unselfish devotion to the carrying of the mail.

May we, then, as we use this new building in the future consider

May we, then, as we use this new building in the future consider it not as a structure of stone and metal, not as a local agency of a rederal department, but as a monument to the men and women who originated the principle that "the mail must go through," and to those men and women who are working today, and every day, year in and year out, to assure to you that "your mail shall go through."

I thank you.

Amendment of the Sugar Act

EXTENSION OF REMARKS

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

CONCURRENT RESOLUTION OF THE MICHIGAN LEGISLATURE AND ARTICLE FROM THE PONTIAC DAILY PRESS

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Michigan Legislature and an article from the Pontiac Daily Press:

House Concurrent Resolution 27

Concurrent resolution respectfully memorializing the Congress of the United States, the President of the United States, and the Secretary of Agriculture to grant immediate remedy and adjust-ment, by correlating the estimate of consumption to actual needs, based upon the actual consumption of 1938 and the extraordinarily large carry-over inventory of sugar as of January 1, 1939, and that the Sugar Act be amended to provide a larger share of the American sugar market for the American farmer

Whereas the fact that in the continental United States we produce whereas the fact that in the continental United States we produce less than 30 percent of the sugar we consume, and sugar is practically the only nonsurplus agricultural product of the United States; and every acre of land utilized in the production of sugar, either from beets or cane, invariably takes such acreage out of the production of some surplus agricultural product such as cotton, rice, wheat, corn, beans, etc.; and

wheat, corn, beans, etc.; and
Whereas the production of sugar on our continental farms, especially the production of sugar from sugar beets, is conducive to the employment of labor on a large scale at profitable wages or rates and the increased employment of labor on a larger scale in the production of sugar in the continental United States would be a great stimulus to prosperity and the general welfare of such sugar-producing areas and the United States as a whole. The increased prosperity of the sugar-producing farmer would enable him to purchase much-needed agricultural machinery, tractors, trucks, etc., and would reflect directly in increased employment in industry

chase much-needed agricultural machinery, tractors, trucks, etc., and would reflect directly in increased employment in industry producing such agricultural machinery; and

Whereas we believe it is the inherent, fundamental, economic right of the American farmer to produce nonsurplus agricultural products, such as sugar, up to the limit of his ability without restriction, and such production should be protected in our United States market so that sugar will sell at a price comparable or equivalent to the index value of all foods. Foreign sugars should not be permitted to enter the United States market in excess of not be permitted to enter the United States market in excess of the amount which when added to our production of sugar the total will equal our consumption, so that both the interest of producers and consumers of sugar in the continental United States will be adequately protected and the production of sugar in the continental United States fostered on a basis of common defense and general welfare, so that, regardless of peace or war, the citizens of the United States will be protected in their supply of such an essential food as sugar; and

Whereas we believe that the Sugar Act of 1937 was a step in the right direction, but with the removal of restrictions on United

States production of sugar, coupled with a proper administration of the act, the sugar industry of the United States can go forward on a sane, sound basis for the best interests of the United States as a whole; and

Whereas excessive sugar consumption estimates out of all proportion to the actual consumption have been made since the adoption of the act, thereby permitting increased importation of foreign sugars, which has depressed prices in the sugar market to its all-time low, there is now available upward of 600,000 tons of cane sugars, which has depressed prices in the sugar market to its alltime low, there is now available upward of 600,000 tons of cane sugar out of the 1938 quotas, which sugars are mainly the product of foreign countries, and a consumption estimate for 1939 by the Secretary of Agriculture, Hon. Henry A. Wallace, of 6,755,000 tons permits the importation of 3,000,000 tons of foreign sugar to further glut and complicate our American sugar market. It is estimated that on December 31, 1939, the end of the current year for sugar quotas, there will be upward of 800,000 tons of foreign sugars available, over and above our current needs, which sugars are all eligible to be marketed in the continental United States. This in view of the fact that in 1938 a kindly Providence, on a limited acreage, saw fit to give us one-quarter million tons of beet sugar and 150,000 tons of Louisiana and Florida cane sugar over and above our Government marketing allotments for 1939, and this practically 400,000 tons of sugar produced by American farmers in 1938, constitutes a further surplus of sugar. Also the recommendation of the United States Department of Agriculture is that certain districts, some of them in Michigan, shall not be permitted to market in 1939 a single pound of sugar produced in 1939. This situation if not remedied in the near future will destroy the sugar industry of the United States. The enforced carry-over to 1940 of practically 400,000 tons of continental beet and cane sugar produced in 1938 will have the immediate effect of eliminating the opportunity for 64,000,000 hours of labor directly utilized in the sugar Industry, and possibly several times that number indirectly employed. Unless immediate adjustment is made on the recommended sugar marketing allotments, at least one and possibly more Michigan sugar plants, it appears, will be unable to operate this year, thus throwing more American laborers out of work and depriving more American farmers from marketing beets and producing sugar, which is our only nonsurplus ag

therefore, be it

Resolved by the house of representatives (the senate concurring),

That the Legislature of Michigan hereby memorialize the Congress
of the United States, the President of the United States, and the Secretary of Agriculture to grant immediate remedy and adjustment by correlating the estimate of consumption to actual needs, based upon the actual consumption of 1938 and the extraordinarily large agon the actual consumption of 1938 and the extraordinarily large carry-cover inventory of sugar as of January 1 1939, and that the Sugar Act be amended to provide a larger share of the American sugar market for the American farmer; and be it further Resolved, That copies of this resolution be sent to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, and to all Senators and Congressmen from Michigan.

from Michigan.

SUGAR FACTORY FORCED TO SHUT-MANY SEND PROTESTS ON UNITED STATES RESTRICTION

Mount Clemens, April 29.—Hundreds of residents of the Mount Clemens area have protested to Secretary of Agriculture Henry A. Wallace a continuation of domestic sugar-marketing restrictions which officials of the Northeastern Sugar Co. said would prevent 1939 operation of the local plant, board of commerce officials ansured Schurder Schurder

1939 operation of the local plane, board of conflicted and nounced Saturday.

Many of the protests came from farmers, board officials said, and were contained in telegrams to Washington, which asserted that a quota imposed on the plant was unfair because it was based in part on beet production in 1935, 1936, and 1937, when poor weather conditions resulted in light crops.

THEORISTS ARE CRITICIZED

C. A. Coryell, secretary-treasurer of the Northeastern Sugar Co... issued a statement in which he charged that the making of market-ing-allotment formulas "is in the hands of theorists in the Department of Agriculture who have had no practical experience and who

do not seem to care what disastrous results their rulings may cause."

With the Mount Clemens plant closed, Coryell said, 1,200 farmers in Macomb, St. Clair, Genesee, Wayne, Monroe, and Washtenaw Counties will be deprived of a market for sugar beets that they have had each year except 1931, when the plant did not operate because of poor business conditions. He said that 1,000 farm laborers and 300 plant employees at Mount Clemens also would be left without work.

SURPLUS EXCEEDS QUOTA

Coryell explained that a sales quota of 139,000 bags of sugar was assigned to the Northeastern Sugar Co. for 1939 after a hearing in Chicago in February. The company had 170,000 bags on hand January 1, 1939, Coryell said, which meant that the company would be required to carry over 30,000 bags of its present store into 1940 even with no production this year.

Coryell said that his company had appealed for a revision of the quota, but had received notification that no change could be made. The Mount Clemens plant sliced 60,000 tons of surgar beets last tall.

The Mount Clemens plant sliced 60,000 tons of sugar beets last fall.

OFFICIALS ALSO PROTEST

The Macomb County Board of Supervisors and the Mount Clemens City Commission also have protested the quota restric-

Also joining in the protest campaign was Arthur A. Schupp, of Saginaw, executive secretary of the Farmers and Manufacturers Beet Sugar Association, who predicted that "continued decreasing marketing allotments will gradually force the industry in Michigan

Closing of the factory was deplored by A. D. Brewer, executive secretary of the Mount Clemens Board of Commerce, who was one of the leading figures in bringing about reopening of the factory

some years back.

A Million Railroad Men, Believing in Democracy, Declare for Referendum on Foreign Wars

EXTENSION OF REMARKS

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. LUDLOW. Mr. Speaker, labor has a vital interest in the peace movement. No other element of our complex civilization is quite so deeply concerned in the elimination of the causes of war as the toilers of our land. It is upon them that war's heavy hand is laid most relentlessly. Others may escape the hardships of military service through exemptions provided for executives, farmers, and persons of specialized qualifications, but for workingmen, generally speaking, there is no loophole. They comprise the mass of the eligible fighting population. They have to take it on the jaw. men furnish the great bulk of the cannon fodder.

During the last few days a million railroad men, comprising the flower of organized labor, have reaffirmed their faith in the so-called Ludlow amendment, which proposes to amend the Constitution to give the people a right to vote on nondefensive wars when the issue involved is whether our boys shall be sent overseas to fight in foreign countries.

Labor, the organ of the 21 railroad brotherhoods, in its current issue advises its readers in regard to the action taken by this vast and powerful element of organized labor. The article printed in Labor says:

The chiefs of the standard railroad labor organizations believe the fathers and mothers of Americans should have a chance to express themselves before their boys are sent away to fight another

war on foreign shores.

So, at its recent meeting in Washington, the Railway Labor Executives' Association reaffirmed its support of what has come to be known as the Ludlow resolution, because it was first advocated by Congressman Louis Ludlow, of the Indianapolis, Ind., district.

It calls for a constitutional amendment which would compel a popular referendum before Congress or the Executive could get the country into a foreign war. However, Congress would still have the right to take action should any foreign power attempt to invade the Western Hemisphere.

The adoption of the Ludlow proposal would serve notice that only the people could put the United States into an Old World war but that Americans would "fight at the drop of a hat" to resist invasion of the New World.

Of course, the Ludlow proposal is anathema to the militarists who keep shouting that we can't keep out of the next war, but there is little doubt that it expresses the sentiment of a very large majority of the American people.

STATEMENT OF RAILROAD BROTHERHOODS

By the action referred to above the Railway Labor Executives Association reaffirmed the statement it presented to the House Committee on the Judiciary during the hearing on the Ludlow amendment nearly 4 years ago, or, to be exact, on June 19, 1935. That statement was as follows:

The Railway Labor Executives Association, representing 1,000,000 railway workers of the United States, desires to place itself on record with your committee as being unqualifiedly in favor of the immediate passage by Congress, and the ratification by the several States, of the constitutional amendment proposed in the Ludlow reso-

Every thoughtful American who is at all informed on international affairs must feel that there is very grave danger of another war among European and Asiatic nations within the next few years. Ancient rivalries have been revived and hatreds have been heated again to the point where a minor incident may be enough to precipitate a conflict even more destructive than that of 1914-18. Political adventurers, military leaders, and those industrial interests which profit from wars and preparations for wars have stirred interna-

tional animosities and brought about a situation which can be compared only to that preceding the Great War. The outbreak of hostilities may occur without warning.

We believe in preparedness, but of a kind directly the opposite to that which our own militarists advocate. We believe that our Government must be prepared to keep America out of the next war; we believe that the people of the United States must be prepared to resist those propagandists who will not hesitate to urge our participation in the holocaust toward which the world is moving. We believe that such preparations, if they are to be effective, must be made now, before new warfare has created the atmosphere of panic and hysteria which permits professional patriots to drum up war sentiment. We believe that the constitutional amendment proposed in this resolution is patriotic preparation against European war—we believe that its adoption will keep America out of the general destruction threatening modern civilization.

The workers we represent, in common with all decent citizens of our country, have been sickened and disgusted by the revelations

our country, have been sickened and disgusted by the revelations recently made of the activities and the profits of the peddlers of war munitions. Efforts sincerely made by governments desiring to limit armaments, and thereby to lessen the international suspicions which breed wars, have been defeated by the incredibly brutal and vicious practices of these munition makers. Professional proparanties have collaborated in product the state of the proparations of the proparation of the production o gandists have collaborated in producing the state of mind among the peoples of the world which assures the widest sale of the implements of war. These munitions makers and their agents are creating their markets and selling their goods with no other thought in mind than securing for themselves the greatest possible

profit.

This greed for profits was not lacking from American munitions manufacturers before and during the World War. While American soldiers fought in the trenches to decide a European war whose issues were of no real concern to us, billions of dollars were being paid by our Government directly and through the financial agents of foreign governments to the manufacturers of munitions in the United States. The appalling sacrifices demanded of our soldiers and their families should have brought voluntary surrendering by our munitions manufacturers of all profit; they should have been eager to supply to us and our allies all possible munitions at actual cost. We know now that to the eternal disgrace of these interests they reared profits which were far beyond any possible interests. they reaped profits which were far beyond any possible justifica-tion—which were possible only because of the desperate needs of the Government and the people of the United States

the Government and the people of the United States.

If European war comes again, there will be no lack of the same kind of destructive and unpatriotic action by our munitions manufacturers. Nothing has happened to make us believe they have changed their spots. There will be no lack of newspapers to give space to false reports of atrocities or to imaginary insults to our national honor. There will be plenty of skilled propagandists who will, for money, use all their arts to confuse and to mislead our people into believing that we should take up arms against some other nation. No sensible American, whose memory runs back to the last war, and who has followed the disclosures of the munitions investigation can doubt that the munitions manufacturers will try investigation, can doubt that the munitions manufacturers will try to force this country into whatever war they can promote in Europe or Asia. No sensible American can fail to realize that war psychology can be created out of the lies and the oratory of the propagandists. No sensible American wants to see us in that next war.

The constitutional amendment proposed will prevent the sudden

and ill-considered sort of action which might plunge us into war. The referendum will give time for thought and for countering the propaganda of those whose selfish interests would be served by war. More than that, the limitation of munitions profits would not only force upon munitions makers a decent restriction during war—it would also greatly reduce their interest in promoting American belligerency. This amendment, however, still permits speedy congressional action to defend the Nation against actual invasion.

We urge upon your committee that it report out favorably the resolution under consideration, and that every effort be made to speed its final adoption; this legislation is racing against the danger of war and there is no time to spare.

History of Flood Control in the Alluvial Valley of the Mississippi River

EXTENSION OF REMARKS

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

STATEMENT OF BRIG. GEN. MAX C. TYLER BEFORE THE FLOOD CONTROL COMMITTEE OF THE HOUSE OF REPRESENTA-TIVES

Mr. ALLEN of Louisiana. Mr. Speaker, Brig. Gen. Max C. Tyler, Assistant to the Chief of Engineers, War Department, Washington, D. C., gave to the Flood Control Committee of the House yesterday a history of flood control on the Mississippi River that was so concise, so informative, and of such vital interest to hundreds of thousands of citizens living in this great valley that I though the people generally ought to have the benefit of his fine statement; and therefore, under leave to extend my remarks in the RECORD, I include his statement, as follows:

The Mississippi River rises in northern Minnesota and flows in a general southerly direction for over 2,400 miles to the Gulf of Mexico. With its numerous tributaries, it drains the great central basin of the North American Continent, an area of over 1,253,000 square miles, of which about 13,000 square miles lie in Canada. The watershed includes all or parts of 31 States and 2 Canadian Provinces

The alluvial valley of the Mississippi begins at Cape Girardeau, Mo., 52 miles above the mouth of the Ohio River, and extends to the Delta area on the Gulf of Mexico. This enormous alluvial plain, about 600 miles long from north to south, varies in width from 20 to 80 miles. In its natural state the alluvial valley of more than 20,000,000 acres was subject to overflow. Today its 12,000,000 protected acres constitute the richest and most productive large

protected acres constitute the richest and most productive large agricultural area in the world.

From the earliest time people have been keenly interested in the Mississippi River both with respect to navigation and to the protection of the bottom lands from floods. It is recorded that the Spaniards of De Soto's expedition witnessed a great flood on the Mississippi in 1543, and in 1684 La Salle found the Mississippi out of its banks. Blenville chose the site for New Orleans because it was above water at the time he found it. The first levee was constructed at New Orleans in 1717, and 10 years later the Governor boasted that it was a mile long and 18 feet wide. In the beginning each owner built his own levee with his own resources. The governor possed that it was a mile long and to rect wide. In the beginning each owner built his own levee with his own resources. The government of the times, however, was much interested in the levee construction. One of the conditions of the grants from the King of France obliged plantation owners to build levees. Police judges required inhabitants within 7 miles of the river to work on the levees, and local governments supervised flood-protection work. In 1743 the Governor of the Territory ordered each inhabitant to complete his portion of the levee line or forfeit his grant. Long before

plete his portion of the levee line or forfeit his grant. Long before Louisiana became a State governmental interest in flood protection exerted a powerful influence on the inhabitants.

Statesmen of Europe and of the United States were in dispute about the Mississippi River from the very beginning. At various times England, France, and Spain have sought control of that river. The ownership of the Mississippi River was one of the most difficult problems that had to be solved when the United States gained its freedom by the Treaty of Paris. The Jay-Gordoqui treaty, never ratified, developed a dispute on the navigation of the Mississippi River, which was settled temporarily by Spain's grant of the right of deposit at New Orleans in the Pinckney treaty of 1795. In 1801, Thomas Jefferson considered the transfer of Louisiana to France "very ominous to us."

During the first half of the nineteenth century, national interest

During the first half of the nineteenth century, national interest in the Mississippi River was directed primarily toward the improve-ment of navigation. When steamboats were developed, need was ment of navigation. When steamboats were developed, need was felt for greater navigable depths in the Mississippi River. After a strong appeal for river improvement in 1827, the United States began some work by detailing to the task members of the Corps of Engineers. In 1843 a committee of the Senate reported upon the great importance of commerce on the Mississippi River and urged its improvement. In 1846, John C. Calhoun introduced a bill for the general improvement of the Mississippi River. Navigation was the primary objective, but flood control entered by the back door. Henry Clay and Abraham Lincoln argued at different times for flood-control improvements on the Mississippi River. In 1847, Thomas H. Benton, Abraham Lincoln, John C. Calhoun, and Horace Greeley attended conventions advocating flood control by the Federal Government. eral Government.

Federal operations on the Mississippi River date from 1820. In that year Congress appropriated \$5,000 for the preparation of a survey, maps, and charts of the Ohio and Mississippi Rivers. This survey, maps, and charts of the Ohio and Mississippi Rivers. This survey, as well as a thorough investigation of the navigation problems of the two rivers in 1821 and a survey of the Rock Island Rapids on the upper Mississippi River in 1829, were all assigned by Congress to the Corps of Engineers of the Army. Navigation improvement was first actually authorized by act of Congress in 1824 when the sum of \$75,000 was appropriated for the removal of snags in the Mississippi River below the mouth of the Missouri and in the Ohio River below Pittsburgh. This, and later appropriations for navigation improvement of these rivers, have been expended under the supervision of the Chief of Engineers, United States Army. In 1837 the improvement of the mouth of the Mississippi for seagoing navigation was first undertaken.

Early attempts to improve the river attracted the attention of scientific thinkers, the demand for scientific data increased and

scientific thinkers, the demand for scientific data increased and records of the ensuing years show selected Army engineer officers continuously at work securing data on the characteristics of the river. As investigations continued, the matter of navigation became inseparably enmeshed with consideration of flood-control improvements, which is the case today on the lower Mississippi

The floods of 1849 and 1850 created widespread damage and increased the growing national interest in the problem of flood control. By the Swamp Acts of 1849 and 1850, the National Congress granted to the several States all unsold swamp and overflowed lands within their limits. Under the provisions of the acts, funds accruing from the sale of these lands by the States were to be to the prosecution of drainage, reclamation, control projects. Louisiana, Mississippi, Arkansas, and Missouri organized offices for the sale of these swamp lands and appointed commissioners for the construction of levees. As might have been expected, however, this attempt to secure effective flood protection failed due primarily to the lack of coordination of the work among

the different States and districts. Such progress as was made under the Swamp Acts was ineffective. As a national flood-control measure the laws were a signal failure.

During the period 1851 to 1858 levee construction financed solely by local interests reached its highest point of development. However, since works were intermittent and inadequate in height and cross section, they were hadly damaged by the floods of 1858 and by local interests reached its highest point of development. However, since works were intermittent and inadequate in height and cross section, they were badly damaged by the floods of 1858 and 1859. Notwithstanding the fact that the National Government was actually doing nothing to protect the valley from floods and little for navigation improvement, the interest of Congress in the problems continued. The Secretary of War directed an engineer, Mr. Charles Ellet, Jr., to make surveys and reports on the Mississippi and Ohio Rivers with a view to the preparation of adequate plans for flood prevention and navigation improvement. His report which has been published as Flood Control Committee Document No. 5, Seventieth Congress, first session, is a pioneer paper on the subject. About the same time, by act of Congress, \$50,000 was appropriated for the preparation of a topographic and hydrographic survey of the Delta of the Mississippi. Captains Humphreys and Abbot, of the Corps of Engineers, were placed in charge of the work. Their exhaustive report was published in 1861 and is still of great value. The important operation of establishing a satisfactory series of gages on the lower Mississippi River was undertaken by authority of a resolution of Congress dated February 21, 1871, which directed the Secretary of War to establish gages at certain specified points on the Mississippi River and its principal tributaries and to make daily observations. The work was assigned to Maj. W. E. Merrill, Corps of Engineers, and gages were established at St. Louis, Cairo, Memphis, Helena, mouth of White River, Lake Providence, Vicksburg, Natchez, Red River Landing, Baton Rouge, and Carrollton. Gages were also established at designated points on the upper river and the tributaries. It is believed that this marks the beginning of systematic and continuous river gaging on the Mississippi. Previous gaging operations had been intermittent.

systematic and continuous river gaging on the Mississippi. Previous

systematic and continuous river gaging on the Mississippi. Previous gaging operations had been intermittent.

The year 1874 found the levee system in the lower valley in a condition still worse than that of 1859. The flood of 1874 did considerable damage in the valley, and as a result a board of engineers known as the Levee Commission was directed to make an examination of the levee system and to submit a plan for the reclamation of the alluvial valley. This commission consisted of Army officers and prominent civilian engineers. In its report, submitted in 1875 and based largely on the work of Humphreys and Abbot, the commission found the existing system defective as the result of five principal causes, to wit. Vicious levee organization insufficient the commission found the existing system defective as the result of five principal causes, to wit: Vicious levee organization, insufficient levee height, injudicious cross section and construction, inadequate inspection and guarding, and faulty location. A general system of levees from the head of the alluvial valley to the Gulf, including the valleys of the tributaries, was advocated, and it was recommended that this project be executed under the general supervision and control of a board of commissioners which would report to the authority from which it would derive its legal existence. existence.

existence.

The need for further improvement for navigation and flood control was generally recognized by the year 1879. The necessity for coordination of engineering operations through a centralized organization was also apparent. Reports submitted from time to time during the period just ended had stressed the magnitude of the problem and had discussed most of the methods of flood control which have since been advanced. Accordingly, in that year Congress passed an act providing for the creation of the Mississippi River Commission, consisting of seven members appointed by the President. Three of these Commissioners were to be selected from officers of the Corps of Engineers of the Army, one from the United States Coast and Geodetic Survey, and three from civil life, two of whom were required to be civil engineers. The law also provided that the president of the Commission should be one of the members selected from the Corps of Engineers.

that the president of the Commission should be one of the members selected from the Corps of Engineers.

Under date of February 17, 1880, the Commission submitted its first report recommending the closure of gaps in the levee system and construction of navigation works at several localities on the main river between Cairo and the mouth of the Arkansas River. The River and Harbor Act of March 3, 1881, placed the stamp of approval upon the Commission's recommendations by appropriations 17th act extended the approval upon the Commission's recommendations by appropriating \$1,000,000 for Commission operations. This act extended the jurisdiction of the Commission and it was further extended, clarified, and fixed by acts of Congress in 1882, 1906, 1913, 1916, 1917, 1923, and 1928. The year 1882 is significant as marking the begin-1923, and 1928. The year 1862 is significant as marking the beginning of levee work by the Commission. While the organic act creating the Commission required it to prepare plans to prevent destructive floods, the earlier appropriation acts usually restricted levee construction and repair to such work as could be considered a part of the navigation improvement plans. The Commission was not in complete agreement upon the value of the levee as an aid to channel improvement. Nevertheless, active levee construction was begun, ostensibly at least, on behalf of navigation and com-

By 1906 the operations of the Commission were well advanced. Navigation improvement of the lower reaches of the rivers was effected by dredging. Bank protection by means of heavy willow

mattress had been successfully developed. Extensive levee work

was being carried on below Cairo.

The floods of 1912 and 1913 were attended by disastrous results, and the Mississippi River Commission was directed by the President of the United States to submit a special report on means for flood prevention. This report submitted by Colonel Townsend, then president of the Mississippi River Commission, considered the following methods for flood prevention: Levees, reservoirs, cut-offs, outlets, diversion channels, and reforestation. Levees were considered the only practical method affording immediate relief.

The so-called first Flood Control Act, approved March 1, 1917, extended the jurisdiction of the Commission to all the water courses connected with the Mississippi River to such extent as might be necessary to exclude flood waters from the upper limits of any delta basin. It also affirmed the policy of local cooperation, since it provided that the contribution by local interests of subsince it provided that the contribution by local interests of substantial percentages of construction cost was a necessary condition to the use of Federal funds for levee construction or repair. The acts of 1922 and 1923 further clarified the jurisdiction of the Commission. The so-called second Flood Control Act of March 4, 1923, stated that the Commission jurisdiction for flood-control works extended from the Head of Passes to Rock Island, Ill., and up the tributaries and outlets of the Mississippi River so far as they might be affected by Mississippi River floodwaters.

In 1927 the most disastrous flood of record occurred. Flood levels attained unprecedented heights at many points along the river, and for the first time levees that had been completed to Commission for the first time levees that had been completed to Commission standards proved of inadequate height and consequently failed. Up to that time flood-control works in this country and elsewhere were usually designed to protect against the greatest flood of record, since the necessary basic data was not available nor methods developed for estimating a maximum possible flood with any reasonable accuracy. The 1927 flood disaster attracted national attention and sympathy, and it early became apparent that national assistance in flood-control work must be given to an extent unprecedented in the history of the United States and perhaps in the recedented in the history of the United States and perhaps in the

precedented in the history of the Chief Chief Precedented in the world.

Long hearings were held before Congress which culminated in the enactment of the Flood Control Act approved May 15, 1928, authorizing the plan of the Army engineers (known as the Jadwin plan, so named from its author, Maj. Gen. Edgar Jadwin, the Chief of Engineers at that time). Preliminary to the final Jadwin plan, separate and exhaustive studies were made of reservoirs, diversions, channel enlargement, and reforestation.

diversions, channel enlargement, and reforestation.

The sum of \$325,000,000 was authorized to be expended on this

project. After work had progressed for several years, the Committee on Flood Control of the House of Representatives passed a resolution requesting the Chief of Engineers "to examine and review the present status and condition of the works now in progress as authorized by the Flood Control Act of May 15, 1928, the provisions of the said act and the engineering features of the the provisions of the said act and the engineering features of the project therein adopted, with a view to determining if changes or modifications should be made in relation to the project and its final execution." On February 12, 1935, the Chief of Engineers submitted to Congress, a report in response to this resolution, recommending certain extensions and modifications of the project adopted in 1928, at an estimated cost of \$313,000,000 (House Committee on Flood Control Doc. No. 1, 74th Cong.). An act incorporating the engineering features of this report was approved by the President on June 15, 1936 (Public, No. 678, 74th Cong.). This act amends the 1928 act and authorizes \$272,000,000 in addition to the balances remaining under the 1928 act. It adopts a 6-year program of extension and modification of act. It adopts a 6-year program of extension and modification of the 1928 plan for flood control of the alluvial valley of the lower Mississippi River, in accordance with the recommendations contained in the report of the Chief of Engineers of 1935, except as modified by the act. When the 1937 flood occurred, the original modified by the act. When the 1937 flood occurred, the original 1928 plan was largely completed, except for floodways, and its success in carrying that great flood of the Ohio River to the Gulf without mishap confirms the soundness of the plan. By the Flood Control Act approved June 28, 1938, certain legislative restrictions with respect to the floodways were removed, and \$40,000,000, in addition to sums previously authorized, was authorized for work not contemplated by the project as amended in 1936. The unappropriated balance of the authorization for the flood-control project on the lower Mississippi River is now \$286,000,000.

The present project for flood control in the alluvial valley of the lower Mississippi River provides for protection works from Cape Girardeau, Mo., to the Gulf of Mexico, including the St. Francis, Yazoo, Tensas, and Atchafalaya Basins, as well as the alluvial lands Yazoo, Tensas, and Atchafalaya Basins, as well as the alluvial lands around Lake Pontchartrain, for protection against the maximum predicted flood. North of the Arkansas River floods are to be confined generally to the main leveed channel, a limited area in the St. Francis Basin, and the city of Cairo, Ill., being given additional protection by the New Madrid floodway. South of the Arkansas River floodwaters in excess of what the leveed channel of the main river will carry safely are to find their way to the Gulf through floodways located in the lowlands west of the river. New Orleans has been given additional protection by the Bonnet Carre spillway, leaving the river a few miles above the city and emptying into Lake Pontchatrain. In addition to levee work, the project includes Pontchartrain. In addition to levee work, the project includes construction of revetments and regulating works to prevent bank caving and to stabilize the channel in the interest of navigation.

It should be understood that flood control for the lower Mississippi Valley has been a practical problem to be developed as the wealth of the valley has grown and as additional rainfall and flow records

became available. There has never been any attempt to solve this problem completely in a short space of time as a mathematical equation is solved. The lands of the alluvial valley have deserved piecemeal and partial protection and increasing protection from time to time as populations and wealth have grown—just as railroads, roads, and other modern improvements have been expanded and multiplied as the populations which they served warranted the costs of expansions. The flood-control works in the lower Mississippi Valley have been planned from time to time with a view to securing the greatest protection practicable to be secured with available funds. Each great flood has added to the available data and resulted in additions to the plans. This is not only practical but it is also the only way in which civilization can progress. The authorizations that have been made for improvement of

The authorizations that have been made for improvement of The authorizations that have been made for improvement of the Mississippi River over the period since 1880 may be summarized as follows: \$1,000,000 in 1881; \$4,000,000 in 1882; continuous annual appropriations that reached \$6,000,000 a year by 1913; \$45,000,000 in 1917, of which not more than \$10,000,000 was to be expended in any one year; \$60,000,000 in 1923 to continue the expenditure of not more than \$10,000,000 a year; \$325,000,000 in 1928 to carry out the 10-year plan adopted by the 1928 act; \$272,000,000 in 1936 to extend and modify the 1928 plan in accordance with the amendment of June 15, 1936; and \$40,000,000 in 1938 for additional work.

tional work.

Federal funds were at first expended only when participation by local interests included contributions of substantial portions of the costs of construction. However, as flood-control work in-creased and as the idea of performing such work only in conjunction with navigation improvements was departed from, more and more responsibility was assumed by the Federal Government and less and less contribution was required of local interests. By the Flood Control Act of 1928 the Government assumed, for the first time, the total cost of construction of the flood-control works adopted for the lower Mississippi River. Eight years later this policy was extended to flood-control work throughout the United States was extended to flood-control work throughout the United States, and a national flood-control policy was adopted by the act of 1936 which made flood-control work a national activity and provided for construction costs to be paid by the Federal Government. In the same year legislation was enacted amending the 1928 act for the lower Mississippi River, which provided for the payment for certain land rights not considered a Federal cost by the original cost. The Flood Control act of last were reduced cell further the act. The Flood Control Act of last year reduced still further the requirements for local contribution by providing that in case of any dam and reservoir project or channel improvement or channel rectification for flood control authorized by the acts of 1928, 1936, and 1938, titles to all lands, easements, and rights-of-way for such improvement shall be acquired by the United States.

No other country in the world has had the incentive nor the money to give as much attention to one of its rivers as has been given to the Mississippi River by the United States. The physical records that have been kept are the most complete and thorough of any on earth. The reports of the Mississippi River Commission that have been made annually since 1880, together with special reports and valuable theses prepared by individual officers and reports and valuable theses prepared by individual officers and engineers, constitute the most excellent planning for flood control that has ever been done anywhere, and the project resulting from this planning is without doubt the greatest flood-control project

in the world.

What Would We Fight For?

EXTENSION OF REMARKS

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 2, 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL OF APRIL 25,

Mr. THILL. Mr. Speaker, the American people are fearful

of war. Much of this war hysteria is directly traceable to utterances emanating from the White House. Slightly over 20 years ago a similar situation faced this country. At that time America was urged to enter a war upon foreign soil to "make the world safe for democracy." Before we repeat that folly let us dispassionately review the situation in Europe.

Mr. Speaker, under leave to extend my remarks in the REC-ORD I include the following editorial from the Milwaukee Journal of April 25, 1939:

> [From the Milwaukee Journal of April 25, 1939] WHAT WOULD WE FIGHT FOR?

Out of the welter of hypocrisy in the current series of crises in Europe, one thing stands out: It is none of the United States' business other than a general desire to have a peaceful world; there is nothing actively we can do about it except play the cat's-paw for

other powers.
Even the manner in which the possible combatants are referred to is hypocritical: "The democracies versus the dictatorships."

"The democracies!" The phrase is the sheerest poppycock. Who are these democracies who so badly want American assistance?

Britain, yes, fundamentally a democracy. But does Britain want assistance to preserve democracy or to preserve her empire—now that the dictatorships have grown strong? Did Britain do all in her power to foster young democracy in post-war Germany? Did she fight to save the most gallant democracy in Europe—Czecho-slovakia? Did Britain extend herself to give young democracy in Spain a fair chance or did she leave loyalist Spain to flounder and seek Communist assistance, as it did, only to be conquered by several dictators? several dictators?

France? A semidemocratic country now ruled by a temporary dictator. A country which has changed its form of government half a dozen times since the United States has existed. Does France want American assistance to preserve democracy—or to help hold the second largest prize in the world and to protect because Company expension?

help hold the second largest empire in the world and to protect herself against German expansion?

Poland? Is Poland a democracy—the Poland of Pilsudski, Rydz-Smigly, Beck? Perhaps Poland has the best regime possible to meet her own problems, but if the United States fights for Poland, will America be fighting for democracy?

Rumania? Does King-Dictator Carol want American help to preserve democracy in one of the most corruptly ruled but richest lands of Europe? Or does he want aid to help keep Rumanian oil for Rumanians? Or to keep hundreds of thousands of Transylvania Hungarians in Rumania against their will, or thousands of Polynia Bulgarians in the country they do not wish to live in?

of Dobruja Bulgarians in the country they do not wish to live in?

Are we again to "make the world safe for democracy" by helping England protect Dictator Metaxas' Greece?

Will we join the "democracies against the dictatorships" by fighting as an ally of the largest and oldest dictatorship of them all—

Soviet Russia? Who would win such a war in Europe? Perhaps

nazi-ism, perhaps bolshevism.

It doesn't make sense to us.

It seems perfectly obvious that France and Britain, and all the rest of the potential allies and enemies, are lining up to fight for their own interests only—and not for any ideal of self-determination, or democracy, or sanctity of small nations, or any other ideals. It seems all too likely that the strain of the war, if it comes, regardless of military victory for the axis or the nonaxis powers, would bring revolution and collapse and almost any ultimate result

would bring revolution and collapse and almost any ultimate result except democracy.

We do not believe that American interests are so deeply involved that we have to rush into the war which threatens in Europe. We believe that, if war breaks out, America will suffer. And we believe that victory for the axis powers would hurt American interests a good deal more than victory for Britain and France. But victory in Europe has proved fleeting for a good many hundred years. The victors today are the vanquished tomorrow.

We believe that American participation in the European war now

We believe that American participation in the European war now threatening would cost far more than any gain that might come out of it. We believe that, win or lose on the battlefield, the strain of the war might endanger the very existence of democracy itself in the United States.

The only democracy that is worth our fighting for is right here

The Wagner Labor Relations Act-Sit Down or Get Up-From the Republican and Democratic Viewpoints

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

RADIO DISCUSSION BY HON. ROBERT A. TAFT, OF OHIO, AND HON. T. V. SMITH, OF ILLINOIS, APRIL 18, 1939

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and important discussion on the Wagner Labor Relations Act, disclosing the Democratic and Republican points of view on the subject as presented by Senator Robert A. Taft, of Ohio, and Representative T. V. SMITH, of Illinois, Tuesday, April 18, over the Columbia Broadcasting System:

Announcer. First, from a Democratic point of view, as presented by Representative T. V. Smith.

Representative Smith. Kinsmen in Texas, neighbors in Illinois, laboring men and women of America, greetings from Washington,

let's get at the most delicate thing first. Then perhaps we can be reasonable about the most important things. The most delicate thing in this subject of labor is the sit-down strike. Don't get agitated for I have good news for you, even if it be a little old. The Supreme Court's "agin" it. Attorney General Murphy, late Governor of the most-sat-upon State of Michigan, is "agin" it. Senator Tarr is "agin" it, I think. And I know that I'm "agin" it. I'm even "agin" the conditions that caused the sit-down strikes. Everybody's "agin" the strikes themselves now that safety has returned and popularity whistles down the wind with the hunters. Since we're all "agin 'em," as is the Labor Board, why don't we all be so "agin 'em" as to help the Board keep them or something worse from returning? If the causes remain, there could be worse effects than to sit down in strike. These curious strikes weren't violent, you remember—not much. They were in fact and as a whole puzzlingly peaceful. Speaking of causes, I wonder if we can't agree that the way to keep men from sitting down against employers, or otherwise striking, is to help men stand up on the job—hearts calm in a sense of justice, heads high with hope? That's exactly what the National Labor Relations Act was meant to achieve and that's exactly what the Labor Board has been working at under the Wagner Act, through a tirade of abuse. This tirade has caused newspapers to forget that 15 out of 18 Supreme Court decisions have favored the act and its Board. It has caused nearly half the editorials since the adverse Fansteel decision (154 out of 352) to accuse the Roard of condoning the sit-down though nearly half the editorials since the adverse Fansteel decision (154 out of 352) to accuse the Board of condoning the sit-down, though the Board itself admitted the sit-down illegal and punishable under the State courts. It has caused the impression that the Board favors the C. I. O., which the figures show not to be so.

The real trouble has been, and still somewhat is, that the American employers had to be forced by law to recognize what they ought to have recognized in conscience, i. e., the practice of collective bargaining. That's the meaning of the Wagner labor law. Admitting the principle as an abstract right, employers long defeated it as a concrete privilege by insisting that they be both the judge and jury to administer the right. When a government sympathetic with working men came into power in 1933 it made the right into a privilege by the very Wagner law. Moreover, it provided a public body, the Labor Board, to administer the right. Seeing all this, the employers themselves sat down in plous obstruction.

First the act was declared unconstitutional. No; I don't mean by the Supreme Court. The Court said otherwise. But before the Court could say anything, the employers got 58 lawyers of the Liberty League to save the Court the trouble by themselves declaring the act unconstitutional. But when the act wasn't unconsti-

ing the act unconstitutional. But when the act wasn't unconstitutional, after all; and when the Board, whose duty it was to see that the act acted, began to make the law work, it in turn became the victim of savage attack. Its membership was rotten, they said; its philosophy was biased, they said; its procedures were wrong,

they said.

You've heard the Republican conservative story before, haven't you? First we don't need improvement, for normalcy's enough. Then we need some improvement, but what's proposed is wrong in principle. Then the principle's all right, but the way of working it out (by boards or otherwise) is all wrong. Then at last everything's all right (in about that tone of voice), but we Republicans can administer it better than you Democrats can—and, besides, we'll see to it that the thing doesn't go any further.

TI

Knowing this story of obstruction now by heart, we can exonerate the Labor Board from what happened while employers were running riot under legal immunity of their self-invented unconstitutionality of the act. After the Court gave the "go ahead," an amazing record has been written by the Board, a record which Fortune magazine describes as "phenomenally successful." The story of that record I'll make brief if you'll enable me to do it by listening closely to these figures. Less than one-third as much time was lost by American workmen on strike in 1938 as was lost in 1937 (when the unconstitutionality question paralyzed the Board). Last year indeed the Board closed 8,851 cases of complaints against employers. In only 2 percent of these cases did the Board have to order employers to quit hindering workers from collective bargaining. Is that what all the hollering's about—the correction of an autocratic 2 percent; 40 percent of the complaints against employers were dismissed by the Board or withdrawn by unions. More than 50 percent of the cases were settled by agreement between the parties. More than half of all the cases.

Hear that record again and behold a Board that's literally protecting employers as well as employees; of nearly 9,000 complaints filed, 40 percent dismissed or withdrawn, 50 percent settled by agreement, only 2 percent of all cases pushed through with decisions against employers. No wonder strikes have now decreased in number and duration, organizations of workers grown apace, and more working agreements signed than ever before in our industrial history.

What, then, of the continuing opposition to the act, coming now

industrial history

What, then, of the continuing opposition to the act, coming now to a head in Congress?

I'm not on the committee to handle the matter in the House, as Mr. Taft is in the Senate; and so I'll content myself chiefly with illustrating the spirit in which current outcries should be heard by liberal men, and I hope by conservatives also. I do this because I am convinced that unless we children of the radio prove less

prejudiced than the children of the press, fiction will continue to outlaw truth and delay industrial justice.

Obviously, the Board itself is in the best position to know what has worked, and what not, in furthering collective bargaining. Any changes, therefore, which the Board proposes will be in keeping with the spirit of the act. The same for Senator Wagner, the author of the act, who is willing for the Board to change its rules to help employers out of a jurisdictional predicament for which they are not to blame. As for the many changes otherwise proposed, let Fortune magazine speak the honest word: "Almost all amendments proposed, from whatever motive, would have the effect amendments proposed, from whatever motive, would have the effect of impeding or slowing down the progress of collective bargaining (October 1938)

Who could sound a more solemn warning than that sounded by this unbiased source, Fortune, the biggest magazine of the biggest business in America? Following this warning, there is one com-plaint in particular that neither Senator Wagner nor the Board nor any other friend of the act is likely to countenance. It is the complaint that the Board is both judge, prosecutor, and jury. Even where the intent of this complaint is not to weaken the act, the result is nevertheless just that—and other results still more far-

reaching.

What would you think if an enemy of our form of government said that our famous system of trial by jury isn't fair because the same system prosecutes and judges the accused? That statement's true, you know. The same system does both functions. But in the system one prosecutes, one defends, one judges, and twelve decide. So in large measures with the Labor Board. Like the jury system, the Board as a body handles all the functions necessary to prevent and to settle these special disputes. But the Board means some 800 trained people. Of these, some investigate, others prosecute, and still others decide. And don't forget that, in addition, the final decisions of the Board itself become penalties only under the tudgment and consent of the regular courts of only under the judgment and consent of the regular courts of the land.

Most of the complaints against its present procedures are covert Most of the complaints against its present procedures are covert attacks upon administrative law. The Labor Board is not essentially different, in the regard criticized, from the now highly respectable Interstate Commerce Commission, which also combines investigative and judicial functions. This form of control has grown up in America, in England, and in other democratic lands because there is no other way so simple, so economical, so effective, and so just to deal with problems requiring control. The courts cannot do it. They are too few by far and too cumbersome beyond all doubt. To ask the courts to do it is to ask that it be not done. A commission or a board can cut through red tape, can get at the A commission or a board can cut through red tape, can get at the facts, can reach a decision, and can right wrongs while the parties wronged are still alive.

Employers who mean to be a law unto themselves naturally prefer a control that does not control them. So long as there are employers who do not fully and gladly accept the practice of collective bargaining—and there are a good many left—friends of labor must look for the bug of sabotage under every chip of an amendment. They who want no interference with their power over their men into forces with those who want no interference. who want no interference with their power over their men join forces with those who want no interference with normalcy anywhere. It is this combination of the industrial autocrat and the political reactionary which must be ever feared, but now be met and mastered. They represent a conspiracy to have those who don't want public control controlled by those who don't want to control them.

These efficient boards and commissions, on the other hand, can track injustice down to morasses not entered by the courts, and can thus clear the ground for judges the better to function. Not can thus clear the ground for judges the better to function. Not to accept and to perfect this type of control is to embrace political lethargy and to restore economic anarchy. And the oldest trick to cover this infamy is to complain at any control that's effective and to praise only the type of government that does not govern. I have this ancient truth on high living authority, the authority of my distinguished opponent, the junior Senator from Ohio. I quote his own telling words from our sixth debate: "Much of the opposition to the extension of Federal power comes from people who know that they are beyond the power of the States, and do not wish to be subjected to any governmental power whatsoever."

I hope that Senator Tart can recognize his specimens as well as

I hope that Senator Taff can recognize his specimens as well as he has described them. If so, he will surely rebuke in the Senate, as I in the House, those who attack the Labor Board with amendments intended to prevent the Board from extending to all workers, under the Wagner Act, collective bargaining through agents freely

chosen therefor.

Pardon me if I speak too earnestly in this matter. near my heart, and that for two main reasons. The first is that this Labor Board is a splendid example of what I have been proclaiming in all these debates as the new federalism. I mean the doctrine of the coordination, rather than the separation, of governmental powers, and the providing of new forms to meet new demands for control. All these boards illustrate how democratic centralism can operate in fashion decentralized. The necessity which called them forth poses this question: Shall we govern ourselves by agencies that coordinate powers, or shall we crucify ourselves upon the cult of separate powers? That's the choice. I for one don't want it said in the hour of democratic failure that we did not even try to govern curselves. try to govern ourselves.

If what we've done in this labor field be one-sided, then Al Capone is right in thinking that the jury system was one-sided against him. When men are violating the elemental rights of other men, you tell them they must stop it. You set up a law with

proper machinery to make them stop it. You enforce that law until they do stop it. They always say that you have it in for them and believe that your process of justice is one-sided against them. If that's what they mean by being one-sided, then in this case they must make the most of it, for it's one-sided only against those who are themselves found off, side in the Truncasser. those who are themselves found off-side of justice. True conservatives like Mr. TAFT must make every effort to show that their criticism of this Board is really not a plea to return to that industrial anarchy where the strong did what they would to the weak, and did it in the name of freedom of contract, not to mention the Colden Palle. When it is used to contract the District Street. tion the Golden Rule. Wasn't it Judge Gary, of the United States Steel Corporation, who, the day after refusing to meet his men in conference, dedicated a great law school by advising young lawyers that he had always found the Golden Rule an all-sufficient guide in business?

guide in business?

It certainly was Chief Justice William Howard Taft who saw and said in 1921 that "A single employee was helpless in dealing with an employer. * * * Union was essential to give laborers opportunity to deal on an equality with their employers."

My second reason for such earnest emphasis transcends all amendments, goes back of the Board, lies back of the act. It arises from what this act has in mind to achieve, industrial peace and democratic justice. Starting with a state of war, we must work cursalves out of it through gradually diminishing forms of warfare. democratic justice. Starting with a state of war, we must work ourselves out of it through gradually diminishing forms of warfare. In our jury system a murder trial is, I admit, a rough way of getting at justice. It's a kind of mutual bickering climaxed by a sort of ordeal of oratory. Rough, yes; but a great improvement over the feud. We're just passing out of the feud stage of labor and capital. Our justice may be rough but it's directed against only malefactors. feud. We're just passing out of the feud stage of labor and capital. Our justice may be rough, but it's directed against only malefactors of economic power. This Wagner Act constitutes the first step, and a long one, toward making political democracy at last "democ" in the industrial field. Are there those who actually believe that we can preserve political democracy as only a green oasis in a desert of industrial autocracy? I cannot think that Mr. Taff believes so; and I know that I could never believe so. Here's democracy for a

In the elections held by this Labor Board, under the Wagner ct, there has been an average vote of 96 percent of all those eligible to vote. Now, that's democracy for you. Compare it with the probable average of 10 percent, or at most 25 percent, of eli-gibles voting in ordinary elections. Talk about local responsibility; here it is under Federal safeguards of fair play. Talk about faith in self-government; here it's demonstrated that when we provide men a way to express themselves on the things that count for most, rather than those that count for least, men are alert

and dependable.

How can one feel lightly about this Wagner Act? It represents the greatest extension of democracy since manhood suffrage. All honor to its fair and courageous Board that has in 2 hard years converted the hitherto empty rights of labor into the daily privilege of genuine collective bargaining. That's the new federalism for you, at work in the factories of our land and triumphant in the hearts of those who man the machines of our great industrial Nation.

ANNOUNCER. That was a Democratic point of view on the Wagner Labor Relations Act—Sit Down or Get Up, as presented by Representative T. V. Smith, of Illinois. Now Senator Robert A. Taft, of Ohio, presents a Republican point of view.

Senator Taft. Citizens of the United States of America, the argument against amendment of the Wagner Act presented by Representative Smith is so typical of New Deal methods that I cannot help but comment on these methods. The argument is Representative SMITH is so typical of New Deal methods that is that no one was ever really interested in the laboring man before 1932, when the New Dealers became his champions. Everyone who suggests the slightest criticism of a New Deal policy is a hidebound Tory, conservative and reactionary, who always did oppose progress and whose motives now must be inspired by a desire to grind down the faces of the poor. Since the critics are people of this character, it is argued, their arguments are not entitled to the clicktest consideration. the slightest consideration.

This position certainly has no strength in the field of labor. Neither the Republican Party nor myself can be accused of conservatism in labor matters. There were many more labor leaders who were Republicans prior to the war than there were labor leaders who were Democrats. The Republican Party was the party which the result of the Republican Party was the party which insisted on adequate protection for American labor against low wages abroad, and labor leaders were insistent upon this protecwages abroad, and labor leaders were insistent upon this protective policy. The high wages of American labor were largely created by an adequate tariff against low wages paid in Japan and Europe and other countries. The Republican Party was the friend of labor in putting through the restriction of immigration, whereas the New Dealers today are exceedingly doubtful whether they want to continue the strict policy of immigration restriction which the Republican Party improved.

they want to continue the strict policy of immigration restriction which the Republican Party inaugurated.

The Republican Party adopted the first workmen's compensation acts in the United States. It has always recognized the right of collective bargaining. I do not know that before 1932 any labor leader or anyone else proposed a measure guaranteeing the right of collective bargaining by law. I give full credit to Senator Wagner, who developed this idea of making collective bargaining more effective than it was before. It was not opposed by the Republicans, and it is fair to say that its basic principle is accepted by all, and certainly will not be impaired by any amendment which Congress is likely to approve. As for myself, I voted for the child-labor amendment and minimum-wage laws for women and workmen's compensation laws and the law outlawing "yellow dog" contracts before Representative Smith ever got into politics at all.

Whether the Wagner Act is the panacea which Representative SMITH describes is exceedingly doubtful. There are still more than 10,000,000 men unemployed in the United States today, and while 10,000,000 men unemployed in the United States today, and while wage rates may be higher, the total income received by each workman is lower, because industry has been so completely discouraged by New Deal policies. Contrast this to the record before 1929. The purchasing power of the average laboring man steadily increased in the United States from an index number of 41 in 1820 to 59 in 1850, to 103 in 1920, and to 132 in 1928. In other words, the position of the average workman improved 300 percent in a hundred years without any Wagner Act.

Whether the Wagner Act has increased the democratic process in industry is not at all clear. The adoption of the sit-down strike throws doubt on this proposition, because a sit-down strike is the means by which a small minority of the men in a plant may throw all the rest out of work. There is not much democracy about that.

As for creating labor peace, the Board's argument is that there

As for creating labor peace, the Board's argument is that there were fewer strikes in 1938 than in 1937. This is true, but there were more strikes in 1938 than in any one of the 12 years before 1937. There were 3,000 strikes in 1938 compared to 2,000 in 1934, before the act went into effect. It was natural that strikes should fall off in 1938 from 1937, because industrial activity suffered a large decrease.

large decrease.

The question before Congress is not one to be determined by emotion. There are very definite criticisms of the complicated provisions of the act, and particularly of its administration by the present Labor Relations Board. In fact, I think the basic difficulty is the bias and prejudice of the present Board, and if it were not for that, amendments might not now even be proposed. The general impression throughout the United States today is that the administration of the present Board is biased, and that many heart are a travesty on justice. I have known of administration of the present Board is biased, and that many hearings under the act are a travesty on justice. I have known of enough cases myself to feel that this is probably true, and when I heard this morning the statement made before the Committee on Education and Labor, by J. Warren Madden, Chairman of the Eoard, I was more inclined to believe the charge. He reflected upon the motives of every critic of the Board, including the officers of the American Federation of Labor, Senator Walsh, of Massachusetts, and Senator Burke, of Nebraska, whose public spirit and disinterestedness are beyond all question to those who know them. interestedness are beyond all question to those who know them. I can only conclude that impartiality is an unknown quality to the present members of the Board. They do not regard themselves as judges, but as men with a mission to organize all employees in the United States, whether they wish to be organized

The character of the Board is shown further by one of its members, Mr. Edwin S. Smith, who attended the International Labor Congress last year in Mexico City, the same congress attended by Mr. John L. Lewis. It was a congress in which the Communists were apparently dominant, and in which the entire tone was communistic. Mr. Smith, speaking before that body, launched an attack against American business which convinced the Mexicans at least that the Roosevelt administration was hostile to American employers. He said in one statement: "Worksrs cannot stand aside at least that the Roosevelt administration was lostife to American employers. He said in one statement: "Works'rs cannot stand aside and listen to explanations of how capitalism might work." Another member, Mr. Donald Wakefield Smith, has been so no-toriously biased that Mr. William Green himself protested against his reappointment to the Board, and the President has withheld the sending of his appointment to the Senate.

It is said that the Supreme Court has upheld the Labor Board, and that therefore the charges of partiality are unsound. It is true that the Supreme Court upheld the Labor Board in all of the earlier cases. This was due to the fact, however, that in those cases the defendants relied largely on the claim that the Labor Act could not apply to an industry in one State because the Constitution only permits a regulation of interstate commerce. The Supreme Court has taken a much broader view of interstate commerce than existed before and held that almost any industry receiving goods from outside the State or shipping goods outside the State is interstate in character. Relying on the constitutional point, few employers even presented the evidence favorable to them. Since the Supreme Court's earlier decisions, facts have been presented, and in many cases the courts have held that the Labor Board's interpretation of the facts was grossly contrary to Labor Board's interpretation of the facts was grossly contrary to the evidence presented. This is the effect of the recent sit-down cases and others.

The C. I. O. and the National Labor Relations Board did the best they could to prevent even hearings being held on amendments to the act, although they were demanded by the A. F. of L. and every businessman in the United States. Why should the defenders of the Wagner Act be afraid of public hearings if their cause is so just?

The most important thing, therefore, is to change the method of administration of the act so that employer and employee alike, A. F. of L. and C. I. O. alike, can be certain of impartial treatment. It is not only important that they receive it, but that all are

It is not only important that they receive it, but that all are satisfied that they are receiving justice and fair dealing. Only thus can we eliminate the unprecedented bitterness, distrust, and suspicion which exist today among worker and employer alike. I think the most important step required is to separate the prosecuting function from the judicial function. Today the Board files the charges, hears the evidence, and decides the cases. No human being exists who can be completely impartial in deciding a case on which he himself has already taken a public position. Representative SMTPH says that is the same thing as

any criminal trial. Of course, he is wrong. The public prosecutor has no connection whatever with the judge. The judge has never filed any charges or taken any position until he has heard the evidence. The Labor Board's position reminds me of Alice in Wonderland: "'I'll be judge, I'll be jury,' said cunning old Fury; 'I'll try the whole cause and condemn you to death.'"

It is true that various administrative boards combine the prosecuting function and the judicial function, but it is always dangerous. The Interstate Commerce Commission is essentially different, because its work is rather legislative than judicial, and it seldom does any prosecuting except in a few technical fields. I think the Federal Trade Commission would be very much better if it did not both prosecute and judge. The Board of Tax Appeals in the Treasury Department provides a precedent in tax cases, where functions are successfully separated so that the taxpayer feels he is receiving justice. But the combination of these functions in the labor field where prejudice and violent feeling are so prevalent threatens to destroy the whole purpose of the act—to produce harmony in industrial relations.

Senator Burke's bill provides that the Board shall be the prosecutor, but that eases were he removed by the defendent to the

to produce harmony in industrial relations.

Senator Burke's bill provides that the Board shall be the prosecutor, but that cases may be removed by the defendant to the Federal district court. Senator Holman's bill provides for the establishment of a prosecuting division in the Department of Labor, the cases to be heard before an independent Labor Appeals Board of nine, responsible directly to the President. Senator Burke's bill also provides for the appointment of a new board, one member to represent the employees, one the employers, and one the public. I should be inclined to favor a prosecuting division in the Department of Labor or the Department of Justice, and an independent board to hear the cases, as proposed by Senator Holman.

Of course, one essential of the act is that employers shall not

Senator Holman.

Of course, one essential of the act is that employers shall not interfere with the formation of unions. The existence of company unions financed by employers, and therefore indirectly controlled by employers, was one of the abuses the act sought to remove. The Board, however, has interpreted this to prevent an employer from expressing any opinion whatever to his employees. The Board has some so far as practically to destroy freedom of speech on the part of employers because of some imaginary coercion involved in any statement made by an employer to an employee. Both the American Federation of Labor and the Burke amendments, therefore, provide that it shall not be considered an unfair labor practice for an employer to confer with an employee, or to counsel and advise employers of the conference of the conf employees, orally or in writing, about any matter within the scope of the act.

Senator Burke's amendments further define certain unfair labor practices on the part of labor organizations as well as employers. Such practices are not to result in any criminal action, but if ille-Such practices are not to result in any criminal action, but if illegal practices like sit-down strikes are engaged in by labor unions, they cannot take advantage of the act. I think some of Senator Burke's amendments go too far, but certainly we should make clear, as the Supreme Court has already made clear, that men who violate the law themselves cannot demand reinstatement with back pay, as the Board has tried to decree in a number of cases.

One of the most difficult matters under the act arises from the rule that the employer shall only bargain collectively with representatives chosen by a majority of the employees. This rule is supposed to carry out the principles of industrial democracy. At first blush it violates our American ideals to say that any group of employees less than a majority who join together and wish to bar-

first blush it violates our American ideals to say that any group of employees less than a majority who join together and wish to bargain with their employer shall not be allowed to do so, but perhaps it is true that the presence of various conflicting committees might impair the whole process of collective bargaining.

The application of this rule is very difficult. The Board has deliberately postponed elections to give union organizers a chance to organize the men into unions, even to the extent of taking them away from older unions, and even though they may be entirely contented with existing conditions in the plant. One of the great complaints has been this delay, which has prevented employers from finding out who the agents are with whom they must bargain collectively, and often required them to determine this question at the peril of expensive back payments if they guessed wrong. All of the amendments propose that the employer be given the right to ask the Board for a prompt election, so that they may know right to ask the Board for a prompt election, so that they may know with whom to bargain.

with whom to bargain.

Of course, in determining who is the majority, the question arises: Majority of what? Of the employees of a particular plant, or of a particular craft, or a particular employer, or of an entire industry? The present act gives the Board wide discretion to decide this question, and the charge is made that the Board has exercised its power so as to favor the C. I. O. unions. The A. F. of L. unions were largely built up on the craft basis, and their amendments provide for the protection of craft unions already existing, with the right to be represented by their own officers. Certainly, it is desirable that more definite rules be made determining what with the right to be represented by their own officers. Certainly, it is desirable that more definite rules be made determining what the units for bargaining shall be; that less discretion be given to the Board; and that no right be given to recognize an entire industry as a unit. If the employees of any particular employer desire to deal with him, they should certainly have the right to do so without being forced into a union with employees of other employers in the same industry with whom they do not wish to join. Peaceful relations will surely be assisted if an employer and his own employees can work out their own particular problems.

There are various other proposed amendments, and it is quite possible that some of them go too far. As far as I am concerned, and I believe as far as any Member of Congress is concerned, there

will be no amendments adopted modifying the fundamental principle that collective bargaining shall be guaranteed by law, unimpaired by any influence of the employer over his employees. I am concerned, however, that every employer and every employee shall receive, and shall feel that he is receiving, impartiality in the hearing of his cases. The labor peace which we are seeking must be founded upon justice and fair dealing between all parties to the labor relationship.

Frank P. Walsh, a Devoted Public Servant

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, yesterday a most distinguished lawyer, Francis Patrick Walsh, passed away.

Mr. Walsh died of a heart attack shortly after 10 o'clock yesterday morning in Foley Square, New York City, in front of the Supreme Court Building. When he was stricken, Mr. Walsh was on his way to the Federal courthouse, where he was to appear as counsel for a labor union. He was given the rites of the church by a priest from nearby St. Andrew's Roman Catholic Church.

Mr. Walsh was born on July 20, 1864, in the city of St. Louis, Mo., the son of James and Sarah Delany Walsh. His father died when he was 7, and at the age of 10 he left school to help support his family. He worked as a Western Union messenger, a factory hand, and a railway accountant.

Studying at night, he learned shorthand, which enabled him to get a position as a court reporter. While serving in this capacity he studied law and was admitted to the bar of Missouri in 1889.

President Wilson appointed Mr. Walsh as Chairman of the United States Commission on Industrial Relations.

In 1918 President Wilson named Mr. Walsh and former President Taft as joint chairmen of the National War Labor Board.

As chairman of the American Committee on Irish Independence, Mr. Walsh vainly petitioned the Peace Conference at Versailles to recognize it. He tried to get both major political parties to take up the cause of Irish freedom in their 1920 platforms.

Mr. Walsh was admitted to the New York Bar in 1919 and served as counsel for labor unions in many important cases.

In 1928 Mr. Walsh became the leader of a progressive league organized to support Alfred E. Smith. During the following years he became a close adviser of Franklin D. Roosevelt, who, as Governor of New York, appointed Mr. Walsh to a commission on revision of the public-utility laws.

Governor Roosevelt appointed Mr. Walsh a trustee of the State power authority in May 1931, and he was immediately elected chairman of that body. He was reappointed for a second 5-year term by Governor Lehman in May 1936.

In 1932 Mr. Walsh helped organize the National Progressive League, which supported Mr. Roosevelt for the Presidency in that year and again in 1936.

He also took a leading part in the formation of the National Lawyers' Guild, in part as a protest against the conservation of the American Bar Association, of which he had long been a member. Last February, however, Mr. Walsh resigned from the guild in protest against its allegedly radical

Mr. Walsh married Miss Katherine M. O'Flaherty in Kansas City on October 21, 1891. She survives, as do seven of their eight children—Sisters Frances Marie and Katherine Louise, of the Order of Loretta at the Foot of the Cross; Jerome Walsh; Mrs. Cecilia Walsh Bradley; John Walsh; James G. Walsh; and Miss Virginia Agnes Walsh.

He was my friend and he was a friend of American thinking. He was ever in the forefront of every battle for true liberalism. He was a liberal when it was not stylish nor

profitable to be a liberal. Clear of mind and voice, his views penetrated the public mind and did much to preserve democracy.

A lawyer of great talents, he often gave legal aid without thought of compensation except the victory of a cause he knew was just.

The New York Times has paid him tribute by editorial. The House of Representatives should read what the Times and what New York thinks about this magnificent advocate. I insert at this point the New York Times editorial of May 3, 1939, entitled "Frank P. Walsh."

> [From the New York Times of May 3, 1939] FRANK P. WALSH

Frank Walsh lived a full life, giving generously of his time and ability to causes in which he believed. He began his political career by denouncing the sins of his own party, and early in his legal career he renounced all corporation practice. He was already one of the leading labor lawyers of the country when President Wilson named him to head the United States Commission on Industrial Relations.

Industrial Relations.

His chief interests ever since had been represented by what he called "the rights of man against the wrongs of property." A Wilsonian radical in those days, he subsequently became a Roosevelt liberal. It was Governor Roosevelt who appointed him chairman of the New York Power Authority in 1931. He was a logical choice as first president of the National Lawyers Guild, organized to support Mr. Roosevelt's crusade for greater liberalism in the courts. When he believed that the guild had refused to take a proper stand against communism and all other dictatorships he withdrew from it. He was an able lawyer, a grim adversary, and an untiring idealist. an untiring idealist.

Equality Before the Law

EXTENSION OF REMARKS

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

ADDRESS BY HON, JOHN T. CAHILL

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. John T. Cahill, United States attorney, southern district of New York, at Jefferson Day dinner of National Democratic Club at Hotel Commodore, New York, April 22, 1939:

The day we celebrate the birthday of Thomas Jefferson, one of the founding fathers of our democracy, affords appropriate occasion for an examination of our stewardship in connection with democracy's most essential element—the free and fair administration of justice.

This assembly of men and women interested in the democratic

ideals of our country is vitally concerned in eradicating from our judicial system abuses recently brought to light.

Liberty, whether it be the right of free speech, whether it be the right to one's own personal freedom, whether it be the protection against unwarranted invasion of the rights of society by individuals—liberty can nowhere more effectively be stifled than

Individuals—liberty can nowhere more effectively be stifled than through corruption in the courts.

It matters not to the injured citizen whether the deviation from the path of righteous administration of justice is caused by the whim of a dictator or by the bribe of a dishonest opponent, the result is inevitably the same—to destroy that inalienable right of free men: the right to a fair and impartial trial.

The strength of a democracy lies in the confidence of the people that there is sufficient resiliency in its processes to correct abuses, even in our courts; to punish offenders in high offices; and to go forward with remedies designed to prevent their recurrence.

The ideal to be achieved is well expressed in the words of

The ideal to be achieved is well expressed in the words of Thomas Jefferson, whose anniversary we celebrate today, in his first inaugural address: "Equal and exact justice to all men." This means nothing more or less than the honest, fearless, unblased, unprejudiced administration of justice. Whenever or however corruption, bias, or prejudice creeps into the administration of law, then and there equality is destroyed, and the very foundation upon which the Government of the United States rests is impaired. There is no higher duty incumbent upon the people of this country than to see that the traditional true equality before the law is all respects preserved.

So important in our American system of law is this principle of true equality before the law that under our law jurymen are The ideal to be achieved is well expressed in the words of

true equality before the law that under our law jurymen are queried not only as to the existence of actual bias or prejudice, but

as well as to facts from which an inference of implied bias or prejudice might be drawn. Our courts must be held to no lower standard. Not only must actual wrongdoing be rooted out, but judges should comport themselves in such a manner as to be above the merest suspicion of wrongdoing.

What matters it that the taxpayers of this country spend millions of dollars each year in the detection and solution of crime, if at

the very fountainhead of justice where cases are presented the evidence is not fairly and impartially received? In the detection and solution of crime the outstanding work of the investigative forces of the Government has time and again brought Nation-wide appliause. Under the direction of J. Edgar Hoover, the agents of plause. Under the direction of J. Edgar Hoover, the agents of the Federal Bureau of Investigation have made kidnaping the most dangerous crime.

The men of the Secret Service have toiled unremittingly to pro-

The men of the Secret Service have toiled unremittingly to protect the purity of the United States currency against counterfeit. The agents of the Treasury have shown that the income-tax laws are to be rigorously enforced.

These and many others comprise the efficient, hard-working, and never-relenting agencies of the United States Government for the detection and solution of crime. The good work of these men can be set at naught if we fall in that vigilance through which alone the integrity of the judiciary is preserved.

That the need for vigilance is unceasing is most clearly evidenced by the disclosures currently being placed before this community. Outstanding is the fact that, before some judges, equality in the law has come to be a hollow phrase without strength or meaning. A manifestation is the idea that a so-called right lawyer must be retained to appear before a particular judge. A litigant who falls to retain the so-called right lawyer is unable to obtain a fair and impartial hearing in matters involving his rights under our law. For the litigant he represents, the so-called right lawyer can obtain on some basis, ranging all the way from friendship and association to downright bribery and corruption, special favors and unwarranted privileges. unwarranted privileges.

Any notion which may have gained currency in any part of this country that a particular lawyer is the so-called right lawyer to appear before any judge must be struck at just as vigorously as any other manifestation of impropriety in the conduct of our courts. If liberty, in regard to our judicial processes, is to continue to mean just that, then it must guarantee to all members of the legal profession a basis of personal equality before the judges of the

If law enforcement is to have the continued confidence of the people, there must in every sense of the word be equality before the law. One of the most important phases of this is economic equality. The fact must be hammered home that no man is above the law, and the same brand of justice is administered to rich man and poor man alike.

We have had enough revelations of wickedness in high places to show there is no monopoly on wrongdoing in any one class of our society. The wrongdoer offers no explanation at all, satisfactory to my mind, when he argues that the amount involved in his criminal act was small compared to his total wealth. People who argue that way, I have found, are those most merciless in their demands that someone of small income caught in the toils of the law be punished to the fullest extent.

There have been efforts by malefactors highly placed to conceal wrongdoing in a maze of corporate transactions in the hope to becloud the fact and escape prosecution. Any belief that corporate complexities are at a premium in the covering up of crime

must be shattered.

Bar associations, as well, must be vigilant and unremitting in dealing with prominent members of the bar caught in transgressions of the rules for proper conduct of members of the profession.

In summary, economic equality before the law means that gold-plating must be shown to be just that. Where wrongdoing occurs, courts and prosecutors alike cannot and must not allow the magnificence of the defendants and the large amounts of their personal fortunes to influence them to vary their course of procedure course to the contract of the course of procedure one lota.

In the search for lasting remedies certain tentative conclusions, based upon what has been done, commend themselves as worthy of serious consideration.

serious consideration.

It does seem to me that to command the respect of the public at large, one who has been elevated to the high post of judge should spend all of his time and attention being a judge. When he accepts this high calling, he should forsake all interests other than those of his judicial office. Judges with active business interests cannot devote their full time and attention to the matters which come before them. A judge who is deeply involved in active stock-market operations too often has ticker on the brain when he needs all the brain he has for the case on trial before him.

A judge who is heavily indebted financially and pressed for payment of his obligations does not enjoy the calmness of mentality necessary to sound judicial reasoning. Where judges are accepting favors from money lenders they are not in a position themselves to condemn the practices of the Shylocks.

Nor can judges with impunity associate themselves and be seen in public with persons of dubious or criminal reputation and then he in a position to complain when rumor and goes in link their

he in a position to complain when rumor and gossip link their names with the activities of their disreputable associates. Not even a judge can escape the impact of the homely maxim that he who lies down with dogs gets up with fleas.

Our President has indicated most clearly that he will tolerate no equivocation with these matters. Attorney General Murphy has

said that the integrity of our courts must at all costs be preserved. It is essential for the preservation of equality before the law that merchants of justice, where found, be driven from the temple of justice.

Above all we must have men on the bench who will not sully the

ermine of their high calling.

And lastly, when we shall have finished with our activities in these matters, we may expect that there will be renewed confidence in our courts and increasing respect for law.

Detention of Certain Aliens

EXTENSION OF REMARKS

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

Mr. BYRNS of Tennessee. Mr. Speaker, under leave given to extend my remarks, I wish to say that I propose to vote for H. R. 5643, a bill to invest the circuit courts of appeals of the United States with original and exclusive jurisdiction to review the order of detention of any alien ordered deported from the United States whose deportation or departure from the United States is not effectuated within 90 days after the date on which the warrant of deportation shall have become final, and to authorize detention orders in certain cases.

It appears that in 1938 alone 460 aliens were ordered deported, having been adjudged unfit to live here further, but foreign governments refused to issue passports for reasons sufficient unto themselves, presumably because they did not want this type of person within their confines. Under the law as it exists at the present time, there is no power to proceed further against these 460 cases, and the majority of them today are as free as any citizen of this country. The bill specifically limits detention of such aliens to several classes-criminals, procurers, narcotic smugglers, or peddlers or the like, immoral persons, or anarchists.

America has made a glorious record of achievement in war and in peace, but this record of achievement has not been made by, or with the assistance of, the criminal, the procurer, the dope peddler, or the anarchist. The mere fact that a foreign government does not wish any more of this kind of cattle running loose within the confines of their country is to me a most sufficient reason why I should vote for this bill. Unfortunately, for us we too have a criminal class, which, through the splendid agencies of the Federal Bureau of Investigation, the Secret Service, the narcotic agents, and the post-office inspectors, we are trying to combat, but we do not need to permit, and we must not permit, the criminal riffraff, the dregs, which foreign governments refuse to receive back, to run at large and to prey upon the citizenry of this country.

Let those who will vote to give the criminal, the procurer, the narcotic peddler and addict, and the anarchist, the right to run loose in this country. I, for one, cannot bring myself to vote for such a procedure, and it is for this reason that I propose to vote for this bill and against any amendments which might tend to lessen its full effect.

Haynesville Tornado

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

Mr. BROOKS. Mr. Speaker, in the little city of Haynesville, La., it was Sunday afternoon, April 16, 1939, and all was peaceful and quiet throughout the community. Suddenly, without previous warning, at exactly 1:55 p. m., from

out of the southwest a great tornado descended on this little city in northwest Louisiana. In a few fleeting seconds the northern part of this town was reduced to shambles and ruin. Eight of its citizens were dead, 20 were seriously injured, and many homes and places of business were injured and destroyed. Like a great scythe, this tornado cut its pathway through the thickly settled northern portion of Haynesville leaving death, destruction, and misery in its wake.

No one knows why in the course of events destiny decreed that this peaceful, God-fearing community in north Louisiana should feel the brunt of such a fearful holocaust. Perhaps in the far-flung plan of the universe this was a test which was to try men's souls, to find out the stuff of which they are made. We do know, however, that out of this tragedy, dazed it is true by the sudden and overpowering force, but undismayed and undaunted, arose the true spirit of determination of the people of Haynesville. With a Christian resolution they have gone about the somber task of burying their dead, hospitalizing the injured, and rebuilding their city.

Within a few hours after the tornado had passed, agencies of mercy offered and extended assistance. For these I am sure the people of Haynesville are most appreciative. Local agencies have already expressed their gratitude for the work of the American Red Cross, the National Guard, and civic and local organizations. Insofar as the Federal Government is concerned, I want to express appreciation for the prompt and energetic efforts of the Works Progress Administration, the Farm Security Administration, and the Disaster Relief Corporation. The first named of these organizations immediately sent a representative through the whole territory to see what could be done to relieve the suffering. The Farm Security Administration has already made a complete survey of the farm damage and stands ready to assist those farmers injured. The Disaster Relief Corporation has sent into this territory representatives to offer such relief and assistance as is permitted by the law. In addition to all of this, I am pleased to state that the Civilian Conservation Corps loaned the services of its personnel promptly, energetically, and without faltering to aid in clearing away the debris, reclaiming the bodies of those killed, and aiding in preserving order.

To all of these I tender the thanks of a grateful people.

Improved Homes Today Will Mean Improved Citizens Tomorrow

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, I have voted for the adoption of the conference report on H. R. 4852, making appropriations for the Department of the Interior, including an amendment making appropriations for the administrative budget of the United States Housing Authority. I am very much interested in having the U.S. H. A. granted the additional funds necessary for the vital work of providing the machinery to effect decent housing for those unfortunates who have been compelled by economic conditions over which they have no control to dwell in the slums of our great cities. I have been working for many years to obtain better housing conditions for the people of the West Side of the city of New York, whom I represent, and it is my fond hope that through the medium of the U.S. H. A. program we may one day soon look forward to a project which will answer the prayers of so many of the people of my district.

There has never been a greater stimulus to industry or employment than housing and other forms of construction work. The United States Housing Act has been estimated to yield more than 600,000 new jobs in private industry for

an entire year. If this worthy goal may be attained, the largest incident of a program designed principally to relieve slum tenants, will be to form a substantial part of the present unemployment. The people of my district need better housing conditions, and I mean to use every power at my command to secure them; until that time I must concentrate my efforts on the work incidental to the housing program, thereby aiding the unemployment situation as it affects the people of my district, who can benefit by the work necessary in building homes.

In my opinion, the United States Housing Authority has thus far performed its duties admirably, and I am confident they will not disappoint in any way those families who are crying out for an opportunity to better their present unfortunate living conditions, and who look to the Government to continue its scientific attack on crime and squalor. I make an urgent appeal to the local, State, and Federal housing officials to work in unity with a spirit of complete and wholehearted cooperation. I call upon them also for the discontinuance of any undue red tape, with particular reference to the solution of the housing problem on the West Side of the city of New York. Cancer, heart disease, and tuberculosis are rampant in this area, due to the deplorable housing conditions existing at the present time. A careful survey would indicate that there have been practically no new dwellings built in this area in the past 50 The employment and pump-priming features of the slum-clearance program are most meritorious incidents, which are as equally worthy of attention as the primary objects of the original act, and I am glad to state that this phase of the program has been of great benefit to the people of my district in providing employment.

The foundation of our democratic institutions is the home. Improved homes today will make improved citizens tomorrow. Home life is the highest and finest product of civilization. No government can perform a more worthy function than to supply work when work is needed, to supply housing where housing is lacking, or to raise the level of living standards where possibility for crime, illness, and want are ap-

parent on all sides.

What Businessmen Can Do To Aid Recovery

EXTENSION OF REMARKS

HON. WILLIAM P. LAMBERTSON OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1939

ADDRESS BY S. CLAY WILLIAMS, MAY 2, 1939

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my remarks, I want to include the very able address of S. Clay Williams, which I had the pleasure of hearing yesterday morning before the National Chamber of Commerce in their annual convention:

With you I regret exceedingly that my friend the Honorable Harry Hopkins, Secretary of Commerce, is indisposed, and I know that I voice the sentiment of us all when I say that we wish him a speedy and a complete recovery.

a speedy and a complete recovery.

I share, too, your keen disappointment over the consequent fact that you will not hear him today, as planned, on the subject of What Government Can Do To Aid Recovery. By practically unanimous opinion throughout the country, recovery is the all-important problem in the United States today; and the question of the means of achieving it—and of achieving it promptly—is uppermost in the thinking of tens of millions of people. And well to the front in their thinking is the realization that the attitude of the administration, and its policies and proposals affecting business, are enormously important elements in the recovery equation. Under these circumstances it would have been especially gratifying if we could have had Mr. Hopkins with us today. But he is ill, and we send him our regrets and our good wishes.

It is not comfortable for me that I am so suddenly and unex-

It is not comfortable for me that I am so suddenly and unexpectedly called upon to speak in the time allotted to him. In fact,

It is definitely embarrassing that having something to do with the setting up of this program I now find myself appearing on it. But such was the decree of my associates when the time proved to be too short to ask anybody except home folks to take this assignment. Of course, I cannot speak to the subject of What Government Can Do To Help Recovery. I cannot speak for the administration, as could Mr. Hopkins, nor can I speak for him. So, speaking only as one businessman to other businessmen, I change the subject to What Businessmen Can Do To Aid Recovery. I know you realize that the processes involved in What Businessmen Can Do To Aid Recovery are limited both as to effectiveness and as to speed. An administration of government with its opportunity for authoritaadministration of government with its opportunity for authorita-tive touch at so many points of our national life and in so many phases of the economy under which we live has the opportunity of make its policies, its attitudes, and its activities effective—and effective at once. Businessmen have no such authority or opportunity for either effectiveness or for speed. But while ours is the less authoritative position, with, at best, the less speedy results, it is, nevertheless, true that whatever the administration may be going to do, or not do, and however speedily, businessmen, too, have an important part to play in this problem of effecting recovery—and thereafter of maintaining it. Ours is the less spectacular task of doing the "spadework", but it is always to be remembered that the securest crops are grown only after lots of heavy, sometimes

back-breaking and discouraging, spadework.

What, then, can the businessman, from his once-removed position, do to aid recovery?

The answer will appear as readily as in any other way through a cursory survey of the situation with which business and the businessman, and indeed the country, are confronted today.

We have some ten millions of people in this country who are unable to find employment in private enterprise. And the fact that we have them now is not so important as is the fact that we that we have them now is not so important as is the fact that we have had the most of them continuously for some 7 years and in that time have increased the public debt by near \$20,000,000,000 in serving and in trying, to solve this problem. Mr. Hopkins, as you remember, said in his Des Moines speech some weeks ago: "Some people think we can maintain a democracy in this country indefinitely with 10,000,000 people unemployed. I don't. This country can't be in good health and the democratic principle can't be safe until men go back to work." In the same speech he also said: "I have yet to see a businessman who doesn't prefer to give these men work, if he could, rather than pay them wages in the form of taxes to be expended by the Government."

With all of that you and I agree. It recognizes the absolute necessity of men being put back to work and states the ultimate penalty as the loss of our democracy. And on the other side, it credits businessmen with the desire to put men to work if only they could.

they could.

And why can't they? The people do not have all the goods and services that they can enjoy—nor even all that they actually need. In fact it was recently pointed out that we are now closing the first decade of our history in which we have falled to raise the standard of living of the average citizen of the country. And we have 2,000,000 more families both to work and to consume goods and enjoy services than we had in 1930. We have money piling up in reserves in hitherto unheard of excesses. Our natural resources are not substantially impaired. And yet—in this great democracy, whose very existence is admittedly at stake on the solution of this problem, we can't find employment for some 10,000,000 people who

want to work and who are entitled to work!

There have been many guesses at the answer to this enigma but, if I may quote again from Mr. Hopkins' Des Moines speech, he spoke more of truth than a mere guess ordinarily carries when he said: "It is clear to me that a returning increase in production cannot be accomplished without a substantial increase in private investment."

He had just said:
"Among many businessmen there exists a widespread lack of confidence. I am prepared to accept that promise, nor would I underrate its importance. Lack of business confidence is and has underrate its importance. Lack of business connuence is and has been a hard, stubborn fact, and may be as real a deterrent to restored business health as any we have to deal with. * * It is not surprising that business confidence has been affected by the events of the past decade. Economic developments alone were sufficient to disturb the sleep of any businessman. Add to that the revolutionary developments in other countries, add to that the legislative reforms and new Government activities, and you have the research why many people have lost their confidence."

legislative reforms and new Government activities, and you have the reasons why many people have lost their confidence."

I think that the question of why more jobs don't exist can be answered rather simply and directly. It takes money—money at work—to create jobs. Your city and mine, and all of the other cities over the country, have their business establishments of one kind and another, and each has its quota of required or usable workers. When the respective quotas of employees of all the business organizations of this country are full, then it follows that the only way to develop a situation where more men can be employed in industry and business is through extending the industrial plant. in industry and business is through extending the industrial plant In industry and business is through extending the industrial plant and the business machinery. It takes money to extend plants and businesses and to provide additional requirements of raw materials, and it takes more or less venturesome money. America has been built upon the venturesome dollar. Whether we think in terms of the railroads, the steamship lines, air transport, the great industrial enterprises like steel and automobiles, telephones and radio, and many others, or in terms of the great distributing units of one kind and another, we are confronted with the fact that each of them was builded and became able to make its contribution to the employment and to the standard of living of the American citizen through somebody, somewhere, having had a dollar and having been willing to venture it in enterprise. And before it was ventured, the owner of it had to feel some assurance—not always too much—that he had a chance to win some reward and, at least, that he could have the hope that his dollar was reasonably—not too reasonably—secure in the enterprise into which he put it. That's another way of saying that the investment of even venturesome dollars has always had to be accompanied by a degree of confidence as to what was going to happen to the dollars ventured.

as to what was going to happen to the dollars ventured.

I am no subscriber to the concept that at the present time money is on strike. I don't think there's any such thing as money going on strike, because I have never seen the owner of a dollar who wasn't looking for some way to put it into some enterprise where it would have a chance to grow by a few cents each year. But I do recognize the fact that there are conditions of mind on the part of investors that can leave them looking so hopelessly at the prospect for safe or successful investment of their dollars that they fail to put them to work

put them to work.

Without attempting to place the blame therefor, I think exactly that situation has prevailed in this country for some time, and in that situation is to be found the answer to the question of why, with an excess of money in the country and with millions of unem-ployed men, the money has not been used to create jobs for the men and establish that happy combination out of which more goods and services will come for the citizen and more income for the Government. In 1926, 1927, and 1928 the new capital that flowed into business in this country averaged \$4,600,000,000 per year. In 1937 the total amount of such new capital flowing into industry was only one billion two hundred million—and that in the face of the fact that the assets of the business mechanisms of the country had meanwhile shrunk, as was recently pointed out, by some \$10,000,000,000 that ought at least to have been replaced if we were even to

but maintain the job-providing efficiency of our industrial plant.

Just there would seem to lie a lot of the explanation of our present predicament, and apparently just there, too, lies the cure for it. At any rate, I agree with Mr. Hopkins' statement: "It is clear to me that a returning increase in production cannot be accomplished without a substantial increase in private investment,"

and with his further statement:

"If we could find a way to break the log jam of private invest-ment in the fields of utilities, railroads, and housing, we will have gone a long way toward making the essential steps to ultimate

recovery.

It seems pretty clear that confidence is the key to that measure of recovery on which everything hangs—confidence on the part of us who are active in the management of business, but much more importantly confidence on the part of those who own business and who own the idle money that could be used to build more business, more jobs, more taxpaying ability, and a better standard of living. Yes, confidence is the catalyst without which the desired reaction of element upon element will not take place. We have the men and the money and the natural resources ready under the hand of American ingenuity—that hitherto unbeatable combina-tion of elements that in their reactions, the one upon the other, have made this country great and have given man here more than he has ever had anywhere else. But we are now forced to the realization that even America's magic formula won't work except

as an atmosphere and an attitude of confidence is present.

The question then of "what the businessman can do to aid recovery" seems to reduce itself to a question of what the businessman can do to aid in restoring confidence—confidence for himself; but, again, more importantly for the owners of business and for the owners of idle funds and the potential employers of idle men. Again we pass by what the administration may do. That is neither

Again we pass by what the administration may do. That is neither our task nor our knowledge.

But every man in this hall can, here and now, in his own right and without waiting for anybody else's consent or cooperation, do a very important thing in aid of recovery. Most of us got a lot of shock a few years ago when we were being told so emphatically and so frequently that we had to run our businesses in the interest of the public welfare. In fact, we got so much shock at hearing that thing said in the way it was said that we forgot for awhile that we had been doing exactly that. One of the virtues—probably the outstandingly precious value—in this American system of free enterprise under which we work is that no one can continue to succeed in it except as he runs his part of it consistently with the public welfare. That's guaranteed in the very mechanisms of the system—materials bought in open competition and goods sold the same way with the only hope for continuing success to be found in the ever-expanding results of fidelity to that magic formula of the the ever-expanding results of fidelity to that magic formula of the American businessman that ever and anon demands "more goods for more people at less cost."

That policy—innate in the American system of free enterprise—is what put half of the telephones of the world in the houses and offices of the American people though they are only one-fifteenth of the population of the world. That's what provided a radio for 5 out of 6 of the families in this country, electric light for 5 out of 7, and an electric refrigerator for 1 out of 3. That's what gave us nearly three-fourths of the world's automobiles—I for every 5 persons, while in France it's 1 for 22, in England 1 for 23, and in Italy 1 for 109. And while doing all of that and thousands of kindred things you American businessmen have provided wages in your factories that enable an American worker to buy with 1 hour of work as much food and clothing and of the little luxuries of life

as can be bought with 12 hours of work in a Russian factory, 9 hours in an Italian factory, or 4 hours in a German factory.

And that wasn't all. Without suggesting that industry was moving fast enough in the matter of assuming social responsibility before the time at which Government entered the field it must be remembered that it was moving and moving consistently and continuously. As one indication of that developing sense and practice of social responsibility, industry had, prior to 1932, put into effect for the protection of its workers more than \$10,000,000,000 of group insurance. The idea had been evolved in 1911 and by 1925 the amount of such policies was four billion four hundred million, increasing from that figure in the next 7 years by more than twice as much as it has increased in the 7 years since the beginning of 1932. Similarly, the workweek in this country had been reduced between 1890 and 1930 from an average of 60 hours per week to 48 hours per week. And from an early stage of American industry in 1850 wages had been multiplied by 1930 by 500 percent. Welfare plans generally throughout industry had become very common, and many of the larger industrial units of the country were spending. plans generally throughout industry had become very common, and many of the larger industrial units of the country were spending, prior to 1932, enormous sums in the pursuit of their sense of social responsibility for their workers. All of this happened without apparent injury to industry and without impairment either of the standard of living of the people or the security of our business system or form of government, or impairment of Government credit. It happened in spite of the fact that in effecting it you were always face to face with the cold fact that every time you, or Government, serve a social need an economic problem is created. It may not be insurmountable—your accomplishments have proved It may not be insurmountable—your accomplishments have proved that it isn't necessarily so—but it was a problem nevertheless. When wages are increased and other cost expenditures are made to serve the social needs of the worker—always in itself a commendserve the social needs of the worker—always in itself a commendable object—the economic question of whether the goods can be sold in sufficient quantity at the necessarily higher price is presented. And upon the question of whether or not they can be so sold in sufficient or expanding volume depends the volume of employment that can be sustained in their making. The social needs of the worker are not met by a wage scale that defeats the possibility of selling the goods, and therefore destroys his job. The social needs of a worker in one part of the country are not met by increases in the cost of goods manufactured there which leave them unable to compete with similar goods manufactured elseby increases in the cost of goods manufactured there which leave them unable to compete with similar goods manufactured elsewhere, and therefore force the abandonment of his industry in his section. He can't move—at least he can't in any considerable numbers—and when industry is destroyed in his section it is to all practical purposes relating to his employment utterly destroyed. Similarly, the expenditure of Government funds for relief and employment—under some circumstances a highly commendable policy—creates an economic problem in that it increases the part of the income dollar which recer to the support of Government and

policy—creates an economic problem in that it increases the part of the income dollar which goes to the support of Government and reduces the part which is available for the purchase of goods and services in the making or rendering of which employment is at stake. Maybe the key to that part of the present predicament is to be found in the speed with which the assumption of social responsibility on the part of the Government and of industry has been undertaken in recent years.

undertaken in recent years.

Certainly what business undertook by way of meeting its social responsibilities was not too much. Probably it was too little. But, on the other hand, I think a reasonable approach to our present situation indicates the necessity of an open mind as to whether or not in recent years we have not in some respects, at least, been called upon to go too fast where in former years we may have gone too slow. Something slowed business and maybe that speed too slow. S

Let me summarize what I am reminding you of in terms of your conduct of your businesses under the American free enterprise system and consistently with the public welfare by quoting Mr. Gerard Swope, president of General Electric Co., who was chosen by the President to head the investigating commission sent to Europe in 1937 to investigate certain industrial conditions and procedures and compare them with our own. Mr. Swope said recentity.

recently:

"While I was in Europe in 1937 I made a comparison of the living standards in the different countries I visited with living standards in our own country in terms of the length of time a workman has to toil in order to pay for his rent, food, transportation, electricity, and other items. In all the other countries I found that a workman must toil longer, and in most cases many times longer, in order to provide himself with the necessities of life, and that therefore he has little margin for the acquisition of the comforts and conveniences so widely possessed in America. Therefore, such items as automobiles and electric refrigerators are beyond the reach of the foreign worker.

Therefore, such items as automobiles and electric refrigerators are beyond the reach of the foreign worker.

"The higher living standard in our own country is due in part to our great natural resources, but these alone could not create or maintain it, because many countries with ample raw materials have low living standards. The American standard of living has been built by the American people—the inventor, the scientist, the engineer, the executive, and the worker—each doing the job for which he is best fitted, and all cooperating through the medium of this system which we call American industry. By constantly developing new products, by improving the quality of products and services, by learning to produce them at less cost, and selling them at lower prices, industry has increased the volume of its production, which has brought benefits to the workman, the customer, and the stockholder.

"Obviously we are not, and cannot afford to be, complacent with past accomplishments. A sizeable portion of our people still do

not have a satisfactory living standard, even though they are far better off than many of a generation ago. We must keep everlastingly at the job of creating more goods for more people at less cost, and that is the formula by which we have created and must continue to create a richer life for the people of this Nation."

No; you businessmen are no strangers to the principle that in a democracy—this one in particular—business is to be conducted consistently with the general welfare and in direct aid of it. consistently with the general welfare and in direct aid of it. Neither are you unfamiliar with a sense of social responsibility and the practice thereof. In short, you are not as bad as at some times you may have been led to think. And the realization of that and of all of the support it has in your own personal survey that you can make much more pertinently and effectively than I have made this general one should give you more of that confidence you need—and so many others need—for that recovery we must have. Your complete reestablishment of your faith in the American enterprise system and your rededication of yourself to the task of defending it and of saving yourself the opportunity of operating under it as the only system in all the world that can so efficiently serve the standard of living of the people of this country is your first task as it is my first task in this matter of reestablishing confidence and thereby effecting recovery in this country. And we can do that one thing here and now.

But you say that isn't all; that isn't sufficient. I agree. It isn't sufficient for two reasons: Your confidence in yourself, your poli-

confidence and thereby effecting recovery in this country. And we can do that one thing here and now.

But you say that isn't all; that isn't sufficient. I agree. It isn't sufficient for two reasons: Your confidence in yourself, your policies, your accomplishments, and in the system under which you work isn't all of the confidence you need. You must have some kind of satisfactory confidence in your neighbor, in the general citizenship, on questions of what they are going to demand be done to you and to your business from sources beyond any control of yours. And possibly more importantly than that—since you are still at work and these discouragements Mr. Hopkins refers to haven't stopped you—it is necessary, since we are talking about a recovery to be effected through reestablishing a flow of capital into industry and are promising the impossibility of that except in an atmosphere of confidence, that something be done to develop that confidence; also, in those who own business and who own the idle funds that must be put to work in making replacements, improvements, and extensions and establishing new ventures before we can hope to see men put back to work. The confidence that can bring the recovery we seek must serve both of these ends. And maybe for both groups it is to be found in the same facts and developed in the same way.

Let us then look for a moment at some of the reasons that caused the loss of confidence on the part of these groups to whom we must look for the attitudes and entered the terms that can be the confidence on the part of these groups to whom we must

the loss of confidence on the part of these groups to whom we must look for the attitudes and actions that can effect recovery—the relatively small group who manage industry and business; that enormous group of citizens who own it; and that possibly larger group who own that accumulation of money whose flow into enterprise must be started to enable enterprise to relieve against unemployment.

ployment.

Mr. Hopkins listed some of these reasons, which I have already quoted from his Des Moines speech. Let us remark one more, which quoted from his Des Moines speech. Let us remark one more, which it seems to me has proved so far-reaching that it almost has the character of a background against which all other specific reasons are to be presented. I refer to the change that has been made in the function of government—not wholly new in recent years, but recently so greatly expanded in practice that it all but seems new, and certainly has brought with it far-reaching effects that were unknown or at least inconsequential under the former more limited

Practice of the function.

When to relieve against an appalling emergency government began to serve directly the material needs of the citizen we made a gan to serve directly the material needs of the citizen we made a long step away from our old form of representative democracy, with its high premium on and its encouragement of statesmanship, and moved by that same long stride toward a direct democracy, with its necessary discouragements to statesmanship and even at times, in some situations, its penalties on the practice thereof. That new function—meritorious and even necessary as it may have been—gave the citizen a very direct new interest in his Government and in what it did; and it insured a directness and a continuity of contact with and demand upon the representative by his constituent citizen that was shockingly impressive. And when citizens with common interests banded themselves together to support their common demands this country had its first real introduction to pressure groups. pressure groups.

That development was, of course, perfectly natural—it was to be expected. And it's not necessarily bad or out of order. This is a democracy, thank God. But it has proved bad—hurtful to the a democracy, thank God. But it has proved bad—hurtful to the country—I think, in a number of instances most of which can be accounted for by a single fact. While other important groups were greatly strengthening their voices in the affairs of the Government and were selling their cases to the people of the country, we who are concerned directly with business were losing our voices, or at least not raising them in support of business and were not telling the people of the county what the case of business was or what it meant to them.

I don't mean we should have had or wanted a pressure group.

ness was or what it meant to them.

I don't mean we should have had or wanted a pressure group. We didn't and we don't. In this progressive atmosphere in which we work in this country today the emphasis is not on what should be done to or for business for its own sake or for the sake of those who manage it, or even for the sake of those who own it. The main question today is how what is done to or for business affects it in its relationship to its neighbors in terms of their stake in it, their dependence upon it, and their benefits out of it. After all, the high objective of business in this country is to

continue to serve—and to continue to improve the service of—the American citizen in terms of the standard of living he can have for himself and for his family. In the operation of the great mechanism of business in this country effectively to that end there's necessarily a place for those who furnish the capital and for those who manage the enterprise as well as for those who do the work and those who produce the raw materials. That's why we shouldn't need or want a pressure group.

But, as has already been indicated, there is something else we

But, as has already been indicated, there is something else we need—something, indeed, that we must have—if a measure of confidence effective to restore the flow of capital into enterprise and thereby relief against unemployment is to be built up in this country. We of business, business itself, and the relationship and importance of business in the American manner to the life of the American citizen must somehow and soon come to be much better

understood by the American citizen.

That is our old problem of education—to develop understanding upon which, in turn, confidence can be developed. Much has been upon which, in turn, confidence can be developed. Much has been done, but the problem has lost none of its importance. Still, "this is a race between education and chaos"; and, as time passes, the race gets tighter and tighter, and more and more dangerous. Without dwelling upon that point, which has been so often urged in this chamber, suffice it to say, with a new emphasis justified by the conditions obtaining in this year, 1939, that there, of course, lies the other installment of what you as businessmen can do to aid recovery. If you have resold yourselves to the value and the worth and the service of this American business system to the life of the American citizen, it but remains to sell those same conceptions to your neighbors—to all of your neighbors. Only then will the basis for confidence be complete—confidence on the part of the managers of business, confidence on the part of the owners of business, and confidence on the part of the owners of that vast sum of capital which must flow into enterprise before men can be put to work and which must flow into enterprise before men can be put to work and before the national income can be raised to a point where it can support satisfactorily both the tax requirements and the standard

support satisfactorily both the tax requirements and the standard of living of the people.

Your job and mine in this matter of helping restore such confidence is largely a matter of reminding the neighbors of business of things they already know and of provoking their thinking in terms of what their stake in business is. It is not a matter of our urging security for business for our sakes or for the sake of the owners of business. That would be a hard case to win, and possibly not worth the winning. But business in this country is due to be made secure—is entitled to be made secure—all other reasons aside, for the sake of the neighbors of business, who in their grand total are the American people.

the sake of the heighfolds of business, who in their grand total are the American people.

Theirs is the more important stake and that means that every one of them with a sound mind—and without a subversive purpose—is a potential ally of all those who dedicate themselves to this all-important task of rebuilding the confidence that will aid recovery. Do you know anybody in your community who doesn't want to see recovery? want to see recovery?

Do you know anybody who doesn't wish that a degree of con-

fidence could be developed that would give your community a chance to operate to the full its existing plants, expand them, and even hope for new ones?

Don't the merchants in your community want more and bigger pay rolls turned loose to furnish bigger volumes of business for

them?
Isn't the same true of the filling-station operators, the automobile dealers, the insurance agents, the cafe owners, the laundrymen, the hotel keepers, the service men, the owners of houses and offices to rent, the doctors, the lawyers, the dentists, and the nurses—in short, of all that group that makes up a community and lives very largely on the pay rolls of industry?

Do you know any farmers in the areas around your community who do not know that they are better off in markets for their produce when your factories are busy and you are building more?

And, even more pertinently, do you know any workers in those factories who don't see values for themselves and for their families in busier factories and bigger ones and more of them, and who don't see hurt for themselves in factories closing down or working short time?

who don't see nurt for themselves in factories closing down or working short time?

And lastly, I ask you how many politicians you know who wouldn't be happier if the confidence of the people of this country were so built up that money would flow back into industry, making jobs for men and goods for a standard of living and relieving government of the burden of serving—at the risk of its own destruction—so many of the needs of citizens that if served by industry would pile no burden on government and place no mortgage on the future?

mortgage on the future?

But when you preach that doctrine you'll meet two questions: First, you'll be asked: "Why, if it's that simple, hasn't it already solved itself without even waiting for your preaching?"

Well, for some time now a lot of the American people have been mightily intrigued and quite busy with some highly diverting enterprises. Some years ago we had a rich government that didn't owe too much money, and when emergency developed the need it was pretty hard to see how it could be very hurtful to get a little aid out of the Treasury even if current income did fail to meet outgo. Then, too, there were in the hands of individuals great pools of potentiality whose size afforded much basis for an argument that they should be divided up and distributed. There were some big incomes, too, and it was thought that some division and distribution would be good there, too. That was a bad background against which to try to put on the brakes, especially when the economic needs of many citizens were so pressing

and seemingly could not be served so promptly in any other way, and could be served in that way without—for the moment, at least—any appearance of danger to the general economy of the country. No wonder the brakes wouldn't work.

But all of that is changed. Our Treasury is not as stout as it

was when it owed \$20,000,000,000 less. And it's not strengthened any nor are the people encouraged by the fact that the established drain on it currently is at the rate of \$3,000,000,000 a year more any nor are the people encouraged by the fact that the established drain on it currently is at the rate of \$3,000,000,000 a year more than its intake in spite of the high tax rates that have been established. Moreover, all those pools of accumulated individual wealth have been drawn down or set for drawing down promptly under tax laws that guarantee that we won't have in this country any more very rich men. Whether tragic or constructive the accomplishment of the tasks undertaken in those regards has definitely completed a highly demoralizing phase of the process the American people have been experiencing. It has cleared the atmosphere and ushered in a new phase of the case. We all know now that government isn't rich enough to do everything the citizen may want done, or even assuredly rich enough to do all the things that ought to be done. We know, too, that the pools into which it could dip with a large ladle in our recent past are largely exhausted and that no more such can be established under present tax laws. We are beginning to see that our problem cannot be much longer served out of the accumulations of the past or through borrowings against the future. That means that the time is rapidly approaching when this United States of America must get on a going basis. It's got to be a matter of making it as we go. And the citizen—the neighbor of business—is beginning to realize that, and further to realize that making it as we go is a condition that can't be met either locally or nationally except with a confident, active, expanding, and locally or nationally except with a confident, active, expanding, and prosperous industry. That's why you can expect the seeds of information you can sow now to fall on fertile soil, instead of on that stony soil on which most such seeds fell in the early phase of this experience.

But you'll be asked, too, how can you ever hope for an effective recovery and a solution of the unemployment problem when our frontiers are gone?

They mean geographical frontiers-free land in the West-the most exaggerated contention, I think, that touches this problem. The Indians had more frontier than anybody else who ever lived on this continent, and they had the lowest standard of living. And, conversely, the maximum employment and the highest standard of living. And, conversely, the maximum employment and the highest standard of living we have ever known came years after those frontiers were gone. Frontiers did it, but they were not geographical frontiers; they were frontiers that industry built for itself. They were found in the telephone, the automobile, the radio, the airplane, and a in the telephone, the automobile, the radio, the airplane, and a thousand other things that men are busy making today that were not even known a generation ago. To accept the theory that there are to be no more such frontiers of employment is to assume that all of a sudden and for no known cause American ingenuity has died in its tracks and that research and invention can never again be counted on as elements of our economy.

And there are temporary frontiers, too. Every depression builds

And there are temporary frontiers, too. Every depression builds its own. Brookings Institution in a recent study made this finding: "The expansion of capital required to replace depreciated and obsolete plant and equipment, and to raise the standards of living even back to the 1929 level is sufficient to absorb all of our unemplayment."

No, gentlemen, it's not a matter of lack of frontiers; it's a matter No, gentlemen, it's not a matter of lack of frontiers; it's a matter of lack of confidence as to what is going to happen to business and to the dollar ventured in business. And the answer to that question will be, and can only be, given by the neighbors of business. Your concern and mine need only be that we put and keep the facts about the parts our businesses play in the lives of our neighbors before those neighbors. We are not the army that can protect and preserve. For that purpose and under present conditions we are but the watchmen on the wall with the duty of seeing and reporting. I am ambitious that none of us may fail in either duty.

My Country 'Tis of Thee

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, ladies, and gentlemen, like yourselves, I have wondered if the Pulitzer prizes have any practical value. But last Tuesday I saw in my morning newspaper a reprint of the editorial published in the Portland Sunday Oregonian which won the \$500 Pulitzer prize for the best editorial last year.

Thousands and thousands of copies of that beautiful and practical editorial have been published in leaflet form, and now newspapers all over the country have reprinted it. Its title is "My Country "Tis of Thee," and I beg leave to refresh your memory by quoting some of its powerful lines. I do this with high pride in the skill of its author, Mr. R. G. Callvert, who gives us a new and deathless picture of the peacefulness of our native land. He writes:

In this land of ours, this America, the man we choose as leader dons at no time uniform or insignia to denote his constitutional position as Commander in Chief of armed forces. No member of his Cabinet, no civil subordinate, ever attires himself in garments significant of military power. When the Chief Executive addresses his fellow countrymen, goose-stepping regiments are not paraded before him. When he speaks to the civilian population it is not over rank upon rank of helmeted heads.

In this land of ours, this America, there is no fortification along the several thousand miles of the northern border. In the great fresh-water seas that partly separate it from another dominion no naval craft plies the waters. Along its southern border there are no forts, no show of martial strength.

In this land of ours, this America, no youth is conscripted to labor on devices of defense; military training he may take or leave at option. There is no armed force consistent with a policy of

In this land of ours, this America, there is not a bombproof shelter and a gas mask is a curiosity. It is not needed that we teach our children where to run when death hawks darken the sky.

In this land of ours, this America, our pledges of peace toward our neighbors are stronger than ruler's promise or written treaty. We guarantee our pledges by devoting our resources greater than the resources of any other nation, to upbuilding the industries of peace. We strut no armed might that could be ours. We cause no nation in our half of the world to fear us. None does fear us nor arm against us.

In this land of ours, this America, we have illuminated the true road to permanent peace. This liberty, this equality, this peace, are imbedded in the American form of government. We shall ever retain them if foreign "isms" that would dig them out and destroy them are barred from our shores. If you cherish this liberty, this equality, this peace, then defend with all your might the American ideal of government.

To these brave words of the prize editorial, as a Representative in Congress, sworn to uphold the American ideal of peaceful government, I say "Amen." I represent the State and the city of New York, which is now holding, not a parade of death and destruction, but a peaceful World's Fair. In the not too distant future I confidently believe the private people of Europe and Asia will detect that war is a great illusion, a costly, evil, and barbarous fraud. Then, instead of goosestepping at the feet of sword-rattling dictators, they too will devote their energies to building World's Fairs and to other symbols of the great fellowship of humanity and the brotherhood of all men.

Our Natural Resources

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

RADIO ADDRESS BY HON. JOHN M. COFFEE, OF WASHINGTON, APRIL 29, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following address delivered by me at a luncheon, Saturday, April 29, 1939, given under the auspices of the People's Lobby, Washington, D. C., at Wesley Hall, located in the National Capital. This speech was broadcast over a national hook-up of the National Broadcasting System:

Of all man's natural possessions, few are more valuable than those that provide power to aid in lightening his toil. The scientific discoveries that have at last made plenty possible for everyone depend upon power and upon those natural resources that provide it, namely, oil, coal, water power, and natural gas.

BASIC RESOURCES MUST BE PRESERVED

Such resources, upon which the happiness and prosperity, and indeed, even the orderly life of our country depend, should obviously be the possession of our entire people. Yet we find that these invaluable national assets are principally in private ownership; and in the control not of a large segment of our population but of a small and ever-narrowing group.

Such a condition is full of danger to our country. Private property, whatever may be its advantages in other parts of our national economy, is a definite evil when existing in natural resources. Private property means operation of them for private gain and it is this lure of profit that has gutted our mines and drained our oil wells at a rate unsurpassed in any other country in the world.

NATURAL RESOURCES ARE EXHAUSTIBLE

On her supplies of oil, coal, and gas Nature appears to have placed an absolute limit. When this is reached those supplies are gone for good. We shall then have to do without these most valuable commodities or use inferior substitutes while Nature replenishes her ravaged storehouse over future geologic eras.

That these treasures should be subject to competitive extraction and marketing in order to hasten their consumption is utter folly; and our descendants will certainly look back with hatred and shame upon ancestors who could have tolerated such carelessness of their

upon ancestors who could have tolerated such carelessness of their

own children's future.

WANTON WASTE MUST BE ENDED

Certain evils of private operation in mining coal or extracting oil and gas are outstanding. In the production of coal, for instance, in order to obtain the maximum profit operators have often mined the most productive seams first in such a way as to render forever inaccessible, or available only at far greater cost, the more numerous thinner seams of lesser productivity. Again, for want of sufficient resources, or because it was too expensive or would yield no immediate profit, private owners have also tolerated enormous mine fires that sometimes burn for generations over thousands of underground acres.

In oil production, competition has caused and still causes a frightful waste of natural gas. Producers often blow off gas into the air, or put a torch to the escape jet so that the oil, on which more money can be made, will come sooner to the surface. This results in much oil being forever lost underground, whereas a more temperate procedure would have utilized the gas to force up more of the oil.

DUPLICATION IN OIL MARKETING

Another waste in private ownership, though more of surface structures, perhaps, than of the oil itself is offsetting, and the extravagant drilling of excess wells on property-line borders in order to divert oil underground from a producer that has brought in a gusher. Worst of all, however, the greed for profit results in artificially pushing consumption. All the devious arts of advertising and "scientific" marketing are employed to make us use up as fast as we can irreplaceable national treasures.

Conservation, thrift, and prudence have had no place in a scheme of things where despoliation of natural resources for private gain

of things where despoliation of natural resources for private gain was the rule. The voice of experience is loud and clear; until such a rule is changed this ghastly waste will continue.

PRIVATE EXPLOITATION

Not only has private exploitation meant a rapid exhaustion of our natural treasures, but it has also proved to be an exceedingly inefficient method of operation. From the standpoint of duplicate facilities alone, two or three times as many oil wells, refineries, mine outlets, pipe lines, and coal railroads have been put up as were needed.

Moreover, where the lure of gold is the sole incentive to activity, beauty vanishes. Today most oil or coal fields are as ugly as city slums, and some of our fairest acres are coated with films of soot or grease and blankets of poisonous air. To be sure, public ownership would not eliminate the derrick or the tipple, but it might considerably reduce their numbers. It could and would transform company towns into garden cities; and if all scars on Nature could not be removed, those that remained might at least assume the sturdy character of functional order in which perhaps the beauty

of logic might not be too deeply concealed.

Private ownership, however, will continue to mean chaotic and planless production, ugliness, and waste.

MISTREATMENT OF LABOR

Labor, also, suffers from private ownership of our natural resources. In their struggle for profits from a daily diminishing source mine and well owners, it seems, have been more than commonly ruthless in exploiting their workers. The first labor spies in American history invaded the coal fields of Pennsylvania at the time of the Molly Maguires.

Colorado coal fields saw the Ludlow massages 50 years later 50.

Colorado coal fields saw the Ludlow massacre 50 years later, 50 years which in the oil industry were marked by the violence of the Rockefeller interests as they tried to strangle every attempt of their workers to organize to improve their conditions. Harlan County, Ky., the coal fields of southern Illinois, and the Commonwealth of Pennsylvania have all seen operators attempting to crush labor with rifle and machine gun, and with deputized thugs or with their more highly organized fellows, the coal and iron

THE CONSUMER HAS BEEN MULCTED BY CORPORATE AVARICE

On the consumer, too, heavy tribute is levied to help the private owners of natural resources amass their giant fortunes. Oil has long been a virtual monopoly and the coal and water-power industries have many monopoly features. In 1936, for instance, Standard Oil of New Jersey alone made a profit of \$144,000,000. Such a vast profit comes from the joint exploitation of the worker and the consumer. Since these are usually the same individuals it simply means that those who are underpaid are also overcharged, while the lords of coal and oil continue to pile up enormous fortunes from resources which should be our common property.

I am firmly convinced that the time has now come to make these resources the possession of the entire people. I propose that the public hand, which extended these treasures to private individuals in a trust that they have so abused, should now reclaim its own. I propose, in short, that the people of the United States should take head the title to a patiental inheritance that by patient right take back the title to a national inheritance that by natural right should belong to all and not to just a few.

H. R. 3121

To that end I have introduced into the House of Representatives To that end I have introduced into the House of Representatives a bill (H. R. 3121), known as the national natural resources bill, that would restore to our citizens the ownership our forefathers once had of the natural wealth of this country in the sources of power. It would do this by setting up the National Natural Resources Corporation, with power to acquire and operate as a publicly owned unified system all the coal, oil, natural-gas, and electrical-energy industries of the United States.

BENEFITS ACCRUING FROM THIS BILL

Passage of such a bill at this time is an essential part of any progressive program that would have a larger number of our citiprogressive program that would have a larger number of our citizens enjoy a greater share of our national wealth. Everyone today pays a greater or lesser toll to the private owners of these power resources. Eliminate that toll, and more money at once would be available for food and shelter, for health and schooling. The businessman could afford higher wages and lower prices, as his expenditures for power to run his machines would be reduced. The motorist could go farther for the same money; families could cook and heat and light their houses for less; and conveniences now looked upon as luxuries on account of their cost would be made. looked upon as luxuries on account of their cost would be made increasingly available, even to the very poor.

THE BILL APPLIES ONLY TO SOURCES OF NATURAL POWER

Although far-reaching in its aims, this bill is both conservative

Although far-reaching in its aims, this bill is both conservative in its methods and limited in its scope. It applies only to sources of natural power, the prime movers of our civilization. Natural resources in metals and forests, in land, soil, or wildlife remain untouched in their existing ownership.

By no means, however, is this a confiscatory measure. On the contrary full payment is provided for by the Government in an equitable manner that would protect the interests of the investor as well as the consumer public. Weight would be given, not only to past earnings, but also to future prospects of the companies in establishing a fair value for their securities. Negotiations with security holders hold first place in taking over the properties, and only if these are unsuccessful may the corporation exercise the right of eminent domain.

ADMINISTRATIVE PLAN OF THE BILL

The administration of the act through a board of five directors appointed by the President is simple and uncomplicated. Indeed it is far simpler than the labyrinthine corporate structure that today conceals from the public eye the activities of the private owners of natural resources. Furthermore the interests of labor are safeguarded. All employees of the corporation will have the protection of civil service and are guaranteed compensation benefits, retirement pensions, and full rights of collective bargaining.

Finally, this corporation is specifically directed to acquire all coal, water-power, oil, and natural-gas properties in the United States as quickly as possible, together with the equipment necessary for their operation. At the end of 18 months continued private production or sale of these resources is forbidden.

Passage of this bill can do much to make America a happier land to live in. Members of the radio audience, I invite your support of this bill. Write to the Clerk of the House of Representatives, Washington, D. C., for a copy of this bill. Remember its name, the national natural resources bill, H. R. 3121.

I trust you who are sympathetic will do everything possible to foment widespread popular support of this measure. We, the people of this country, will then be well on the road to restoring to ourselves and to our children the national treasure that should be and will be our birthright again. The administration of the act through a board of five directors

will be our birthright again.

I thank you.

Foreign Relations-Congress or the President-From the Republican and Democratic Viewpoints

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

RADIO DISCUSSION BY HON. ROBERT A. TAFT, OF OHIO, AND HON. T. V. SMITH, OF ILLINOIS, APRIL 25, 1939

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and important discussion on Foreign Relations-Congress or the President. disclosing the Democratic and Republican points of view on the subject, as presented by Senator Robert A. Taft, of Ohio, and Representative T. V. SMITH, of Illinois, Tuesday, April 25, over the Columbia Broadcasting System:

Announces. From a Republican point of view, as presented by Senator Robert A. TAFT.

Senator Tarr. Citizens of the United States of America, the express powers given by the Constitution of the United States to the President in respect to foreign relations are quite limited: "He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall nominate, and, by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers, and consuls." But from the nature of foreign relations, and from the hearing of the Government the second from the and from the beginning of the Government, the courts and the Congress have held that the President's power over foreign relations is predominant. The Nation cannot speak with a multitude tions is predominant. The Nation cannot speak with a multitude of voices, and the President must be the person who conducts all negotiations with foreign nations. The Supreme Court has said: "In this vast external realm, with its important, complicated, delicate, and manifold problems, the President alone has the power to speak or listen as a representative of the Nation. He makes treaties with the advice and consent of the Senate; but he alone negotiates. Into the field of negotiation the Senate cannot intrude; and Congress itself is powerless to invade it."

On the other hand, Congress, and particularly the Senate is

On the other hand, Congress, and particularly the Senate, is On the other hand, Congress, and particularly the Senate, is given extensive powers and duties with reference to any Government action other than negotiation in the foreign field. Only Congress may regulate commerce with foreign nations. Only Congress may declare war. Only Congress may raise and support armies and provide and maintain a navy, although the President is Commander in Chief when they are raised or provided. Only Congress, therefore, has power to act in the field covered by the Neutrality Act, involving the embargo of shipments abroad, restraint on American ships, restraint on the loaning of money or credit to foreign nations.

The President is responsible for what this Nation says to foreign nations, but he must be very careful in his statements as to what this Nation will or will not do, because, unlike most executives in European countries, he has not the final power to put his foreign policy into effect.

The position sometimes taken that Congress should keep entirely out of foreign policy is wholly contrary to the Constitution. Congress has no business to interfere in negotiations with foreign governments, but it has not only the right, but the duty, to consider the policies which involve specific legislation like the Neutrality

There is another careless statement that no American, in Congress or out, should criticize anything the President does or says in his relations with foreign nations, because politics should stop at the water's edge. I quite agree that foreign policy is not a partisan issue; and, as a matter of fact, there is just as much difference on the Republican side today as on the Democratic side. But if in time of peace any citizen feels that the President's handling of foreign policy is wrong or likely to lead to a war which he thinks unnecessary, it seems to me his right and duty to state fact clearly on foreign poincy is wrong or likely to lead to a war which he thinks innecessary, it seems to me his right and duty to state fact clearly and do whatever he can to change a policy which the thinks likely to result in war. The essence of democratic government is that men shall be free to express their opinions on any subject, certainly on a subject as vital as foreign relations. No President tainly on a subject as vital as foreign relations. No President should be permitted to lead the country gradually into a situation where a declaration of war is almost forced on Congress without full opportunity for criticism. The people whose very existence may be terminated by war should have full opportunity to hear both sides and approve or disapprove the preliminary steps of any policy, and so it is entirely proper that Congress and Representative SMITH and myself, as junior Members of it, should discuss our foreign policy, whether that discussion involves criticism of the President or not.

Everypody in the United States today asserts that he is for peace.

Everybody in the United States today asserts that he is for peace, though some of the weapons to secure it seem to me rather warlike. Everybody in the United States today asserts that he is for peace, though some of the weapons to secure it seem to me rather warlike. The basic purpose of the Neutrality Act and the amendments now being considered is to keep the United States out of war. I believe that most of the provisions of that act tend to accomplish that purpose. The cash-and-carry provisions, providing that credit may not be given to governments engaged in war, certainly prevent our acquiring a financial interest which may lead to our support of one country against another. The provisions prohibiting loans directly to such governments have the same effect. The prohibition against American vessels carrying arms to belligerents should prevent incidents of the kind which led to our joining in the World War. The prohibition against American citizens traveling on vessels of nations involved in war is likely to remove a cause of war if such a vessel is sunk by an enemy.

The only provision in the Neutrality Act which seems ineffective to me to aid peace is that which prohibits the shipment of arms, ammunition, and implements of war to belligerent states. Since we are selling on a cash-and-carry basis the materials from which such munitions may be manufactured there does not seem any great difference in principle in the shipment of munitions. Nor do I see that any nation can object to other nations buying arms in this country if the same market is open to every nation which can approach it, and so we give them no cause for war. I cannot believe that inability to get arms from us will prevent a nation going

to war, for it can build its own munition plants and buy the raw materials from us. But the refusal to sell any arms discriminates against small nations which have no arms plants of their own. I should be inclined to favor an amendment of this section of the act to permit the sale of arms to any nation on a cash-and-carry basis.

But I should be very much opposed to the Thomas amendment and to any other amendments which give the President any power to discriminate between different nations according to his idea as to discriminate between different nations according to his idea as to which may be the aggressor in a particular war. If we begin to take sides in foreign disputes, we will almost certainly become involved in such disputes. From George Washington to Woodrow Wilson a policy of neutrality has always been considered as likely to keep us out of war and benefit this country. George Washington said: "Europe has a set of primary interests which to us have none or a very remote relation. Hence, she must be engaged in frequent controversies the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to complicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or emmittes." Woodrow Wilson insisted on a complete neutrality for 2 years, until direct interference by Germany with our own citizens and rights compelled us to war. and rights compelled us to war.

and rights compelled us to war.

If a war occurs in Europe and our Government deliberately sides with one nation or group of nations and assists that nation by embargoing exports to its enemies, it will not be long before our people identify their interests completely with one side. In these days of propaganda, all of the propaganda would come from that side. The Government itself, having taken sides, would tend more and more toward war until we would find ourselves first financing and the grapped that the grapped that the grapped that the grapped have the favored patting. The slightest and then supporting with troops the favored nation. The slightest incident with the nation against whom we discriminated would arouse, both in the people of that nation and in our own people, the intense bitterness which leads inevitably to war. I am pleased that even Senator Pittman, in his amendments of the Neutrality Act, proposes no power to the President to discriminate. Should a situation ever arise, after a war has begun, in which our interests seem to be directly involved in the result, Congress can determine

at that time whether or not to declare war.

at that time whether or not to declare war.

The President's position seems to me much too warlike. A year ago in Chicago he declared his belief that we should "quarantine the aggressor nations." In his opening speech to Congress he said: "The defense of religion, of democracy, and of good fath among nations is all the same fight. To save one we must now make up our minds to save all." It is somewhat difficult to see how we can save democracy and good fath among nations by a policy of mere defense of the United States. The President said further in that address that we cannot safely be indifferent to international law-lessness anywhere in the world, and cannot let pass, without effective protest, acts of aggression against sister nations. The word "effective" suggests armed intervention. The President, however, suggests that he does not mean armed intervention, and says: "There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governeffective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people." This must mean economic sanctions or embargoes against foreign nations, which, in my opinion, would abandon our whole historical policy of neutrality and lead directly to war.

The President seems to me to accept too easily the assumption that we will become involved in a European war. In leaving Warm Springs 2 weeks ago he said: "Til be back in the fall if we don't have a war." Finally, after his return, he endorsed whole-heartedly an editorial in the Washington Post which interpreted his Georgia remark as a threat to Germany and Italy that we would join England and France in case of war. That editorial said: "Nothing less than the show of preponderant force will stop them, for force is the only language which they understand." The President "made it plain that a war forced by them would, from the outset, involve the destinies of a nation which, as they fully realize, is potentially far stronger than Italy and Germany united."

There are plenty of other people in the United States who believe that we should threaten to join in a European war. Some of them would frankly be in favor of taking, immediately, an active part in The President seems to me to accept too easily the assumption

would frankly be in favor of taking, immediately, an active part in behalf of England and France if war occurred. Others argue that if there is a European war we are bound to become involved sooner if there is a European war we are bound to become involved sooner or later, and if we threaten to join England and France we will decrease the chances of war. I do not accept this argument. I do not see any reason why we must necessarily become involved in a European war if the people do not wish it. If we are determined to stay out of such a war, we can stay out of it. It is a question of our determination to do so. Those who argue that we cannot keep out are really in favor of going in. I believe we should stay out of it, and can.

The argument is that we should join England and France first, in order to save democracy in Europe, and then to prevent Hitler and Mussolini from overrunning the United States. I do not believe that a war in Europe, no matter what its result, would ultimately assist democracy in the world. As a result of the last war, half the democracies became dictatorships.

The line-up in Europe today is more one between nations, as in 1917, than between forms of government. Already we see lined up on the English and French side the autocracies of Poland, Rumania, Greece, and Communist Russia. A practical dictatorship has been established in France. Before such a war were over we might find communism or fascism in control in England and France, even if the war is successful from their standpoint. We are primarily interested in the preservation of a republican form of government in the United States, not in Europe. If we join in another world war, I doubt if we could maintain such a government in this

country. There would be an immediate demand for arbitrary power, unlimited control of wages, prices, and agriculture, and complete confiscation of private property. We would be bound to go far toward totalitarianism. It is doubtful whether we would ever return. War is the enemy of democracy. Our best service to the cause of democracy is to keep it alive in the United States, and provide a standard to which the world may in time return.

Nor do I believe that we face any danger from Germany or Italy. We can defend our position in North America and the Caribbean.

Nor do I believe that we face any danger from Germany or Italy. We can defend our position in North America and the Caribbean against the world if we have to do so, and that very fact means that we will never have to do so. There is some selfish reason for all of Hitler's and Mussolini's acts of military aggression up to now, outrageous as those acts have been. But it is hard to see any reason for a military attack on the United States. Germany and Italy will never be released from the complications of the European situation to such an extent as to become a threat to the United States.

United States.

United States.

Those who desire the repeal of the Neutrality Act, those who favor the President's apparent position, may talk of their affection for peace, but they have already accepted in their minds the thought that we should take an active part in a European war if it occurs. They have developed the same callousness to war which has existed in the past, and they do not even admit to themselves that it involves the suffering and death of millions of American under the most hourible circumstances. Modern war Americans under the most horrible circumstances. Modern war is more terrible than any past war. It involves the unlimited slaughter of civilians as well as soldiers. If we had been in the last war from the beginning, as these people would have advocated, we would have lost millions of men instead of hundreds of thousands. Almost any solution is better than war, and certainly we should not admit that the welter of different races in Europe and the inevitable conflicts which constantly result should drag

and the inevitable conflicts which constantly result should drag us into a maelstrom of destruction.

I hope the President does not mean what he seems to say. Perhaps he is only threatening Germany and Italy, without intending to carry out that threat. But such a course is dangerous, for it may lead England and France into taking a position they cannot maintain without our active assistance. It might even encourage a too aggressive attitude, which the French at least have often adopted in the past. Let us not threaten anything unless we intend to carry out the threat. Our bluff might be called. Finally, the President should be exceptionally careful about promising support in war, which he cannot give without action of Congress, for Congress accurately reflects today the determination of the American people that they shall not become involved in European war.

Announcer. From a Democratic point of view, as presented by Representative T. V. Smith, of Illinois.

Representative Smith. In some lands differences between patriots end at the boundaries in trying times like these. Or are these try-

end at the boundaries in trying times like these. Or are these trying times? I could not escape the impression from the Senator's speech that because he's secure he thinks everybody's secure, and, ing times? I could not escape the impression from the Senator's speech that because he's secure he thinks everybody's secure, and, therefore, that anybody who talks of war is warlike, trying to create war. Particularly he seemed to suggest that any American who tries to prevent war is endangering the peace of the world. Bickering along, the Senator has jockeyed himself into a threefold error. He is as obviously wrong in dramatizing a cleavage between Congress and the President in foreign affairs as he is, after the cleavage is made, in taking sides against the President's honest efforts to keep us out of war by helping to prevent horrors of war for the whole world. With war and peace at stake, I cannot believe my fellow citizens primarily interested in a jurisdictional dispute over the dogma of separation of Federal powers, and I will not believe them indifferent to the problem of prevention.

I know indeed from my mail that you are immeasurably more interested today in what is done than in who does it. You are justly impatient with bickering as to who shall lead when the world's smoldering with passion and is blazing here and there into flame. I shall return to the minor issue of who is to lead only therefore after getting back into strong focus our common desire for peace, and our deep faith in the possibility of world-wide prevention. This desperate desire for peace—I know it as much from my heart as from my mail—is the one fullest thought in America today. I do not know of a single Congressman who does not share with the President and with you this concern over war and this common will to peace. Our differences have to do with ways and means, not the end of peace. That said, and solemnly said, let's look at the Senator's bickering against the President, our strong leader for peace.

The Senator is brought round by the bold words of the Supreme Court into admitting that "the President alone has the power to speak or listen as a representative of the Nation." He is even brought to admit that "into the field of negotiation the Senate cannot intrude; and Congress itself is powerless to invade it."

But still he bickers at the present President's magnificent use of this exclusive constitutional initiative, accusing the President of helms wealing and even of contemplating light in the contemplating the president.

of this exclusive constitutional initiative, accusing the President of being warlike and even of contemplating lightheartedly our embroilment in Europe. Such easy imputations against the Chief Executive of this Nation, any Chief Executive of this Nation, is to me downright saddening. I will not be so caught up in the spirit of debate, however, as to reply in kind. Walter Lippmann has replied appropriately. Arthur Krock has replied appropriately. I imagine the Senator's conscience will in time reply appropriately to this abuse rather than right use of our splendid heritage of free speech and open criticism.

I am moved, the rather, as a student of American life to inquire into the causes of such intemperate speech on the part of a conservative. Partly, I suppose, it is merely the tactics of the "outs"

who want in. We all do this more than is to my liking. But more importantly, the Senator is guilty of this indiscretion because he sees the fact without seeing the reason for the fact of the executive leadership declared so forcibly by the Court. And yet he might have learned the reason as well as the fact from the Court itself. In the same decision from which he quotes the reason follows what he

same decision from which he quotes the reason follows what he quoted. Let me give you the reason in the language of the Court: The President, "not Congress, has the better opportunity of knowing the conditions which prevail in foreign countries, and especially is this true in time of war. He has his confidential sources of information. He has his agents in the form of diplomatic, consular, and other officials. Secrecy in respect of information gathered by them may be highly necessary, and the premature disclosure of it productive of harmful results * * *."

Thus the Supreme Court (1936) on the reasons for Executive leadership in foreign affairs. The trouble with Senator Taff—If I may speak as frankly of him as of myself—is that he doesn't know what he's talking about. I'm convinced that, though he's a Senator, he knows as little about foreign affairs as I admit that I know. Indeed, I believe he knows less; for, like old Socrates, who knew that he didn't know, I know, at least, that others know more than I do and that it is knowledge that counts here more than all our prejudices put together. Mr. Taff and I are both midwesterns with the prejudices of our region around us and the ignorance of our offices about us. We appropriate several hundred thousand dollars a year, however, so that somebody may know more than we know and may the veguidance force we interpreted before the better the circum. however, so that somebody may know more than we know and may give us guidance for our ignorance before we begin to give you guidance in your ignorance of foreign affairs.

Think a moment concretely of what the Court gave as reason for trusting the President: "He has his confidential sources of information. He has his agents in the form of diplomatic, consular, and other officials." Yes, indeed. He has at this moment 57 ambassadors and ministers and 722 consular officials stationed in listening posts throughout the complex web of this whole troubled world. A half hundred trained diplomatic officers, I repeat, and more than 700 trade specialists out there listening and reporting more than 700 trade specialists out there listening and reporting daily upon everything from a closing market for hairpins to an opening avenue for a new plea for peace. "Daily." did I say? Why, Mr. Stimson, our late Secretary of State, quoted to the Senate committee the other day a remark of his predecessor "that nothing could happen in this world of any importance that did not come over his desk within 2 hours." Mr. Stimson added: "Now, certainly, that does not happen to the Members of Congress." It does happen every day, however, to the Secretary of State and it happens even faster to the President of the United States. The world is today literally at the other end of the telephone. The President knows what there is to be known; and yet he must tell little that he knows, lest indiscretion further inflame the world. He must sit by with heavy heart while Senators accuse him of fingering lightly the threads of fate, and he must wear his heart out for peace to the tune of senatorial criticism that he is warlike. If he drops, at the threads of face, and he must wear his heart out of peace to the tune of senatorial criticism that he is warlike. If he drops, at Warm Springs, a cautious word (interpreted most incautiously by the Senator) to let the dictators know that he knows what they're up to and that we don't like it, he becomes to dictators and to some Senators alike one engaged in foreign ballyhoo to save his

face at home.

Let no Senator have the comfort of self-pity to shield him from the consequences of such irresponsible criticism as this. Nobody wants or means to stop free criticism, but we all join in hoping that Senators will progressively learn to talk like statesmen rather than like street urchins engaged in free name calling to see who can do it the loudest and the naughtiest. The Gallup poll shows that the American people are not partners in this perpetration against the President as our leader. They overwhelmingly share his feeling that we are hit when our religion, our democracy, and our moral faith are attacked. They share the fear that war threatens the world. They share too the hope that a conference of nations can help us all more than a mere do-nothing policy.

It was, I admit, the absence of this latter faith in the Senator's speech that disturbs me most of all. He seems to think that Europe is not on the brink of war. I don't know who Senator Taft's private ambassadors are. Is there a Cliveden Set operating behind the scenes to provide us with an American Munich by telling us to be merely neutral until we cannot be neutral at all? Whatever the grounds of Senator Taft's complacency, our President, who has a half hundred diplomatic and 700 trade ambasdent, who has a half hundred diplomatic and 700 trade ambassadors abroad, thinks that war, terrible war is imminent if things are allowed to drift. Mr. TAFT may be right and the President wrong. But Chamberlain, since Europe's Munich, has lost his face and his courage for nothing, unless there's daily danger of doom impending from the air. If there's not daily danger of war in Europe, what does the Senator make of the apparent extremity that drives Britain to conscription, a measure heretofore faced only in the heat of war itself?

It may be that Senator TAFT thinks so too but has no faith of

only in the heat of war itself?

It may be that Senator Tart thinks so, too, but has no faith at all in efforts to prevent war. Yet he has great faith, he says, that neutrality can keep us out of whatever comes if only we will observe neutrality strongly enough. The very best way to keep out of war is to keep war out. Who doubts it? Those who surrender to fate in Europe will have to meet fate face to face with one more reserve lear. lost. We might stay out of a raging war; we're certain to stay out of a nonexistent war. Prevention is so infinitely the better bet for us to avoid war that nobody who cares will spare any effort at

prevention.

I emphasize this because every criticism made against the President's use of his constitutional power is directed at his efforts to prevent war. And not a critic has proposed a single other thing

to do, so far as I can recall, to prevent war. They want us to stay out, as you and I want to stay out. But they seem resigned to let war come and then hope that we can stay out. Only that hope is realistic which uses all peaceable prowess to prevent war at all,

anywhere.

All honor to the President, who is straining might and main to All honor to the President, who is straining might and main to keep us out of war by keeping war from coming to anybody. He has suggested a just approach to raw materials, as well as a gracious respite from the groaning tension of awful armaments. He might have done more but for critics that want nothing done; but how could he have done less, knowing what he knows, seeing what he sees, feeling what he feels? It is too early to say that he may not be successful in his latest bid against almost certain war in Europe. If those in whose hands our future fate is, since it is no longer wholly in our own hands, can listen to reason, they have been given the most compelling reasons of our generation to leave off coercion and to come to conference with guns parked outside the door.

III

If this heroic effort fail, God grant it fail not through irresponsible criticism of the President here at home during these days of waiting and hoping for a reasonable reply from Germany. If this effort at prevention fails, then we shall unite ourselves in a drive for the wisest possible neutrality. I join Mr. Taff at that point in a hope as firm as it is desperate. There is no fate that foredooms us to war, even if war comes to Europe. Our best chance seized and lost—the chance to prevent—then we'll hug our last chance, the chance to avoid the chance to avoid.

the chance to avoid.

But that chance will prove the less if we make neutrality mean isolation. As a midwestener, I'd personally prefer complete isolation. Why not let the Old World go its old way of war and the New World keep the peace it has? Well, prejudice apart, we cannot possibly isolate ourselves from the fear of airplanes and the insistence of ideas. Even if the airplanes elect to stay away—there's nothing else to keep them away—the ideas undo us, especially when they as ideals get completely outraged by those who boast over the radio their outrages and threaten more and more of the very same. The trouble with us Americans is that we aren't used to having to choose between two evils. We don't want war. But we also got all fussed up at the thought of death rained from the air on women and children, of cities razed and cruelty enthroned. There is no isolation of ideas. Our sympathies undo enthroned. There is no isolation of ideas. Our sympathies undo us. The will to power must be made of sterner stuff. Moreover, economic isolation would so dislocate our whole national life that nobody, I fear, but a philosopher who lives on humor and high thinking would stand the gaff. Jefferson tried the embargo until the people decided the cure of isolation worse than the disease—so the War of 1812. We must say, in general, with an ancient sage, that isolation is for gods and brutes alone. Alas, we Americans are not gods, and God grant that we be not brutes.

Our neutrality cannot mean isolation. It must mean self-defense. But it must mean a very spacious self-defense. The Monroe Doctrine involves us in defense to the south of us, and in de-

rense. But it must mean a very spacious self-derense. The Monroe Doctrine involves us in defense to the south of us, and in defense to the north of us. That's a big order—two continents, you know, and some scattered islands. What kind of neutrality can a country have that has already undertaken to defend two whole continents, in an age of radios and airplanes? We have accepted a man's job, and we must go at it in a man's way.

It must be a bold neutrality. Only that kind is open to us. Such a neutrality may not "name the aggressors," but it will mark who they are when they boastfully name themselves by short wave and through ugly deed. It will not purport to sympathize with crime nor stoop to recognize pillage. It will not be bullied into restricting its trade; but will do so only out of prudence and from a sense of caution. It will arm itself adequately and will keep its powder dry. A bold neutrality will harm friends as little as possible and will help its friends' enemies as little as possible. But most of all and best of all, it will leave inaction to the reactionaries, and will push for prevention while yet there's time. It will not lie down on peace just because tyrants shout for war. A bold neutrality will be what our neutrality has become under our dynamic leader—a strenuous struggle for peace through every peaceful means that's humanly possible.

Proposed Amendment of Merchant Marine Act Regarding Ship Construction

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1939

Mr. IGLESIAS. Mr. Speaker, under leave to extend my remarks in the RECORD I want to refer to bills H. R. 6118 and H. R. 6117, which amend the Merchant Marine Act regarding ship construction, extending the effects of said act to Puerto Rico.

It seems to me these two bills are of great importance for the welfare and security of the people of the island and will no doubt contribute to remedy the unemployment situation uplifting the progress of Puerto Rico.

With the purpose of explaining the above contention and to demonstrate the importance of approving such bills on behalf of Puerto Rico, I am inserting herein the essence of

Section 2: Section 211 (a) of such act is amended by inserting, following the comma after the word "markets" and before the word "which", in the fifth line, the following: "and between ports in continental United States and Puerto Rico"; and by inserting following the comma after the words "United States" and before the word "and", in the seventh line, the following: "and the commerce between continental United States and Puerto Rico."

Section 5: Section 502 (b), as amended, of such act is further amended by adding at the end thereof the following:

The term "domestic shipyard," as used in this section and elsewhere in this act, means a shipyard owned by a citizen of the United States and located within the United States, including Hawaii, Alaska, Puerto Rico, and the Virgin Islands; and the term "American shipyard," as used in this act, means the same as "domestic shipyard."

Section 7: Section 601 (a) of such act is amended by changing the period at the end of the first sentence to a comma and inserting the following: "or in an essential service in the commerce of the United States between continental United States and Puerto Rico"; and by inserting, following the comma after the words "United States" and before the word "and" in the eighth line the following: "or the commerce of the United States between continental United States and Puerto Rico"; and by changing the semicolon after the word "commerce", in the seventeenth line, to a comma and inserting the following: "or commerce between continental United States and Puerto Rico"; and by changing the semicolon after the word "commerce", in the twenty-first line, to a comma and inserting the following: "or commerce between continental United States and Puerto Rico" (H. R. 6118)

Section 2: Section 702 of such act is amended by striking out the words "on the Atlantic and Gulf and Pacific coasts", in the second line of said section, and by adding at the end of the section the following: "The term 'domestic shipyard' as used in this section and elsewhere in this act means a shipyard owned by a citizen of the United States and located within the United States, including the Territories of Hawaii, Alaska, Puerto Rico, and the Virgin Islands; and the term 'American shipyard' as used in this act means the same as 'domestic shipyard.'" (H. R. 6117.)

Under the provisions of the Merchant Marine Act, 1936, as amended, ship differential construction subsidies are not allowable unless the construction of the vessel is performed in a shipyard "within the continental limits of the United

States."

Whatever motive may have prompted the Congress in that act to discriminate against Puerto Rico, Hawaii, Alaska, the Virgin Islands, the Canal Zone, and the other outlying possessions of the United States is not known. If any substantial reason existed for such discrimination at the time the Merchant Marine Act, 1936, was passed, no such reason is now

The fact that no important shipyard then existed or now exists in any of the Territories or possessions seems to be beside the question, for many concerns within the continental United States without extensive shipyards are bidding for contracts for ship construction, which involve differential

construction subsidies.

Puerto Rico has had for years an excellent repair shop where ship repairs are made, and the efficiency of the workmen in this line throughout the years has been demonstrated. It is understood that this plant could promptly be equipped to build vessels up to 3,000 tons capacity, and that the plant is as well fitted now as are many concerns in continental United States that are bidding for Government ship-construction contracts.

Be that as it may, certainly Puerto Rico should at least have the chance-which it does not now have-to participate in the ship-construction program of our Government. A few contracts for the building of vessels in Puerto Rico would help to relieve the unemployment situation there, which is not only a problem—as it is in the States—for the local administration but for the Congress as well.

The loyalty of the people of Puerto Rico to our Government has been demonstrated and the efficiency of Puerto Rican workers is well known. Vessels could be as well constructed and, it is thought, as economically built in Puerto Rico as in

continental United States.

Hence it would seem to be in the interest of our merchant marine and our national defense that the Congress, through these amendments, give Puerto Rico, as well as Hawaii, Alaska, and the Virgin Islands, the opportunity to share in the benefits of the ship-construction program of the Maritime Commission.

The beautiful island of Puerto Rico is situated at one of the crossroads of world commerce-1,380 miles southeast of New York and 1,010 miles from the Panama Canal. Puerto Rico has been a part of the United States since 1898. We were made citizens of the United States by Congress in 1917. We buy more American goods from American manufacturers than any Latin American country, more than Mexico or Cuba. In world trade with the United States we hold sixth place as a purchaser from the mainland. Puerto Rico's total commerce, imports and exports, is around \$200,000,000 per annum. The influence of the people of the United States in Puerto Rico has been a tremendous help to us.

Immortality and Politics

EXTENSION OF REMARKS

HON. LOUIS LUDLOW OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

ADDRESS BY DR. GEORGE A. FRANTZ

Mr. LUDLOW. Mr. Speaker, in response to a unanimousconsent request presented by my colleague, Hon. WILLIAM H. LARRABEE, and me, I hereby present for printing in the RECORD the following inspiring address delivered on April 9, 1939, by Dr. George A. Frantz, of Indianapolis, Ind.:

Politics without God and immortality are in their end tyrannous,

brutish, and degrading.

Why? Because what you undertake to do for men and with men depends upon what you think a man is, whence he came, and

whither he is going.

Ours is the first age in history to form a conspiracy of silence about the goal and significance of life. We appear to be afraid to

ask the ultimate questions.

Let your memory range back, back over the last two generations.

Upon our fathers fell the shock of the view of life as an evolu-

Upon our fathers fell the shock of the view of life as an evolutionary process minus Providence; a creation without the Creator; no "Father Almighty, Maker of heaven and earth."

They were wounded in their pride. They saw themselves born of dust. Now, the Genesis story had long ago told us that truth, but had touched it with the flame of immortality. Our fathers under their shock felt no breath of God. They saw only forty-second cousins hanging by their tails in the family tree.

Upon our generation fell the horror of war and the ghastly failure of peace.

Psychoanalysis tagged along to give us the strange comfort of uncovering for us the black, beast desires which blind and pervert our boasted human reason. And the age of reason learned to distrust reason.

The economic slump brought the collapse of the gilt gods called "Comfort and Security." Who now can sing "Glory to man in the highest, for man is the master of things"? It is as silly as it sounds, Mr. Swinburne.

Do you wonder that our generation is disillusioned and frustrated? We gave up our hope of immortality, our sense of eternal justice, yonder, if not here. We traded our hope of eternal life for "the larger hope," as we were taught to call it. We exchanged heaven for high-pitched expectations of a perfected human society. An earthly paradise was just around the corner. It was to replace the kingdom where God's love has room and authority to make all

wrong right.

New inventions would air-condition even Utopia. Comfort was to be king, pain killed, all hurdles down, all sand traps carted off, all greens to be shaped like funnels, every hole "a hole in one." Life without hazards.

And when will all these things be? Next year? In 10 years? In a rounded century? No. The bubble burst. The new society turned out to be the old society minus God and immortality, plus hate and braggadocio and brutal race nationalisms.

We are left now with men who are not sons of the eternal. They are only biological specimens, born from below, born to perish. Their only need is bread and someone to herd them, order them around, and use them.

If man is born from below, if he is nothing but the product of a biochemical process, then certainly he has no inalienable human rights—no more than a fat steer in a field has rights.

If man is not immortal, he has no eternal value. If he is not the child of God, then he may be used as a mere instrument in any political and economic experiment. He is not only the product of his tools; he is just a tool. And there is no sanctity in a shovel: it can be cast aside when the grave is dug. Death is the only immortal. Man is merely a dictator's cannon fodder. He is a pawn in a supreme state. He is just a fraction, a humiliating, vulgar fraction, in a totalitarian system. He is only one eightymillionth of the population.

The tragic deflation in our day is the reduction of the gold con-

tent of man, the depreciation of our spiritual currency, the wiping out of the eternal human values. When the Christian conception of man is nothing but a flat money, man is only dust, and not

gold dust.

When God or God's will becomes a question mark, man is only a colon. In the Fitzwilliam Museum in Cambridge is a huge canvas showing nothing but a gray sky—no sun, nor moon, nor stars—ominous and dark with fearful portents, and against that leaden sky a colossal question mark. It has a title, "Young man looking at the future."

Make no mistake, we cannot maintain the eternal values of man as a person, with rights, if we let go God and immortality. Banish God and an eternal life and you banish human sanctity. You bow meaning out of existence. There is no purpose in man's history.

There is no purpose, no progress, only change.

п

But, God be thanked, man is a rebel—a rebel against a meaning-less life. Look what happens! Godless, devalued, lonely, mecha-nized man calls for the collectivisms in which he may find signifi-

nized man calls for the collectivisms in which he may find significance again—in something bigger than himself.

Godlessness calls for a collectivism, as social chaos calls for a dictator. Better any kind of social order than no order at all. Better any kind of bigger purpose for life than to remain a lost, frightened, and self-distrusting, lonely individual in an empty world whence God and life eternal have gone. This world is too big for mere mortals. It makes us afraid to be alone.

The collectivisms have a message for frustrated and despairing mortals who see themselves as extles from immortality. They have a message for such men, but no permanent solution. They rescue drowning men at too low a level. They just bring our noses above the water. And the next political ripple or economic swell will strangle us.

We need a boat. We need wings.

We need a boat. We need wings.

"Bird which on frail branches A moment sits and sings,
He feels them tremble, but he sings unshaken,
Knowing that he has wings."

Our immortality keeps us unshaken.

The terrible "isms" are the joint creation of all men who have helped to devalue man by stealing the gold of his immortality. The political "isms" are the last effort of a godless world to bring back significance to a dehumanized civilization. They are the demonic attempt to make man content here without his immortality.

Their end is an injustice to man made into a religion. Their

and is regimented misery erected into a social order.

A this-world-centered life, which means a self-centered life, is moral anarchy for you and for any society which you may build on that God-divorced foundation.

And contemporary history is underlining every word which I have spoken; underlining it with red—the red of the blood of brothers.

brothers.

III

But, thanks be to God, there is God and immortality. The eclipse of faith is not total, nor final.

We know something real and ennobling about man when we read him in terms of Jesus Christ. Here is man; man as God intends him. This is his value—worth the disturbance of the stars; worth him. This is his value—worth the disturbance of the stars; worth the cross of the Son of God; worth the shattering of the seals of all tombs; worth redeeming; worth raising from the dead; worth Christ's preparing a place for him.

The world is God's world. It depends utterly upon Him. Apart from Him it has neither worth nor meaning. Man is God's child, and apart from Him we have neither value nor significance. "In Him is life" (deathless life), "and that life is the light of man."

All our prized liberties are coming back again.

For men who recognize each other as children of God can trust each other with political freedom. They can tolerate difference of opinion. They dare to have free speech and a free press. They

can always appeal to the constitution, to God's constitution of the universe, which was made by Christ and for Christ and a world of his brothers. Nothing but Christ's conception of life stands be-

tween us and the world spread of degrading tyrannies.

Here in this land you may still dally with your decision for God and immortality. Here a man may still say that the church is just cheap sentiment about life—"rose water, wishful thinking,

None of the dictators has ever said anything so silly. They recognize their real enemy to their purposes. And they set themselves to silence the prophets and to destroy the churches. They are fully aware that they cannot ultimately mistreat men who know themselves as the immortal sons of the Eternal Father.

The brutal tyrant in Browning's Instans Tyrannus laid his plan. is complete. Comes the moment when he thinks he has achieved It is complete. his horrid ambition, the domination of a fellow man. The victim

is down-

"Do you see? Just my vengeance complete,
The man sprang to his feet,
Stood erect, caught at God's skirts, and prayed!
—So, I was afraid."

And fear is the tyrant's portion, so long as man may catch at God's skirts and appeal to immortal justice. "The weapons of our warfare are mighty before God to the casting down of every high thing that exalteth itself against the knowledge of God." You may consider the desire for continued personal life for yourself to be only a very subtle form of selfishness. But is it selfishness to treat other men as the immortal sons of the everlasting Father? Is it selfishness to treat them with respect, and love, and care, knowing that what you do to them helps to decide their destiny? To treat them as immortals is the death of brutality and tyranny, and the resurrection of hope and liberty.

The only practical politics are the politics of the Kingdom of God. And the supreme political question is still the question about the soul of man.

We have the eminent advantage of living at the end of an age.

We have the eminent advantage of living at the end of an age,

We have the eminent advantage of living at the end of an age, an age that held a conception of life as of this world only; a view of human existence entirely confined to time; an attempt to shape human society by purposes set solely in this earthly scene. We are now at the forks of the road. We see the end results. Blind guides have led blind men. And there is the ditch. We know now that where there is no vision of God and of man's immortal worth, the people perish, and they perish by wholesale. And it matters little what pretty interests you fill into your days and nights; it matters little what kindly things you do for folks; if you are not dealing with men on the basis of their immortal worth and destiny, you are helping to sap the ramparts of human freedom, and you are on the side of the demons. What can we do?

Numan freedom, and you are on the side of the demons.

What can we do?

Nothing till we take our place in the community of the immortals, which is the body of Christ.

Nothing till you protest, in the name of Jesus, to the eternal God against everything that destroys a soul for whom Christ died.

Nothing, till we who call ourselves Christian become a society of people who treat each other no longer in the contract of the contr of people who treat each other, no longer in terms of income, or class, or color, or race, but as sons and daughters of the King, immortal, invisible, the only wise God our Saviour. Nothing, till

mmortal, invisible, the only wise God our Saviour. Nothing, till we see our neighbors as children of the King.

Then everything! Then shall we see the morning break, the powers of darkness take their flight.

A few months after the war I was in the regions of France over which "The Four Horsemen" had swept. In many of the villages the only thing rebuilt was the church tower. The bishop had said, "Build the towers. Set the bells ringing. The people will come and restore their homes."

Build again the twin towers for God and immortality. Set the

Build again the twin towers for God and immortality. Set the bells of eternal hope ringing. And men will, amid the ruins, again build homes for habitation, and a free society for the children of God.

Treatment of Prisoners

EXTENSION OF REMARKS

HON. MATTHEW A. DUNN OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

JOINT RESOLUTION BY HON. MATTHEW A. DUNN, OF PENN-SYLVANIA

Mr. DUNN. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following joint resolution which I have introduced:

Joint resolution to abolish chain-gang systems, dungeons, a inhuman treatment of prison inmates, and for other purposes

Whereas there are many unfortunate people who, because they cannot find employment are compelled to solicit in order to obtain the necessities of life; and

Whereas many of them have been arrested and sent to prison as vagrants, and while in prison have been subjected to inhuman treatment: Therefore be it

treatment: Therefore be it Resolved, etc., That all chain-gang systems and dungeons in the United States and its possessions shall be abolished and inhuman treatment of prison inmates shall be permanently discontinued.

SEC. 2. Penitentiaries, jails, police stations, and all other places of incarceration must at all times be kept in a sanitary condition.

SEC. 3. Any official, guard, or overseer of any of the institutions mentioned in this act who would be found guilty of inhuman treatment of a prison inmate shall be sentenced to pay a fine not exceeding \$1,000 or to undergo imprisonment not exceeding 3 years, or both.

SEC. 4. This act shall become effective immediately after its

Necessary Additional Money Supply in Order to Keep Pace With Our Growing Nation Must Be Put Into Circulation Among the Lower Income Group to Create a Consuming and Purchasing Power

EXTENSION OF REMARKS

HON, BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

RADIO DISCUSSION BY SENATOR SHERMAN MINTON, OF IN-DIANA, AND HON. ROBERT G. ALLEN, OF PENNSYLVANIA

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include what is known as congressional breakfast talk over station WOL every Tuesday morning under the personal direction of former Congressman Charles G. Binderup, of Nebraska; also a brief letter entitled "Unrobing the Ghosts of Wall Street," which is one of the usual letters preceding these Tuesday morning radio discussions. The Constitutional Money League of America is a patriotic organization supported by volunteer workers and contributions. It is nonpartisan, nonracial, nonsectarian, and nonprofit. The purpose of this organization is to spread monetary knowledge and to coordinate and unite into a national organization all the various detached local monetary study clubs and organizations of the United States together with unattached students and citizens who are in sympathy with constitutional money and Government monetary control as the first step to economic stability. Anyone interested in monetary reform should write to their Senators or Congressmen for copies of these congressional breakfast talks or write to the Constitutional Money League of America, Washington,

UNROBING THE WALL STREET GHOSTS

1. Fifty-cent dollars.

2. Printing-press money.

3. Fiat money. 4. Inflation.

4. Inflation.

Ghost No. 1: Fifty-cent dollars. There is no such thing as making a 50-cent dollar, when measured by its own content, out of a piece of money stamped by Uncle Sam "One Dollar." You know there isn't.

We changed the size of the paper dollar in 1929 and made it about one-half size, but you didn't notice the change in its value or purchasing power, did you?

You tried it in 1933 when we reduced the gold content of the dollar 41 percent. You bought just the same amount of com-modities as you did before. You never noticed any difference in its value or purchasing power, did you?

Then why this continued talk of 50-cent dollars? We all know

You cannot possibly change the value or purchasing power of the dollar by changing the size or material on which Uncle Sam's It is the stamp of Uncle Sam which makes and determines the unit of exchange.

It is the abundance or scarcity of dollars which determines the purchasing power or value. Whether it is a 50-cent dollar or a dollar-and-fifty-cent dollar, can only be determined when measured by the dollar's purchasing power of commodities.

Unless you are in the market buying gold. Then by reducing the gold content of the dollar 50 percent you double the price of

gold, because it requires only half as much gold to make a dollar; but no other commodity on the domestic market is affected.

Sincerely yours.

C. G. BINDERUP.

but no other commodity on the domestic market is affected.

Sincerely yours,

C. G. Binderup.

Announcer. It is now 8:15 o'clock and we are again privileged to hear the regular Tuesday morning congressional breakfast talk under the personal supervision and direction of former Congressman Charles G. Binderup, of Nebraeka. Mr. Binderup.

Mr. Binderup, of Nebraeka. Mr. Binderup.

Mr. Binderup of Nebraeka. Mr. Binderup.

In the House and Senate and a hearty welcome to our guest speakers the House and Senate on your part of America is very appearance of the House and Nebraeka.

Mr. Binderup on your part of America is very appearance of Indiana, and Congressman Robert G. Allen, from the great industrial State of Pennsylvania. Senator Minron, I am going to ask you to open the discussion.

Senator Minron, Mr. Binderup, in your last Tuesday morning broadcast I note you said that we should create new additional money yearly to the extent of 4 percent every year, and that this would amount to approximately \$2,000,000,000 a year at present. Now, I believe this philosophy of additional new money every year is more or less a new thought. Most of the people think that if we can only maintain the same amount of money from year to year, that that would be all that is necessary. I think this is a subject which should be brought out in a clear manner, and definite statistics, facts, and figures should be provided. How do we arrive at the 4-percent increase and how do we arrive at the 4-percent increase and how do we arrive at the 4-percent increase and how do we arrive at the 4-percent increase and how do we arrive at the 4-percent increase and how do we were the facts. In the statistics facts, and figures s

Mr. BINDERUP. Yes, Senator, you are correct.

Mr. ALLEN. I don't think we are making this point plain enough.

Mr. Binderup, you say add 4 percent each year to our money supply. From what time or amount do you figure or base your 4 percent?

Mr. BINDERUP. I base the 4 percent on, or figure it from, the amount of money in circulation on the 31st day of December each year.

each year.

Mr. ALLEN. I believe, Mr. Binderup, you said in one of your **RILER. I believe, Mr. Billiettly, you said in one of your recent Tuesday morning discussions that we were approximately \$18,000,000,000 behind in our money supply and that it would be necessary to add about this amount in order to reach the price level for labor and commodities equal to the year 1926. From what year did you start adding 4 percent in order to establish this sum of \$18,000,000,000?

Mr. RILER. I delive, Mr. Billiettly, you said that it does not be not supply that it is a price of the year 1926.

Mr. RILER. I delive, Mr. Billiettly, you said that it does not said that it would be necessary to add about this amount in order to reach the price level.

this sum of \$18,000,000,000?

Mr. Binderup. In our calculations we go back to the year 1926 and add 4 percent every year from that point and you will find by so doing the amount of money necessary to attain the 1926 price level will be approximately \$18,000,000,000.

Mr. Allen. Just what do you mean by money in circulation? Do you mean gold, silver, Federal Reserve notes, checks, or what?

Mr. Binderup. We take from the records of the Comptroller of the Currency the amount of demand bank deposits. This con-

stitutes our checkbook money. Add to this the amount estimated that we carry as pocket money, or, in other words, small change and currency, which is estimated to be \$1,000,000,000. This constitutes our money supply.

Senator Minton. Mr. Binderup, I would like to know why you take the year 1926 as your standard. I don't think we had full employment and real prosperity in the year 1926.

Mr. Binderup. No; in this you are right, Senator. But during the Coolidge administration it was decided to establish that year as a period or point from which to measure prosperity, and so all our charts and records and statistics are based on the average 1926 price level. Now, this does not mean that that is our definite, permanent goal; but we cannot go at random, so in order to protect the creditors we say our plan or bill proposes that we shall set the stake here at the 1926 price level, and when we are established on this price level Congress shall determine if we shall move any definite number of points higher.

Mr. Allen. President Roosevelt has suggested that the national income next year should be at least eighty billions. Suppose we

income next year should be at least eighty billions. Suppose we add the sum of money you suggest. Would it result in accomplishing President Roosevelt's objective?

Mr. BINDERUP. That would depend on this: If we should donate it to the banks by selling bonds (as we have been doing), who al-It to the banks by selling bonds (as we have been doing), who already have more money than then can loan, it would not have much effect, as what we need is purchasing and consuming power among the lower-income group. With our unbalanced financial condition there is an abundance of money among about 4 percent of the people at the top, and the remaining 96 percent of the people are more or less below their standard in purchasing and consuming power. If, however, you distribute this new money among the lower-income group, our national income would go to no less than \$120,000,000,000 as soon as the \$18,000,000,000 plus the necessary yearly addition of approximately \$2,000,000,000 had been released into the veins and arteries of trade, which should take about 5 years. It would be wise to release the eighteen billions which we are behind at this time cautiously in order to make it unnecessary to take money out of circulation at times as we must not exceed the take money out of circulation at times as we must not exceed the

1926 price level. Senator Minton. And now, then, Mr. Binderup, if I understand your monetary philosophy correctly, first "ou claim that we must add and distribute the amount of \$18,000,000,000 approximately add and distribute the amount of \$18,000,000,000 approximately over 5 years, and in addition to this you would add 4 percent from year to year in order to keep up with the growth of our Nation. The first objective is to reach the 1926 price level, and if this does not give full employment and the desired higher standard of living among our laboring people. Congress shall instruct the monetary authority, an agent of Congress, to increase the amount of new money amount the lower-increase group in an amount sufficient to money among the lower-income group in an amount sufficient to reach this 1926 price level. The price level of 1926 is not necessarily the definite goal which we expect to attain permanently, but only a mark or a period from which Congress can determine and instruct our monetary authority, the agent of our Government. Am I not right in this?

Mr. BINDERUP. Yes, Senator. You are definitely right.
Mr. ALLEN. Now, just a minute. This sounds awfully big to me. Just suppose you get too much money into circulation. Then how

Just suppose you get too much money into circulation. Then how would you reverse your monetary machinery in order to protect the creditor, for he is also entitled to protection as much as is the debtor. It is a poor rule that does not work both ways.

Mr. Binderiff, senator, may I answer this? To reverse the machinery and take out just exactly enough to balance our money supply which determines prices by and according to its own supply and demand, as compared with the supply and demand of commodities, if this should at any time become necessary, it is simple enough. Suppose we reach over and take our telephone and say to the Associated Press and the United Press, "Give the public this little news item: 'On the 1st of the next month Uncle Sam is going to sell \$500,000,000 in bonds direct to Tom, Dick, and Harry, not to the banks but through the banks * * * at a good rate of interest.'" Let the money be hoarded or rather this Governe Harry, not to the banks but through the banks * * * at a good rate of interest." Let the money be hoarded, or rather this Government credit remain inactive for a few months or until the ernment credit remain inactive for a few months or until the Nation has grown enough to catch up, and then take up these bonds callable at any time. What would millions of people do when they read this article? Why, they would take their phones and call up their banker, saying, "Hold \$1,000 of those bonds for me." That phone call would immediately stop \$1,000 from circulating, and in 1 day we could take out or stop as much money as we wented to and not one cent more than we wented to. Now we wanted to, and not one cent more than we wanted to. that is what we call scientific Government monetary control.

Senator Minton. I think everyone understands that we must have new money in circulation yearly, but what plan shall we use to get it into circulation? We have exhausted the plan of letting the banks create it as they now do and loaning it to the people, charging interest, which at present amounts to over \$1,000,000,000 a year. The banks can no longer loan it down to the people for the borrowing public has become depleted of their equities, their property has become worthless by deflation, so there is only one way left—put it into circulation among the lower income group. Tell us, Mr. Binderup, what do the banks think of your plan? They should welcome a plan which would make their business safe after their disastrous 13 years' experience preceding the year 1934, when about 16,000 banks failed.

Mr. BINDERUP. Well, Senator, the banks as a whole are not favor-I believe they read of this plan like the devil would read the Bible, with a prejudiced mind, especially the large banks, who make their profits out of a fluctuating price level. However, we have hundreds of bankers who are very enthusiastic about the plan, and among these we have three presidents of bankers' associations. Those who have not read the bill or plan are the loudest in their criticism. There isn't a small commercial banker in the Nation who wouldn't definitely approve of Government monetary control and constitutional money if they understood the plan.

control and constitutional money if they understood the plan.

Mr. Allen. I think in a former broadcast you estimated a potential profit of \$2,500 yearly to each of our banks on an average from old-age pensions only; but this, it seems to me, is too low, as this money remains in the community, and your estimate was only for the first year. It would gradually increase over this figure in following years as it accumulates. And you stated that old-age pensions for 3,339,000 old folks over 60 years old at \$50 per month, plus other benefits, would amount to \$1,602,000,000 a year. Their expectancy of 10 years, according to the American Table of Mortality, would create a credit on which banks could loan the \$17,126,000,000 hoarded money now lying idle in the banks, as this would virtually be a definite, guaranteed income of \$16,020,000,000 to their customers. With this income equities would be built, and equities and guaranteed income are the bankers' base for loans. All of this would be builded on a safe and sound base, for a Government contract to pay old-age pensions is as secure a foundation for loans as is a Government bond.

loans as is a Government bond.

Mr. Binderup. Yes; I agree with you, Congressman Allen. I have been too conservative in estimating the profits in this plan to the

commercial banks.

Senator Minton. In conclusion let me ask you, Mr. Binderup, suppose you are mistaken in your 4-percent yearly increase and that the \$18,000,000,000 won't work out right distributed in the channels of business in 5 years, and again suppose the \$17,126,000,000 which the Federal Deposit Insurance Corporation claim are now lying idle and dormant in the banking system should flood the market, and suppose the \$4,500,000,000 which the Board of Governors of the suppose the \$4,500,000,000 which the Board of Governors of the Federal Reserve Banks state we have in excess reserves should at once be utilized by the banks and put into circulation; then suppose we should be confronted with perhaps the greatest financial problem of all, human psychology of an approaching period of prosperity which would have a tendency to boom prices sky high by speculation. Suppose all of these monetary cyclones tear loose on you, as they will some day, as they will together with the international bankers' desire to destroy your plan. Do you think your constitutional plan for Government monetary control can withstand such gigantic pressure? such gigantic pressure?

Mr. Binderup. Yes, Senator. If all the figures I have given you are wrong and all the history and statistics are wrong, and all the idle money in the banks should be rushed on the market, our plan for Government monetary control and constitutional money is still right, and will do the work regardless. Yes; truly I didn't answer you in reference to the power of the international bankers who would want to destroy our plan. Oh, we know their power and we do not underestimate that these are the enemies of our Government. A president of one of our western banks told me before I came to Washington the recombination of the proposed and the president of the proposed and the president of the proposed and the pr Washington that we could not succeed unless we took this group out and set them up against a stone wall at sunrise. But our plan Government monetary control does not contemplate anything so rash. Knowledge is light and wisdom is power, and the Constitutional Money League of America set out to build up this fortification first, for it is still more powerful than the international bankers.

In our plan for Government monetary control we have what you might call a "monetary valve," which we can open and allow this money to flow into the channels of business among the lower income group just as fast as it can be absorbed into the veins and arteries of trade and commerce. We have the green and red signal, our 1926 price level. This is our ceiling to prevent inflation and repudiation. We have the plan for taking care of the overflow by absorbing it in bonds to be purchased by the people thus hoardabsorbing it in bonds to be purchased by the people thus hoarding the overflow until we can again release it into the business channels of the Nation in an orderly manner. But everyone knows the truth of your statements, Senator, about the avalanche of uncontrolled inflation which is threatening us and some day will make the German mark inflation look like a miniature gesture. And only one thing can prevent this. It is Government monetary control. We did have hopes at one time that the Board of Governors of the Federal reserve banks would represent the people and find the way to prevent these catastrophes but they have given up. They have informed us in print that there is nothing that can be done, that we must allow our great Nation and our people to be destroyed by the continuation of these disastrous people to be destroyed by the continuation of these disastrous booms and depressions which Uncle Sam has endured 27 times. But now his vitality is gone. He cannot stand another one without destruction of his Constitution.

Mr. Allen. In this it seems to me they have ignored President Rosevelt's splendid challenge when he said: 'Let us refuse to leave the problem of our economic welfare to be solved by the

to leave the problem of our economic welfare to be solved by the winds of chance and the hurricane of disaster, let us not admit that we cannot find a way to master economic epidemics, just as after centuries of suffering we found a way to master epidemics of

"We are not interested in stabilizing the franc and the pound for a short time. We are only interested in a dollar with the same debt paying and purchasing power now and a generation hence."

debt paying and purchasing power now and a generation hence."
ANNOUNCER. You have just listened to another one of the congressional breakfast talks from this station every Tuesday morning sponsored by the Constitutional Money League of America under the personal direction of former Congressman Binderup from Nebraska. Your speakers this morning were the Honorable Sherman Minton, Senator from the State of Indiana, and the Honorable Robert G. Allen, Congressman from the State of Pennsylvania.

Doctors of the South

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1939

EDITORIAL FROM THE ATLANTA JOURNAL

Mr. LEE. Mr. President, I rise for the purpose of asking leave to have printed in the Appendix of the RECORD an editorial from the Atlanta Journal of March 11, 1939, under the caption "Doctors of the South."

This editorial pays high tribute to the trail blazers of the medical profession. It recounts a number of epoch-making surgical operations that were first performed by doctors of the South. It pays high tribute to Dr. L. L. Hill, of Montgomery, the father of one of our colleagues, the brilliant and sincere junior Senator from Alabama, Senator Lister Hill. Dr. Hill was the first American surgeon to successfully stitch a stab wound in the heart. That operation was performed by the light of a coal-oil lamp in a Negro cabin.

Mr. President, my father was a country doctor. I used to go with him on some of his calls. One time in the old Indian Territory I accompanied him on one of these calls. There were no section lines then. The directions were rather vague—only such guideposts as the forks of the road; an old dead tree.

It was a cold winter afternoon. I remember we saw a timber wolf. It grew dark, and yet we had not found the place. There was little daylight left, and father drove the team up on a mound in order that we might look around. Just then a door opened beneath us, and a man stuck his head out and shouted, "Get off of my house." We were on top of his dugout. That was the place that we were trying to find.

The woman was very sick. There was a large family of children. They all lived in that dugout. I was just a little shaver, and I bedded down on a pallet with the other children. Soon I was asleep, but all night long my father toiled over the sick bed. The crisis passed. Daylight came. We drove home. The sincerity and the effort and the medical skill of the country doctor had saved the life of a mother of a large family of children.

One time I saw my father amputate a leg in a log cabin. He did not have his surgical instruments with him. He performed the operation with such instruments as he could get there. He sawed the bone with a hand saw. Later I saw the man, hale and hearty, hobbling around on one leg, of course, living because of the determination of a doctor who performed his services to humanity. A country doctor had saved his life.

Mr. President, the biography of every country doctor would make a volume of such stories. I shall certainly give my support and my efforts to any legislation which is designed to help make the services of the medical profession available to those who are too poor otherwise to afford them; but I shall never lend my support to any effort which has for its purpose removing the personal incentive, the thing that has

caused the great medical profession to move forward from the days of Louis Pasteur to the present day. I shall support any efforts toward cooperative hospitalization; I shall support any legislation which has for its purpose making available medicine and medical facilities; but I shall oppose with all of my vigor any effort which would tend to regiment the doctor.

The family doctor is an institution in America. He served as the adviser for the family. When he came into the sickroom, the tension relaxed. Those watching over the sickbed allowed the burden and the worry and the responsibility to shift to his shoulders, and he accepted that burden and that responsibility; and the smile of the family doctor brought hope and courage to those in the sickroom. But how different it would be if all doctors were appointed and paid a salary. The professional pride which has caused the development of the medical profession would be gone. The motive that causes the country doctor to pore over his crude laboratory, and to fight out the battle of life and death would be removed.

In my opinion, it would be a dark day for the medical profession as well as for the people whom they serve if we could not have freedom in selecting the doctor we want to serve us.

This desire to succeed, this ambition to become a great doctor and a great surgeon that burns in the heart of every young medico is the stimulus that causes the great medical profession to move forward. It is that secret ambition on the part of every doctor that has caused them to work all night over a sickbed when reason and hope were both against them, but finally succeed because of their sheer determination. It is that ambition and inspiration that causes every good doctor to put his profession above his personal comfort.

Mr. President, I ask unanimous consent that this editorial be inserted as a part of my remarks in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Atlanta Journal of March 11, 1939]

Trail blazers of the past, penetrating the unknown with vision and courage, made possible the mighty highways of modern progress. The medical scientists who met in Atlanta this week bore this in mind, their postgraduate assembly presenting not only a panorama of modern surgery but a striking picture of pioneering achievement. In his scholarly address as retiring president of the Southeastern Surgical Congress, Dr. T. C. Davison read the honor roll of southerners who have made signal contributions to the science of medicine and surgery.

science of medicine and surgery.

The towering achievement of Georgia's own Crawford W. Long in demonstrating the value of ether as a surgical anesthetic is well known, of course, but other pioneering feats of the first magnitude are not so well known. To many it will be news that the South is credited with the first operations to open up the stomach, remove part of the spine, remove a rib, and drain a lung, correct a cleft palate, remove an ovary, correct a clubfoot, and amputate a leg at

Beside the Crawford W. Long statue in the hall of fame are statues honoring Dr. Ephriam McDowell, of Kentucky, for performing the first successful operation for removal of an ovarian tumor, and Dr. John Gorrie, of Florida, for inventing artificial ice in the course of his search for means of bringing comfort to feverish patients. Dr. Rudolph Matas, of New Orleans, now 80 years old, is justly renowned for his work in blood-vessel surgery and related fields, while Dr. L. L. Hill, of Montgomery, now 77 years old, is hailed as the first American surgeon successfully to stitch a stab wound in the heart. Dr. James Marion Sims, of Alabama, is recognized as the founder of modern gynecology. Dr. Jesse Bennett, of Virginia, performed the first Caesarian operation in this country. Dr. Francis L. Parker, of Charleston, was the first American surgeon to stitch a large nerve center. These and other pioneering southern doctors helped elevate medical science to the lofty position of effective humanitarian ministration which it occurries today.

occupies today.

The Atlanta assembly, with its review of the past, its intensive study of the present, and its indications as to the future of surgical science, was perhaps the most successful in the 10-year history of the congress. The credit goes not only to the medical scientists who contributed their services as teachers, but to the many local surgeons who worked so hard to make the meeting an unqualified

success

Illinois Manufacturers' Association

EXTENSION OF REMARKS OF

HON, JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

ADDRESS BY HON. HARRY F. BYRD, OF VIRGINIA, BEFORE THE ILLINOIS MANUFACTURERS' ASSOCIATION AT CHICAGO, ILL.,

Mr. BAILEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a very important and timely address delivered by the Senator from Virginia [Mr. Byrd] before the Illinois Manufacturers' Association at Chicago, Ill., April 25, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a particular honor and a particular pleasure for a Virginian to be permitted to address this distinguished gathering of Illinois citizens.

Under the royal charter of 1609, Illinois was controlled by Virginia. By authority of that charter Virginia established Illinois County. The only claim the old Mother State has today is the fervent hope that you in Illinois have for Virginians the same affection and esteem that we have for you.

esteem that we have for you.

In these troubled times, when democracy must fight for its very life, when dictators deride the democratic dogma, when innocent subjects of a great empire are stripped of their property, it is well to recall the sacrifices made by Colonial leaders of America in defense of democracy. Great masses may be regimented and drilled under fear of punishment in the discipline and subservience to the supreme state, but the one "most rublime thing in the universe, except its Creator, is that of a great and free people governing itself by a law higher than its own desire."

The sacred responsibility of preserving representative democracy

by a law higher than its own desire."

The sacred responsibility of preserving representative democracy rests upon the shoulders of American citizens, because here it has flowered to the fullest perfection in freedom and in our progress and our development. Preserve it not only for ourselves and Americans who come after us, but as an inspiration and encouragement to the depressed peoples in other lands who seek the blessings of the freedom we enjoy here.

depressed peoples in other lands who seek the blessings of the freedom we enjoy here.

What we need most in our country today is a program of education in the operations of government, and then an aroused public sentiment to fortify and improve good legislation, and to discard impractical theories; to demand sound economic principles that have never been set aside successfully since the beginning of time; and to act not for the political aggrandizement of any one individual or of any one political party, but for the true and best interests of all the American people. We want debate, free and unafraid, coming from members of both political parties, conducted utterly regardless of political consequences to those who speak the convictions that exist in their hearts.

For the past several years we have had at Washington much loose talk and loose thinking of a new liberalism which we are

for the past several years we have had at washington much loose talk and loose thinking of a new liberalism which we are told will sweep away the clouds of depression, wave a magic wand of legislative panaceas for our ills, and give a substitute for those time-old virtues of thrift, frugality, self-reliance, and industry that have made our country great and given to us a progress, a freedom, a happiness, a contentment that have never before been enjoyed by any great nation.

enjoyed by any great nation.

From my own personal observation in the Senate of the United States a modern liberal if often tested and judged in proportion as to how liberal he is willing to be with other people's money. When the history of this momentous period is written, I believe the true liberals of today will be recorded as those who fought the packing of the Supreme Court by the Executive, who risked their political lives in defense of the immortal principle that our Government was established in three branches each independent of ernment was established in three branches, each independent of the other.

These of us who act to preserve the financial solvency of our Nation are fighting for true liberalism, because without solvency there can be no liberal government. And so it was when we voted to make illegal the use of relief funds in elections. Certainly there is nothing more unliberal and un-American than to coerce and control the sacred privilege of suffrage in a free country by commands from those who dispense relief to the destitute who

are compelled to accept charity from their Government.

And again in supporting the resolution condemning sit-down strikes, a liberal vote was cast, because the principle of the sanctity of private property from mob possession is inherent in every liberal form of government. So the classification is largely a matter of definition. But I can say definitely that good government and liberal government would be vastly promoted if the brain trusters, from Tugwell to Corcoran, would go home and leave Congress free to perform its constitutional duty of initiating, considering, and passing upon national legislation.

ing, and passing upon national legislation.

Today the time has come to analyze, to appraise the good as well as the bad, and to pass judgment on the vast legislation adopted by the National Congress in the past 6 years. Our last election indicates very clearly that the American people intend to do this very thing, and are doing it. In this analysis let us remember that the real test of a law—the real worth of legislation—is in practical administration and its effect upon all the millions of our citizens and that a principle enacted into a law—a just and a fair principle—is often defeated by the maladministration of its operation.

With much important legislation enacted in this period I can

With much important legislation enacted in this period I can agree. I have supported Secretary Hull in his efforts to regain our foreign trade. I have supported adequate national defense and will continue to do so unless national defense is used merely as a means of public spending. I favored control of the New York Stock Exchange. I am opposed to monopolies that operate to throttle competition and to fix prices. I applaud the remarkably fine work done in the reorganization of the banking system. I will support measures to reform, strengthen, and make workable a social-security program within the ability of our citizenship to pay. Social security, in one form or another, is here to stay. I favor the taxation of tax-exempt salaries of public employees and the taxation of future issues of tax-exempt securities.

In surveying recent legislation, remember that private enterprise is the foundation stone on which our Republic is founded. Private enterprise is the motor that provides the taxes on which our Government operates. If taxes become confiscatory, if governmental regimentation becomes too oppressive, if governmental competition becomes too destructive, then private enterprise can neither pay the taxes nor give employment to the workers.

Remember, too, that the character of our individual citizen is With much important legislation enacted in this period I can

Remember, too, that the character of our individual citizen is our most valuable national possession, and the character of many can and will be injured, if not destroyed, by unrestricted and profil gate public relief, because character comes from self-help and industry and not from idleness and thriftlessness. The very im-

gate public relief, because character comes from self-help and industry and not from idleness and thriftlessness. The very immensity of our relief expenditures has made impractical the confinement of relief to those actually in need—an obligation that all of us recognize must be met in the fullest measure.

A grant to the States by the Federal Government is not a gift. Nothing would curb the wanton extravagance in our Federal Government more than a recognition of this very simple and elementary principle. Actually every grant from the Federal Government in the past 6 years has in fact been a mortgage, and a first mortgage, on the property of every citizen in each of the 48 States. In this confederation of States—the United States of America—the Federal Government has no money except such as is derived from referred Government has no money except such as is derived from the States by taxation. It has no security on which to borrow except the property of the citizens of the 48 States; so instead of a grant being a gift, we are given a mortgage to pay with accrued interest, and the bureaucrats at Washington take a toll for top-heavy administrative cost, which, in some instances, as I have shown on the floor of the Senate, has equaled a full 33 percent of the sum expended.

As one who for 3 years has been investigating our Federal expenditures as chairman of the select committee created for that purpose, I assert that we have at Washington today the most costly, the most wasteful, most bureaucratic form of government that this Republic has ever known, or any other nation has been afflicted

with.

What is our situation today after 9 years of deficit spending?

Our tax burden is the largest in peacetime history—two and one-half times more in Federal tax receipts than in 1933.

Our Federal debt has been increased from sixteen billions to more than forty billions today, and an estimated forty-five billions on July 1, 1940. In addition, we have a contingent liability, none of which existed in 1932, of nearly \$8,000,000,000 in Federally guaranteed securities of the Government corporations not included in the public debt. The losses of these corporations, certain to be heavy, must some day be transferred to the direct public debt. These corporations, without further legislative authority, have the power to obligate the Federal Government for another \$7,000,000,000 in addition to the eight billions of debt already created. addition to the eight billions of debt already created.

addition to the eight billions of debt already created.

Some of the vast Federal corporations make detailed reports to Congress and some do not. Many are not accountable to the Comptroller General for control audit, such as the Tennessee Valley Authority, a corporation with over a quarter of a billion of stock and further authority to issue bonds guaranteed by the Government.

In January 1936 the President said:

"Our policy is succeeding. The figures prove it. Secure in the knowledge that steadily decreasing deficits will turn in time into steadily increasing surpluses and that it is the deficit of today which is making possible the surplus of tomorrow, let us pursue the course that we have mapped."

Since the President spoke these words 3 years ago in defense of deficit spending to restore prosperity, Federal deficits have continued to multiply. Today we are further away from a balanced Budget—I say this advisedly—further away than at any time since the deficit spending began. The deficit so far this fiscal year is three times as great as for the corresponding period of last year.

In this year the Federal Government is spending four times as much for unemployment relief as the total cost of the Federal Government in 1916. I repeat this because I want this astonishing

fact to sink in. This year the Federal Government alone is spending \$2,741,000,000 for unemployment relief as compared to \$734,-000,000 for all expenses of the Federal Government in 1916. Thirtyfact to sink in. three States now take from the Federal Government for relief alone, exclusive of grants and subsidies, more than they pay into the Treasury from which they draw. Virginia and Illinois are among the 15 States in all the Nation drafting less relief money from the Federal Treasury than they contribute in tax revenue.

The interest charge on the Federal debt is now \$1,050,000,000, and this is 40 percent more than the total Federal expenses in 1916.

Today for every dollar you pay in Federal taxation 20 cents goes directly to the payment of interest. If the Budget were balanced now, and the sum of of \$500,000,000 paid each year on the Federal debt, it would take 56 continuous years to reduce the debt to where

it was 8 years ago.
We are being told that we are in a new era. We are listening again to the story that the old rules no longer hold; that the magic of new advisers and new tricks in financial manipulation have wiped out the significance of addition and subtraction. We are listening to the siren song of debt and still more debt. Wishful thinking and mere good intentions are not quite enough. In India the mother who casts her infant into the Ganges as an act of worship to the devouring greenful is inspired by the most secred. worship to the devouring crocodile is inspired by the most sacred intentions. But, it is pretty hard on the infant. Is it any wonder that the average businessman, as Secretary Morgenthau says, has the state of mind of "What's the use?"

You know and I know that the extravagance of today must be

paid by great taxation tomorrow. You know that tax-free Gov-ernment competition throttles private enterprise. You know that oppression by needless governmental regulation stifles the business

The Federal Government alone is spending \$23,000 every minute of every day and every night, including Sundays, and of this \$11,500 is being added each minute to the public debt.

Coincident with the rise in the Federal debt and increase in

rederal taxation have come similar increases in the burdens of the States and localities. The Federal Government has demanded the same prodigality of spending by the other governmental units of our Republic. Only recently the sovereign State of Georgia was publicly reprimanded because that State was reluctant to amend its constitution to issue State bonds and to abandon its wise and forces policy of review receipts.

amend its constitution to issue State bonds and to abandon its wise and frugal policy of pay as you go.

This current year, the fiscal year of 1939, the expenditures of all governments in America will be more than \$20,000,000,000, or about one-third of the total gross income of this Nation, and this \$20,000,000,000 is more than twice the value of all products that come from the soil and the earth—farm crops, livestock, metals, coal, oil, and lumber. How long can a Republic exist spending one-third of its gross income and twice the value of the new wealth that comes from the soil? As great as are our vast expenditures for recovery and relief, it is a fact, also, that by actual Budget figures. the regular or ordinary expenses of governactual Budget figures, the regular or ordinary expenses of govern-ment have increased more than 100 percent since 1934. We are told that the millionaires will pay this debt and this

we are told that the millionaires will pay this debt and this spending. The total income of those receiving more than \$100,000 last year was \$974,000,000. If this income were all confiscated by taxation—take it all—it would pay the cost of the Federal Government for less than 30 days and the cost of all governments—local, State, and National—for less than 15 days. For the balance of the year the public expenses would be paid "in the sweat of every man who labors," and you know who described in 1932 our tax problem with the wisdom and accuracy of those words.

tax problem with the wisdom and accuracy of those words.

The vast spending is entrenched in every nook and corner of America. Actually, 1 out of every 80 men, women, and children in the United States is now on the regular Federal pay roll. More than one million and a half are regularly employed by the Federal Government in its various activities. In addition, there are more than 1,000,000 Federal pensioners, and to this must be added the many millions receiving Federal relief and subsidies of one kind or another. To dismantle and reduce this gigantic bureaucracy is a task of overwhelming proportions, but the reward is the preservation of sound government, the prevention of inflation and keeping our country secure for our children and those to follow. After years of deliberate deficit spending and the trebling of the public debt, the Honorable Marriner S. Eccles, Chairman of the Federal Reserve Board, said a year ago that the premature cessation of government spending (premature after 8 years) brought on the reversal of recovery and the return of the depression in 1937. Have iron lungs been used for so long that they

sion in 1937. Have iron lungs been used for so long that they cannot now be dispensed with?

The fact is that this so-called contraction of spending was due to the payment in the previous year of the soldiers' bonus (a nonrecurring expenditure) and even then the reduction was less than 8 percent. So, in the early part of 1938 another gigantic program of pump priming was started, and the expenditures increased nearly 30 percent over the previous year.

We are now told by the President and the Chairman of the Fedrick President and the President and the President and the President and the President and

We are now told by the President and the Chairman of the Federal Reserve System that to reduce spending would be to "invite certain disaster." No one can deny that deficit spending has been given a fair trial to the tune of nearly trebling the public debt. Faced now with stagnation of industry, stoppage of investment, serious unemployment, and other marks of economic depression at hand, we must ask ourselves the serious question: When is the flood of spending to cease and be replaced by a balanced Budget or a surplus? It would appear that we have "got a bear by the tail."

The sponsors of excessive spending, until very recently, refused to admit any possibility of error and in the teeth of logic and cold

facts contended that prosperity could be purchased on borrowed money just like a commodity could be purchased on the market.

Has it relieved unemployment? It has not. More than 10,000,000

are now unemployed, nearly as many as when the depression began, and no less than a year ago.

and no less than a year ago.

Has it reduced the relief rolls? It has not. W. P. A. rolls during the current fiscal year reached their peak. The Social Security Board states that 21,300,000 persons are recipients of public relief. Has the United States kept step with recovery in other countries? It has not. The League of Nations monthly bulletin of statistics placed the recovery of the United States (based on the 1929 level) as the lowest of 20 nations, with 64 percent recovery as compared to 113 percent in the United Kingdom and 78 percent in France.

Has deficit spending stimulated business expansion? It has not.

Has deficit spending stimulated business expansion? The financing of new capital issues—a certain index of business expansion—shows that in 1928, 10 years ago, 75 percent of all capital issues for that year was for private business and 25 percent for Government agencies. In 1938, 10 years later, 79 percent of new capital issues was for Government agencies and only 21 per-

new capital issues was for Government agencies and only 21 percent for private business. In 1929 about 29 percent of all bonds held by banks were Government; now 57 percent are Federal bonds. Our greatest need is production, and especially more of the sort of production that goes into new plants, more modern equipment, expansions, additions, improvements, and betterments. Such undertakings are financed by the sale of corporate securities and such sales are made only when executives have confidence and hopes for profits and when investors share that confidence. With large private sums lying idle, it is a significant and telling comlarge private sums lying idle, it is a significant and telling com-parison of how far we have gone in 10 years from new productive business expansion to dependence upon nonproductive public assistance when the financing of new capital issues has been reversed from three-fourths private in 1928 to one-fifth private in 1938. We know that the primary function of long-term private debt is to help finance the creation of durable goods, whereas public debt does not do this.

Have continued deficit spending and the mounting public debt impaired business confidence? I say emphatically that it has, Every intelligent businessman knows that the extravagances of today must some day be paid for. The profit motive is to capital-ism what the law of gravitation is to the physical universe. Pri-vate enterprise is more concerned about the "hope" of profits than the profits of the hour. This must be so because a factory is not built for this year but for many years. It is this confidence and hope of profits that is impaired by the expectation of the inevita-ble day of settlement.

Sound economic theory and the practical lessons of experience are proof that our present financial program is not promoting economic recovery. When the spending ceases, so does the effect, Like a habit-forming drug, the longer the indulgence in deficit spending continues the harder it is to stop.

In order to combat the evil of deficit spending we must understand the theory underlying the principle of proportion are provided.

In order to combat the evil of deficit spending we must understand the theory underlying the principle of promoting prosperity by borrowing and spending public money. Its chief exponent is Mr. Marriner S. Eccles, Chairman of the Federal Reserve Board.

In plain language, the Eccles theory, as elucidated in his public letter to me of December 14 last, is to stimulate private enterprise by "properly directed and properly timed Federal expenditures," and that such expenditures must be financed by the purchase by banks of Government bonds. The important thing is not the mere magnitude of Government expenditures but the excess of the Government

of Government bonds. The important thing is not the mere magnitude of Government expenditures but the excess of the Government spending over its income; in other words, the magnitude of the deficit. The borrowing by the Government to meet the deficit, from the standpoint of the Eccles theory, must be not from individuals but from banks, so that new bank credit will be created to increase what Mr. Eccles calls "purchasing power." In his own language, appearing before the House Banking and Currency Committee in December 1937, Chairman Eccles explained his policy by saving: "The way to get money into operation is for the Governsaying: "The way to get money into operation is for the Government to spend more than it collects. If you spend more than you collect, you create that budgetary deficit that puts money into operation."

He appears to think that public appropriations can be turned off and on like a spigot—that when the national income increases you turn the spigot off and when it declines you turn it on. Nothing could be further from the actual practical facts. These vast sums are spent by gigantic Government bureaus reaching into every nook and corner and manned by politicians of influence. Solomon in all his wisdom could never have devised a plan of public spending "directed and timed to stimulate private enterprise" and to raise this expenditure up and down in accordance with the national income and at the same time satisfy the 48 States and 4,000 communities. So this planned economy for timed expenditures is thoroughly impractical of operation, even if otherwise desirable.

It was Mr. Eccles who, in February 1933, testified before the Senate Finance Committee that \$3,000,000,000 of gifts from the Federal Government to the States was a sufficient contribution to restore Our deficits to date are twenty-eight billions and still

prosperity. Our deficits prosperity has not come.

Only recently Mr. Eccles said that the overwhelming majority of the people of the United States favored drastic reduction in public spending, and while he still believes that such a course would invite disaster, yet Congress should obey the popular mandate and reduce. I have set your house on fire, says Mr. Eccles; now you do your best to put it out unaided by me or the administration.

In fact, the Eccles theory is the dogma of that erratic English economist, Dr. J. M. Keynes, who, though a prophet without honor in his own country, seems to have sold his seductive schemes of

borrowing and spending to those vested with power and responsi-bility in this country. England rejected his fantastic fallacies of borrowing, spending, and lending, and adopted a rigid policy of re-trenchment and economy, reduced her per capita tax, balanced her

trenchment and economy, reduced her per capita tax, balanced her budget, and revived prosperity.

Our public debt—national, State, and local—now averages \$450 for every man, woman, and child in the country, as compared to \$277 per capita in 1939. The present generation has placed a mortgage on all the people and on all the property of all the people in order to prime the pump for the present generation. We are handing down to our children a staggering indebtedness which they did not incur but which they will be required to pay. But Mr. Eccles says what difference does this make because we owe the debt to courselves.

High taxes mean high cost of living. High taxes retard business expansion and prevent employment of the unemployed. In some emergencies high taxes may be necessary and advisable, but high taxation as a permanent diet is another thing. There is a definite limit to the percentage of the Nation's productivity that can be

taken for taxes.

taken for taxes.

To the suggestion made by Mr. Eccles that this public debt need not be paid, I respond that America has always paid her debts. She did so after the early days of the Republic. She did so after the Civil War. After the World War nearly one-half of the debt created was paid. We are an honest people. If the Government does not pay in an orderly way its debt, the citizen will not pay his debt, and financial chaos will follow.

On March 27, 1936, Mr. Eccles made a speech at the University of Cincinnati, and said:

"I agree with most businessmen and bankers that a budgetary deficit, if continued, will create inflation."

"I agree with most businessmen and bankers that a budgetary deficit, if continued, will create inflation."

Mr. Eccles apparently believes the way to maintain the solvency of the Government is to continue indefinitely to increase its debt. He believes the way to avoid the evils of inflation is to embrace inflation, as he, himself, described it—"continuous deficit financing through bank credit"—that is what is being done—"is inflationary."

In his public letter to me, written last December, Chairman Eccles took the position that "the same general economic considerations apply to both private and public debt."

I did not suppose that anyone familiar with the science and principles of public finance could give sanction to such a self-evident absurdity. About the only things they have in common are that they are both promises to pay.

In our Government of checks and balances the check on excessive spending comes from the tax-conscious citizen who can see where his tax money goes and criticize its use. If deficit spending is practiced indefinitely, the taxpayer is not directly conscious of the burdens to be imposed later upon him.

I want to get business prosperity restored, not by financial ma-

I want to get business prosperity restored, not by financial manipulations on the part of the Government, but by restoring confidence of the business community in the fairness of the Government, by eliminating needless restrictions and restraints, and by freeing the enterprise of a great people, who want jobs, not char-

ity work, not taxes.

freeing the enterprise of a great people, who want jobs, not charity work, not taxes.

Nine years of deficits, very largely financed by bank credit, should shake even Mr. Eccles' faith in the value of deficits as financial magic in making business prosperity. I emphatically repudiate the doctrine that debt for its own sake is good; that deficits for their own sake are good, and that an expansion of bank credit for the purpose of financing deficits is good. I believe that the general flow of purchasing power must come out of production itself—production in one industry giving rise to the demand for goods produced by other industries—that, with the proper proportion among the different kinds of industrial activity, the producers themselves will clear the markets of the goods that other producers create, and that all the financial manipulations of Government deficit spending designed to create additional purchasing power merely mess up and distort the picture.

We know that the Federal Budget cannot be balanced immediately, but the longer we delay the approach to a balanced Budget, the greater the penalty we will pay.

In January 1938 the President said in his Budget message that seven billions was adequate to prevent distress and to operate the agencies of the Federal Government. Yet now we are spending nine and a half billions, and may soon spend ten billions as compared to four billions when Mr. Roosevelt took office.

We cannot collect nine or ten billions in Federal taxes, pyramided on local and State taxation, and maintain our business progress and development.

To reduce public spending becomes of imperative importance

progress and development.

progress and development.

To reduce public spending becomes of imperative importance to every American who believes in our democracy, founded upon a government operated within the ability of the people to support. We are facing a perilous situation and what can be done about it? Can we expect any leadership from the present administration for economy and retrenchment? In my judgment, only an aroused public interest by the citizens who must sooner or later pay for these extravagances will protect us from the disasters of uncontrolled inflation or taxes so high as to be confiscatory.

Public spending grows by what it feeds on. Many more billions may be added to the public debt before this excessive spending is stopped, for the very simple reason that the experiences of all governments prove that one of the most difficult of all things is to eliminate spending that feeds great bureaucracies established

an governments prove that one of the most difficult of all things is to eliminate spending that feeds great bureaucracies established and firmly entrenched in every hamlet of our vast country.

I suggested a five-point program as an aid to gradual restoration of the country to fiscal sanity, and of this program Chairman Feeles said:

man Eccles said:

"I am convinced that your program is not only a defeatist one; a program of retrogression and not of progression, but it would jeopardize the salvation of democracy."

I confess this program, as limited as it is, is intended to be a gradual approach to a balanced Budget. In this respect it means "retrogression" and not "progression" in debts and taxes. I will let you decide whether it will "jeopardize the salvation of our

democracy."

Here it is:

First. Reorganize the Federal Government for simplification, retrenchment, and economy, and many millions can thus be saved. Second. Cancel existing authority of 30 borrowing corporations and agencies to borrow an additional \$7,000,000,000 without further legislation, and require these corporations and agencies to function through the Budget, allowing Congress to approve or reject their

through the Budget, anowing Congress to approve or reject their future expenditures.

Third. Scrutinize the new activities of government now responsible for the expenditure of 30 percent of the total appropriation, exclusive of relief, eliminate the dispensable activities, and reduce others to a minimum cost.

Fourth. Have a thoroughly honest purge of relief rolls to stop all expenditures in excess of provision for those in need and through requirement of the localities to bear a portion of the burden; direct

local interest to needed reforms.

Fifth. Conduct the Government within the ability of the people to pay and regard reasonable taxation as one of the best assurances

for business prosperity.

And last but not least, let us be realistic about this No. 1 Government problem. To retrench there must be the will and desire ernment problem. To retrench there must be the will and desire for economy. Such a proven fallacy as the Eccles spending and borrowing plan to bring prosperity must be thrown out of the window. Worth-while economy will only come through cooperation for retrenchment between the Executive and the Congress. The very complexity and operation of the Budget system make this so. The Budget is submitted to Congress by the Executive after exhaustive investigation by the Budget Bureau. Under sound budgetary practice, the Budget should be a balanced program for expenditure within the ability of the Nation to pay. The very immensity of our Federal expenditures and the vast detail involved make most difficult worth-while economies in reducing Budget estimates in the face of Executive opposition. Congress is in a mood for retrenchment, and with Executive cooperation much can be accomplished immediately to restore the country to sound fiscal policies. policies

Tax reform in the removal and modification of tax barriers to business progress should not be delayed, but after all remember that expenditures regulate taxes. As long as we spend two dollars for every one the Government receives, long-range tax reform, so vital to business recovery, remains unattainable. To the contrary, vital to business recovery, remains unattainable. To the contrary, unless retrenchment comes quickly, we must prepare for much greater tax burdens, falling heavily on every class of our citizens. I still agree with the philosophy of the late Will Rogers, repeated often but not often enough, that "we ought not to spend money we haven't got for things we don't need."

In conclusion, may I be permitted a personal word? Since I came to the Senate in 1933 I have consistently fought what I regarded as waste and extravagance in Government expenditures. At no time have I opposed what I believed to be appropriations sufficient and reasonable to provide for the needy and to finance the proper and necessary functions of government. I mention this only because of the inference often suggested and implied that if only because of the inference often suggested and implied that if one opposes waste and extravagance, he is willing for citizens of America to starve and freeze and suffer and the country to stagnate because of the lack of adequate Government appropriations.

Let us so conduct our Government as to keep our resources free to meet any emergency the future may have in store for us. Gov-

ernment, efficiently and economically administered, is our best protection against the undermining of democracy. Financial preparedness is the greatest bulwark of national defense, and it is the greatest guaranty of national security.

The Merchant Marine

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

ADDRESS BY REAR ADMIRAL EMORY S. LAND, APRIL 25, 1939

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the Congressional Record a most informative address delivered by Rear Admiral Emory S. Land, retired, Chairman, United States Maritime Commission, at a luncheon of the Chicago Rotary Club, Chicago, Ill., April 25, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The opportunity of speaking here today is one which I appreciate. I hope that we may benefit mutually by an exchange of ideas. For that reason I have informed your chairman that upon the For that reason I have informed your chairman that upon the conclusion of my remarks I shall be glad to answer any questions which I can from the floor. No holds will be barred. If you have something on your mind concerning the merchant marine and our program, let's have it.

One reason for my gratitude today is the fact that this is an audience representing many and varied business and financial interests. The merchant marine can do much directly for many of you. It is necessary to all of you.

I propose to tell you something of what the Commission has been doing and then, if I may, suggest how your cooperation and interest can contribute to the success of the program that Congress has

charged us with perfecting.

Some of you I am sure are familiar with the decline in quality and prestige of our merchant marine following the war. For a number of reasons the decline continued almost without interruption from 1920 to 1936. Those reasons I will not describe in The American merchant marine has too long had a past. we are much more interested in the future. I feel that it can be said today that with a thorough understanding of our problems on the part of the American people that future is brighter than

for many years.

The Maritime Commission was created under the Merchant Marine Act of 1936. It was charged with the responsibility of rehabilitating our merchant fleet. That involves replacements and additions to provide an adequate and well-balanced instrument of

trade promotion and national defense.

The Commission did not formulate a definite program until it had made a thorough and comprehensive study of all the problems in this most complicated and oldest of our industries. Some of us knew that a substantial and efficient merchant fleet was a national necessity. This was fully confirmed by our study which was undertaken by a group of experts and the staff of the Commission—experts in many lines, from finance to naval architecture.

There have been some who doubted, and I presume may still There have been some who doubted, and I presume may still doubt, the advisability of maintaining what is commonly described as an adequate merchant marine. Their memory does not go back to the spectacular experience of business and industry during the war. Millions upon millions of dollars were lost to American industry through lack of shipping facilities. Foreign markets passed into other hands, with a consequent loss which cannot even be reckoned.

found that shipping services throughout the world frequently improved upon the entrance of American-flag vessels into the trade. It tended to stabilize and in numerous cases even re-

duce existing rates.

The Commission wanted to avoid the waste and extravagance entailed in our wartime construction program. For that reason we projected our plans on a long-range basis. We have undertaken new construction on a 10-year schedule, during which time we plan to build a minimum of 500 new vessels. This we believe will provide a systematic and orderly replacement program. sible, of course, that it may be necessary to expand the undertaking. The extremely dangerous international situation reminds us, unhappily, of the importance a merchant marine must play in the national defense. I am not going into that in detail. I merely wish to call to your attention with some emphasis that the efficiency of a navy is dangerously impaired without a strong and a well-balanced merchant fleet. This fleet feeds and fuels the navy in time of emergency. That is a fact which in these times it is folly to ignore.

Today the record of our program includes 66 ships, several of which have already been launched. This, we believe, is the beginning of one of the best merchant fleets that science and engineering

skill can produce.

There is under construction at Newport News, Va., the largest liner ever laid down in an American shipyard. Her name will be America. She will stand as a symbol of the rehabilitation of our merchant fleet. Next spring she will enter the North Atlantic trade

merchant fleet. Next spring she will enter the North Atlantic trade as one of the finest and safest ships afloat.

Other ships are building in California, Florida, Pennsylvania, Massachusetts, New Jersey, and Mississippi. Please note that the work is reasonably well distributed.

Four of a series of 12 high-speed tankers already have been launched. They and their sister ships were ordered by the Standard Oil Co. of New Jersey. Because of certain vital national-defense features built into them, the Maritime Commission paid approximately 28 percent of the cost. They are remarkable vessels. Trials have shown that they develop approximately four times the horsepower of an ordinary tanker and are capable of a speed approaching 20 knots per hour loaded with almost 150 000 times the horsepower of an ordinary tanker and are capable of a speed approaching 20 knots per hour loaded with almost 150,000 barrels of oil. This makes them the fastest ships of their kind of which there is any reliable record. The Navy has acquired two of them and expects to buy a third; two more have been purchased by Keystone Tankship Corporation of Philadelphia. All will become available for naval service should an emergency arise.

In addition to the tankers, we are building several types of drycargo vessels, including four with the American Export Lines and three combination cargo-passenger vessels with the Mississippi

Shipping Co. Vessels under construction for our own account will

Shipping Co. Vessels under construction for our own account will be sold or chartered to private operators.

Last Saturday the first of the dry-cargo ships was launched at the yards of the Sun Shipbuilding & Dry Dock Co., Chester, Pa. This vessel and the other 19 of her design carry the names of 20 of the most famous clippers. It is hoped that in using these names something may be contributed to a revival of the spirit and enterprise which existed in our merchant marine when it was at its peak during the clipper days. The ship launched last Saturday was named *Donald McKay*, in memory of one of the greatest shiphuilders of all time. builders of all time.

Within a few weeks keels will be laid for a series of combination cargo-passenger vessels with accommodations for 68 to 100 passengers, depending upon the trade they enter. We propose to build a series of smaller cargo ships and we have on the drawing boards

plans for several liners.

From what I have said thus far you might assume that the Maritime Commission has no duties other than construction. I almost wish that were true. However, there is no need to discuss before this audience the complications involved in the Commissional sion's regulatory functions. It is enough to say that they impose an arduous burden upon this five-man board.

be interested, I think, in the improvement that has You will be interested, I think, in the improvement that has been brought about in steamship service between New York and the east coast of South America, a market for American products that can be of inestimable value. Last year the Commission established the "good neighbor fleet" of the American Republics Line, operating between New York, Brazil, Uruguay, and Argentina, with stops at Barbados and Trinidad en route. This service was operated from October 8 to January 1 by the Commission. On the latter date, it went under charter to Moore-McCormack Lines, Inc., of New York. We are confident that this operation will make a material contribution to our trade in South America and will supply a long-needed link in the friendly relations existing between us and our neighbors to the south. and our neighbors to the south.

The Commission spent over \$2,000,000 in equipping three of the finest ships of their type under any flag for this service.

named Argentina, Brazil, and Uruguay in honor of the three principal foreign countries they serve.

We have been gratified by the results to date. Passenger traffic has shown a steady increase since October and we have reason to believe that this will continue.

There are indications that within a reasonable length of time many of the existing difficulties involving exchange problems, import restrictions, and similar handicaps will be overcome. This will mean increases in cargo, both to and from the United States, and a healthier condition in general.

These conditions are improving right now.

Here in Chicago you are also interested in matters pertaining to domestic shipping. The Commission has under way at present an extensive survey and study of inland and lake shipping.

We have just completed a similar inquiry into coastwise and intercoastal shipping. Our domestic fleet, as distinguished from those vessels in the overseas trade, is operated by about 135 companies with 277 received of 1000 gross tops and over They constituted. panies, with 877 vessels of 1,000 gross tons and over. They constitute a majority of the tonnage of our merchant marine, and likewise constitute an essential part of our transportation economy.

We found that here, too, operations were being carried on primarily with vessels built during the World War. Many of them have passed the limit of their economic lives. Many others are approach-

ing obsolescence.

We also found that a number of the companies faced sharp com-petition in many instances from the railroads. Generally unsatisfactory economic conditions in the past also served to depress the industry as a whole. Instances of unsound business judgment and unwise practices were disclosed, including disbursal of dividends without adequate provision for replacements in the fleet.

The matter of replacements was the most pressing of all the

problems, both in connection with the fleet's strength and with its

efficiency, the latter vital to any reduction in operating costs.

The Commission, therefore, is faced with the problem of how to stimulate construction in the domestic fleet and in the overseas trade as well. The domestic operators, being protected by law from foreign competition, do not receive construction or operating sub-Our investigation did not disclose justification for under-

taking that type of assistance even now.

The Commission did conclude that stimulation might result from the introduction of what has come to be a common commercial policy—namely, trading in the old for the new. Consequently we policy—namely, trading in the old for the new. Consequently we asked the Congress for authority to accept vessels of 17 years of age or older as a credit toward the purchase of new ones. Their worth would be evaluated by the Commission on several bases, including scrap prices and the higher world-market value. This figure would be set up on our books as a credit and limited ex-

figure would be set up on our books as a credit and limited exclusively as partial payment on new construction.

We recently had to prohibit the sale by one operator of several of his ships to a foreign buyer. The transaction was considered contrary to the public interest. However, had the sale gone through, this operator would have received considerably more than three times as much as he could obtain in the domestic scrap market. This, it was felt, was an unavoidable injustice to the operator and at the same time prevented the undertaking of new constants. ator, and at the same time prevented the undertaking of new con-struction. Had our proposed "trade in" authority been available,

this situation could have been remedied to a great extent and new

this situation could have been remedied to a great castle construction undertaken promptly.

There is another matter which I think should be presented here.

You have undoubtedly heard criticism of service on American-flag ships. Certainly there have been occasions when it was justified. I would like to assure you that no general criticism of our merchant personnel can be supported in fact. True, there is room for improvement just as there is upon the ships of other nations. Unfortunately we Americans are prone to advertise our shortcomings; our foreign competitors do not. Right here I would like to say that the American merchant marine today stands upon the official records of the past several years as the safest in the world from the point of shipboard casualty.

Our merchant marine personnel are O. K. All they need is the

"will to do."

"will to do."

The Maritime Commission last year organized and established the United States Maritime Service, which provides an opportunity for licensed and unlicensed merchant personnel to obtain formal and valuable training. At present enrollment is limited to men with 2 or more years' experience at sea. Under this set-up we are operating one training station at Hoffman Island, in New York Harbor, another at Government Island, Oakland, Calif., and a third, where licensed men may take training, at Fort Trumbull, Conn.

There has been considerable opposition on the part of some organized seamen, but I am glad to be able to say that today on the east coast men who were almost violently opposed to this training system have gone through the school and come out enthusiastically

east coast men who were almost violently opposed to this training system have gone through the school and come out enthusiastically urging their fellow seamen to do the same. On the west coast the opposition is still vigorous, but I expect even there conditions will change within a comparatively short time.

We have facilities for training 300 licensed and 3,000 unlicensed men annually. We hope eventually to make available correspondence courses and other educational aids to the merchant personnel in general. Nor are we overlooking young men without previous experience. We hope to expand this activity to round out our whole program, which is aimed at developing a merchant personnel second to none.

second to none. I suggested earlier that there was a very definite and constructive part that you gentlemen should play in the program that is directed to restoration of our merchant fleet to its proper place upon the seas. I want you to remember that a merchant fleet is vital to our economy in peace and to our national defense in war. For that reason we must have a fleet strong and efficient, and we must have the whether it he owned myivately or owned by the Government. If reason we must have a fleet strong and efficient, and we must have it whether it be owned privately or owned by the Government. If you fail in your responsibility, it will, of course, be necessary for the Government to own a greater and greater share of the enterprise. However, with your cooperation our merchant fleet can continue not only as a desirable form of private enterprise, but it can be strengthened; it can provide better service with better ships, and it can become a most attractive investment. In shipping as in everything else, good management is a primary requirement, but the best management without adequate revenues cannot accomplished the desired results.

accomplished the desired results.

What is the situation today in this respect? Simply this: American ships are carrying less than 30 percent of our foreign trade. About 7 out of every 10 American citizens crossing the North Atlantic sail under a foreign flag. This situation, which seems to me hardly justifiable, makes doubly difficult restoration of our fleet to an appropriately healthy condition.

But, what, you ask, can be done about it? The answer to that question, gentlemen, rests with you. In this audience are men who control the import and export of large amounts of goods and products flowing into world trade. There are those in this audience who finance and extend the credit necessary to the conduct of this trade. It is within your power to designate shipping, where services are available, on American-flag ships.

I am not urging, nor would it be wise to do so, that all the world's trade, or that even all our own, be carried in American-flag ships, but surely 27 or 28 percent of our own is a pathetic share of that business.

business

but surely 27 or 28 percent of our own is a pathetic share of that business.

As I told the New York Board of Trade the other day, estimates have been made that, were our share in the carriage of our foreign trade to rise even to 35 or 40 percent of the total, the annual revenues of the shipping companies involved probably would increase some \$75,000,000, and more than half of that would go to lines which are now subsidized. You can figure for yourselves what such an increase would mean when I tell you that operating subsidies today are running something like thirteen millions annually. Give more business to American-fiag ships, and the Treasury of the United States can reduce its contributions to its support.

Given a fair and substantial share of our foreign trade, American shipping would find the majority of its existing problems eliminated. You are not to interpret my remarks on this subject as an effort primarily directed along lines of patriotic appeal. Surely we can and should take pride in seeing American merchantmen filled to the hatch covers with many cargoes. My suggestions today are made purely as a business proposition. You need not pay any premium for patronizing American-flag services. You are not being urged to indulge in philanthropy. You are being asked to examine this question yourselves. I think when you have, you will find that it is to your own interests to travel and ship under the American flag.

We ask for your help and your active cooperation. flag.
We ask for your help and your active cooperation.

Americanism

EXTENSION OF REMARKS

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

INTERVIEW WITH WILLIAM RANDOLPH HEARST

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Record an interview with William Randolph Hearst on the subject of Americanism, published in the New York Journal and American of Sunday, April 30, 1939, under the heading "Let America Set a World Example." The interview is by the well-known writer Damon Runyon, It gives in splendid form a historic résumé of the many patriotic services rendered over a long period of years by the distinguished publisher.

There being no objection, the interview was ordered to

be printed in the RECORD, as follows:

[From the New York Journal and American of April 30, 1939] "LET AMERICA SET A WORLD EXAMPLE," URGES W. R. HEARST—FAVORS PEACE, INDEPENDENCE, AND "FRIENDLY ISOLATION"—URGES RETEN-TION OF HISTORIC AMERICAN IDEALS AND POLICIES

(By Damon Runyon)

William Randolph Hearst is my ideal of a truly great American. "There is nothing new in Americanism. It is what the founding fathers put in the Declaration of Independence and the Constitution and into practical operation and that we have proceeded on for over 150 years with the most amazing success the world has ever known."

This is from an interview with him that I had on the occasion of his 76th birthday.

We are hearing so much about Americanism nowadays and so many people are discovering Americanism for the first time that I thought the views of a man who has made Americanism the very keynote of a long life would be interesting.

"In the short period of America's existence, we have accumulated more than half the wealth of the world and almost 100 percent of the peace and happiness of the world."

"I SEE NO REASON TO ALTER UNITED STATES POLICY"

William Randolph Hearst for nearly half a century has been preaching from the text Americanism and democracy. He was the apostle of Americanism long before many of those who have recently discovered it were born.

"I cannot see any reason for changing those plans and that policy, unless we are dissatisfied with having too much wealth and too high a standard of living or with having too much peace and progress."

progress."

As a young man and through his middle years, the voice of William Randolph Hearst was constantly heard in the land of the free trumpeting the tenets of the founding fathers and sounding his

own faith in his native country.

You go through the files of the Hearst papers from the still inkyodored copies of yesterday, on back down the years to the time of
their inception, and you will find that same strain running through
them like an echo of the national anthem—Americanism and

democracy.

democracy.

"What do we envy those foreign nations for? Their wars? Their depressions? Their poverty? Their persecutions? Their concentration camps and their bloody purges? Why should we adopt their theories and their policies, and why participate in their destructive conflict? That is the whole theory of the situation."

In days of national prosperity and consequent carelessness toward serious thought, it is conceivable that some of Mr. Hearst's readers wondered at his insistence in keeping the topic of Americanism constantly before them and were even bored. They could not see how it concerned them when things were going nicely and smoothly. That is exactly what Mr. Hearst was always trying to guard against—the inertia of the American public mind toward American spirit and American interests—toward Americanism in general.

against—the inertia of the American public mind toward American spirit and American interests—toward Americanism in general. That is why for nearly 50 years his voice has ever been booming out over the United States, calling on Americans to think American and to talk American and to be American.

"But in addition to theory we have the practical result of having departed from our peaceful Americanism in the World War. That showed us how great a folly such departure was. That proved to us, if we needed proof, that Washington and all the great American Presidents down to the time of Wilson were right in keeping us free from foreign entanglements."

WORLD WAR PROVED FOLLY OF MEDDLING

WORLD WAR PROVED FOLLY OF MEDDLING

I remember hearing, long ago, a couple of Mr. Hearst's editors in the office of the New York American discussing an editorial that had just come in from him. It was during one of those periods of public inattention toward anything but money making and amusement and this editorial was a regular old drum-ruffle on Americanism. One of the editors was a Johnny-Come-Lately to the service and he remarked:

"This Americanism seems to be the chief's phobia."

"Phobia?" said the other editor, who had been around there quite a spell. "That's no phobia—that's his religion."

Now, in the serenity of 76 years of life, Americanism remains a religion with Mr. Hearst, as I soon learned when I went to interview him—Americanism and democracy.

religion with Mr. Hearst, as I soon learned when I went to interview him—Americanism and democracy.

"So we have two things to guide us. First, proof of the wisdom of adhering to American principles in over 150 years of peace and progress, and second, the folly of departing from them in the consequences of the World War."

Mr. Hearst is easy enough to interview after you get to him, and I was fortunate enough in getting to him with a celerity that caused me to reflect on other occasions when I was not so lucky. It struck me when I was interviewing him this time that he had not greatly changed in physical appearance since then, though it was years ago, and that he had changed not at all in courtesy and patience.

and patience.

When he thought he was talking a little too fast for my note taking during the interview, he slackened his vocal speed or came to a stop and waited until I caught up, as when I asked him what he thought of a policy of isolation for America.

"I FAVOR ISOLATION TO KEEP OUT OF WAR

"I favor an isolation policy as far as adhering to American principles and keeping out of foreign wars is concerned. We have never been completely isolated. We have traded with all the world. We welcome the friendship of all the world. We have had the admiration and respect of all the world."

His big frame was relaxed in a chair, his long legs crossed, his functor expectations to what has a chair, his long legs crossed, his

His big frame was relaxed in a chair, his long legs crossed, his fingers sometimes toying with the charm on his watch chain or pulling at his upper lip when he was giving consideration to a question. He watched our pencil flying across the note paper. "We want the benefits of those friendly contacts, but if anyone means we should take part in the prejudices and persecutions of Europe and in the antiquated theories of despotic government, that we should seek the level of their wage standards and industrial standards, I say 'no'; let's maintain a policy of isolation as far as those matters are concerned." far as those matters are concerned."

"LET NATIONS FOLLOW AMERICA'S EXAMPLE"

You do not have to ask Mr. Hearst many questions. You ask one to indicate the thought you are trying to capture and he talks to that question with great clarity until he has answered it

completely.

Of course, Mr. Hearst is a newspaperman himself and that makes a big difference. Moreover, I was interviewing him on a subject on which he has talked and written more than any other man in

the United States.

"Let's keep out of international conflicts. Let's keep out of class, racial, and religious conflicts. Let's maintain the liberty and tolerance and fraternity and opportunity which have made us a unique and isolated example of human progress. In other words, let the less happy, less peaceful, less successful nations of the world follow our example, and let us not follow theirs."

I asked Mr. Hearst if he thought there would be a war. That is the question everybody is asking nowadays. He talked for some time on the matter:

is the question everybody is asking nowadays. He talked for some time on the matter:

"I don't think there will be a war because, in the first place, no nation wants war. In the second place, no nation can afford it economically, politically, or socially.

"Every government realizes what another great war would mean to it. The consequences, win or lose, would be worse than the World War."

"BUNDS ARE OFFENSE AND MENACE TO UNITED STATES"

We asked him what he thought of those organizations in America

We asked him what he thought of those organizations in America of foreign-born such as the so-called bunds.

"They are an irritation and an offense, and to a certain degree a menace. I do not think an overt act is any worse than a secret or a subversive act. We are threatened on the one hand by fascism and on the other hand by communism. It isn't necessary to decide which is worse. It is only necessary to realize that both of them are offenses against our generosity and outrages against our liberty."

He paused as if in thought, his fingers pulling at his upper lip. He has strong-looking hands. He likes very fancy neckties though otherwise dresses quietly and in garments that fit him loosely.

"I believe in free speech, but not in freedom to destroy the political system which provides and protects free speech. I believe

political system which provides and protects free speech. I believe in liberty, but not in liberty to undermine our liberties.

"I would protect our liberties by deporting those trying to destroy

our liberties.

"If these malcontents prefer political systems and conditions which exist in other countries, let them be transported to those other countries and live under those conditions. There is nothing

very drastic about that program."

He added that he thought if we have a right to prevent undesirables from coming into this country, we have a right to prevent undesirables from remaining in this country.

"This United States should be a nation for desirables and for people who love liberty and know how to exercise it and preserve it—who know how to use it and will not abuse it."

He thought there could be a great deal of overdiscussion of racial and religious questions and that such overdiscussion sometimes makes people think they ought to take sides, when, as a matter of fact, there is no real basis of prejudice or persecution in this country on which to base that discussion and dissension.

"The greatest single problem—quite as great as the war problem—is whether America as we know it can continue to exist. Whether

American individualism and successful industry can continue under the present back-breaking burden of taxation. Personally, I don't think it can possibly do so."

He said if taxation continues as it is, the private enterprises will be largely driven out of existence and we will have an entirely new system, a socialization of industry and regimentation of the in-

That's close to the totalitarian theory

"That's close to the totalitarian theory."

Mr. Hearst said it does not make any difference under what theory you reach this result—whether it is under the theory of communism, which produced Stalin, or under the theory of State socialism, which produced Hitler and Mussolini.

He said the people must compel the Government to be economical and efficient—to do what it is paid to do; to do what it is elected to do, which is to run the Government in the interest of the people and not regiment the people in the interest of the people and not regiment the people in the interest of the politician.

"We still have the democratic processes under which this can be accomplished, but if we wait long enough, even those democratic processes may be taken away from us. However, I do not despair. I believe in democracy because I believe in the ultimate wisdom and justice of public opinion.

"Sometimes," he said, "it takes the people a little longer than we think it should to make up their minds and take action, but they generally make up their minds wisely and take the right action.

"It took us 10 years to get rid of that particular regimentation known as prohibition, but the people finally decided that it was an unwise invasion of their personal liberties and they eliminated it.

"I believe the people are being thoroughly aroused to the disastrous effect of overtaxation and that they will correct that situation and correct it thoroughly and get rid of all the wasters and all the prodigal sons. If they don't, it will not be the prodigal sons but the American people who will eat the husks."

I sat thinking that here was a man who had seen all the great social upheavals in the United States for generations past—who

sons but the American people who will eat the husks."

I sat thinking that here was a man who had seen all the great social upheavals in the United States for generations past—who had seen the Nation change its manner of living and mode of thought, not once but a dozen times, and who had been an active figure in most of those changes. I asked Mr. Hearst what period, in his experience, had produced conditions similar to those of today. He said the second Cleveland administration.

"We had the same hard times, the same visionaries, the same malcontents, the same disbelievers in American principles. We had Herr Most and his theory of anarchy instead of Karl Marx and his theory of communism.

his theory of communism.

"SOUND AMERICANISM" TERMED SOLE NEED

"What corrected that situation was the eventual triumph of sound Americanism, and that is all that is needed to correct the present situation."

present situation."

I asked him what he considered the most thrilling period of his newspaper career, and he said it was the time he came out of the West and invaded New York City, buying the Journal from John R. McLean and starting out to rival the great Pulitzer. He thought the Spanish-American War was a mighty exciting newspaper period and told me about the Journal yacht following the American fleet through the Battle of Santiago.

The Americans drove the Spanish ships ashore and Mr. Hearst landed and captured 27 prisoners, though he said it was not a heroic feat because they wanted to be taken. Then he said he had quite a time turning them over to the American forces.

CALLS NEWSPAPERS "VOICE OF THE PEOPLE"

He tried to deliver them aboard the battleship Texas, but the commanding officer ordered him off in great irritation, saying: "We don't want any yellow fever on this ship."
Finally, Mr. Hearst induced the commanding officer of the converted liner Harvard to accept his prisoners and give him a receipt. Richard Harding Davis, Frederic Remington, Karl Decker, Stephen

"Ah, well. We were young. It was adventure."

He talked of some of his great editors and publishers of another day—Arthur Brisbane, Sam Chamberlain, Arthur McEwen, Dent Robert, and others, and of some of his former writers, such as Ambrose Bierce, his greatest columnist, and Alfred Henry Lewis,

Ambrose Bierce, his greatest columnist, and Alfred Henry Lewis, his greatest political commentator.

"But news is the most important thing to a newspaper. Features are fine, but they are lagniappe. An editorial page is good for character and occasionally makes circulation, though not in ordinary times. I like pictures. It is a pictorial age. But news is most important of all."

HOPES FOR LEADERSHIP "BACK TO AMERICANISM"

I asked him what he considers the newspaper's duty to the people. He said its first duty is to give the people voice and expression of their views and sentiments and that a paper is chiefly influential when it does that.

He was obliging and entertaining as he responded to my questions about newspapers, but his thoughts seemed to be lingering with our original discussion—Americanism. That, I think, is even

nearer and dearer to his heart than his papers. His mind traveled

hearer and dearer to his heart than his papers. His hind traveled back to the subject before I left.

"All that is needed to correct the present situation is a realization that the Declaration of Independence does not belong to the oxcart age and that the benefits of the Constitution are not limited to the horse-and-buggy age, and that Washington, Jefferson, Jackson, and Lincoln are not back numbers. All we need the contract of the constitution are proposed to the contract of the contract son, Jackson, and Lincoln are not back numbers. All we need today is a good, sound American to carry out the American ideal."

Long afterward I kept thinking of one remark during this inter-

view with a great American:

"I do not despair. I know that somewhere there is a good, sound American who will lead us back to good, sound Americanism."

Unemployment Compensation

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 4, 1939

ADDRESS BY HON. WILFRED JESSUP

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Hon. Wilfred Jessup, a distinguished lawyer of Richmond, Ind., and a member of Indiana's Unemployment Compensation Commission, on the subject of unemployment compensation delivered before the Indiana section of the United States Chamber of Commerce on the night of May 3, 1939, at the Mayflower Hotel in Washington, D. C .:

OBJECTIONS TO PROVISIONS OF BYRNES BILL AFFECTING UNEMPLOYMENT COMPENSATION

The two immediate fundamental objectives of unemployment compensation, as embodied in the social-security program, are (1) to insure workers against the hazards of unemployment, and (2) to aid in bringing about stabilization of employment.

Underlying and entwined in these two specific objectives is the

eneral principle that unemployment compensation, if it is to be successful, should contribute constructively to the country's economic well-being—and that means to the economic well-being footh employees and employers in industry. If successful, it must help to create employment, and not to destroy employment. To be successful its benefits must outweigh its costs. If the process of the process providing insurance against the hazard of unemployment becomes such a load on the economic machinery of the country that addi-tional unemployment is created thereby, then unemployment com-

pensation obviously becomes a failure.

Objections to the proposed Byrnes committee amendments affecting the unemployment-compensation program may be summed up in the statement, and this statement is not exaggerated, that the amendments constitute a major stride toward the defeat of the underlying principle and the fundamental objectives of the

It is significant that unemployment compensation is conceived It is significant that unemployment compensation is conceived as insurance against the hazards of unemployment. It is based, to as great an extent as practicable, on insurance principles. Certain sums, the amount of which are based on an individual's earnings, are set aside for him as insurance. Unemployment compensation is an insurance and not a relief program. It does, of course, provide relief at a time when relief is needed, but in the same manner that sickness or fire insurance provides relief when relief is needed. When unemployment compensation attempts to take on the outright relief functions now performed by other governmental agencies and private charities its break-down is assured, just as the break-down of a private insurance company that abandoned insurance principles in the payments to policyholders would be assured. assured.

The second immediate objective, stabilization of employment, is

calculated under the unemployment compensation program to be attained in two ways. One is the pouring of reserve money into the channels of trade when employment is falling off, thus lesthe channels of trade when employment is falling off, thus lessening the shock and protecting consumer buying power. The more direct factor is the offering to employers of a practical incentive for the stabilization of employment in their own plants and industries. This incentive is the opportunity—in those States with workable merit rating provisions in their laws, of which Indiana is one—for employers to reduce their unemployment compensation pay-roll taxes by planning their operations so as to provide steady employment in their establishments.

Amendments affecting unemployment compensation that are incorporated in Senate bill 2203 should now be examined for their effect on the unemployment-compensation program as a whole

and, more explicitly, for their effect on the excellent program developed in Indiana.

The requirement that unemployment compensation pay roll

The requirement that unemployment compensation pay roll taxes be geared in each State to produce the equivalent of an average tax of 2.7 percent on all pay rolls would, first of all, sound the death knell, for all practical purposes, to State merit rating provisions offering the incentives for employers to stabilize employment. Merit-rating provisions that still might be possible under such a requirement would be so difficult to administer and restricted to such narrow limits as to be virtually worthless. Under this requirement, tax-rate reductions for employers with stabilized employment could be granted below the 2.7-percent level only to the extent that the reductions were offset by revenue from "penalty" rates in excess of 2.7 percent. Increases in penalty rates, imposed on employers not carrying their own load in the program, sufficient to broaden the merit-rating limits to any extent obviously would be prohibitive.

would be prohibitive.

Application of the 2.7-percent average rate requirement to Indiana would nullify what employers of the State believe is one of the soundest and most workable set-ups encouraging stabilizaof the soundest and most workable set-ups encouraging stabiliza-tion of employment that can be found in the unemployment com-pensation programs of any States in the country. Under the Indiana individual-reserve partial-pool type of fund with merit rating, employers are encouraged to build up their own reserves by the opportunity to earn tax reductions thereby, and at the same time they contribute to a general pool which guarantees to every worker—even though he may have been working for an em-ployer who has failed to build up a reserve—full payment of all benefits to which he is entitled.

benefits to which he is entitled.

Further aspects of the effect which the 2.7-percent average tax requirement would have toward increased costs of the program will

be discussed later.

Violation of insurance principles of unemployment compensation is embodied in the dual requirements of the Byrnes committee bill that weekly benefit amounts be computed on the basis of full-time that they be paid for a minimum of 13 weeks. that weekly benefit amounts be computed on the basis of full-time weekly earnings and that they be paid for a minimum of 13 weeks. In other words, total benefits payable would be based not on what an individual actually had earned and on which pay-roll taxes had been paid, but on a formula involving what an individual would have earned had he been working full time at his regular rate of pay, multiplied by the arbitrarily fixed duration of at least 13 weeks. The combined full-time earning base and minimum 13-week duration actually is a compromise between insurance principles and an outright relief basis for the unemployment-compensation program, with the implication that the relief basis would be the next step. Those who believe sincerely in the unemployment-compensation program must agree that abandonment of insurance compensation program must agree that abandonment of insurance principles and acceptance of the relief concept would endanger seriously the soundness of the program.

Under the Indiana benefit formula the weekly amount is determined on the basis of actual earnings in the calendar quarter of highest earnings among the first 4 of the last 5 completed calendar quarters of an individual's employment. Despite this somewhat complicated explanation, the formula actually represents one of the simplest methods yet devised of approximating full-time earnings for the purpose of computing the weekly benefit amount. It is assumed that within the year's period of employment an individual has had in most instances at least one quarter of full-time work. Thus the Indiana formula is in approximate compliance with the proposed requirement of relating weekly benefit amounts to full-time weekly earnings. However, the Indiana formula then bases duration of benefits—or total benefits payable, up to the maximum of 15 weeks of benefits—on actual earnings in the base period of five and a fraction quarters, rather than following the plan of paying benefits for a fixed period of time. Therein lies the major departure from the Byrnes committee bill requirements in respect to total benefits payable.

At this point it would be well to examine another very important Under the Indiana benefit formula the weekly amount is deter-

Ments in respect to total benefits payable.

At this point it would be well to examine another very important objection to the weekly full-time wage-base requirement. States that have attempted to adhere strictly to a weekly full-time wage base for the computation of benefits have encountered almost insurmountable administrative difficulties, even when the plan of using the most recent wage rate is followed. Employers are confronted with reporting tasks and administrative agencies with computing and record-keeping tasks involving weekly and hourly rates. pronted with reporting tasks and administrative agencies with computing and record-keeping tasks involving weekly and hourly rates of pay, hours actually worked, full-time working schedules, and similar detailed matters. Difficulties of deteremining in many instances exactly what constitutes regular rates of pay and full-time working schedules are obvious. Studies show that administrative costs of State programs, including the connected employment services, now range from 8.7 to 24 percent of contributions collected. (The administrative cost in Indiana for 1938, including the employment service, was about 14 percent of contributions.) With administrative costs already quite high and simplification of the program an aim, it would appear to be wholly unwise to augment administrative complexities and difficulties.

Under a fourth requirement of the Byrnes committee bill, waiting Under a fourth requirement of the Byrnes committee bill, waiting periods preceding payment of benefits would be shortened to 1 week of total unemployment. The Indiana law now specifies waiting periods of 2 weeks of total or partial unemployment. Purposes of the waiting period are to encourage unemployed individuals to seek new employment during a short period in which they still are living on their own resources, and to provide time for administrative procedures to be carried out. Practical effects of the shortening of the waiting period would be to create added administrative difficulties in carrying out the registration and benefit payment procedures on time; to cut 1 week off the end of the benefit period, when it is most needed by the individual, and add it to the beginning of the period; to reduce the incentive for individuals to seek new employment, and to increase benefits paid in cases of short, temporary lay-offs.

While it is certain that provisions of the Byrnes committee bill

would result in a substantial increase in benefits payable out of the Indiana unemployment-compensation fund, figures on which can be based an exact computation of such an increase are not available. A conservative estimate is that the proposed amendments would increase the financial drain on the fund 15 to 20 percent.

Benefits paid in the first full year of benefit payments—April 1, 1938, to April 1, 1939—amounted to \$20,258,271. A 15- to 20-percent increase would have amounted to \$3,038,740 to \$4,051,654. At the present time benefits are being paid at the rate of about \$1,000,000 a month. A 15- to 20-percent increase applied to the present monthly basis would amount to about \$150,000 to \$200,000 a month.

The estimate of a 15- to 20-percent increase in benefits payable in Indiana if the Byrnes committee amendments were enacted is based in the main on figures indicating the 13-week minimum duration requirement would increase benefits payable to at least 12 percent. In addition to that, the requirements shortening the waiting perod, relating benefits to full-time weekly wages, and establishing a \$5 minimum-benefit amount would increase the

benefits payable in an unpredictable amount.

benefits payable in an unpredictable amount.

During the first full year of benefit payments, the average duration of benefits established by eligible applicants was about 12½ weeks. If the 13-week minimum were established and the present 15-week maximum remained in effect, it could be assumed that the average duration would be about 14 weeks, or an additional week and a half of benefits for each of the 207,455 applicants who established benefit rights during the first year of payments in Indiana. Those figures applied to the average weekly benefit amount of \$12.34 would indicate the 12-percent increase growing out of the 13-week-minimum duration requirement.

This 12-percent increase estimate obviously is extremely conservative in one respect. It is obtained by using figures for the first full year of benefit payments, during which the total benefits payable, and the duration of benefits, were much larger than they will be under normal circumstances in subsequent years.

While the foregoing figures indicate the immediate cost effect of the Byrnes committee amendments on the Indiana fund, they are far less significant than a consideration of the ultimate, overall effect in adding to the burden that must be borne by industry. If the incentive for stabilization of employment is to be removed,

all effect in adding to the burden that must be borne by industry. If the incentive for stabilization of employment is to be removed, the ultimate effect can only be more benefits paid out to individuals in the place of wages they would receive for working under a stabilized program. If unemployment-compensation pay-roll taxes are to be continued indefinitely at an average rate of 2.7 percent, it may be taken for granted that ways will be devised to accelerate the outgo from the State fund to approximate the income. If business is to continue to be dwarfed by a tax load that it cannot afford to carry, the result can only be more unemployment, and hence more unemployment-compensation benefits.

Business in Indiana subject to the unemployment-compensation program had a \$900,000,000 pay roll in 1937 and a \$629,000,000 pay roll in 1938. At the 1937 pay-roll level, business of the State would be compelled to look forward to the payment, indefinitely, of \$27,000,000 a year in State and Federal unemployment-compensation pay-roll taxes—should the requirements of the Byrnes committee be imposed. At the 1938 pay-roll level, the annual bill would be \$18,870,000.

\$18.870,000.

But if the present Indiana program is allowed to stand without interference, it is probable that the annual unemployment-compensation tax bill on Indiana business eventually will be reduced automatically to somewhere in the neighborhood of \$12,000,000 or less.

Any consideration of the need of business for all possible relief from unemployment-compensation taxes must take into account

from unemployment-compensation taxes must take into account the very important factor of the scheduled increases, under the present social-security law, in the Federal old-age annuity taxes. These taxes are scheduled to jump from 1 percent to 1½ percent each on the employer and the employee in 1940, continuing upward at one-half of 1 percent jumps each 3 years until the maximum of 3 percent paid by the employer and 3 percent by the employee is reached in 1949.

The same Indiana pay rolls that contribute to the unemployment compensation program will be forced in 1940—assuming the 1937 pay-roll level of \$900,000,000—to shoulder an increase in the old-age annuity tax of \$4,500,000 on the part of employers and another \$4,500,000 on the part of employees, minus some deductions by reason of the fact that the annuity tax is not paid on earnings of persons 65 years of age or more or on salaries in excess of \$2,000

earnings of persons 65 years of age or more or on saiaries in caces of \$3,000.

Although the Byrnes committee bill amends all phases of the Federal Social Security Act, it ignores the recommendations of Secretary Morgenthau concerning possible reductions in the schedule of old-age annuity taxes. Should the bill be adopted, it would prescribe for Indiana pay rolls subject to the unemployment-compensation program, with some exceptions, a pay-roll tax bill in 1949—still assuming the 1937 pay-roll level—of \$27,000,000 for unemployment compensation and \$27,000,000 for old-age annuities, paid by employers, and another \$27,000,000 for old-age annuities, paid by employees. This amounts to a grand total of \$81,000,000, or 9 percent, but leaves out of consideration the old-age annuity

tax on employers of less than eight persons and the somewhat compensating exemption from the payment of old-age annuity taxes on salaries in excess of \$3,000 a year and on earnings of persons who have reached the age of 65.

Arguments have been advanced in support of the proposed aver-

age State rate of 2.7 percent on all pay rolls for unemployment compensation to the effect that such a rate is necessary to protect the financial stability of a State program. Such arguments, as applied to the Indiana program, appear to be without substance.

In Indiana, when payment of benefits began April 1, 1938, the balance in the State fund was about \$27,000,000. The first year

of benefit payments were made under conditions of most severe strain on the fund. Characteristic of unemployment-compensation programs, the start of benefit payments always constitutes a period of heavy payments. Added to that was the fact that bene-fit payments started at a time when industry was in a low point fit payments started at a time when industry was in a low point of the late 1937 and early 1938 economic recession. Yet after a full year of benefit payments, under such conditions, the balance in the fund on April I, 1939, was about \$24,324,000.

More significant in respect to the trend of the fund under somewhat normal conditions was the fact that the balance in the fund grew \$1,607,435 in the first calendar quarter of 1939.

Under provisions of the Indiana law no employer's tax contribution to his own reserve fund will cease until his reserve has reached 15 percent of his preceding calendar year's pay roll—an amount

tion to his own reserve rund will cease until his reserve has reached 15 percent of his preceding calendar year's pay roll—an amount sufficient to pay all his employees all benefits to which they are entitled if his plant were shut down permanently. If every Indiana employer were able eventually to build up a 15-percent reserve, the State unemployment-compensation fund would accumulate \$135,000,000, assuming the 1937 pay-roll level of \$900,000,000. This would be a sufficient reserve to pay every eligible employee in Indiana the full amount of the cash benefits to which he would be entitled.

be entitled.

It is obvious that a point never will be reached at which all employers of the State will have established 15-percent reserves. It is

ployers of the State will have established 15-percent reserves. It is equally obvious that the State does not need to anticipate such severe conditions as the complete shut-down of all industry and the full payment of all benefits to which all workers are entitled. Actually, under the Indiana law, many employers under normal conditions will in a relatively short period of years establish their 15-percent reserves, others will approach that point more gradually, and others never will establish any substantial reserve. Safeguards guaranteeing the payment of benefits to all eligible workers lie in these phases of the program:

these phases of the program:
1. If an employer's individual reserve becomes exhausted, benfits are paid out of the State pool, to which all employers contrib-ute a flat rate of 0.135 of their pay rolls, and to which is credited interest received on State funds in the custody of the Federal

Government.

Government.

2. If an individual employer is not carrying his own load—that is, if his individual reserve goes into a deficit—his tax will be increased to 3.7 percent for at least 1 year, continuing until the State pool has been reimbursed for benefits paid in his behalf.

3. As an additional protection to the now-growing State pool, the State unemployment-compensation board is empowered, if the bal-

State unemployment-compensation board is empowered, if the balance in the pool falls below \$3,000,000, to increase the contributions to the pool on the part of all employers to a flat 1 percent of all pay rolls.

Thus under the Indiana program the contribution rates are geared to meet the financial needs of the program—expanding and contracting as needs arise and at the same time rewarding those employers who succeed in stabilizing their employment. The Byrnes committee bill differs radically in that it would eliminate the rewards for stabilization, would establish a fixed taxation level, and would tend to great certs of the program and the contraction. and would tend to gear costs of the program upward to the taxation level.

Requirements of the Byrnes bill in respect to unemployment

Requirements of the Byrnes bill in respect to unemployment compensation are:

1. All States would be required, regardless of merit-rating variations among individual employers, to levy pay-roll taxes that would produce the equivalent of a 2.7-percent levy on total pay rolls of employers subject to the unemployment-compensation programs. The Indiana law now provides for the individual reserve partial-pool type of funds, with merit-rating provisions calculated to meet adequately the financial needs of the program, but it does not attempt to perpetuate an arbitrary 2.7-percent level of taxes. After reserves have been built up to levels making the merit-rating provisions effective, the financial needs of the Indiana program and employment records of individual employers automatically will control rates of contribution.

2. A minimum 13-week duration of benefits for totally unem-

2. A minimum 13-week duration of benefits for totally unem-

ployed eligible individuals would be required.

Indiana now bases duration of benefits within a maximum of 15 weeks on actual earnings of an applicant in his base period of five and a fraction quarters. Total benefits to which an eligible appliweeks on actual earnings of an applicant in his base period of live and a fraction quarters. Total benefits to which an eligible applicant is entitled are 15 times his weekly benefit amount or 16 percent of his earnings in the base period, whichever is the lesser.

3. The waiting period for eligible applicants would be shortened to 1 week of total unemployment.

Indiana now requires 2 weeks of total or partial unemployment as a waiting period, on the assumption that such a period is a reasonable length of time during which an individual is to look for new employment while living on his own resources.

4. States would be required to relate weekly benefit amounts to full-time weekly earnings—or to the earnings which an employee would have received had he worked full time at his regular rate of pay-and to meet specified minima ranging from \$5 to \$15.

Indiana follows the much simpler plan of computing weekly benefit amounts on the basis of actual earnings in the calendar quarter of highest earnings among the first 4 of the last 5 completed calendar quarters of an individual's employment. The specified minimum amounts would affect the Indiana program only to the extent of increasing the absolute minimum amount from \$2 to \$5.

5. State programs would be administered under "merit" systems

approved by the Federal Social Security Board.

This would make the present merit-system administration in Indiana subject to Federal approval and implied regulation.

It is significant in this, as well as in the proposals affecting merit rating and method of computing benefits, that the underlying aim appears to be Federalization of unemployment compensa-tion. There has been a very apparent unwillingness on the part of many of the social theorists in this field to accept the thinking of many of the social theorists in this field to accept the timking developed from actual experience with the administration of the system and with the operation of a business, out in the States. Indiana has done a notably good job in administering its law, partly because it has had a competent administration, partly because of the cooperation of both employers and employees affected, and partly because its law, with simple method of computing benefits, makes all this possible.

Shall It Be War or Peace?

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 4, 1939

RADIO ADDRESS BY HON. DANIEL A. REED, OF NEW YORK, MAY 3, 1939

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me recently over the radio:

Ladies and gentlemen of the radio audience, President Roosevelt for some time past, has made direct attacks upon the rulers of certain nations with which this country is at peace. This conduct on the part of our Chief Executive is unprecedented in the annals of our history, and nothing he could have done would have been more likely to engender resentment and hostility than to publicly criticize and abuse the rulers of nations with which the United States has long enjoyed friendly diplomatic relations.

If President Roosevelt had not taken sides in the foreign controresident Roosevelt had not taken sides in the bright conduct in harmony with the rules of neutrality, he might have become the greatest peacemaker in history, but after having involved himself in the pending foreign disputes he lost this opportunity and became merely a meddler. I believe that enough has taken place to make all good citizens realize that the interference of President Roosevelt in European and oriental affairs which do not concern this Nation is a dangerous departure from sound Executive conduct.

in European and oriental affairs which do not concern this Nation is a dangerous departure from sound Executive conduct.

I maintain that under our form of government it was never intended by those who founded this Republic that any President should use his official prestige to create a situation by which a free people might be forced unwillingly into war. For a Chief Executive to pursue such a course is a transgression, if not a usurpation, of power never contemplated by the American people. To permit a President to exercise such power is in violation of a fundamental concept of our Constitution. Abraham Lincoln, in discussing the constitutional power to declare war, made these observations:

"The provision of the Constitution giving the war-making power to Congress was dictated, as I understand it, by the following reasons: Kings had always been involving and impoverishing their people hn wars, pretending generally, if not always, that the good of the people was the object. This our convention understood to be the most oppressive of all kingly oppressions, and they resolved so to frame the Constitution that no man should hold the power of bringing this oppression upon us."

I say here and now that the violation of this principle by President Wilson brought its oppressions, and the people are still suffering from them. There is no reason, none whatever, why the citizens of this country should suffer or permit President Roosevelt to violate the spirit of the Constitution, and thus bring down upon them oppressions as great or greater than those which resulted from the Movel War Engley congression from them war and the New Engley congression was a suffering them them was and the people are still the world War. Engley congression that war and the New determine the Mexiculation of the Service o

them oppressions as great or greater than those which resulted from

them oppressions as great or greater than those which resulted from the World War. Enough oppression from that war and the New Deal experiments are quite sufficient, without having our country participate in another foreign armed conflict to add further to the crushing oppressions which are people are now suffering.

All this lack of neutrality, which inevitably builds up a war psychology, happened in 1917 when Europe was actually at war and when American rights were being interfered with by both sides. How infinitely worse is the situation today, when the administration has dropped all pretense of neutrality and has definitely

taken sides when there is no war and when the various European nations are doing all in their power to prevent war. The President, in drumming up a war spirit in time of peace, is not only endangering his country but is making it harder for the nations of Europe to carry through their processes of appeasement. They have not forgotten what war means and are determined to avoid another disaster. Our highest officials are scratching matches while they are sitting on the powder kees. are sitting on the powder kegs.

are sitting on the powder kegs.

It is quite unnecessary to call attention either to the cost of the last war or to speculate as to the probable cost of another World War. Terrible and horrible as the last war proved to be, destructive as it was to property and to human life, the instruments of death and violence then cannot be compared with the efficiency of modern implements of human destruction which are now available for wholesale slaughter of human beings and the demolition of the products of civilization.

the products of civilization.

the products of civilization.

The cost to the nations involved in the last war is estimated at \$200,000,000.000. Can any person conceive what the cost of a modern world war will prove to be? Millions of lives were sacrificed then, and among them thousands of innocent women and children. Villages were blotted from the map. Large parts of industrial cities were wiped out. The cost to our own Nation was over \$51,000,000. Our own Army casualties were 350,300 men—all this in only a few months of extual fighting.

only a few months of actual fighting.

The heartaches and the suffering of our soldiers and their parents, wives, and children have been pouring over my desk for over

Is our Nation in financial condition to engage in another foreign war? No; certainly not! Would not this Nation be pauperized by a violent inflation? Would it not mean an immediate change in our form of government? Without participation in a war during the last 7 years the national debt is so large it staggers the imagination. Yet clamor for war emanates from our high official quarters. Where does this Nation stand financially? Vast sums, collected through taxes, have been spent. But this is not all. The administration has borrowed over \$16,000,000,000, and this also has been spent. The result is an intolerable burden of each even without The result is an intolerable burden of debt, even without another war.

It must be remembered that in addition to the national debt of It must be remembered that in addition to the national debt of \$39,950,000,000 there are other Government obligations in the hands of the public, fully guaranteed by the Government, amounting to \$5,416,700,000. The whole story of the public debt does not end with these figures, because there are authorized, but unissued, guaranteed obligations amounting to \$9,485,000,000. Once these authorized obligations are issued the crushing debt burden resting upon the shoulders of the people will be some \$60,000,000,000. I ask you in all candor, Is the United States financially prepared for another war?

ask you in all candor, Is the United States financially prepared for another war?

But there is something far more important to consider than the cost of another war in dollars and cents. The cost in lives and suffering must not be ignored. I call attention to the fact that in addition to our own Army casualties in the World War—350,300 men in just a few months of fighting—we have today 66,898 service-connected World War mental cases receiving care by our Government. They are all cases where mental disease is the major allment and of service connection. The number of these tragic victims of the last war is increasing and will continue to increase. These 66,898 mental cases were hows 20 years ago and were then accented. 66,898 mental cases were boys 20 years ago and were then accepted for duty by their Government as sound mentally and physically.

for duty by their Government as sound mentally and physically. Today they are pitiful human wrecks.

I am astonished to see by the Gallup poll that the number of those in favor of sending our boys into a European war has increased from 5 percent to 16 percent. How can this happen unless through continual suggestion that war is inevitable? It would be interesting to know the names of the 16 percent and their motive for writing to send our how into another foreign shample. These for voting to send our boys into another foreign shamble. These persons should have an opportunity to embark on the first trans-port for the front when and if this Nation enters the fight

overseas.

I am sure that in the light of past experience the reckless and intemperate public utterances of President Roosevelt and members of his Cabinet, relating to our foreign relations, have alarmed the citizens of this country. We all know that to the average father and mother the term "war" is almost synonymous with wholesale murder. It would seem to me that it would be more in keeping with the dignity and wisdom of the Chief Executive at a time when the United States is at peace with all the world, to remember that as President he is the trustee of the lives of millions of his fellow citizens. I do not conceive it to be the function of a President of the United States to engage in foreign controversies that do not concern us as a Nation. The belligerent attitude that President Roosevelt has assumed toward some nations, and the that do not concern us as a Nation. The belligerent attitude that President Roosevelt has assumed toward some nations, and the partiality he has shown for others is something for which this country may pay dearly in years to come. I maintain that the President has violated the fundamental principles of our foreign policy as laid down at the very beginning of our Government. The wise admonition of George Washington to his fellow countrymen with reference to the policy that should be followed in our relations with foreign nations is familiar to almost every citizen, but even so, it is timely to mention what he had to say. I quote from his farewell address:

"The nation which includes toward another an hebitual batrad."

"The nation which indulges toward another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest.

"Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of

umbrage, and to be haughty and intractable, when accidental or trifling occasions of dispute occur. Hence frequent collisions, obstinate envenomed and bloody contests.

"The nation, prompted by ill will and resentment sometimes impels to war the government, contrary to the best calculations of profiler."

I am sure that we all read with profound astonishment the speech made by President Roosevelt in Chicago on October 5, 1937, in which he characterized certain nations as diseased and therefore subject to quarantine. If these are not words prompted by ill will, I can consider of near that one

conceive of none that are.

The statement made by President Roosevelt at a press conference on April 11 came as another shock to the American public, except on April 11 came as another shock to the American public, except perhaps to a small minority whose zeal for war far transcends any desire on their part to personally participate in the actual fighting when and if war is declared. I claim it is an astounding violation of Executive power to pledge this country to support certain foreign nations in the event of a European war. It is an assumption of aribtrary power surpassing that of the rulers which the President so violently berates.

The precedent which Woodrow Wilson established in ignoring the advice of George Washington seems to be the one that is now being followed by our present Chief Executive. When I speak of the advice given by Washington I have in mind not only the part of his Farewell Address already quoted but to that portion where he suggests that—

"Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmittes."

I cannot believe that American citizens have lost their reverence for those who fought to establish our freedom, and who later framed the Government under which we have lived and prospered for the past 150 years. Out of the mental confusion arising from war propaganda, daily and hourly pouring in over the radio and appearing in the press, urging preparedness, the calm words of wisdom of the fathers seem to have been forgotten. I doubt if ever in the history of the world a group of men of comparable numbers, with ing in the press, urging preparedness, the calm words of wisdom of the fathers seem to have been forgotten. I doubt if ever in the history of the world a group of men of comparable numbers, with higher motives and with greater consecration to the cause of human liberty, ever set around a council table and formulated a more perfect form of government for a free people than did those who framed our Constitution. They searched the annals of history; they studied every form of government, ancient and modern; they exhausted all the then existing knowledge that might throw light upon the problems before them; they plumbed the motives of men; and, so far as human fallibility would permit, they sought to place all sovereign power in the people, and also to eliminate the means by which men, ambitious for arbitrary and tyrannical power, could seize the reins of government. It is to the words of such men that we, as American citizens, should give heed when a man entrusted with power seeks to enlarge his powers and make them permanent.

I invite you to listen to the words of James Madison on the question now foremost in the public mind, because what Madison had to say is pertinent to the issue and timely.

"The means of defense against foreign danger," said Mr. Madison, "have always been the instruments of tyranny at home." And, continuing, he said: "Among the Romans it was a standing maxim to excite war whenever a revolt was apprehended. Throughout all Europe the armies, kept up under the pretext of defending, have enslaved the people. It is perhaps questionable whether the best concerted system of absolute power in Europe could maintain itself in a situation where no alarms of external danger could tame the people to the domestic voke."

concerted system of absolute power in Europe could maintain itself in a situation where no alarms of external danger could tame the people to the domestic yoke."

This statement by Mr. Madison is a perfect picture of the situation today, both here and abroad. This is no time to become hysterical in dealing with national defense, since every sane man knows that we are not in danger of attack from Europe. Even before there are any hostilities abroad, President Roosevelt has taken the first step in violating the fundamental rules of neutrality by taking sides in the controversy and berating, in the name of 130,000,000 Americans, the rulers of other nations.

It is true that Congress along can declare way but there will be

It is true that Congress alone can declare war, but there will be no alternative if the Chief Executive and his Cabinet spokesmen continue to involve this Nation in the spider web of foreign en-

tanglements.

In the light of the experience of 22 years ago, is it not the duty of every Amercan citizen, of every Christian father and mother to protest against Executive meddling in the age-old bickerings and controversies of foreign nations and to make that protest now? Is not this the crucial time for those who must suffer the consequence of participation in a foreign war to assert, and to assert emphatically, their rights as sovereign citizens to remain at peace?

I say that the time for every citizen to speak is now, because once war becomes inevitable and war is declared the right of petition, freedom of speech and of the press will be supplanted and suppressed by laws so drastic and enforced by informers so numerous and tyrannical that protest will mean prison or a concentration

I say to 130,000,000 free Americans: Your boys, your wealth, your welfare, your liberties, your form of government are at stake! It is your sacred, patriotic, Christian duty to preserve, protect and defend all of these from the hazards and horrors of a foreign war.

Public Control and Ownership of Natural Resources

EXTENSION OF REMARKS

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 4, 1939

ANALYSIS AND BRIEF BY THE PEOPLE'S LOBBY, INC.

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a statement of a proposed plan for public control and ownership of natural resources. I am doing so by request, and not with any thought that I am in accord with the proposal.

I. ANALYSIS OF PROPOSED BILL

The policy of Congress is declared to be "to encourage and promote the public control and ownership of agricultural land and resources in order to prevent absentee private ownership of land, speculation in farm lands, exploitation of farmers, and the subjection to debt burdens of land operated by owners."

The Secretary of Agriculture is authorized to acquire any real property within the United States and its territories, for the purposes of the act, "by purchase, exercise of the power of eminent domain, or gift."

The total appropriation for the purpose is \$250,000,000.

The Secretary is authorized to lease farm lands acquired to bona fide farmers or other cooperatives on conditions he prescribes and also to operate such farms.

also to operate such farms.

also to operate such farms.

It is stipulated that in acquiring farm lands consideration shall be given to what the average net return of the lands has been during the preceding 10 years, and what it probably would be should the land remain in private ownership, and that the price paid "shall be, as nearly as possible, what the land would bring in the open market without any Government subsidy on crops, direct or indirect."

To protect standards of labor it is provided:

"The wages, hours, conditions of labor, or terms of contract for compensation shall be at least as favorable to the worker as those prevailing for similar work in the county of, or in the counties adjacent to, the place of employment: Provided, That the wages shall be sufficient to insure to the worker at least the second-class diet as defined by the United States Department of Activations diet as defined by the United States Department of Agriculture, proper housing where such is not already existing or provided by the Secretary, sufficient clothing for the farmer and his family, and adequate provision for other essential needs."

II. BRIEF FOR EMPOWERING THE SECRETARY OF AGRICULTURE TO ACQUIRE FARM LANDS AND OPERATE OR LEASE THEM

1. All good farm land has passed into private ownership

All good farm land has passed into private ownership and is held for speculative selling prices or profits.

The Department of Agriculture reports that about 100,000,000 acres of land should be withdrawn from cultivation.

In a pamphlet, Saving the Soil, it states:
"Of the 1,907,000,000 acres representing the total area of the country, exclusive of city and water territory, nearly two-thirds is in some degree affected by erosion.

* * *

"In terms of money, the direct toll of erosion is estimated at

\$400,000,000 annually.

In 1929 only about 8,000 farms were classified as large-scale farms—or one one-hundredth percent of all farms—but they paid 11 percent—about one-ninth—of the total farm wage bill. In 1935 there were 88,662 farms of over 1,000 acres out of

6.812.350 farms.

6,812,350 farms.

In 1935, 3,899,091 farms were operated by owners of which only 3,210,224, less than half of the total, were operated by full-time owners, and 48,104 were operated by managers.

Tenant farmers operated 2,865,155, or 42.1 percent of all farms, and there were 336,802,000 acres in tenant-operated farms, or 54 percent—considerably over half—of all land in farms.

By 1937, Secretary of Agriculture Wallace reports, the number of farm tenants was about 2,565,000, and he commented:

"Not all farm tenants need to be converted into owners in order to give them the necessary security. Cheap land in itself may not be the answer. This country had plenty in the past and gave it away freely under the homestead laws; yet throughout large areas today there are more tenants than owners, and the tenants are very insecure. It is well to aid tenants in becoming owners as funds and opportunities permit, but the problem of giving more security to the remaining tenants must be dealt with in other ways. Land buying, indeed, sometimes causes speculation, excessive debt, and foreclosure, the end result of which is more tenancy. We need a better farm-tenant system and better methods of land loaning." 2. Government policies are increasing selling prices of farms and rentals and reducing demands for farm products

The Secretary of Agriculture in his annual report for 1938 states that in 1938 the index of the value of farm land per acre for the entire country was 85, compared with 73 in 1933, with the years 1912–14 equaling 100, and makes two comments:

1912-14 equaling 100, and makes two comments:

(a) "Important among the current factors in the situation are the present ample supply of credit for land transfers, the prevailing low level of interest rates, and the sharp decline that has taken place in the last decade in the total agricultural indebtedness."

(b) "Many farms still carry indebtedness that is excessive in relation to their earning power.

"Moreover, farm earning power tends frequently to be overestimated, particularly when land values are rising. It makes no difference whether the advance results from an actual increase in current farm earnings or from a gain in the net income to the

ference whether the advance results from an actual increase in current farm earnings, or from a gain in the net income to the farmer as a result of low interest rates. Whatever the cause, farmers tend to capitalize the favorable prospects excessively and to make them the base for an unwieldy superstructure of debt." He also states: "Rent paid by farmers in the United States to nonfarmers in 1935 is estimated at \$699,000,000, in 1936 at \$743,000,000, and in 1937 at \$829,000,000."

This excludes rentals paid to relatives and to other farmers, and since buildings on rented farms are notoriously poor, it is chiefly

since buildings on rented farms are notoriously poor, it is chiefly

rent for farm lands.
In 1929 such rentals were \$1,110,000,000.
Higher prices for farm products due to higher costs of production and distribution have curtailed domestic consumption, which the administration seeks to increase by special arrangements for

those on relief, and has also reduced demand abroad.

We exported only about as much wheat in 1938 as in many years before 1932, and about half as much cotton.

The plan for export bounties on farm products won't meet the situation.

3. Farm program does not raise standards of landless farmers

For the current fiscal year, Federal expenditures for agriculture, exclusive of appropriations for the Department of Agriculture, are estimated at \$1,092,973,500, of which "aid for tenant farmers" is only \$26,800,000, or about 2½ percent.

A small part of the Farm Security Administration and Rural Electrification Administration outlays also seeps through to tenant farmers and shorecomment.

farmers and sharecroppers.

Emergency subsistence payment to farmers amounted in 1938 to \$22,609,000.

4. Mechanization on farms militates against tenant farmers

Dr. C. Horace Hamilton, in a study "The Social Effects of Recent Trends in Mechanization of Agriculture" by the Texas College of Agriculture and the Mechanical Arts, says:

"It has been estimated that, in 1830, 288 hours of man-labor were required to produce a hundred bushels of wheat on 5 acres of land. By 1930 only 49 man-hours were needed to produce 100 bushels of wheat on 5 acres.

"In the production of corn, the number of man-hours needed to produce 100 bushels dropped from about 180 in 1880 to 104 in 1930. "In 1930 only 235 man-hours were required to produce a bale of

"In 1930 only 235 man-hours were required to produce a bale of cotton as compared to 285 in 1900, and 304 in 1880.

"The surplus of farm tenants available in Texas has created considerable competition among tenants for places to rent; and, as a result, rental rates are rising. In areas that once followed the straight third-and-fourth share rent systems, cash rents and privilege rents of various types are being used. Pasture land, which tenants formerly received free of rent, now rents frequently for \$1 per acre.

"In some areas tenants are being charged cash rent for their dwellings. In many areas from three to six dollars per acre is being charged for land planted in fee crops. On many of these farms the cash rent on the feed lands amounts to more than the income from cotton."

Dr. Hamilton estimates there are between 200,000 and 300,000.

Dr. Hamilton estimates there are between 200,000 and 300,000

cotton pickers.

Mechanization is partly responsible for the fact that about one-seventh of the farms of America produce about one-half of all farm production.

This leaves one-half of farm production for six-sevenths of the

farms!

farms!
Dr. Paul S. Taylor, in an article in the United States Department of Labor Monthly Review for April 1938, states:
"Between 1930 and 1937, according to the best data available, the number of tractors (on southern farms) increased from 12.2 percent to 18.5 percent of the national total. While tractors increased 23.7 percent in the United States, they increased 87.9 percent in the 10 southern Cotton States."

5. Present status of farm tenants and farm labor

Mr. J. R. Butler, president, Southern Tenant Farmers' Union, describes the status of "more than 10,000,000 human beings" as "enslayed in chains by 'King Cotton,' absolute monarch of America's

He states:
"During the past 5 years, more than 500,000 sharecropper families, white and colored, have been displaced from their homes, forced into the cities, there to begin futile competition with America's 10,000,000 unemployed, or have accepted the horrible alternative of becoming farm laborers, paid by the day, for working from sun-up to dark, at a wage between 50 cents and \$1.50." He reports the practical working out of the crop-reduction program of the A. A. A., in displacement of labor, and that cash benefits induce landowners to shift from sharecropping to day labor, thereby depriving former tenant farmers of their rightful share of the cash benefit.

He says:

"If the landowner wishes to escape the burden of 'furnishing' for their tenants during the winter months, they send them to Government relief agencies for groceries and clothing.

"But if they feel that relief from the Government may make the cotton workers less eager to work for 75 cents a day wages the following spring, these families are kept off relief."

In 1935, the then Resettlement Administration estimated that 630,682 farms with 91,246,000 acres, presented use problems which "appear to warrant encouragement of a change from crop farming fourteen Southern States had 451,767, or over two-thirds of these farms, with 44,012,000 acres, or nearly half of the acreage.

These States did not include the Dust Bowl nor the big grazing

Sharecroppers, tenant farmers, and farm labor are being made the victims of this "economic planning" for the benefit of southern plantation monopolists and their northern avaricious credit brokers.

6. Present status of Government resettlement projects

The Assistant to the Secretary of Agriculture stated January 6, 1939

"(1) The Farm Security Administration has virtually completed (1) The Farm Security Administration has virtually completed 149 projects which were initiated by the Resettlement Administration or other preceding agencies. This total includes five migratory labor camps and three suburban housing projects known as Greenbelt towns. The remaining projects vary greatly in type. Although no two are quite alike, they all fall within these general classifications. classifications:

"(a) Full-time farming projects.
"(b) Subsistence homestead projects, in which the residents produce most of their food supplies in their own gardens, and earn their principal cash income by working in established industries in

nearby cities.

"(c) Part-time farming projects, in which the residents earn part

(c) Part-time farming projects, in which the residents earn part of their income by working in industries which have been established at the project site.

"(2) Expenditures on all projects up to November 30, 1938, totaled approximately \$102,678,753. The total expenditures for all projects except the suburban communities and the migratory labor

camps was \$64,461,122.

"(3) Although some of the projects are not yet fully occupied, 49,781 persons, or approximately 10,000 families, were in residence as of December 1, 1938. We regret that we do not have a breakdown showing the number of adults and the number of minors resident in our projects. In general, however, the typical families selected for residence included two adults and between two and three children.

"(4) Industrial enterprises have been established, or are being planned for nine of the projects. These enterprises include hosiery mills, woodworking plant, a farm equipment factory, and two garment factories. We are enclosing a statement explaining the plan for establishing the hosiery mills, in which you expressed particular interest. Approximately 35 additional projects have some type of expreditural products processing plants such as cotton gives structured. agricultural products processing plants, such as cotton gins, sirup mills, and feed and grist mills. In most cases the plants are cooperatively operated by the project residents for the processing

of their own crops."

This is a good beginning, but meets the needs of only about 1 percent of those equally needing a chance.

7. Reasons for provisions as to payment

The admission by the Secretary of Agriculture that Federal payments to landowners for soil conservation, crop benefits, etc.—really a subsidy—has increased the selling price of farm lands shows the necessity for ending the policy of scarcity subsidy, which inures chiefly to the benefit of farm-land owners, as there has been a marked reduction of farm-mortgage debt, as well as interest rates.

Government, representing all the people, cannot maintain class

Its largesse to farm-land owners was designed to save their productive plant, but does not establish a precedent.

The fact Government has given such salvaging subsidy gives it a prior ethical claim to acquire farm lands for the use of the most helpless of the farm population—on the basis of the selling price of farms without a Government subsidy.

In the early thirties few farms showed a net return.

No net return means no commercial selling price. Government must not, in fairness to all, buy back what it has

Legally title to all land is inalienably vested in the Government-State or Federal.

Refusal to provide Federal subsidies to farmers would insure acquiescence in a rational program of land taxation, and acquisition for the public welfare, at a price not bloated by Treasury grants; that is, by taxes on consumers.

Only Federal subsidies prevents the debacle of agriculture today.

8. Chief alleged objections and answers

First. Taxing all ground rent into State and local treasuries in place of taxes on consumption would make land available for a song and remove the need for such a measure. This should be done, but would not be enough, because farming can no longer be conducted as an individualistic competitive enterprise, as the growth of farmers' selling and buying cooperatives

Second. The plan would lead to an orgy of speculation in farm lands and the Government would be struck heavily.

The Government will be much more careful about paying high prices for land, when it is to retain title, instead of unloading it on sharecroppers, tenant farmers, and agricultural workers, and making them hold the sack. The Government can refuse to buy highpriced land, and through its grants from the Treasury compel State and local governments to adopt tax systems which will reduce the selling price of good farm lands.

Third. It will ruin farmers' independence.

That has already been done; and the wealthiest farmers, with the highest-priced land, are most dependent upon the Government, and getting the biggest cut out of the Treasury, and ultimately the people, by bonuses, soil-conservation payments, tariffs, and county agents' services.

Fourth. The yearning for ownership is essential, and home ownership is the bulwark of democracy.

This has never been true and has less validity now than ever. (a) Home ownership for low-income families is being discouraged

(b) Labor has too much sense to try to buy out railroads, mines, factories, and most distributing agencies and run them as owners.
(c) Mechanization in agriculture, speculation in farm lands and in farm products, and soil mining has made individual ownership of farms and of farm equipment and machinery highly dangerous for most untrained farmers.

This does not apply so much to well-financed farmers in dairying, poultry, fruits, and vegetables near large industrial centers. It does apply to a great majority of sharecropping and tenant farmers and agricultural workers throughout the Nation, for whose benefit this program is devised.

9. Agricultural experts favor general plan of Government and cooperative farming

Dr. H. C. Nixon, Birmingham, Ala., executive secretary, Southern Conference for Human Welfare:

"I am in hearty sympathy with the idea of setting up Government farming corporations, with power to operate farms directly or through cooperative societies; in other words, with the idea of providing facilities by which more people can help themselves as producers and consumers on the countryside.

"This is particuarly important in the South, where so many people are backed up on the land but where human and physical resources are not adequately harnessed for producing a living or for living.

"The Farm Security Administration program is good as far as it goes, but it does not go far enough."

Dr. J. D. Black, department of economics, Harvard University:
"So far as the proposal relative to farming operations is concerned,
I think it would be better to work this out of the F. S. A. by the
procedure of amending the act to permit the Government to acquire
land and sell it under flexible long-time contracts, preceded by short-term lease periods, as was recommended in the original report on farm tenancy

"My principal objection to that proposal was that I would make the period during which the contract can be paid completely elastic

up to 40 years.
"I would also amend the act to permit experimenting with cooperative farming ventures. I think we must feel our way along with respect to undertakings of this sort. In general, I would expect with respect to undertakings of this sort. In general, I would expect an arrangement under which each man operating his own farm by large-scale machinery was owned by a group of farmers cooperating for that purpose would prove more satisfactory.

"I should also like to see the rehabilitation program of the F. S. A. pushed as rapidly as is warranted by the success which it achieves in any given area."

Barry Bingham, president and publisher, and Mark F. Ethridge, vice president and general manager, the Courier-Journal and the Louisville Times, join in the statement:

"You ask our opinion on the value of an expansion of the resettlement program of the Farm Security Administration. It was the sentiment of the Atlanta meeting (of 29 representative southern leaders), as stated in their declaration, to urge the continuation

sentiment of the Atlanta meeting (of 29 representative southern leaders), as stated in their declaration, to urge the continuation and expansion of this program.

"We personally feel that it is one of the outstanding, constructive efforts to which we should devote ourselves in order to obtain any measure of security in the farming regions of our Nation.

"The limited program which has been in operation, as you suggest, barely touches the problem. It has been sufficient to prove, however, the soundness of such a plan, and the overwhelming need for a reconstruction of our American farm life along these lines."

Dr. T. Lynn Smith, director, experimental stations, Louisiana Agricultural and Mechanical College:

"I favor a limited amount of governmental experimentation with large-scale cooperative agricultural ventures. I am particularly concerned, however, that such undertakings be designed in a manner that allocates responsibilities for decisions and failures to the various members of the society. In other words, if all of the thinking is reserved for a few managers of the project, in my estimation the thing has failed before it has started.

"There are problems of land tenure in the South which are very real, but these are similar to tenure problems in other parts of the

country. In addition to these the South has the acute problems which arise out of the plantation system due to the fact that the

country. In addition to these the South has the acute problems which arise out of the plantation system due to the fact that the great mass of the agriculturists have no tenure rights, and a few people shoulder all the responsibilities. At the present time the so-called tenancy of the South is blamed for the one-crop system, inefficient labor, low returns to the laborers, soil erosion, soil exhaustion, etc. It is interesting to note that prior to the Civil War the institution of slavery received the blame for these.

"Why not saddle the responsibility onto the plantation system where it properly belongs? Perhaps in the future a system of cooperation will be evolved which will overcome the social disadvantages of large-scale agriculture. But so far in the history of the world large-scale agriculture has always resulted in the development of a small selected group of the elite, while the great mass of the population has remained in ignorance and poverty."

Dean Thomas S. Staples, Hendrix College, Conway, Ark.:

"We need to subsidize or finance the marginal and submarginal farmer. It is unwise, to my notion, for us to colonize people from the lowlands, the highlands, and the alleys together in colonies situated in social and geographical areas to which they are not accustomed. To be specific, it is my opinion that it is unwise to bring people from the hills and from the bottoms where they have lived in houses situated far apart and locate them in such projects as the Dyess colony. It is unfair as well as unwise to set up Government farming corporations for a few of the people and subsidize the projects at the expense of other people. I approve in principle agricultural cooperative societies. However, I do not believe in the Government subsidizing them."

Dr. Charles S. Johnson, director, department social science, Fisk University:

"I believe that in the present situation of the great mass of

University:

"I believe that in the present situation of the great mass of tenants, in the South notably, the major needs are (a) for security above the rather questionable unique advantage of ownership in fee simple, and (b) for intelligent and dependable guidance in the form of Government services, in the interest of the producers themselves

themselves.

"No other arrangement that I can think of can serve both the long-exploited producer at the bottom and at the same time contribute intelligently to the preservation of the soul of the South." William Mitch, president, district 20, United Mine Workers of America, Birmingham, Ala.:

"It seems to me that it would be well for the Government to give a trial to this experimental proposition of cooperative farming when full facts have been developed in the matter."

The proposal is not to "socialize" or "collectiveize" agriculture, but to extend rapidly practical Government ownership of farms, and provision of Government direction and guidance for hundreds of thousands of untrained and impoverished farm families by methods which have already proven their worth. methods which have already proven their worth.

Quota Works a Hardship

EXTENSION OF REMARKS

HON. ALVA B. ADAMS

OF COLORADO

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

EDITORIAL FROM DETROIT NEWS OF MAY 2, 1939

Mr. ADAMS. Mr. President, on behalf of the junior Senator from Michigan [Mr. Brown], I ask unanimous consent that the leading editorial from the Detroit News of May 2, 1939, be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Detroit News of May 2, 1939] QUOTA WORKS A HARDSHIP

The Mount Clemens factory of the Northeastern Sugar Co. will not operate this year unless the Department of Agriculture changes the quota restrictions put on its production. This plant for many years has furnished the market which has built up a flourishing sugar-beet industry in Macomb, St. Clair, Genesee, Wayne, Monroe, and Washtenaw Countles.

Such a shut-down coming at a time when agricultural plans must be well advanced will work hardship. Farmers must make quick shift to some less profitable crops for which they have made no preparations. The plant management says 300 factory workers and more than 1,000 farmers will be affected.

The logic of the entire sugar-control policy of the Government is not clear. Before a hearing of the Agricultural Committee of the House of Representatives recently, Secretary of Agriculture Wallace said the sugar industry is subsidized by gifts of about \$350,000,000 annually. When questioned, he admitted that the amount spent

annually by Americans for sugar would be that much less if quotas,

sanitarity by Americans for sugar would be that much less if quotas, tariffs, and benefit payments to growers were discontinued.

So the people pay \$350,000,000 to reward producers for accepting quotas, and the quotas shut down factories so sugar cannot be made from beets, farmers cannot find markets for their crops, and workers lose their jobs. It probably is carefully thought out by Washington experts but it will be confusing to the people in those six Michigan counties who have depended largely on the sugar-beet industry for a living. industry for a living.

Red Cross Convention

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

ADDRESS BY HON, NORMAN H. DAVIS, APRIL 24, 1939

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the Congressional Record an address made by the Honorable Norman H. Davis, chairman of the American Red Cross, at the session of the annual Red Cross Convention, Constitution Hall, Washington, D. C., April 24, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this opening session of our annual convention we witness again a demonstration of the spirit of voluntary service which is so characteristic of the Red Cross. The delegates gathered in this hall, the associates in communities throughout the Nation, and their predecessors have, by intelligent leadership and unselfish service, definitely established the American Red Cross as an essential expression of our national life.

This convention marks the end of my first year as your chairman. I am deeply conscious of the privilege and honor which I enjoy in serving with you, and I am conscious, also, of the responsibilities which my office entails. During the last 12 months I have seen the Red Cross in action, dealing with great emerging the last 12 months. gencies and maintaining the lines of service and communication which reach out to meet human distress and need in every community in this country, and also in certain stricken areas abroad.

I have discussed the common ideals and objectives of the Red I have discussed the common ideals and objectives of the Red Cross with the representatives of other national societies. For me it has been a year of education and inspiration, and I share with

it has been a year of education and inspiration, and I share with you the deep satisfaction of participation in a great endeavor.

The Red Cross enjoys unusual confidence and support both at home and abroad. In thousands of communities, great and small, citizens of every class have found time to contribute a portion of their busy lives—a portion of their substance—to the development of the Red Cross. They have created an organization embodying the better side of human nature, an impressive example of our national unity and solidarity, a great reservoir of the American spirit of neighborly service from which we may draw the resources to meet great emergencies.

There is much that I might say to you of the progress and development in our various fields of service since the meeting in San Francisco last year, but ample provision has been made for such discussion in the succeeding sessions of this convention. I feel it is my duty, however, to make reference to some of our major

During the past year we have been faced with a number of tragic situations requiring relief both at home and abroad. Emergency aid and rehabilitation following the hurricane which struck New England and New York last September alone involved an expenditure of \$1,682,000. In an appeal confined largely to the affected States a total of \$931,000 was raised and the balance had to be provided from the national disaster relief appropriation and the disaster revolving fund.

There were many other disasters—not so large or spectacular in their scope, but involving the same suffering and the same privation. These smaller disasters, numbering 140 during the last fiscal year, occurred in all parts of the continental United States and required aid in excess of \$1,000,000. But the expense thus incurred by no means represents the full value of the aid rendered. To this sum must be added the immeasurable value of the devoted service of several hundred thousand Red Cross volunteers. These volunteers in our 3,714 chapters join hands with the national organization to give the Nation assurance that human need will be met when disaster occurs.

There has been a satisfactory growth in all of our services and a corresponding public support. The number of persons helped through our chapters and the national organization shows a marked increase. The persons trained in first aid and lifesaving, the mothers and younger women completing courses in home hygiene and care of the sick, the veterans and service men who have been assisted, the needy families who have received care from the publichealth nurses and from our home-service workers form a vast and createful legice. grateful legion.

Our efforts to prevent accidents or give first aid on highways, in homes, farms, and industries have been rewarded with encouraging results. We have strengthened and consolidated our nursing services, establishing a unified direction that assures a sound and consistent development, and, we hope, a great increase in the enrollment of qualified nurses in the first reserve of the Red Cross.

Our junior membership has increased to over 9,000,000, and the senior enrollment now numbers upward of 5,700,000 men and women in all walks of life and in every corner of our Nation. Such a devoted army is indeed an effective force for good in these unsettled days.

During the past year pressing calls have come for emergency assistance from several parts of the world. Of these, the most urgent were from China and Spain. For China, through appropriations and collections, we have made available for relief over \$810,000 and in addition have provided large quantities of medical supplies donated by the public, and two cargoes of wheat provided by the Covernment.

by the Government.

Spain has presented many distressing problems. First, the Red Cross was called upon to assist American citizens to leave the danger zones. Then the International Red Cross Committee appealed for funds to finance its work with the wounded and prisoners of war in both Loyalist and Nationalist territory. Large quantities of flour and wheat from our surplus supplies were also provided for impartial relief of women and children refugees on the vided for impartial relief of women and children refugees on the verge of starvation. This aid was made possible through the cooperation of the Government in providing flour and wheat at a nominal price, the Maritime Commission in furnishing free transportation, and the American Quakers in acting as distributing agents in Spain. Furthermore, a grant of \$20,000 was made to the French Red Cross to assist in caring for Spanish refugees in France. Altogether some \$200,000 has been provided from our national reserves in connection with the relief problem of Spain.

The Red Cross Society of Czechoslovakia was also assisted through

The Red Cross Society of Czechoslovakia was also assisted through donations of milk and the transfer, through our organization, of

funds collected in the United States.

The sad plight of the Jewish and other refugees in central Europe also has been a question of serious concern. Although recognizing that this problem is so politically complicated as to require governmental initiative and action rather than that of private agencies, I have, nevertheless, as chairman of the League of Red Cross Societies, appealed to the 61 national societies to render such emergency assistance as may be possible and necessary to the Red Cross societies of those countries where temporary refuge is being provided provided.

The devastating earthquake of last January in Chile left great suffering in its wake. To meet these needs medical supplies, vac-cines, serums, and foodstuffs were rushed by Army and commercial airplanes to the scene. Later, shelter tents and clothing were sent. In addition to this, Red Cross cash grants and collections of \$45,000 have been transmitted to the Chilean Red Cross, while in total, American donations from all sources have amounted to over

Thus today, as for more than half a century, the American Red Cross has, through its far-reaching activities, maintained a barrier against the forces of disintegration which inevitably follow natural catastrophes. It has mobilized the Nation's resources to relieve the victims of war and the despair of war's aftermath. Its understanding and its mercy have followed close upon the heels of destruction and distress. and distress

and distress.

Men of all nations have tried valiantly through the ages to establish institutions, principles, laws, and rules of conduct to insure a greater measure of justice, forbearance, security, and peace between peoples and nations. While erecting these safeguards, man's inventive genius also has been creating forces for his progress and convenience—forces which may, however, be used to his detriment or even destruction, and which, unfortunately, man has not yet learned to control. We can speak and be heard around the world, but the messages that pass in the air carry too often the foreboding of disaster. We have made the world a neighborhood by the marvel of communication and transportation, but the spirit of neighborliness does not always pass so readily over these facilities as the spirit of intolerance and strife.

The building of our civilization has been a slow and tedious

spirit of intolerance and strife.

The building of our civilization has been a slow and tedious process of evolution, with varying periods of progress and retrogression. Today there are disturbing indications of retrogression. We see man's disruptive forces at work—forces destructive of the basic principles that men of good will in every nation hold dear. Treaties, laws, and covenants of peace which have been bulwarks of security and confidence are being brushed aside, leaving nothing but naked force to take their place. The world in which we live is, accordingly, in a state of doubt and anxiety.

In this welter of uncertainty it is encouraging and significant that one most important international covenant, the Treaty of Geneva, the origin and foundation of the Rea Cross, signed in 1864, has never been criticized, challenged, or repudiated by any nation. This Red Cross Convention, which was originally signed by 12 governments three-quarters of a century ago, has grown to include 65 adherents and to become the universal authoritative guide and protector of the forces of mercy in time of war.

of adherents and to become the universal authoritative guide and protector of the forces of mercy in time of war.

I cannot emphasize too strongly the belief that the Red Cross societies must all carefully guard this treaty, this world-unifying force, with every resource at their command. They should, furthermore, endeavor to supplement it by securing agreement on protective measures to minimize the horror and suffering of modern workers and particularly to seferguard women and children against

warfare, and particularly to safeguard women and children against slaughter by bombs from the air.

It is not within the province of the Red Cross to deal with or pass judgment on political questions. It has no authority to determine what the rules of warfare shall be. Of necessity, however, it is concerned with the burdens imposed upon it by modern warfare and the ingressing demands which may be made upon it ever, it is concerned with the burdens imposed upon it by modern warfare and the increasing demands which may be made upon it to care for the civilian victims of war. It must, therefore, endeavor to promote, by every means in its power, peaceful and humane instincts among the people of the world. In this endeavor it will have the force of a great movement—the strength of the good will generated by the hearts and minds of those in every nation who earnestly desire to contribute to human welfare.

Born on the battlefield, the primary purpose of the Red Cross for years was caring for sick and wounded soldiers. Now, however, aside from its responsibilities in war and its increasing peacetime.

from its responsibilities in war and its increasing peacetime activities, it has become a great channel for the maintenance of international cooperation and friendship. Today it bands together in the League of Red Cross Societies and in the International Red Cross Committee many millions of Red Cross members in 61 nations. In the Red Cross we have expression of universally accepted accepted whether the committee the committee of the commi cepted moral principles which extend beyond all national boundaries; a great instrument of human progress that withstands the forces of prejudice, of intolerance, and of strife.

Around the council table of the international Red Cross are seated representatives of all nations. I have myself seen within a year men from countries locked in undeclared war, men representyear men from countries focked in undeclared war, men representing opposing sides in civil strife, seated in Red Cross conclaves. In these councils there are no political divisions. Here men's minds are intent on methods of mercy, of saving lives, of preserving the finer human instincts of generosity and fellowship.

There are some who believe that America has little or no responsibility to assist the victims of catastrophe in the outside world.

of course, the obligations of catastrophe in the outside world. Of course, the obligations of charity begin at home, and the primary responsibility of the American Red Cross is at home, but as charity is not worthy of the name if it ends at home, so the American Red Cross must, within the limit of its recourses, extend aid to the victims of disaster in the world neighborhood in which we live.

The charter obligations of the American Red Cross are well defined. Our responsibilities are clear. We are called upon to act in

fined. Our responsibilities are clear. We are called upon to act in matters of relief under the Treaty of Geneva in time of war, to furnish volunteer aid to the sick and wounded, to carry on a system of national and international relief in time of peace, and to apply the same to the mitigation of suffering * * * and to devise and carry on measures of prevention.

and carry on measures of prevention.

Under this wide franchise we are pledged to duties that are challenging and inspiring. Men and women in every walk of life should gladly embrace the opportunity to serve in this endeavor. We need their support to help us meet our obligations both at home and abroad, to assist in mitigating suffering, and to devise methods of preventing it.

I do not think that I can overemphasize the opportunity of the Red Cross. I have watched its growing success as it ministered to human suffering. I have seen its impartiality and humanity bring together peoples and nations of every sort of political, social.

bring together peoples and nations of every sort of political, social, and religious faith.

In the light of my experience, I say to the millions of Red Cross members and workers in this country and throughout the world—you have forged a great instrument of human cooperation which is of increasing importance and benefit to mankind. We must all work to strengthen this great agency, to make it worthy of the ideals of its founders and the challenge of today. I urge that, as a minimum and as a token of our resolve to be prepared for all eventualities, we set our plans to increase our Red Cross membership by at least a million members in the coming annual roll call.

We are today confronted not only with a struggle of ideas but of values, and in that struggle it will be the responsibility of the Red Cross to see that where brute force leaves its victims mercy and helpfulness will follow.

and helpfulness will follow.

At whatever cost, we must keep open the channels of understanding and service which the Red Cross has established, face our obligations in peace or in war, and move forward toward the goal we so earnestly desire. If we can realize the significance of the Red Cross in the world today, if we can mobilize the moral forces in this Nation and in other nations, the Red Cross emblem will lead the great majority who, in their hearts, hold true to the course of human kindness, human sympathy, and human understanding, the great majority of those who hold fast to the age-old faith of good will and fellowship among men. There is in such a fellowship a bond between men and nations more lasting than the spoils of victory and more satisfying than the pursuits of war.

The War-Profits Tax

EXTENSION OF REMARKS

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

ARTICLE BY JOHN T. FLYNN

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article from the pen of John T. Flynn, a well-known writer for prominent magazines. Some time ago a bill was introduced in Congress dealing with the question of taxes on income received during wartime. There was discussion of it. particularly at the hands of one or two commentators, especially of that section dealing with net incomes of over \$1,000,000. Some misinformation, I think, to state it temperately and mildly, has been given to the public. The matter of the levels of taxation under the wartime taxation proposal would, of course, have to rest in the sound discretion of the Members of this body. I would not set myself up as a judge to decide what they should be or indulge in a discussion of decimal points, but I think the particular matter touched upon by Mr. Flynn in his article will prove of great value to those who have interested themselves in this bill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OTHER PEOPLE'S MONEY THE WAR-PROFITS TAX

. The Senate will soon be called upon to deal with the anti-war-profits bill introduced by Senator Homer T. Bone and some 49 other Senators. When this bill was introduced various newspaper other senators. When this bill was introduced various newspaper reporters made much of the point that the taxes in the higher brackets were so severe that they were confiscatory. A person with a million-dollar income, they announced in a burst of triumphant criticism, would actually be taxed \$1,061,030, or \$61,030 more than his income.

Here is how they worked it out. They assumed that the tax-payer's net taxable income for Federal tax purposes would be \$1,000,000. On that there would be a State tax in New York State of \$79,750. The Federal tax would be \$981,280, making a total of

\$1,061,030.

\$1,061,030.

This would indeed be confiscatory if it were true. But let us look at the facts. We begin with the assumption that the tax-payer has an income of \$1,000,000 taxable for Federal purposes. Let us assume the year we are dealing with is 1939. What is the net taxable income for Federal purposes in 1939? To arrive at that figure one must deduct the State taxes paid in 1939 on the 1938 income. In other words, the person's income before taxes would be \$1,000,000 plus the State tax paid. Assuming the tax-payer had the same income in 1938, the State tax on his 1938 income would be \$79,750. His income in 1939 would be \$1,079,750. less the His net income for Federal purposes would be \$1,079,750, less the \$79,750 paid in State taxes.

\$79,750 paid in State taxes.

To put this differently, the taxpayer's income must be shared by him with the Federal Government and the State government. The Federal Government permits him to deduct what he pays the State to arrive at the tax base for Federal purposes. But the State does not permit him to deduct the Federal tax to arrive at the base for State tax purposes. The taxable income for State purposes would be \$1,079,750. The taxable income for Federal purposes would be \$1,079,750, less the State tax, making his taxable income for Federal purposes \$1,000,000. That's how we arrive at a million-dollar net taxable income. And so when our reporters took a net income of a million dollars as an illustration they took an income from which the State taxes for the preceding year had been deducted.

Now with this as a base, let us see what a taxpayer would pay under this bill. He is paying income taxes on his 1939 income. These he will pay in 1940 of course. His 1939 income is \$1,079,750. Now what will he have to pay?

State income tax, 7.9 percent (approximate) on

State income tax, 7.9 percent (approximate) on \$1,079,750 \$86, 110 Federal income tax:

6 percent on \$1,000,000 \$60,000 Tax on \$20,000 9,880 93 percent on balance of \$980,000 911,400

Total tax_____ 1,067,390

981, 280

As his income is \$1,079,750, his tax consumes all but \$12,360 of his income. This is a very different result from the one given by the critics. It leaves this million-dollar gentleman very little, it is true, but it is in conformity with the principle of the bill to leave to people earning over \$20,000 no more than around \$10,000 a year in the event of war. One may quarrel with the principle, but that is another question. It has nothing to do with the actual arithmetical problem of computing how much tax will be taken.

Now, of course, one may say that this overlooks the fact that the man has paid \$79,750 in income taxes to the State out of his 1939 income already. That is not quite true. That \$79,750 deduction was the tax for 1938. It was paid in 1939, but it was actually assessed against the 1938 income. We cannot undertake to assume out of what year's income it was paid. But one thing we know: We cannot, in determining how much taxes a man will pay out of his 1939 income, add the State taxes for 1938 and the State taxes for 1938 also. We cannot assess 2 years' taxes against that one year's income. And that is precisely what the critics did in this case. By taking a million-dollar-a-year income for Federal tax purposes, they assumed an income from which had already been deducted the State taxes for the preceding year. And having deducted the State taxes for the preceding year, to arrive at the million, they then proceeded to deduct the State taxes for the taxable year.

million, they then proceeded to deduct the State taxes for the taxable year.

Why the drastic tax? A tax of \$1,067,390 out of \$1,079,750 looks pretty stiff. Yes, it is. But remember, this is a wartime measure. How about the young man who has a job paying him a salary of \$3,000 or \$5,000 and who is drafted for the Army. Not only is his body taken for military purposes to be shot at, but his entire \$5,000 salary is extinguished and he is given \$360 a year by the Government. Pretty tough? Yes, to be sure. But the Government needs him—all of him, his entire body and perhaps his entire life, his whole supply of blood, not just 93 percent. Will anyone contend that it is less just to take 93 percent of the earnings of the man who remains behind?

man who remains behind?

Man who remains behind?

Now, of course, there is the economic argument—namely, that this will upset the economic system. That is a long story. But as a matter of fact a war will upset in the most alarming manner the economic system. As for profits, men may enjoy them for a year or two, but with the end of the war the profits will be quickly extinguished, as they were last time. The object of this bill is not to upset, but to protect the economic system. These taxes will certainly upset the economic habits of those who are taxed. But they will protect the economic life of the Nation as a whole. They are indeed the only way to safeguard the national economic life against the disastrous effects of war inflation.

Men have got to make up their minds that war is not a means to a boom, but that it is a grim and terrible thing which involves sacrifices and that these sacrifices must be shared by the whole society—by the young men who will be taken bodily to fight the war.

JOHN T. FLYNN.

Neutrality

EXTENSION OF REMARKS

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES Thursday, May 4, 1939

STATEMENT BY RUSSELL A. BLACK

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an excellent statement on the subject of neutrality by Russell A. Black, a high-school instructor of Los Angeles, Calif.

Mr. Black treats this interesting subject with so much good common sense that I should like to make it available to all students of neutrality. I find myself in complete accord with Mr. Black's views as expressed in the statement on everything except his position with regard to China, with which I agree only in part. I commend the whole article to interested persons.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Shall the United States maintain strict neutrality in Europe and Asia? Time and again we hear, from Americans who should know better, from students, college professors, and people in all walks of life, that we should throw our influence one way or the other in some of the conflicts now raging or in the making. Various reasons are given for this belief. One group will say that Christianity is imperiled or that we should ship arms to one side because the other side is able to get them here. Another will say that effect this or that faction has conquered Furence it will invade that after this or that faction has conquered Europe it will invade America; therefore we should fight it while we have some allies to help us. We hear this counsel from the protagonists of both bolshevism and fascism, the current "isms" which are now making a shambles of Spain, in the endeavor to see which side will be able to exploit her resources. Still another would say that since

a shambles of Spain, in the enceavor to see which side will be able to exploit her resources. Still another would say that since we cannot expect to keep out of a world war in any event, there is no use of trying. We often hear that it is our duty to come to the aid of the democratic countries in their fight for existence, or to take issue with the peaceful nations against the warlike ones. What do we mean by neutrality? The story is told of the owner of a small farm situated close to the Mason and Dixon line at the time of our Civil War. His place had been raided first by the northern troops, who took his chickens, then by the southerners, who made off with his cow. Then his farm was seized by a band of guerrillas of doubtful allegiance. The farmer did not know which side they were on. The leader approached him and growled, "Well, what are you, a Yank or a Reb?" The old man looked about him cautiously and replied, "Well, I'll tell you, boys. I'm neutral, and dam' little of that." While we need not adopt his policy, nevertheless we shall be in quite a similar situation if we allow ourselves to be inveigled into taking sides in any of the quests for power now going on. Neutrality, in international law, is the condition of a state or government which refrains from taking part, directly or indirectly, and taking the transfer of the state of the condition of the powers.

It is not easy for any government to observe strict neutrality, directly and traditions the street in the condition of the condition of the powers.

It is not easy for any government to observe strict neutrality, directly and indirectly, in the complicated relations which exist in international intercourse. But it should be our highest resolution that in every possible way we will show all the nations that we have every intention of observing and defending our right to be have every intention of observing and defending our right to be neutral. We should, as a nation and as individuals, keep ourselves from any word or act which could be construed as taking a side. Empty talk of "quarantining the trouble makers" does no one any good, and does us considerable harm by making other nations think we are bluffers, who make threats which we are not prepared to back up. There is enough bluffing going on; we are one Nation which does not have to bluff. The advantages of remaining neutral for cytivation the difficulties

far outweigh the difficulties.

far outweigh the difficulties.

In the unfortunate event of our allowing ourselves to be dragged into the miserable mess, which side should we take? Should we defend Christianity from the atheism of the Communists by joining with the neopaganism of the Nazis? Should we send our ships to be blown up by one contestant because his enemy is buying from us here? Shall we throw in our lot with one group because the other, if victorious, will invade the United States later? That was one of the big arguments in the "war to end all wars" in 1917. If we are to take sides on this theory, which country is the more likely to invade us? The best way to predict the future is by the past. Who has invaded the United States? Did our enemies of 1917, Germany or any of her allies, ever do so? No. Did our Allies? England invaded the United States in 1812, destroyed Washington and burned the Capitol. But that do so? No. Did our Allies? England invaded the United States in 1812, destroyed Washington and burned the Capitol. But that was long ago; they would not do so now. Of course not, they couldn't right now. But as recently as 1865, they gave all possible aid and comfort to our enemies, threatened and bullied us, and did everything they dared to assure our ruin, at a time when our national existence was at stake. At the same time, France was getting a foothold in Mexico from which to assall us. And the only thing which prevents them from doing so again is the power of the United States. If anyone believes they have reformed, they will have to admit that it is not necessary to risk the future of the United States to find out. There is only one country that we can depend upon to resist invasion, that is our own United States of America.

What about the argument that since we cannot hope to keep

What about the argument that since we cannot hope to keep out of a world war anyhow we should get in early in order to "keep the fire from spreading"? The Scandinavian nations, without our wealth or resources or isolation, were able to hold themselves aloof during the World War. Is there any good reason why we cannot do as well?

as well?

Suppose we should wish to join forces with the democratic nations. Which are the democratic nations? Forms of government change so fast in Europe that it requires a good memory to keep up with them. Since 1918 Germany has been monarchy, republic, socialist state, and whatever she is now. Spain has gone through these stages of evolution and is being forcibly changed into no one knows what. The Government of France changes almost weekly and is very likely to be violently overthrown at any time. England has managed to keep one form of internal government, but is so tied up with treaties that her foreign policy is not her own. Italy Portugal. Hungary, Greece, and most of the not her own. Italy, Portugal, Hungary, Greece, and most of the Balkan States have been at different times controlled by socialists, monarchists, fascists, and other forms of government; Russia has had three forms, and no country in Europe can be said to have a stable government and any certainty of maintaining it from one year's end to another. If we try to pick out the democratic nations from this scramble, we have got to pick the needle out of any one of a group of haystacks into which it may have jumped. And every time we pick wrong we have more enmity piled up for us. No, indeed; it cannot be done.

To those who would have us favor the "peaceful" nations I say, "Will you please point them out?" That is the trouble—there are none. Neither side is peaceful, and any one of the belligerent States will shift sides at any time if it thinks it sees some temporary advantages. States will shift sides at any time if it thinks it sees some temporary advantage to itself in so doing. The law of the jungle still reigns supreme in Europe. That unhappy continent has not been able to learn by its thousands of years of pain and sorrow that no permanent advantage can be secured there by force. Every boundary line on the continent has been driven back and forth time and again at infinite cost in human suffering, and still no boundary is secure. In this saturnalia of blood and greed, the nations have changed partners in the dance of death for any reason or for preson. Nations have waited to see which side was winning. have changed partners in the dance of death for any reason or for no reason. Nations have waited to see which side was winning, then thrown themselves upon the loser like hungry wolves pouncing upon one of their fellows who has been wounded. The fact that Italy was bound by treaty to come to the aid of Germany did not prevent her from springing upon Germany's back when the latter country was facing Russia, France and England, and it will not prevent any country there from duplicating this treachery if it looks feasible. Treaties are made for expediency only; they are "scraps of paper" made in the hope that they may impede the other nation's freedom of action while leaving "this one" free to take any action that looks advisable at the moment. Small nations which happen to stand in the line of march are ruthlessly trampled under foot. The last time it was Belgium: will Switzerland share her terrible fate next? If these small nations are protected by solemn treaty, so much the better; it may keep Switzerland share her terrible fate next? If these small nations are protected by solemn treaty, so much the better; it may keep them from building adequate defenses; the treaty can be torn up when "the day" arrives. "Peace conferences" confine themselves to squabbles about armaments; agreements arrived at are concerned with what type of devilish tortures will be tolerated in "civilized" warfare. Even these agreements, if made, are invariable breaken agreements. bly broken as soon as they become inconvenient.

NEUTRALITY

This is a sorry picture, but it is not overdrawn. It is a candid facing of the facts. We had a hard lesson in 1918 regarding meddling in European affairs. Every nation among our Allies heartily despises us because we did not do more to help them. They do not feel that way about the Scandinavian nations which remained neutral. Certainly the countries which we helped to defeat do not neutral. Certainly the countries which we helped to defeat do not love us any more for that reason. War breeds upon hatred and fattens on revenge; and each war leaves its seeds behind, to take root like the foul weed that it is, and defile the fair fields of peace and progress with its abominable contamination.

Why is it that the Continent of Europe is so cursed with this blight? The answer is complicated. Hatred and revenge have been bred into the fibers of its unhappy citizens for so many centuries that they are going to be hard and slow to remove But more

that they are going to be hard and slow to remove. But many estimable people come from Europe, and when they get an ocean between them and the land of their sorrow they become useful, peaceful citizens. Even in their own countries many of them prefer peace to war. Why, then, can they not have peace? The selfish few who assume control of these countries are such absolute masters of press, radio, and all forms of communication, and such masters of propaganda, that they are able to educate the younger generations particularly into any state of mind which they desire them to have.

Any person having views contrary to the leader is afraid to express them, or is promptly liquidated if he does. The leaders are mad for power and feel that they must advance or lose their power. They give the orders and the rest of the nation must follow. What They give the orders and the rest of the nation must follow. What percentage of the population of any European country is in favor of peace or war would be hard to determine. But thus much we do know: If we go to war with any of these peoples, we shall be fighting the entire population; the system will take care of that. Perhaps a majority of the people may desire peace and would be heartly glad to see the last of the madmen who rule them, but the fact is that they permit this condition, and we must be concerned with facts and not let wishful thinking distort our vision.

Our American forefathers realized this and left Europe behind to found a new nation in a new world, uncontaminated by this heritage of hatred. Their wisdom becomes ever more apparent as the

tage of hatred. Their wisdom becomes ever more apparent as the

years pass.

years pass.

This is the picture of Europe as a whole today. Are there any exceptions to this rule? Perhaps there may be. Let us hope so. But we need not experiment to find out. Maybe Finland is the exception. The Scandinavian nations seem to be able to act sanely. For some strange reason we in this country had a tendency to believe Great Britain's protestations of friendliness until she proved that her word was just as valueless as that of her partners in crime by joining the list of defaulters. George Washington's advice to refrain from entangling alliances applies with more force today than it did the day it was delivered.

All the European nations which took part in the World War with the single exception of Finland stand revealed as breakers of treaties. A treaty made to be broken is much worse than no treaty at all. We can thank the wisdom of the American people that we were not dragged into the League of Nations. The European situation is hopeless at the present time. When peace comes to Europe, it must come from an overwhelming desire for peace within Europe. Until that day comes, all we can do is to

peace within Europe. Until that day comes, all we can do is to leave them alone. Any interference will cause them to hate us more, and only delay the final solution of their internal problem. Fortunately, we have no possessions or important interests there, and desire none.

But what about Asia? Should we come to the aid of hapless China, writhing in the clutch of the invader? Again the apostles of fear spring forth with their alarms. "If Japan subjugates China," they wail, "she will have a population and resources greater than ours. We cannot stand by and see this menace created at our doors."

They alarm themselves unnecessarily. Our European friends are not going to see Japan get China. Unless China can unite and repel the Japanese herself, she is due to be split up between Russia, England, and France. These countries will come to her "rescue" in due time, when Japan has weakened herself to the extent that she will be unable to offer effective resistance. And their armies, after entering China, will never leave. This may well be for the best in the long run. A country which cannot govern itself is going to have its governing done for it. At any rate, if the Chinese, with their tremendous resources and population, do not care enough for their country to protect it from being overrun by a little fifth-rate power like Japan, certainly the matter should not be of greater concern to the United States than it is to China.

The time to get excited about potential enemies who may invade America is when we know who those enemies are likely to be. Before that time comes the warlike nations will change partners Before that time comes the warlike nations will change partners many times, and there is no way to predict what particular combination of powers may decide to attack us. All we can do in the meantime is to look to our defenses and keep our men at home. Our past, present, and future are confined to the continent of America. Let us hope that some day a basis of peace, founded on justice, will be acceptable to the rest of the world. No arguments of feer manager along sealers or profit hunters must be allowed.

of fear mongers, glory seekers, or profit hunters must be allowed to shake our unflinching determination to keep our hands out of foreign wars. Only in this way can we be in a position to show the other nations the path to peace when they desire to find it.

Collect War Debt and There Will Be No Danger

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

LETTER FROM WILLIAM GRIFFIN, EDITOR AND PUBLISHER, NEW YORK ENQUIRER, TO SENATOR ROBERT REYNOLDS APPEARING IN NEW YORK ENQUIRER ON MONDAY, APRIL 24, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, I believe the following letter under date of April 17, 1939, from Mr. William Griffin, editor and publisher of the New York Enquirer, addressed to Senator ROBERT REYNOLDS, of North Carolina, concerning the war debt is of such importance that I hope every Senator and Representative will carefully read it and give it his most serious consideration. Senator Reynolds is to be congratulated for his statesmanlike and typically American approach to this vital issue. Under leave to extend my remarks in the RECORD, I include the letter, as follows:

Hon. Robert Reynolds, Senator from North Carolina, Senate Office Building,

Washington, D. C. MY DEAR SENATOR REYNOLDS: I want to send you my warmest MY DEAR SENATOR REVNOLDS: I want to send you my warmest thanks for introducing the concurrent resolution relative to my being appointed as special envoy in connection with the collection of the war debts. You have indeed done me a great honor.

To my mind, the collection of this enormous sum of \$13,000,000,000 is one of the most important and pressing issues confronting America right now. You, as an upstanding American, are

not afflicted with the spirit of defeatism which makes some of

not afflicted with the spirit of defeatism which makes some of our citizens shrug their shoulders and scoff at the very mention of exacting payment of the war debts.

If this Republic acted as the men who founded it and made it great would have had it act, it could have compelled our welching friends beyond the Atlantic to observe to the fullest the solemn agreements entered into by them with our Government as to the payment of the amounts due by them.

Even if we really thought it impossible to collect this \$13,000,000,000, it would be gravely harmful to the national interest to admit such a view openly. If we were to submit supinely to being defrauded on such a colossal scale, how could we expect honest treatment in our international dealings in the future?

We already see how our permitting these defaulters to victimize us has militated against our national prestige and material in-

terests throughout the world. As a much-traveled American, you, I am sure, know that we are looked upon abroad as a people who love to be fooled and fleeced.

If another European war breaks out, can we escape the self-reproach of having been morally responsible for it. For if we had compelled England, France, Italy, and the other war-makers to pay their indebtedness to us, they would not have been able to find the wherewithal to prepare for and wage war. We now see France and England engaged in bribing (with loans) Poland, Rumania, Greece, and other nations whom they wish to place on their side. The cash they are using is our cash, the cash which of right belongs to the crucified American taxpayer.

In its dealings with foreign nations our Government is in

In its dealings with foreign nations our Government is in duty bound to follow at all times the great guiding principle laid down by George Washington, namely, to act with strict impartiality. You will recollect that when the dictator of the Reich ruthlessly wiped out Austria's independence, there was a vigorous design of the state of the recomment that the Belgh proposed the

mand on the part of our Government that the Reich assume the

mand on the part of our Government that the Reich assume the American debt owing by Austria.

But when the dictator of the Reich ruthlessly seized Czechoslovakia, and since then, our Government has not said one word with regard to the American debt owing by Czechoslovakia. Why? Hitler is concerned in both instances. Can it be that the reason for this discrimination lies in the fact that someone high in official circles in Washington did not and does not desire to compel payment of Czechoslovakia's war debt of \$165,000,000 to Uncle Sam? Uncle Sam?

The \$84,000,000 in gold which the dictator of the Reich confiscated in Prague was not in actual fact the property of Czechoslovakia, but of the American people. Czechoslovakia was one of the most brazen members of the united war-debt welshers front, headed

by John Bull and Marianne.

There is a tremendous amount of talk in high places on the

Potomac as to the vital necessity of getting the disputing nations of Europe to sit down around the council table and devise ways and means of avoiding war.

By all means, let England, France, Germany, Italy, Russia, and the others concerned sit down in conference, and instead of intriguing and jockeying for position with regard to the balance of power to Function and the property research the results are the property and powerful to device the results are the property and powerful to device the results and the control of the property and the property and powerful to device the property and powerful to device the property and powerful to device the property and the property and powerful to device the property and the property a

guing and jockeying for position with regard to the balance of power in Europe, set themselves zealously and honestly to devising ways and means of fully meeting their debts to Uncle Sam.

If they act as thus indicated, they will do a service of transcendent importance to world peace, international concord, and international cooperation. By paying their debts to the crucified American taxpayer they will neither be in a position to wage war nor prepare for war.

With kindest regards and all good wishes I am

With kindest regards and all good wishes, I am,

Sincerely yours.

WILLIAM GRIFFIN. Editor and Publisher, New York Enquirer.

Agricultural Conditions In Wisconsin

EXTENSION OF REMARKS

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 4, 1939

RESOLUTIONS BY AGRICULTURAL GROUPS OF WISCONSIN

Mr. MURRAY. Mr. Speaker, I wish at this time to call your attention and the attention of the Members of this House to the deplorable agricultural conditions that exist in parts of Wisconsin.

The accompanying resolutions are presented by men who have intimate knowledge and contacts with these agricultural programs and I am sure we should give heed to their suggestions.

Whereas the mortgage indebtedness of a farm is a vital factor in determining whether or not the farm family can continue earning a living from the farm, and in view of the fact that many farm mortgages now being foreclosed are greater than their actual value; and

their actual value; and

Whereas resales of foreclosed farms, many of which were grubbed out of the wilderness and developed by those who lost them, are being made to new owners at much less than the foreclosed mortgages: Therefore be it

Resolved by the Agricultural Group of the Proposed Plans for Northern Wisconsin Counties, That this group recommend assistance through reamortization and adjustment of such mortgages at 3 percent for a period of 40 years in accordance with the principles of the Frazier-Lemke plan.

Dated at Rhinelander, Wis., this 17th day of April 1939.

Whereas it must be admitted that the fundamental cause of this Nation-wide depression rests wholely upon agriculture and the lack of purchasing power on the part of the American farmer with which to acquire and utilize the products of industry; and

Whereas practically every farmer, in order to continue operations, is getting assistance in some form or other from a Government agency, and such procedure has produced a tendency on the part of

agency, and such procedure has produced a tendency on the part of the farmer to relax in his efforts to promote better farming methods and reduce his production costs; and

Whereas agriculture as a whole has not benefited by such national farm legislation as has been enacted due to the fact that some sections of the country have been encouraged to produce certain products and commodities heretofore not produced in that area, thereby entering into competition with commodities produced in other sections, which practice tends to reduce the basic market price of such commodities; and commodities; and
Whereas securing to the farmer a minimum price of not less than

whereas secting to the tarmer a minimum price of not less than the cost of production would—

1. Create a new spirit through the knowledge that with proper farming methods and management he would be assured of a living in keeping with American standards and could eventually retire the indebtedness that hangs like a cloud over practically every farm at present, and could provide for his children the education to which they are entitled.

present, and could provide for his children the education to which they are entitled.

2. Tend to minimize the spread as exists between producer and consumer, which condition is recognized as one of the greatest evils retarding the return of prosperity to America; and Whereas it appears that existing conditions can be remedied only through the acknowledgment on the part of our lawmakers that agriculture is the foundation of this country and prosperity depends entirely upon the ability of the farmer to dispose of his produce at a price not less than the cost of production, which in turn would enable him to purchase and consume the products and services of industry: Therefore, be it

industry: Therefore, be it

Resolved by the Agricultural Group of the Proposed Plans for Northern Wisconsin Counties in session assembled at Rhinelander, Wis., This group unanimously endorses bill No. H. R. 2372, providing for cost of production, as well as other identical cost-of-production bills, and petition passage by the Congress of the United

Resolved further, That a copy of this resolution be forwarded to the President of the United States, to the Secretary of Agriculture, and to all Members of Congress representing the State of Wisconsin. Dated this 17th day of April 1939.

F. J. PAWLITSCHECK. Chairman, Agricultural Group for Northern Wisconsin Counties.

Our Obligation to Veterans and Their Families

EXTENSION OF REMARKS OF

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

Mr. CANNON of Florida. Mr. Speaker, under permission to extend my remarks with reference to H. R. 5452, which was passed by this body today, I wish to make the following statement:

I supported H. R. 5452 as introduced by Mr. RANKIN and reported by his committee, not because I believe that the enactment of such legislation will completely discharge the obligation of this Government to the veteran and his family, but rather because I feel that it is a step in the right direction.

WAR DEBTS

Much has been said on this floor in years past about the war debts owed to this country by foreign nations. Let us not forget that the greatest unpaid and almost repudiated war debt is the one which this great country owes to those who sacrificed themselves and their families in the armed services of this country. Until this debt is paid in full we Americans cannot conscientiously chide others who have forgotten their obligations.

Many of those of whom I speak are alive but not living. Normal employment opportunity is not theirs. We have allowed this condition to exist for 20 years, and it is about time we were doing something about it.

ECONOMY ACT

It is encouraging to hear so many of my colleagues express themselves in favor of reestablishment of those benefits cut

off by the Economy Act. I, too, believe in economy, but there is a difference in economy and repudiation of an honest obligation and debt.

TECHNICALITIES

Our present veterans' laws are so complicated with technicalities that in many cases the most deserving receive little or no benefits. Let us do away with all technicalities and meet our obligations to this most deserving group in a simple and fair manner. They served this country as it has never been served by any official, agent, or employee. We pension all other employees, irrespective of every technicality and strictly on the basis of their needs. If we will pension every veteran, his widow, or his children or parents, as the case may be, on the basis of their needs, then, and then only, will this country have satisfied its obligations to the veteran.

ECONOMIC EFFECT

There is no doubt that if we will proceed to pay our obligations to the veteran, W. P. A. rolls may be reduced. There will be less people on our social-security rolls. The lines in front of our employment-service offices will be shorter. Yes; even bread lines will be shorter. Every cent paid will go into circulation. From a credit standpoint, in my humble opinion, it is more desirable for this Government to clear its credit with millions of American people to whom we owe a solemn debt than with the banks. I hope both can be done in time. But if there is any priority in the debts that this country owes, that seniority is certainly in favor of the veteran, for this debt has been overdue and unpaid for 20 long years.

IMMEDIATE ACTION

There is no excuse for waiting longer in taking care of this our war debt. Over 20 years ago we sacrificed the youth of this country in a foolish war, and now we are sacrificing on the altar of economy the same group, which is now our older people, their widows, parents, and children. Yes; their children, who, because we will not pay our obligation to them, go uneducated, ill-clothed, and in many cases unfed. No other question warrants the immediate action of Congress more than this vital and most important matter. Let us pay our debt now.

The Collapse of the New Deal

EXTENSION OF REMARKS

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 4, 1939

EXCERPTS FROM ADDRESSES BY HON. CHARLES A. HALLECK, OF INDIANA

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the Record, I include the following extracts from addresses recently made by me at Columbus, Ohio, and Richmond, Va.:

In November of 1936 President Roosevelt was returned to office by a 10,800,000 majority—the largest in our history. That year the Republican Party carried only 2 States for the Presidency, and elected but 5 Governors, 6 Senators, and 89 Representatives. The newspapers were full of editorials that the end of the G. O. P.

Two years went by—two of the most dramatic years in our political history. Then last November a Republican landslide swept 18 Republican Governors, 11 Republican Senators, and 169 Repub-18 Republican Governors, 11 Republican Senators, and 169 Republican Representatives into office. The political picture had reversed itself. There were, I know, a great many factors which caused that change, but all of them can be lumped together in a single sentence, "The people of the United States have discovered that the New Deal does not work."

When Mr. Roosevelt was campaigning for office in 1932 he pointed with horror at the sight of 11,000,000 unemployed. He rightly said that this great country of ours was too rich to allow 11,000,000 men and women to tramp the streets for long looking for work. And yet, in spite of wielding more centralized power

than any President in our peacetime history, in spite of 6 years devoted to ceaseless talk of trying to help our underprivileged, the American Federation of Labor figures show that unemployment last November still stood at 11,000,000.

FABULOUS SPENDING

Certainly this failure to help labor cannot be blamed on lack of Government funds. Since coming to office President Rooseveit has spent \$47,000,000,000. No human mind can understand what that much money means. But it can understand the fact that that much money means. But it can understand the fact that \$47,000,000,000 is \$18,000,000,000 more than was spent by the Federal Government from March 4, 1789, under George Washington, to the day we entered the World War. During those 122 years 26 American Presidents expended only 60 percent of the money Mr. Roosevelt has spent in 6 years. With it they paid for the American Revolution, the War of 1812 with England, all of our nineteenth century wars with the American Indians, the Mexican War with our sister Republic to the south; the great and tragic War between the States, and the Spanish-American War that made us an imperial power. And, in addition, those 26 Presidents bought the Louisiana Territory, Florida, Alaska, and the Virgin Islands. They dug the Panama Canal, dredged our rivers and harbors, and spanned dug the Panama Canal, dredged our rivers and harbors, and spanned this continent with a firm network of highways; paid the wages and pensions of the veterans of the above-mentioned wars; and carried on all the activities of the United States Government for 122 years. All of that took but \$28,729,000,000. But since March 4, 1933, the Federal Government has spent approximately \$47,000,000,000.

BUSINESS STILL RETARDED

Two simple ways of measuring the health of business in this country are to consider the types of new financing and the number of houses built each year. From 1920 to 1930 new financing in this country, exclusive of refunding, was divided 88 percent corporate and 12 percent Government, which includes Federal, State, and municipal. From 1931 through 1937 the division was 15 percent corporate and 85 percent Government. In other words, since the New Deal business has not been able to raise money to repair old

plants, let alone to build new ones.

During the 8 years leading up to 1929, private capital built annually 223,000 houses. Since the New Deal has been in office (during which time vast sums have been spent by the Government for housing) the average number of homes built in the United States has fallen to 77,000 annually. Do I hear you say that is because the whole world has been in a bad state for the last 6 years? Well, recent figures released by the League of Nations show that industrial production in Japan is 67 points ahead of the 1929 level, that Norway is 35 points, and England 9 points ahead, while the United States, which stands thirteenth on the list of nations, is 15 percent worse off than in 1929.

BROKEN PROMISES

BROKEN PROMISES

The tragic weakness of the President is his inability to read election returns correctly. The votes that first elected Mr. Roosevelt in 1932 were votes for recovery, and when the New Deal first came into office it took every step in its power to promote that recovery. But before this program had been under way for 3 months President Roosevelt switched to a program of reform, and the great impetus that had been given to prosperity died.

The great victory won by President Roosevelt in 1936 was again a mandate from the people to go ahead with recovery. But instead of recognizing it as such, President Roosevelt set out early in 1937 to remake the Government along the lines of one-man

in 1937 to remake the Government along the lines of one-man rule. He tried to pack the Supreme Court, and to centralize the Federal Government. He closed his eyes to the lawless excesses of misguided groups of labor. By the end of 1937 we were in a violent depression.

Just as President Roosevelt failed to read correctly the meaning of his 1936 victory, so he has failed to understand his 1938 defeat. The real Democrats in Washington interpreted the message from

The real Democrats in Washington interpreted the message from the voters. But instead of turning to proven political advisers, President Roosevelt listened to the very group of starry-eyed reformers who had advised him so unwisely after his 1936 election victory. Let's see how the President has responded to the mandate of the people as expressed last November. One mandate of the 1938 election was to take politics out of relief. President Roosevelt put Harry L. Hopkins, the key man in the whole relief picture, in his Cabinet. Cabinet.

Another mandate of 1938 was to enforce law and order, yet President Roosevelt put Frank Murphy (repudiated by the voters of his own State of Michigan for his action in sit-down strikes) into his Cabinet as Attorney General, the chief law office of the Govern-

The mandate of 1938 was for Government economy. But in his annual message to Congress this January, President Roosevelt not only gave up any idea of balancing the Federal Budget but took the indefensible position that Government spending is Government

investing, and that the United States should continue to try the impossible course of spending its way into prosperity.

The mandate of 1938 was that this country should check radicalism and encourage business, but President Roosevelt to date has uttered no word to discourage alien radicalism in its attack upon Americanism.

Americanism.

It is true, too, that the New Deal reluctantly, 3 months after the election, executed one of its apparent about-faces for the declared purpose of appeasing business. Speeches extending the olive branch were delivered by Mr. Hopkins and by Mr. Morgenthau, Secretary of the Treasury. But scarcely had the echoes of these orations died until President Roosevelt himself turned thumbs down on the appeasement policy, and business again began discounting a discouraging future.

REPUBLICANS PLEDGED TO RECOVERY

If Mr. Roosevelt ever actually seeks to appease business—instead of permitting a temporary breathing spell so that a firmer grasp may be had at its throat, he will find the Republicans in Congress stanchly behind him. But we are not interested in political gestures or economic panaceas. Let the President undertake to cut down some of the reckless spending that has marked his administration and we will follow him. Let him call for the repeal of down some of the reckless spending that has marked his administration and we will follow him. Let him call for the repeal of the discretionary powers he now holds, which have created so much uncertainty. Let him propose a common-sense tax program, designed to raise revenue and not punish business, and we will be with him. Let him propose a fair revision of the Labor Relations Act. Let Mr. Roosevelt frankly and specifically place a limitation on Government competition with private business and he will get our votes. Let Mr. Roosevelt declare that the era of experimentation is over, and let him back up his words with deeds.

If Mr. Roosevelt does these things, he will find the Republicans in Congress with him because these proposals constitute the stand the Republicans have taken for the last 4 years. We protested incessantly against the punitive measures taken against business, despite occasional honeyed words of appeasement.

Until we witness a little action to follow promises we cannot be blamed for keeping our fingers crossed. The New Deal for 6 years has a record of breaking one promise after another. At least once in every year of his administration Mr. Roosevelt has reversed himself. He has described himself as a "quarterback." The description is an apt one. So until we have an opportunity to see a little specific action we do not know whether the play is going to be a line plunge down the field or just another end run with another loss of 10 yards.

STRANGLING PRIVATE ENTERPRISE

But let me say that the New Deal efforts to solve the depression are no longer a game, if they ever were. Its spending program has become an economic treadmill.

In fact, the cold figures show it is not even a good treadmill, because, instead of running as fast as you can to remain on the same spot, we are actually drifting backward toward constantly lower standards of living for millions of our people, particularly in the form resions. farm regions.

farm regions.

Now, this slow economic degeneration can be demonstrated by figures. We need only look at the amount of durable goods purchased by private enterprise in the heavy industries since 1933.

During the 10 years 1919-29 the American people spent an average of \$19,000,000,000 a year for durable goods—new machinery, new factories, new railroads, and other such forms of capital equipment.

But since 1933 our expenditures for this type of goods have averaged only about \$11,000,000,000 a year. We, therefore, have a deficiency of \$8,000,000,000 a year for the 7 years of the Roosevelt era, up to the end of the 1940 fiscal year. This means that the accumulated national deficiency in durable goods under Roosevelt's policies now approaches the staggering figure of \$56,000,000,000.

Of course, no one can have any real comprehension of what this amount of money means, even when spread over 7 years. But we can come to a good relative appraisal of the amount by recalling that the total deficiency of the Federal Government for the 9 years 1932-40 aggregates \$28,000,000,000.

These are the official figures submitted by President Roosevelt in his Budget message last January.

January.

Now, the official justification offered is that these huge Government deficits "prime the pump" and thereby help restore jobs and prosperity. The new dealers overlook the fact that their unsound fiscal policies have driven to hiding \$2 of private buying and investment for every \$1 of Government deficit spent in pump priming. If we had spent the \$56,000,000,000 in private capital, it would be working for a higher living standard. Instead, we owe \$28,000,-000,000 of Government debt.

Or we may put it another way: In spending \$28,000,000,000 to restore prosperity, this administration has driven \$56,000,000,000 of private spending and investment out of the market. The answer? It is only one phrase—lack of robust business confidence. This is why I say the Roosevelt scheme is worse than a treadmill. The problem of restoring a robust national confidence in private enterprise, and in harnessing once more the great driving power of investment capital is the one great problem before this Nation

We know there is hat one great problem before this Nation today.

We can never have solid and sustained prosperity, we can never have real jobs at honest wages for our 10,000,000 unemployed until the American people feel certain of the future of America and its bountiful system of competitive free enterprise.

This is the one problem the President and his inner circle of imperious advisers will not face or discuss.

We know there is hat one real presents of recovery that is the

We know there is but one real measure of recovery, that is the number of people restored to jobs. And we all know that today, after 6 years of unrestrained new dealism, we still have 10,000,000 unemployed.

But the American people will discuss our 10,000,000 unemployed even if the President would rather talk about the war in Europe.

Our first responsibility is not to Europe but to the old frontier of unemployment and economic insecurity in the United States of America. The elimination of the bread line is our first line of defense.

We challenge the President on this issue and we propose to make the challenge, not in the quiet confines of our offices in Washington

the challenge, not in the quiet confines of our offices in Washington but in the public forum of America from coast to coast.

And we do not intend to be diverted from this fundamental issue of American life by the President's excitement over imaginary threats from other quarters.

We are going to carry this issue right to the people who must decide it; and if you have examined the election returns of last November, you will hold every confidence, as I do, that the American people already are feeling their way toward the right conclusion, namely, that the New Deal alone is the one great factor in American life which makes for continued depression and prolonged unemployment. unemployment.

That is what the record tells us; that there never will be any solid and sustained recovery and prosperity in this great country of ours until Franklin D. Roosevelt ends his one-man war on private enterprise, on profitable business, and against the American gov-

ernmental system of ordered liberty under law.

The Needs of New England

EXTENSION OF REMARKS

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Thursday, May 4, 1939

ADDRESS OF RALPH E. FLANDERS, DIRECTOR OF THE NEW ENGLAND COUNCIL

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Ralph E. Flanders, of Springfield, Vt., director of the New England Council, at Washington, D. C., May 3, 1939:

Council, at Washington, D. C., May 3, 1939:

It is something of a responsibility to be asked to present New England needs and possibilities before its representatives in the Senate and House as I have been asked to do. The difficulty lies in the fact that no one man can see the whole picture; nor can any two New Englanders, with their traditional independence of opinion, fully agree on just what it is that we want and in just what direction we should go. You must then discount this as an authoritative presentation, and give it only the importance which your own judgment assigns to it.

New England has had an interesting history. The industry of modern America was established there. The iron industry started there. The cotton textile industry started there, and so did many another of our great industrial developments. Meanwhile we fed ourselves as well as manufacturing for the rest of the infant Nation. Our fields of grain, flocks of sheep, and herds of dairy cattle supplied us with food and clothing. Our industries paid the highest wages, and our workers enjoyed the highest standard of living of any part of the country.

Meanwhile our fishermen drew the heaviest catches from the ocean, and our merchant ships sailed the world around and were the undisputed masters of the seas. New England led the Nation in industrial and mercantile enterprise for more than half of the

in industrial and mercantile enterprise for more than half of the

nineteenth century.

Her subsequent history has not been so spectacular.

nineteenth century.

Her subsequent history has not been so spectacular. The limited sources of iron yielded place to the vast deposits of Pennsylvania, the South, and the Lake Superior region. The lower wages of the South attracted the cotton industry and much of this has left New England forever. Shoemaking drifted away from our cities and towns nearer to the sources of leather and to the centers of population of the Nation. New England wool gave place to that from vast flocks raised on the open ranges of the West, made available by the building of the transcontinental railroads. Our grain supplies come from the West. And while our milk is for the most part raised within our boundaries, yet cream and butter come to Boston markets from beyond the Mississippi.

New England geographically, industrially, and agriculturally is "out on a limb." The air is bracing and the view is unexcelled, but still we are "out on a limb." To leave the picture here, however, would be to give a very false impression of what is really a heartening rather than a disheartening picture; for when New England found it necessary to give up providing the rest of the Nation with bulk and staple goods, she turned her energies to the production of quality goods, and in the production of those goods she finds her present field of activity and her present source of employment for her workers and of income for her industries. Wherever material cost is high and the amount added to the production by labor is inconsiderable, we relinquish the field to our competitors. Wherever skill of hand and brain is applied to the refined manipulation of quality products, there we find our field.

Although much of the low-priced shoe trade has left us, we still find a market for the highest grade of men's and women's shoes. It has become difficult for us to compete in the manufacture of staple cotton textiles, but the finer weaves and the artistic specialties meeting the demand of enlightened style—these we can and will produce. We no longer sell pig iron to the rest of the country, but we continue to manufacture the highest type of machine tools and find our market in the Waltham watch rather than in structural steel.

Thus for the industries which we retain we still pay the highest wages and enable our workers to live at the highest standard of living of any section of the country. We have abandoned the quantity ideal and have become a region whose industries are based on quality. This has been made possible by the fact that we have as a foundation for our production of quality products a quality population, whose native ingenuity, skill, and character fit them for our type of industry to an extent not to be matched elsewhere in the Nation.

elsewhere in the Nation.

Carrying this idea still further into other fields than that of industry, we see the new opportunities of agriculture pointing in the same direction. Our future lies in food specialties which will bring a price above the market. Butter, cheese, hams, country sausage, bacon, each stamped with a trade-mark whose reputation has been founded on cleanliness of preparation, delicacy of flavor, and unvarying high standards, point the way to the future of New England agriculture. Add to this the New England tradition of farming as a way of life and we have not only the background farming as a way of life, and we have not only the background for a solid success in agricultural pursuits; we have as well a con-tinuation of the New England countryside as a source of the finest

human material for the replacement of the leaders of the Nation in commerce, industry, education, and statesmanship.

As our final resource, we again have quality in the recreational facilities which we have to offer. There is quietness, beauty, and regenerating peace in our landscape. Those who live in the region and minister to its visitors have such a real, though unconscious, participation in the quality of the scene that they are at unity with it, and the discerning visitor seldom finds himself disturbed by the jarring note of dissonance between the seashore the mounby the jarring note of dissonance between the seashore, the moun-

tain, or the valley and its inhabitants.

A region whose prosperity is based on quality has difficult problems to face, some of which come very clearly within the influence of national legislation. Let us consider a few of these matters with which you, our representatives in Congress, are particularly con-

cerning yourselves.

cerning yourselves.

There is, of course, the ever-present question of the tariff, with relation to which our region presents no unusual problems. I must say that the terms of the recent reciprocal arrangements with Great Britain and Canada made it look as though New England had either been kept too much or too little in mind, when such things as milk, maple sugar, and fisheries had their protection decreased. I do not know that it is yet time to appraise the results of this action, and perhaps we had better wait until the results are clear before we try to make protest; for there until the results are clear before we try to make protest; for there are other legislative problems which do affect us more directly.

are other legislative problems which do affect us more directly. The Wages and Hours Act is a serious matter. Here we find ourselves on the horns of a dilemma. I am sure that most of us are opposed to the setting of wage rates and hours by national legislation. The lack of flexibility, the widely varying conditions, the impossibility of granting exemptions with even-handed justice, the inevitable necessity for the building up of great bureaucratic administrative institutions, and the choking of natural developments in accordance with economic needs are only a few of the difficulties which follow an attempt to introduce totalitation. of the difficulties which follow an attempt to introduce totalitarian administration into a highly developed and elaborately organized society like ours

Yet, on the other hand, a region which must subsist on quality products, paying high wages, is ever sensitive to the disadvantages which those high wages entail. Our region has led the Nation in its wage and hour standards. It has placed itself at a definite disadvantage thereby, and the temptation is strong to support wage and hour limitations and to demand their extension.

However advantageous such a course might be for New England, I believe that it would be bad for the Nation as a whole and ultimately bad for us. The most we should ask for, it seems to me, is such a wage rate as gives minimum standards of decency, giving assurance that the industry is just above the sweatshop level. Thirty-five cents an hour or even thirty-two cents an hour as a minimum would seem to meet these requirements for goods

made for interstate distribution.

A quality region also has its definite problems with relation to taxation. For one thing it is subject to greater fluctuations of income. It has years of loss in its operations and then a few years of profit. The net result over a period of years is a tax on its average profits higher than the normal rate of taxation for any 1 year. We are thus far more heavily taxed than regions engaged in more stable occupations, such as the food industries. We have a particular interest in taxation policies which carry over gains and losses so that the taxation is on the basis of our average conditions instead of on the abnormal ones.

In a region renowned for its inventiveness and its enterprise, we have been hard hit by the special forms of taxation which have been devised, it would seem, specifically to penalize business risk. The undistributed-profits tax bore heavily on businesses whose earning power fluctuated widely, but it bore still more heavily on the growing industry, attempting to make for itself a place as a new venture against the competition of established businesses. The capital-gains tax, like the undistributed-profits

tax, has been somewhat lightened, but even in its present form

tax, has been somewhat lightened, but even in its present form its effect is to discourage "venturesome capital." There is nothing this Nation needs more than a revival of the spirit of business risk and enterprise, and the ability to realize on profits from risk and enterprise is an essential necessity. Full reemployment waits on risk and enterprise and at this moment it waits on little else. While these things of which we have been speaking are specific, there is a general requirement still unmet which it is most difficult to put into words. That general requirement relates to the atmosphere or the "weather" in which business enterprise must live and act. The weather has not been good. The weather is made in part by business itself and in part by the conditions which surround it, which in the last few years have been primarily determined by the Federal Government. I think that I may safely say that the arrival of good business weather and consequent revival of employment and a decrease of the excuse for large governmental expenditures depends overy little upon the passing of new legislation. It depends, on the whole, rather more on the refraining from legislation or from the threat of legislation. We are, indeed, in a dangerous position when we assume that business depends on positive action by government for its health and depends on positive action by government for its health and activity.

There are certain business evils from which government must protect the body of its citizens. There are certain evils from which some sections have to be protected as against other sections. There are certain disasters which come to business from the raids of speculation, for instance, from which protection must be pro-vided. But, take it altogether, these various protections are of a general sort and fall far short of the regulation of the details of general sort and fall far short of the regulation of the details of business by government on which we have embarked in the last few years. Such detailed regulation is impossible. The attempt to enforce such legislation meets with difficulties such as to require an ever-expanding and ever-elaborating administrative machinery. It is not too much to say that the attempt to govern the details of business by government, if persisted in, will destroy popular government, and destroy the useful functions which our representatives in Congress now perform. Only the totalitarian government can give detailed management to business, and in the totalitarian government the people's representatives play no part.

I might properly close by calling attention to the fact that New England's particular forte of providing the more refined goods and services for the rest of the country gives her a particular interest in the welfare of the country as a whole. It is New England's industries which suffer first and most if the Nation's business is not sound. We have, therefore, no special favors to ask. We ask only that our Nation be permitted to continue on its old course of private enterprise and activity with only the necessary checks on the evils which have hindered that enterprise and activity.

I hope that this picture will appeal to you as clarifying and simplifying the responsibilities and opportunities of you who are responsible for national legislation. We are dependent on you, and we believe that the requirements which we feel must be met in your sphere are requirements which you are as well fitted to carry out in the future as you have shown yourselves to be in the

The Unconstitutionality of H. R. 5643 and the Danger of Concentration Camps Under Its Administration

EXTENSION OF REMARKS

HON. RUDOLPH G. TENEROWICZ OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1939

Mr. TENEROWICZ. Mr. Speaker, I rise in opposition to H. R. 5643. Were it not that this bill, in my humble opinion, strikes at the very roots and foundations of the Bill of Rights for all Americans, citizens and noncitizens, I would not ask your indulgence. Because it does propose an opening wedge in the bulwark of our civil liberties-specifically, imprisonment without trial upon a class of foreign-born residents-I feel it to be a menace to us all.

Do not misunderstand my position. If any alien has violated the laws of our country, he should be immediately subject to the operation of the Criminal Code of the Federal Government and to the laws and police regulations of the States. These Federal and State laws have in the past, and are today, bringing about the conviction and punishment of such violators. And even the remedy this bill seeks to bring about is, as stated in the majority report from the Committee on the Judiciary, designed to care for and not to exceed 50 such aliens a year.

It is not the scope of this bill which arouses our violent protest but the future implications which are bound to follow its passage. It is repugnant to me as an American citizen to see introduced within these Halls legislation so palpably copied from the tactics of foreign dictators, legislation which openly provides for concentration camps in freedom-loving America. I, for one, could never live with my conscience if I permitted my vote to be cast for the first concentration camp ever contemplated in these United States.

Are we Members of this Seventy-sixth Congress-all of us as President Roosevelt has recently reminded us, the sons of immigrants-seriously considering the passage of this bill? Do we favor this measure which, for the first time in our long history, would introduce into American jurisprudence a procedure calling for prison terms which could amount to life imprisonment and for persons who, through no fault of their own, are unable to obtain travel documents to foreign countries? I for one do not think we do.

The danger, however, lies in permitting the forces of reaction to set up such machinery under the guise of punishing wrongdoers of foreign birth. Should this measure pass, how long would it be, I ask, before these concentration camps, where men and women are committed without due process of law-without benefit of a jury trial or assistance of counselhow long before they would be suggested for, yea, and even used, to imprison American-born citizens who disagreed with those in power?

At first glance this may seem farfetched to some of us. "What do we care," you may say, "what happens to foreigners who have violated our laws?" But the wiser among us will remember that eternal vigilance is the price of liberty. That what happens to unwanted aliens today may tomorrow happen to us.

Sometimes I feel we are apt to forget in these frenzied times just what appeal the United States holds out to a fearconstricted world. It is well for us to remember that from 1820 to 1920, 33,000,000 immigrants entered this country drawn by the irresistible promise of freedom and liberty for all. These immigrants of every race and creed shared in the great national development of America. Their brains and skill helped build this country and make it great. They came here, reared their children, and remained because of the degree of freedom and economic security they found here. And today, perhaps more than ever before, men and women of the world are looking to the United States as the haven and shining light of liberty and civil rights.

The ably written minority report of the Judiciary Committee raises a grave doubt about the constitutionality of this bill. It points out that this bill "sets up a procedure for the arrest, and in some cases permanent detention, of persons in a way which contravenes well-established principles of the United States Constitution."

May I, with your permission, quote from this report:

If Congress provides for imprisonment, however, for deportable or the persons it would seem to follow that such persons are entitled to a jury trial, the assistance of counsel, compulsory process, and other rights secured to persons accused of crime by the fifth and sixth amendments to the Constitution, since the courts have held that these amendments apply to the prosecution of aliens as well

as citizens.

It is apparent that the draftsmen of this bill had this objection in mind, since the provision is made for confinement "though not at hard labor" and for release by the Secretary of Labor "upon sufficient evidence of good cause." It is difficult to see how the Constitution can be circumvented by referring to indefinite imprisonment as "detention" or confinement "without hard labor." Nor does the provision for release upon the order of the Secretary of Labor cure the constitutional defects in the bill, since there is no definition whatsoever of the phrase "good cause." Obviously, what might seem "good cause" to one Secretary of Labor might not seem "good cause" to others. The provisions for judicial review of the Secretary's orders in these detention cases is meaningless, since the courts would have no legislative standard with which to measure the validity of the Secretary's action.

Indeed such a vague phraseology would indicate that the bill not only conflicts with the specific language of the fifth and sixth amendments but is probably also unconstitutional on the ground of unlawful delegation of power.

Can we forget, my colleagues, that it was not so many years

Can we forget, my colleagues, that it was not so many years ago that we invited aliens to our shores? We needed their

brawn and their brains and we promised them freedom. Today the picture is changed. Today many a good worker, through neglect or ignorance, finds himself an unwanted alien in our midst. We know that at this very session of Congress there have been more than fourscore bills introduced under the heading of antialien legislation. Instead of harassing and persecuting these aliens and foreigners in our midst would it not be more to our mutual benefit to encourage and assist them to become American citizens by liberalizing our naturalization laws for those who have been here a number of years?

I cannot close without pointing out the danger to organized labor, and to workers everywhere, which lies inherent in the bill under discussion. Labor has found, all too often to its sorrow, that such measures directed against aliens frequently are used to intimidate and threaten workers exercising the right to join with their fellows in improving their living conditions. The existence of concentration camps in America would be an especial menace to organized labor.

And does it not seem incongruous to us here that we should be considering such a tyrannical measure at the very moment when hundreds of thousands of our citizens are gazing with reverence and awe on that great English foundation stone of democracy, the Magna Carta now on view at the New York World's Fair?

In closing I ask you, before voting on this bill, to reread the Constitution of the United States and the Bill of Rights. And, if you still waver, the Magna Carta. I firmly believe that no lover of democracy could read these immortal documents and then vote "Yes" on this bill.

Has Business Lost Interest in Tax Revision?

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES' Wednesday, May 3, 1939

JOINT DISCUSSION BY HON. EMANUEL CELLER, OF NEW YORK, AND HON. JOHN W. McCORMACK, OF MASSACHUSETTS, BROADCAST OVER A COAST-TO-COAST NETWORK FROM WASHINGTON, D. C., MAY 3, 1939.

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following joint discussion by Hon. John W. McCormack and me, which was broadcast over the coast-to-coast red network of the National Broadcasting Co. from station WRC, Washington, D. C., May 3, 1939:

Mr. Celler. On March 14 we were privileged to discuss certain changes in existing tax laws that might be put into effect without loss of revenue to the Government, and which at the same time would tend to restore confidence, to stimulate employment, and to more quickly bring the country back to normal prosperity. The suggestions made during that discussion have received Nation-wide acceptance and approval.

Mr. McCormack. That is true, Congressman Celler. Many thousands of copies of our tax discussion were requested and distributed throughout the country. While there has not been the articulate demand for tax revision expected, still, so far as I am aware, not a single dissenting voice has been raised against the proposals we submitted at that time. On the contrary, wholehearted endorsement has come from business, large and small, from individual taxpayers; and from the public in general.

Mr. Celler. Nevertheless, I have been somewhat puzzled, Congressman McCormack, that there is not a livelier and more articulate interest on the part of businessmen and taxpayers generally

late interest on the part of businessmen and taxpayers generally in the revision of Federal tax laws at this session of Congress, Discussions involving earlier efforts at tax adjustment were accorded overwhelming endorsement, but recently the drive for tax revision seems suddenly to have slowed down. I am disturbed by this recent let-down, although there has been some awakening from this apparent apathy on the part of taxpayers since our discussion

Mr. McCormack. I share this concern with you, Congressman Celler. While the articulate demand has not evidenced itself, there does seem to be increased interest for pressing reasonable tax revision on Congress since our last radio talk. While corporations or businessmen are not expecting much in the way of reduction of the total amount of revenue to be raised, at least not until there seems to be more definite prospects of reducing Government expenditures, nevertheless, a healthy growing feeling is evidencing itself at the repeal or alleviation of some oppressive taxes, which will contribute to a rapid business recovery. The question at the moment is not so much the reduction in the total taxes collected as it is the elimination of the varied and intricate forms of taxation and tax reports, and the simplification of procedure to such extent that the actual saving of time and money to the executives and employees in private business will in and of itself result in a substantial reduction in the present total expenditures for taxes, as well as a reduction in the cost of preparing, filing, and examining the multiple tax reports which have to be made.

Mr. Celler. You probably observed, Congressman McCormack, a few days ago the Brookings Institution submitted recommendations, based on a survey by one of its economists, which are practically on all fours with the tax recommendations contained in our recent radio talk. Similar recommendations have been made by other groups also. Inasmuch as our suggested changes involve no loss of revenue to the Federal Government, why should there be any

objection to their adoption?

Mr. McCormack. I see no justification whatever, Congressman Celler, for anyone opposing proper and necessary tax revision. So far as I am aware, no proposal has been advanced by any leader in the tax-revision drive which has as its aim the facilitation of tax avoidance by wealthy persons. I know of no pending proposal that the tax and the facilitation of tax and the facilitation of tax avoidance by wealthy persons. that aims to reduce the total of governmental revenues from business taxation. I do know that a lot of hard work and study have gone into plans to eliminate some of the many complex levies now gone into plans to eliminate some of the many complex levies now assessed against business. Such a revision would give businessmen some time, which is sorely needed, to run their business and to permit them to make sound business decisions, which are impossible today without expert professional advice. Further, such liberation would give businessmen time to expand their enterprises, create more jobs, promote recovery, and thereby build still greater revenues for the Government.

Mr. Celler. Isn't it possible, Congressman McCormack, that the seeming lack of interest on the part of businessmen today may be caused by some of the recent unfounded press statements? For example, some dispatches have indicated that a corporation tax as high as 27 percent might be necessary to bring about the desired

revision.

Mr. McCormack. Such statements are, of course, fantastic; but, unfortunately, they do have the effect of disturbing business equilibrium and creating more unrest throughout the country. It is the duty of businessmen to distinguish between political propaganda and constructive criticism. You will recall that in his first speech after assuming office, Secretary Hopkins, on February 24, stated: "Among many businessmen there exists a widespread lack of confidence. I am prepared to accept that premise, nor would I underrate its importance. Loss of business confidence is and has been a hard, stubborn fact, and may be as real a deterrent to restored business health as anything we have to deal with." I think, therefore, we cannot afford to ignore this fact.

I, like yourself, Congressman Celler, have been preaching tolerance and understanding on the part of all—Government, business, finance, employers, labor, everyone—as essential in the first instance to a restoration of confidence. We cannot have confidence where suspicion of each others' motives exists, or where hate exists.

where suspicion of each others' motives exists, or where hate exists. where suspicion of each others motives exists, or where hate exists. With tolerance and understanding existing, and with proper tax revision, the businessmen of the country will be inspired to greater activity, and the country as a whole will benefit therefrom.

The country cannot be lifted from its present state of economic depression except by private enterprise. A revival of private enterprise can be secured only by a restoration of business confidence.

Mr. Celler, I am in thorough accord, Congressman McCormack.

Mr. Celler. I am in thorough accord, Congressman McCormack. However, some objections to this position have been advanced by theoretical economists and a few officials in Government. These theoretical economists remind me of the teacher who had a class in arithmetic in a school in one of Ohio's numerous cities who posed the question: "If there were 12 sheep in a field and 5 jumped the fence, how many were left?" She asked several pupils and got the lence, how many were left?" She asked several pupils and got numerous answers. Some said 3, some said 9, and some said 6. She asked Johnnie, who had recently moved in from the country, and his reply was "no sheep left." The teacher told him that he was mistaken and that if 5 sheep out of 12 jumped the fence, there would be 7 left. His answer to the teacher was: "You might know arithmetic, but you don't know sheep." The theoretical economists might know economics, but evidently they don't know human nature and practical business.

Mr. McCormack. Additional fears understally have been been

Mr. McCormack. Additional fears undoubtedly have been engendered by the charges of a small group that the changes we have advocated in the tax revision program would amount to a defeat advocated in the tax revision program would amount to a cereat of the social economic concepts of measures intended to correct inequalities. I see nothing in our proposals that in any way affect such objectives. On the contrary, the adoption of these proposals will tend to consolidate the gains that have been made through the social legislation adopted by Congress during the past 6 years.

Mr. Celler. I know, Congressman McCormack, that the Ways and Means Committee, of which you are a distinguished member, will compare the provideration to all expects of tax revision possible at this seements.

give consideration to all aspects of tax revision possible at this session of Congress. Certainly the studies which Treasury officials have made, and which Secretary Morgenthau and Undersecretary Hanes have stated they are prepared to furnish to your committee whenever called upon, should dispel any misunderstandings or

wrong conclusions as to what this tax revision program amounts to. I have implicit confidence in the ability and fairness of the members of the Ways and Means Committee to recognize the necessity for proper tax revision to restore prosperity. Such action on the part of your committee will terminate the uncertainty that exists at present and it will restore confidence.

at present and it will restore confidence.

Mr. McCormack. You will recall, Congressman Celler, that in his message to the Congress on January 4, 1939, President Roosevelt stated: "It is my conviction that down in their hearts the American public—industry, agriculture, finance—wants this Congress to do whatever needs to be done to raise our national income to \$80,000,000,000 a year." To me that statement is clear. It is equally clear to me that a returning increase in production cannot be accomplished without a substantial increase in private capital investment. Furthermore, the responsibility of Government with respect to the health of business is to make sure that business, as a whole, is properly sustained.

a whole, is properly sustained.

Mr. Celler. There is no argument on that score. I have never belonged to the school of thought which holds that merely dividing up the present national income would provide a decent living for all. If new jobs are to be provided, the national income must be increased. It is only by increasing the national income, and increasing the number of people with receiver their treasure.

all. If new jobs are to be provided, the national income must be increased. It is only by increasing the national income, and increasing the number of people who receive their income through private wages, that we can hope to obtain anything resembling security in America. A rising national income means good homes, a decent education, and genuine security for the families of America. This country cannot be in good health, and democratic principles cannot be safe, until men go back to work—until we solve the unemployment situation.

Mr. McCormack. Again, Congressman Celler, we are in substantial agreement. In a message to the World's Fair Commission, on the evening of April 23, Secretary Hopkins said: "We know at home that stimulation of recovery rests primarily upon the resumption of the flow of private capital into enterprise. It has been this risk of investment funds—this willingness of businessmen to venture into new fields—that has supported a rising national income, increased our national wealth, and provided jobs in the past."

Recovery in the United States has been delayed because of idle men, idle machines, and idle money. Since 1930, the waste of labor time through unemployment has reached the appalling total of 80,000,000 work-years. This problem becomes constantly more acute because the growth of the population adds about 600,000 new workers to the labor force annually. It is estimated that an investment of \$7,000 per worker is required for our industrial economy. That means an investment of \$4,200,000,000 annually is required to give employment to the new workers alone in this country. You have only to study the investment figures in the United States during the past few years to realize why so many men have been and still are out of work.

Mr. Celler. What makes the situation more perplexing to the ordinary person, Congressman McCormack, is the realization that the amount of money lying idle is greater in this country today.

ordinary person, Congressman McCormack, is the realization that the amount of money lying idle is greater in this country today than in any previous time in our history. We have more money to lend for productive purposes than ever before. The proportion of loans to our total bank deposits and net capital funds averaged 39 percent for the last 5 years against 63 percent for the preceding 11 years. The surplus of bank deposits and net capital funds over total loans and investment has more than trebled in the last 5 years. Fear is a deterrent to the use of this money. Tax revision will dispel that fear.

Mr. McCormack. The adjustment of the two factors of idle men and idle money will solve this problem. The present Budget, as everybody knows, cannot be balanced by increasing taxes alone. It cannot be balanced by reducing appropriations alone. It can be balanced only by increasing the national income. But the na-tional income can be increased only by a revival of private capital

tional income can be increased only by a revival of private capital investments; and private investments can be revived only by assurances of reasonable profits.

Mr. Celler. The situation may be likened to a poker game. Would you sit in a game where some outsider took out of every pot you won 6 or 7 chips out of every 10 in the pot? Certainly, you would not. Well, that is what business is facing with the Government taking the same percentage from the businessman. The existing tax system does not balance the Budget; but by stifling private enterprise it perpetuates the deficit.

We may as well recognize the fact that it is only men with large incomes who are the sparkplugs of industry and prosperity, and if you cripple them the machine won't operate satisfactorily. They are the ones who do and can take the risks of new enterprises. Men with small incomes, as a rule, do not put their money

prises. Men with small incomes, as a rule, do not put their money into new enterprises. Risk capital must be furnished by men with the larger incomes. It is such investments that bring about

employment.

When you give a man on relief a dollar, you assist that individual and tide him over a period of embarrassment. That dollar, however, does not add to the national income to the same extent however, does not add to the national income to the same extent as a dollar earned in private enterprise. The latter dollar would turn over approximately 20 times, and would contribute to the sum total of national income of all our people. It requires no stretch of the imagination, therefore, to visualize that if the amounts spent by the Federal Government for relief were paid directly to workers in private enterprise, instead of being collected in the form of taxes and disbursed by the Government, there would be restored to gainful employment almost overnight many millions of employables now seeking jobs. In every factory in the land you would see a sign, "help wanted," hanging over the entrance to the shops. The measure of recovery, in my opinion, is going to be in the reduction of unemployment. Have you any suggestions to offer at this point, Congressman McCormack?

Mr. McCormack. I would suggest, Congressman Celler, that all

taxpayers—business groups, large and small; individuals; labor, and agriculture unite on a reasonable program of tax revision, such as that suggested in our last radio talk. That program included:

1. Drastic modification of the capital gains and losses tax.
2. Drastic reduction of income surtaxes, preferably to a maximum of 25 percent.
3. Complete repeal of the undistributed profits tax.

4. Substitution of a single income tax for the present corporate income tax, capital stock tax, and excess profits tax.

5. Granting the right to corporations to carry over their net losses for at least 2 years.

6. Elimination of the tax on intercorporate dividends.

7. Elimination of the dividend corporate dividends.

Elimination of the individual normal income tax on corporate dividends

8. Permission for affiliated corporations to file consolidated returns.

I know that members of Congress are sympathetic with such problems and are anxious to do what is for the best interests of the country.

Business received assurances from Congress last Friday of defi-nite steps toward encouraging recovery by tax legislation. The Ways and Means Committee voted to defer for 3 years the scheduled increases in social-security taxes for old-age pensions, which would go into effect next January 1 under present law. This was a good start toward removing or lowering taxes which have

been criticized as deterrents to business.

Mr. Celler. I want to compliment you, Congressman McCormack, on offering the motion to make this effective, and which was adopted unanimously by the committee. Just what does that mean in the way of tax savings?

Mr. McCormack. It represents tax savings of approximately \$275,000,000 per year for the next 3 years, beginning January 1, 1940; or a total of \$825,000,000 for the full 3 years. In other words, employers and workers in the United States will have \$825,000,000 more to spend, which otherwise would have been taken from them in taxes. This is the first step. And Chairman Doughton, of the committee, has announced that next week Treasury officials will be invited to submit recommendations for a general tax-revision program.

general tax-revision program.

I would suggest further that when and if hearings are held by the Ways and Means Committee businessmen themselves should attend these hearings and express their views personally. I can appreciate the hesitancy shown in the past by businessmen to do

appreciate the hesitancy shown in the past by businessmen to do this. However, professional representatives, while helpful in some instances to the committee, cannot be a real substitute for the tax-payer himself. The real way to learn about taxes is to pay them, and, certainly, businessmen in this country have had plenty of opportunities to qualify in this respect.

Mr. Celler. That is good advice, Congressman McCormack. This is a truly nonpartisan question. Federal taxation hits everyone. Government reaches intimately into the daily lives of every citizen in this country. No tinge of bias, therefore, should be permitted to creep into a discussion of this all-important question. Tax revision is only one of the steps necessary to make possible industrial expansion and increase employment. Our present system discourages risk capital and stands in the way of recovery. Any tax system that does this is self-defeating, because on the one hand it reduces revenues by reducing the sources of revenue, one hand it reduces revenues by reducing the sources of revenue, and, on the other hand, it perpetuates the need for increased subsidies and relief payments of all kinds.

Taxing the life out of business won't create work. Fear won't create work. There is only one thing that will create work, and that is cooperation with business; providing for business the one thing it needs—confidence—a confidence that the green light will be turned on and the signals will be set to go.

In this effort we need the active support of every citizen in the land. Have you any further message for the radio audience, Congressional McCongress.

gressman McCormack?

Mr. McCormack?

Mr. McCormack. Yes; just a parting word in closing. You of the radio audience stand as our counselors tonight. Your voices carry weight. You can help us in obtaining proper tax-revision legislation. Those who are interested in proper tax revision should make known to their Senators and Congressmen their views. We will welcome constructive suggestions.

Neutrality

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include certain interesting and timely observations made to me on the subject of neutrality, by J. Anton De Haas, well-known writer, scholar, and lecturer, and present occupant of the William Ziegler Chair of International Relationships at Harvard University:

A simple answer to the question of whether we can stay out of the European turmoil can be "yes." If, however, we interpret the question to mean should we shut our eyes and our ears to the goings-on in Europe, and endeavor to retain a complete isolationgoings-on in Europe, and endeavor to retain a complete isolationist policy, then the answer is an entirely different one. Of course,
the way to stay out of European troubles and problems is to build
a completely self-sufficient economy. This method, which has been
advocated by not a few, is obviously absurd; for it is a method
which is physically impossible, since we lack the necessary raw
materials to permit us to be self-sufficient.

There will be those who will say that we can proceed far in the role of isolationist by following Germany's example and endeavor to produce substitute articles. These advocates should realize, however, that a tendency in that direction will inevitably necessitate the regimentation of industry. This has been the experience wherever such attempts have been made. It will start with rigid control over foreign bank balances, selective control over imports, and control over exports. All of this, of course, will reflect itself in a rigid control of the domestic economic life as well. There will inevitably follow from this a regimented economic life and a lowered standard of living.

The question therefore comes down to this: Is it wise to follow such a course? And the answer is definitely: No.

We come now to the second interpretation of our original question: Not, can we keep out of European affairs, but, do we want to keep out? It is quite obvious that we cannot want to keep out of European affairs for the simple reason that since our capital and economic interests are tied up with those of Europe or any other part of the world, it means that we have no alternative but to interest ourselves in those events which may destroy these very interests in some manner, shape, or form.

Aside from all of the above, we cannot very well deny the fact that the present is an uncomfortable time to raise such a question. For the present places us face to face with all the accumulated problems and troubles which are the direct outcome of an unwise peace treaty of years gone by, and of a 20-year period of successful undermining of the principle of collective security. For whatever may be thought of the League of Nations as it was conceived, it should be clear to anyone today that the League does represent the only principle upon which a decent and stable world society can be built.

Unless through cooperative and mutually beneficial effort a State running amock is restrained, it is inevitable that the world groups proceed in the disastrous way in which we are now drifting. Once we abandon the principle that the interest of one is the interest of all, there is no obstacle in the way of progressive coninterest of all, there is no obstacle in the way of progressive concessions to the aggressors. Today, the question may be: Would you go to war for Albania? Tomorrow, would you go to war for Switzerland? And since the question, put in that way, almost always is answered in the negative, the aggressors, by a method of piecemeal aggression, can establish themselves ever more strongly. The policy which has now been adopted by the nations of the earth is the policy of the frontier. Everyone looks out for himself. It is as if the United States were saying: "Go ahead and help yourselves, but we will shoot it out with anybody that shoots at us." Obviously, an ordered society is utterly impossible under these conditions.

these conditions.

Now it is true that the principle of the League of Nations has been ridiculed, and that the League has been criticized as being theoretical and impractical. But it is equally true that the practical world which has now been created by those who undermined the League, is quite practical, but certainly not more comfortable. For that very reason, it is the height of folly for the United States to believe that it can find a cyclone cellar in which it can hide in perfect security. Let us suppose for the moment that in the next war, Great Britain were defeated and conquered, and that we, in our desire not to become involved, had allowed Italy and Germany to gain the upper hand, what would be the position of Canada? How would we feel and what would we do if the British possessions off the coast of South America were to fall into German hands? And what about the Bahamas or Bermuda? All of them would be most attractive possessions for Germany or Italy?

Such suppositions may appear absurd today; but when we glance

Such suppositions may appear absurd today; but when we glance back over the developments of the last few years and realize that Great Britain has completely lost control in the Far East and in the Mediterranean, then such suppositions seem quite possible. Should these suppositions become realities, then we shall be forced to face an extremely difficult and serious problem. For when they begin to shoot at us and we take up arms to shoot back, we shall find to our dismay that we are the only ones doing the shooting on our side.

Now, does not common sense dictate that we take cognizance of all of these facts and that we take such action today as will make such developments in the future unlikely? This does not imply simply that we must join forces with the democracles. That is not the main issue. The really main issue which we, as a nation amongst nations, must face is whether the powers of the earth will abide by international law and decency, or whether they, or any one of them, will break international law and use force. That is

the issue. It is none of our concern whether a nation is a de-mocracy or an absolute monarchy or a dictatorship. Since that is the issue, it would appear that our position is clear. We have announced in Lima just where we stand. Then let us have the courage to stand there. We need not make any alliances or treaties about it. We can merely serve notice upon the world that we will refuse to give any assistance, economic or financial, to any nation which breaks the international law. This means, of course, that we must repeal, not amend, our neutrality legislation. We cannot continue to leave it to accident whether the victim or the criminal shall receive our assistance.

Relief of Puerto Rico

EXTENSION OF REMARKS

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1939

HOUSE JOINT RESOLUTION 285, AND MEMORANDUM BY M. GONZALEZ QUIÑONES, SECRETARY, PUERTO RICAN FARM-ERS' ASSOCIATION

Mr. MARCANTONIO. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following joint resolution introduced by me, together with a memorandum in support thereof:

Joint resolution (H. J. Res. 285) providing for cancelation of loans made to farmers of Puerto Rico by the Puerto Rican Hurricane Relief Commission or its successor, and for other purposes

Resolved, etc., That the Puerto Rican Hurricane Relief Commis Resolved, etc., That the Puerto Rican Hurricane Relief Commission or its successor is authorized and directed to provide for the immediate cancelation of all leans which have been made to farmers in hurricane-stricken areas in Puerto Rico pursuant to resolution approved December 21, 1928 (Public Resolution No. 74, 70th Cong.), as amended by the Second Deficiency Act, fiscal year 1929, approved March 4, 1929 (Public Law No. 1035, 70th Cong.), and as amended by resolution approved August 27, 1935 (Public Resolution No. 60, 74th Cong.).

Sec. 2. That the Puerto Rican Hurricane Relief Commission or the successor is also authorized and directed to release all liens.

its successor is also authorized and directed to release all liens given to secure the loan or loans made to any such farmer pur-suant to any such act or joint resolution, and to notify each such farmer that no further payments of principal or interest shall be required after the date of enactment of this joint resolution with respect to any loan so made to him.

MEMORANDUM IN SUPPORT OF HOUSE JOINT RESOLUTION 285, SUB-MITTED BY M. GONAZALEZ QUIÑONES, SECRETARY, PUERTO RICAN FARMERS ASSOCIATION, SAN JUAN, PUERTO RICO

On December 21, 1928, Congress passed a "joint resolution for the relief of Puerto Rico," appropriating the sum of \$6,000,000 to provide loans for distressed farmers after the hurricane that swept the island during the days of December 13 and 14, 1928. A Central Survey Committee, which was appointed immediately after the hurricane, appraised the damage and destruction wrought by same as \$85,312,120, of which \$35,525,959 were in the coffee, by same as \$55,512,120, or which \$55,525,959 were in the conce, tobacco, citrus, and coconut farms in the island. It was the main objective of the resolution for the relief of Puerto Rico, to provide employment to the poor people of Puerto Rico, rather than to invest money as a commercial proposition in Puerto Rico.

According to a statement made by Senator Hiram Bingham, at the time the chairman of the Senate Committee on Territories

insular possession of the United States * * *. However," continued Senator Bingham, "when such large areas have been destroyed as have been destroyed in Puerto Rico, when a poor people and a poor country have been hurt to the extent that one out of and a poor country have been that the state of the state

or employment, there is urgent need. We never had anything like that in our own country."

The history of this legislation, as it appears in the record of the joint hearings, shows that it was the purpose of Congress to provide relief for the distressed laborers and farmers of Puerto Rico in the same manner as it has been done with the farmers and laborers of other continental areas affected by similar disasters. Most of these laws were made without what we would regard as commercial security, and in fact the joint resolution

itself gave the Hurricane Relief Commission power to prescribe the

itself gave the Hurricane Relief Commission power to prescribe the kind of security to be requested from borrowers.

The report of the Central Survey Committee above mentioned shows that not less than one-half million persons were left in a state of destitution, that the replacement in the coffee trees and shade trees would be ineffective unless undertaken at once, and that 3,368 farmers, in spite of this necessity of beginning immediately the rehabilitation of their farms, were not doing so on account of lack of funds. The problem created by the chaotic situation that followed the hurricane of 1928 was not considered a private problem to be solved by the coffee, tobacco, citrus fruit and coconut farmers of Puerto Rico, who after all, were merely victims of an act of God, that entitled them to protection from their Government. It was a public problem involving the life or death of 1,000,600 Americans, and the wreckage of the entire ecotheir Government. It was a public problem involving the life or death of 1,000,600 Americans, and the wreckage of the entire economic system in a territory governed by the American flag, to be solved by the national administration in the fulfillment of its responsibilities for the life and welfare of the people of the

Taking cognizance of this responsibility, Congress approved the afore-mentioned resolution for the relief of Puerto Rico, whose title reads as follows: "To assist in the rehabilitation of the island of Puerto Rico, particularly in the coffee plantations and on the coconut plantations, to encourage a more general planting of food crops needed by laborers on the plantations, especially of root crops, to aid in the repair and restoration of schools and roads, and to assist in providing employment for unemployed and destitute laborers." This means that the loans authorized were not to rehabilitate Puerto Rican agriculture, but merely to assist in the efforts to that end to be made by the farmers themselves, and that employment for the unemployed and destitute laborers had to be provided by the farmers without assistance of the Hurricane Relief Commission through these loans.

It can easily be seen that the remedy offered by the joint resolution, though sufficient to set the wheels of farm progress in motion as a solution of the administrative problems, was clearly of Puerto Rico, particularly in the coffee plantations and on the

in motion as a solution of the administrative problems, was clearly insufficient to put these farmers, who lost \$34,000,000, in a position that might have enabled them to work out the recuperation of their loss, not only because of the character of the measure and the small amount appropriated, but also because the farmers' hands were tied by the conditions established in the loan contracts, to expend the amounts borrowed in the manner required by the Commission. It was, however, a great help at the moment to the people of Puerto Rico as a whole, and I can assure you that the people of this island were grateful to the administration that made this assistance possible.

The condition of the Puerto Rican farmers, indebted to the

Federal Government in accordance with this resolution, has not changed, except to be aggravated by many new problems, including the very disastrous hurricane that swept the island in 1932, wiping out not only the investments made by the farmers with the money borrowed from the Hurricane Relief Commission but every bit of money that they had put in the land for the rehabilitation of

their properties.

Ever since the hurricane of 1928 everything seems to have been designed to hit and destroy the farmers of Puerto Rico, especially the coffee, tobacco, citrus fruit, and coconut farmers. To the hurricane of 1932 there was added the general economic depression, the Federal legislation increasing the price of the continental products that the island's farmers must buy, the reduction of tariff on Puerto Rican products, or the lack of protection as in the case of coffee; the loss of the European and continental markets, the trade agreements, which in many cases, like in coconuts, has been trade agreements, which in many cases, like in coconius, has been a death blow to the farmers of the island. All this has brought nothing but ruin to our fellow citizens from Puerto Rico, who struggle heroically to keep their country going.

The hurricane relief debts are, in many cases, one of the heaviest handicaps with which the coffee, tobacco, citrus fruit, and

coconut farmers are burdened.

Congress approved, since August 1935, Public Resolution No. 60, amending "Joint resolution for the relief of Puerto Rico," authorizing the readjustment of such debts. This authority was given to the Hurricane Relief Loan Section of the Interior Department as the successor of the Puerto Rican Hurricane Relief Commission. However, almost 5 years have elapsed since the approval of the above-mentioned Public Resolution No. 60, and nothing has been done up to this time in regard to the enforcement of this resolu-

tion, intended to favor the farmers involved.

The farmers of Puerto Rico cannot understand why the Hurricane Relief Loan Section, under the Division of Territories and Island Possessions of the Interior Department, has not adopted a liberal readjustment rule that would do away with the burden a liberal readjustment rule that would do away with the burden of this emergency indebtedness, or reduce it to a nominal sum, as a help in the disastrous situation recognized to exist in the island's agriculture by officials of the Insular and Federal Government. Instead, the Hurricane Relief Loan Section has lately moved to starting a drastic collection policy, and to demand immediate payment at this particular moment in which the condition of all the people of Puerto Rico, and especially of the coffee, tobacco, citrus fruit, and coconut farmers are so desperate, and deserve to be given the benefit of every doubt. We have been informed that on different occasions, the Secretary of the Interior has sent down to Puerto Rico persons to investigate the condition of the borrowers of the Hurricane Relief Commission. condition of the borrowers of the Hurricane Relief Commission, and that as a result of these investigations, it has been admitted that most of these loans cannot be collected, due to the difficult economic situation of these farmers, and that some of these loans can only be collected through foreclosure proceedings, which will mean that the Government of the United States will be bound to adopt the bolicy of driving Puerto Rican farmers out of their properties in order to recover a very insignificant amount of money which was given to them primarily for the purpose of helping the island's rehabilitation and to provide employment for unemployed and destitute laborers, after the most disastrous

hurricane in the island's history.

The moment does not seem the most appropriate, both in Puerto Rico and the United States, to create uncertainty, discouragement, and anxiety among the distressed Puerto Rican farmers through foreclosure proceedings that the hurricane relief loan section is carrying out. The Government of the United States has in the past given millions of dollars for relief purposes not only in the continental United States but even to foreign nations when such help was deemed necessary. And if we are to follow the policy of encouraging a friendly attitude among the nations of Latin America, we should be at any moment in a position to present as the best example of such friendly attitude the treatment to our citizens of Puerto Rico that will at the same time promote the best feeling of the people of this small island toward the United States.

There has been introduced in the Senate by Senator WHEELER Senate Joint Resolution No. 20, to provide for the immediate cancelation of all loans which have been made to farmers in droughtstricken areas in the United States, and there is no reason why we should not accord the same treatment to the farmers of Puerto Rico, in connection with the loans made after the hurricane of 1928, and whose investments therein were completely lost on account of another act of God, the devastating hurricane of 1932, and whose condition was further aggravated by the economic depression and as a result of the effect of compencial treaties. depression, and as a result of the effect of commercial treaties signed by the United States on the products of those farms in Puerto Rico which Congress intended to rehabilitate.

A Problem in Goat's Milk

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 3, 1939

LETTER FROM JOHN DOE

Mr. VOORHIS of California. Mr. Speaker, even aside from the humorous aspects of the letter which follows, I am convinced that the communication from my friend-"John Doe." for the Record—is well worth the reading. He is a man of wide experience, of marked ability, and, above all, with a most earnest desire to serve the best interests of his country. I have purposely omitted my reply to his letter and commend to Members of the House for earnest study the questions he raises at the end of his letter.

APRIL 6, 1939.

Hon. Jerry Voorhis,

The House of Representatives, Washington, D. C.

Dear Congressman Voorhis: I am calling on you in the hope that you can be of some help to me in my trouble. The trouble is mental and maybe I need a psychiatrist, but it started with my trying to think through a very simple matter of money and banking; and, as you have done some study in this field, I thought I would try you first in the hope that you might be able to convince me that I am not as crazy as I sometimes feel I am, or at least that there are enough other people in the same fix for me not to worry too much about my own condition.

It all started several months ago with Mr. Talburt's nanny goat. The Washington News carried his very clever cartoon pointing out the absurdity of Mr. Eccles' theory of spending our way to prosperity. The United States was pictured as the nanny goat, and Mr. Eccles, who stood by with a couple of buckets, was explaining his theory to an incredulous Uncle Sam. The idea was to milk the goat and feed it on its own milk. The more the goat was milked, the more milk it would have to drink, the more milk it had to drink, the more milk it would give, the result more milk it had to drink, the more milk it would give, the result more milk it had to drink, the more milk it would give, the result being that it would continue to grow stronger and fatter and more productive. While I am not an expert on goats, I know enough about them to know that they can't thrive on a diet of their own milk and nothing else. But the goats I am used to have two teats, and if I saw rightly Mr. Talburt's had four; so perhaps his is a different kind of goat. Moreover, it occurs to me that there is some similarity between his goat and a system that has actually been working for some time in this country. During the bank troubles in the early thirties I was eager to know what the cause was but not eager enough to do any bard study.

what the cause was, but not eager enough to do any hard study

on my own account; so I asked some of my business friends who should know all about it. They assured me that they did know, and it was all very simple. People were merely scared, so they and it was all very simple. People were merely scared, so they were drawing their money out of the banks and putting it in safety-deposit boxes or burying it in the back yard. Specific examples were given of one of our leading citizens who only the day before had drawn \$200,000 out and locked it up in a safety deposit box, and of a thrifty Italian who a few days before that had drawn out his life savings of \$20,000 and buried it in some unknown spot. With the restoration of confidence these people would put their money back in the banks and everything would be all right again. The explanation was both simple and logical. With President Roosevelt's inauguration in March 1933, followed immediately by the banking holiday, and later by the program of recapitalizing the banks through the R. F. C. and insuring of deposits through the F. D. I. C., confidence was restored and bank deposits stopped declining and started going up. From June 1928 to June 1933 the deposits had decreased from \$53,000,000,000,000 to \$54,000,000,000.

But the trouble with the answer was that all the money we

But the trouble with the answer was that all the money we have ever had in this country, including coin, silver certificates, Federal Reserve notes, and Federal Reserve bank notes, has never amounted to much over \$6,500,000,000, and the amount of cash in all the banks at any given time has never amounted to over \$1,000,000,000. So the flow of this money in and out of the banks can't very well account for the deposit shrinkage of \$15,000,000,000,000 and the subsequent increase of \$16,000,000,000; and it is clear to me now that bank deposits are not money but debts which the bank owes, and that even the item on the asset side of a bank balance sheet, "cash in banks," represents only a debt which one bank owes to another. However, while deposits are not money, they are what we use for money in over nine-tenths of our business transactions. In other words, the United States Government and the Federal Reserve provide us with the nickels, dimes, and quarters for newspapers, coca-colas, and taxi fares, and the bills with which we buy our hats and shoes if we don't charge them; But the trouble with the answer was that all the money we and the Federal Reserve provide us with the nickels, dimes, and quarters for newspapers, coca-colas, and taxi fares, and the bills with which we buy our hats and shoes if we don't charge them; but, if we want to buy a house or an order of goods or an automobile, we use a medium of exchange provided us by the banks—provided by the banks getting in debt to us. But the banks can't get in debt to us until we in turn get in debt to them because this seems to be the principal way deposits are created; and the more we get in debt to the banks, the more they can get in debt to us, and the more we get in debt to each other, the more the banks have to lend, and the more we have to spend. It does look very much like a case of a goat living on its own milk, or perhaps more accurately of two goats living on each other's milk.

It seems that the trouble in the early thirties was not that cash was being taken out of the banks and hidden, but that we and the banks stopped getting in debt to each other, that is, we stopped it

was being taken out of the banks and hidden, but that we and the banks stopped getting in debt to each other, that is, we stopped it as far as we could, and we didn't start it again to any great extent after 1933 until the Government got into the game. It issued its bonds, thereby getting in debt to the banks, and to a like extent the banks got back in debt to the Government by entering deposits in its favor; and, because the banks were indebted to the Government, we were able to get in debt to the banks again, and the banks were able to get in debt to the banks again, and the banks were able to get in debt to us again, and we once more had enough medium of exchange. It looks now as if it takes three goats to keep the scheme going instead of two.

If I am wrong about the goat theory, I will greatly appreciate your straightening me out. If I am right, what happens when one goat starts drinking more than its share of the milk? It seems to me that in that case the other goats will begin to get thinner and give less milk, and in time the goat that is getting the biggest

give less milk, and in time the goat that is getting the biggest share still won't have enough to keep it going. Have you any suggestions as to how the matter can be worked out so we will be sure that each goat always gets just exactly the right amount and no more

Yours very truly,

JOHN DOE.

Independence of the Philippine Islands

EXTENSION OF REMARKS

HON. USHER L. BURDICK OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1939

ARTICLE FROM THE PHILIPPINE-AMERICAN ADVOCATE

Mr. BURDICK. Mr. Speaker, the question of the ultimate independence of the Philippine Islands is a matter of grave concern to the people of the United States. It was never our policy to acquire this Territory for ourselves but to protect it until such time as the people of the islands were ready to operate their own government. We have set the date of

their ultimate freedom for 1946, but in our declaration granting independence to the islands we would be making a grave mistake should we attach any strings to that independence.

Mr. Porfirio U. Sevilla, publisher of the Philippine-American Advocate, and a young progressive Filipino leader, has some very definite views on this subject which I desire to submit herewith. His statement follows:

[From the Philippine-American Advocate]

SEVILLA, PROMINENT PHILIPPINE LEADER IN UNITED STATES, CAUTIONS EVILLA, PROMINENT PHILIPPINE LEADER IN UNITED STATES, CAUTIONS
THERE WILL BE CIVIL WAR IN PHILIPPINE ISLANDS UNLESS CONGRESS CURBS QUEZON'S POLITICAL AGITATIONS—SEVILLA ASSAILS
SENATE BILL 1028 EXTENDING PREFERENTIAL TRADE RELATIONS TO
QUEZON GOVERNMENT IN HIS TESTIMONY BEFORE THE UNITED
STATES SENATE COMMITTEE ON TERRITORIES AND INSULAR POSSESSIONS—HE CONSIDERS BILL A MOVE ESTABLISHING A QUASI-PROTECT
STATES TO THE PROPERTY OF THE PROTECTION. TORATE TERRITORY IN THE PHILIPPINES; A CAMOUFLAGE FOR BOYCOTT AGAINST FOREIGN POWERS; A DISTINCT VIOLATION OF FILIPINO RIGHTS AFTER INDEPENDENCE IS GRANTED TO THE PEOPLE—CONGRESS MUST SAFEGUARD AMERICAN INTERESTS FIRST LEST FOREIGN POWERS EXERCISE RETALIATORY ACTS, SEVILLA CAUTIONS COMMITTEE

Washington, March 8.—If the United States Congress passes Senate bill 1028 as well as similar bill pending in the House of Representatives, calling for preferential trade relations with the Representatives, calling for preferential trade relations with the Philippines after independence is granted in 1946, as provided by the Tydings-McDuffie Act, Porfirio U. Sevilla, Filipino executive, businessman, and publisher, testifying before the United States Senate Committee on Territories and Insular Possessions, warned the Congress that "civil war is ahead if Congress allows further interference in Philippine problems after independence is granted to Filipino people in 1946."

"We must not forget," said Mr. Sevilla, "that the Filipino people have had nothing but deep affection and loyalty for the American people and Government for the past 40 years of their administration, but millions of Filipinos were led to believe that, under the provisions of the Tydings-McDuffie Act, the United States would completely withdraw her sovereignty from the Philippines in 1946, politically and economically, without strings attached to the Independence Act.

Independence Act.

"Again, we must not forget," Mr. Sevilla went on to say, "that the Flilpino people ratified the Tydings-McDuffie Act on the strength that this act guaranteed complete and absolute independence in 1946."

During the hearings of the Senate Committee on Territories and Insular Possessions, prominent Government officials, representing State and War Departments, as well as members of the Filipino missions, headed by Sergio Osmena, Vice President of the Philippines, were present. Also present were professional lawyers. Lobbyists and officials representing various commercial interests and sociations were interested spectators.

BILL LEGALLY QUESTIONABLE

"In my opinion," Mr. Sevilla further stated, "this bill is merely one of those administration policies which, if enacted into law, are subject to ratification or modification by Congress at any time Congress chooses to do so. What will prevent any Member of Congress or any other administration in the future who may be hostile to Philippine commercial interests, and whose political and economic theories are against the present administration, from completely ratifying or modifying this act? Then what will happen to the Filipinos and the Philippine Islands?" Mr. Sevilla asked the committee the committee.

"This bill is a move on the part of Congress to establish a quasi-protectorate territory in the Philippines," said Mr. Sevilla. "It is a camouflage for boycott against foreign powers who, under international laws and orders, are entitled and justified to conduct business in the Philippines. It is a distinct violation of Filipino rights after independence is granted."

ECONOMIC CONDITIONS

"Economically," said Mr. Sevilla, "all local industry and foreign trade of the Philippines have, for the past two decades, been owned and controlled by foreigners and foreign capital."

Mr. Sevilla then asked, "What are the products, trade, and industries that we Filipinos have to offer or bargain with in the consideration or acceptance of this bill? None!" And in a strong loud voice, thumping his fist on the table, Mr. Sevilla told the committee, "the full and ultimate benefits of this bill would fall upon foreigners and foreign capitalists namered by President. upon foreigners and foreign capitalists pampered by President Quezon, pauperizing the Filipino people."

Mr. Sevilla then cited the fight in which 25 Filipinos were wounded in the agrarian troubles in the province of Pampanga. And in wrathful tones, he denounced the foreigners and foreign capital, that while they profited in millions, the Filipino laborers were being shot at and wounded in their effort to obtain better wages than the 10 to 20 cents a day they now receive, to support 7 or 10 members of a family.

"The President of the United States was misled," thundered Mr. Sevilla, when he denounced the members of the Philippine committee group composing the Joint Preparatory Committee on

Philippine Affairs. Mr. Sevilla went on to say, "If President Roosevelt had been aware of the true colors of this matter, and they are very bad colors, I doubt very much whether the President would have recommended this bill to Congress."

Emphatically thumping the table and with a strong remark, Mr. Sevilla denounced President Quezon as the "father of foreign capitalists," and shouted that "the Filipino laborers are the lowest paid laborers under the American flag."

Mr. Sevilla asked the committee, "What are the reasons for the success of those interests militating against free entry of Philippine products into the United States in open competition with American interests?" American interests?"

"One exponent reason," he told the committee, again thumping on the table, "is cheap Filipino labor destroying the American standard of living."

RETALIATORY MEASURES

Mr. Sevilla then cautioned the committee that "if this bill is

Mr. Sevilla then cautioned the committee that "if this bill is enacted into law, there certainly would be positive retaliatory acts against the dual Philippine-American political and economic interests from foreign powers who are equally and justifiably commercially interested in the Philippines."

Mr. Sevilla then cited the textile bill which was introduced during the last days of the defunct Philippine Legislature, imposing 75 percent duty against Japanese textile and its products into the Philippine markets. "What was the result," shouted Mr. Sevilla, "of this bill? The Japanese Government protested through the United States State Department that if this particular bill would be enacted into law by the Philippine Legislature, then, it would mean an international war on textile and its products in many foreign countries, particularly in Latin-American countries."

"The State Department warned the Filipine leaders in the Philippines, headed by President Quezon, of the protest on the part of the Japanese Government," continued Mr. Sevilla, "and as a result, a gentleman's agreement was concluded between the United States and Japanese Governments at Washington to the effect that the textile exports of both countries into the Philippine markets would be based on a pro rata basis."

be based on a pro rata basis."

Mr. Sevilla again warned the committee, emphatically banging his fist on the table, "We must not forget the fact that, according to the provisions of the Tydings-McDuffle Act, upon reaching the period when the United States will completely withdraw her sovereignty from the Philippines, the President of the United States

ereignty from the Philippines, the President of the United States will invite foreign powers to sign, recognizing and guaranteeing the safety of Philippine independence."

With another emphatic thump, Mr. Sevilla served notice to Congress that "to effect the successful neutralization of the Philippines, the American Government must exercise justice and impartiality with foreign powers."

Mr. Sevilla then asked the committee, "Do you expect Germany, Italy, Japan, Russia, or any other foreign power to guarantee the independence of the Philippines when this bill itself explicitly provides that these powers cannot conduct husiness in the same manvides that these powers cannot conduct business in the same manner as American businessmen conduct business in the Philippines?"
"No," shouted Mr. Sevilla.

EXPECTS CIVIL WAR

"All that Filipinos expect from the Americans today is that by "All that Filipinos expect from the Americans today is that by 1946, by act of Congress ratified by these millions of Filipinos, they will become a free and independent people. There are now about seventeen to eighteen million people constituting the population of the Philippines," Mr. Sevilla told the committee, "and only 25,000 Filipinos, so-called land owners and producers dominated by foreigners—Spaniards and Japanese—know about this Senate bill 1028 before the committee. To alter the provisions of the Tydings—McDuffle Act would mean civil war upon those millions and millions of Filipinos who were made to believe that under the provisions of Filipinos who were made to believe that, under the provisions of this act, some day, and that day is in 1946, they will be a free and independent people. To enact this bill into law would mean a camouflage for a quasi protectorate territory in the Philippines."

SEVILLA HITS QUEZON ADMINISTRATION

"It is a matter of public record," shouted Mr. Sevilla, "that no one shall say one word against the administration of President Quezon."
Then Mr. Sevilla cited the many intimidations and offerings on the part of those administration leaders, advisers, and friends close the part of those administration readers, duvisers, and friends close to President Quezon, that "if I should go on to criticize President Quezon's administration here in Washington, it would mean that my business enterprise would be at stake." He then recalled the fact that his company was barred from participating in government bids under the instructions of President Quezon, an instance of this intimidation.

And while thumping his fist on the table, he questioned the committee, "Do I look like a man who can be intimidated or bribed for political-financial reasons or expediency? No! I shall keep on if I am the last man to stand or fall for the cause of my people,"

Mr. Sevilla said.

"If this bill is recommended by this committee and enacted into law, it simply means one thing: The surrender of this committee. That and nothing else," thundered Mr. Sevilla.

Mr. Sevilla spoke for 35 minutes before the committee, the longest

time allowed by the committee at the hearings regarding Senate

J. Sterling Morton

EXTENSION OF REMARKS

HON, GEORGE H. HEINKE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

ADDRESS BY STERLING MORTON, II, ON THE OCCASION OF THE OBSERVANCE OF ARBOR DAY AT NEBRASKA CITY, NEBR., APRIL 22, 1939

Mr. HEINKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Sterling Morton, II, at Nebraska City, Nebr., on April 22, 1939, which was the sixty-seventh anniversary of the founding of Arbor Day, of which his grandfather, the late J. Sterling Morton, was the author:

One memorable evening just before Christmas in the year 1897 I sat in the stage box of this theater, one of several grandchildren of J. Sterling Morton, here with him for the opening performance. The play was Secret Service, that American classic, superbly acted by William Gillette. Over 40 years have passed, but the scene comes back vividly, as it must to others in this audience. I only wish that we had with us both of the surviving members of the citizens' committee for the occasion, Paul Jessen and John Steinhart, then, as now, leaders in your community. Judge Jessen, then county attorney, presented resolutions commemorating the event and grandfather's 43 years of service to the State, the county, and the city. May I in turn congratulate these gentlemen on their even greater length of service? Like the third committeeman, W. L. Wilson, they have shown not only a fine record of usefulness, but have impressed their ideals on those who have come after them. Nebraska City has indeed been fortunate in its men.

Nebraska City has indeed been fortunate in its men.

Yet I know well that could my grandfather guide my words today he would not have me devote them to a eulogy of himself. He would not have me speak of the past, except as we could seek there our course for the future. For he was always more concerned with the things of tomorrow than with the things of today or the things

the things of tomorrow than with the things of today or the things of yesterday.

Within these walls spoken drama has given way to the silent film, and today, with sound and color, the world is brought near to us as never before. We feel ourselves, for better or for worse, closer to events. Times change, habits change, ideas change; but may we hope that ideals will not change; that love of country, of religion, of truth, of freedom will always remain the American heritage. May we of this rapidly passing generation bequeath to those crowding after us the virtues, the vitality, the vision our predecessors left to us. We need the calm, firm determination of the pioneer, his strength of character, his true liberalism. These must not pass out of our lives along with the Indian and buffalo. So it is vastly encouraging that character is again becoming the criterion by which a man in office is judged. It rekindles one's faith in human nature to see the public approval which greets one from this State, high in the councils of the Nation, who places conviction above convenience, experience above expediency, and patriotism above partisanship. May his example be a shining light to all of us.

Today, when the very foundations of our civilization are rocked by the impact of new philosophies, new kinds of government; when the old standards of conduct are ceaselessly attacked, we would do well to look for guidance to the past. Washington, in his Farewell Address, set forth the principles which, until 25 years ago, guided us well in our foreign relations. Were we to return to them, the future would indeed be much cleare. Jefferson laid down rules of internal government which are scarcely followed by those who claim to be his political descendants, while Marshall wisely delimited the authority of the Federal Government.

As we look down the procession of Presidents the foursquare figure of Grover Cleveland looms ever greater. More and more grows our appreciation of the essential honesty with which he approached governmental prob Within these walls spoken drama has given way to the silent film,

grasping minorities.

J. Sterling Morton was a close associate and a loyal disciple of Cleveland. His attitude on governmental matters is very well summed up in the trenchant sentences of his chief, which I have quoted. Throughout his life he was guided by those ideals, plus a keen sense of the necessity of economical administration of the

very minimum of government that could fulfill its functions. While Secretary of Agriculture he not only strenuously opposed the addition of new bureaus and divisions to the Department, but, more remarkable still, returned unused to the Treasury approximately a quarter of the money appropriated for the Department. His example has not been followed, for today the Department of Agriculture spends each week at least as much as it spent during the entire 4 years he was Secretary. You ask why taxes are high, why commerce and industry do not go ahead. Perhaps this ray of light on the expenditures of one governmental department may furnish a clue as to where to look for the real cause of our depressed economic conditions, our staggering taxes, our ever-recurring deficits!

Today, however, I shall speak chiefly of that characteristic of my grandfather which was indeed outstanding. This is best expressed in his own words, now inscribed on the monument here: "Other holidays repose upon the past; Arbor Day proposes for the future." What a vast difference that suggests!

future." What a vast difference that suggests!

On Memorial Day we rightly honor those who made the supreme sacrifice that the Nation might live; on Thanksgiving Day we acknowledge the blessings the year has brought; on Independence Day we turn our thoughts to the founders of our country. Again we celebrate the birthdays of great men of the past. These holidays, even the Christmas one, turn our thought backwards; their inspiration for the future is only incidental. But Arbor Day truly proposes for the future. There are indeed few tangible actions of which man is cauchle into which the future are strongly. proposes for the future. There are indeed few tangible actions of which man is capable, into which the future enters more strongly than into the planting of a tree. We lay cornerstones; we bury cylinders of time-resisting materials containing records of present-day things, hoping some kind of men will dig them up thousands of years hence. But such actions, interesting as they are, seem sterile compared with the simple act of planting a tree. That action shows at one time our faith in Nature, our love of beauty, our desire that, long after we are gone, our act may bring comfort and pleasure to many of whose very existence we are ignorant. fort and pleasure ignorant.

Just as man, through speech and writing, is the only animal who can draw on the wisdom and experience of the past, so is he the only animal who consciously can plan for the remote

Just as man, through speech and writing, is the only animal who can draw on the wisdom and experience of the past, so is he the only animal who consciously can plan for the remote future. It is in such wise, intelligent, thorough planning for the future, whether it be the future of the individual, the community, or the Nation, that man reaches his greatest heights. But such planning must be soundly done. It cannot be based on untried theories, on wishful thinking. No; the plans must be molded in the light of experience, tested in the accumulated knowledge from the past, and tuned to the real needs of the present. They cannot be based on wishful thinking alone. Rainbow chasing is not planning.

Arbor Day could not have been conceived by a man whose thoughts were fixed in the past, nor could it spring from the brain of one wholly occupied with the concerns of the present. Those here who knew J. Sterling Morton will agree that, to him, the past and the present were but the servants of the future. A great artist, looking at the statue now in Washington, said: "There is a man who looks ahead." The genius of the sculptor, fortified by that sculptor's intimate knowledge of and love for the subject, has caught that outstanding trait of character and immortalized it in bronze. The level glance, the foot in advance, symbolize it. The book held in his hand, representing the past, is subordinate. What lies ahead is all-important,

You who, like me, were privileged to be with him on the corner of his porch during long summer evenings remember that past experiences of those who came by had but little of his attention; that always he asked what they planned to do. He was intensely interested in the young people, the ones who would be the builders of the future. Typical is the story he told at the centennial exercises here on July 4, 1876. "I am reminded of a somewhat ungrammatical citizen, who, having listened a long time to an orator who dwelt at great length on the glorious achievements of our ancestors, declared in a loud

studied what the future might bring, and, quietly and thoroughly, prepared to meet it. As the years went on, he turned again to the trees, and, thinking always of the future, founded the great arboretum which bears his name. Every year it becomes more convincing proof of his inherent faith in the future.

We meet here today to honor the founder of Arbor Day. In Washington your Representative in Congress plants today a tree to his memory. In all parts of this wide land, in many foreign countries, the Arbor Day he created is observed. I like to think that the real reason for the widespread acceptance of his concept is that it appeals to the finest inner conclusion of problems of the first three concepts of the concept is that it appeals to the finest inner emotions of mankind; that it gives man, no matter how humble he may be, an opportunity to do something really creative, to contribute tangibly to the future

of all.

So I can give you no better text for today, I can give you no better star to guide your course than is contained in that terse phrase, "Arbor Day proposes for the future." Can we not find time,

amid the duties and stress of the present, in some small way to "propose for the future"? Can we not translate into our daily lives something of the idealism which this spring today, in all parts of the world, moves men, women, and children to plant trees? No matter what tomorrow, next year, may bring to those who plant, most of these trees will for many years give welcome shade to the weary, furnish fruit to the hungry, and gladden the eye of the

To most of us it is not given to be leaders. About most of us the pages of history will be silent. But yet each of us, in our own way, can bring some thought of tomorrow into our daily lives and actions. Just as the simple faith of the tree planter builds a better world for all, so we, too, by renewing our faith in the fundamental principles of our national life, can build a better future for those who will live in it.

Conservation of American Youths by the National Youth Administration

EXTENSION OF REMARKS

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

STATEMENT BY HON. AUBREY WILLIAMS, DIRECTOR OF THE NATIONAL YOUTH ADMINISTRATION

Mr. JOHNSON of Oklahoma. Mr. Speaker, I am presenting herewith a very timely and interesting article prepared for the April issue of the Phi Delta Kappan, publication by Phi Delta Kappa, a professional and fraternal association of men in education, by Hon. Aubrey Williams, Administrator of the National Youth Administration.

Mr. Williams is a far-sighted and progressive student of the problems of youth. All of those who are familiar with the N. Y. A. program will agree, I am sure, that he is doing an outstanding work.

The article, in which I am sure Members of Congress will be interested, follows:

Those who see only glory and hope in the period of youth must have short memories indeed. For youth, by definition, is the period of transition from childhood to the responsibility and indeperiod of transition from childhood to the responsibility and independence of adulthood. No transition so fundamental can be accomplished without struggle and pain even under the most favorable conditions. But when you add to the normal difficulties of young people, who must throw off psychological and physical dependence on parents and other adults, the difficulties attendant on our present economic situation the problems of transition become exaggerated to a painful degree.

There are two characteristic stages to the transition period of youth. First is the period of preparation centering traditionally youth. First is the period of preparation centering traditionally in our educational system. Second is the actual process of absorption into the economic system, the process whereby young people achieve financial independence and with it the social independence that goes with self-support. Both of these functions have been seriously affected by the depression. It has been more difficult for young people of this generation to secure adequate preparation for adult life because of their parents' financial difficulties and because of the reduction in public expenditures for educational and related services affecting youth. It has been difficult, if not impossible, for young people to break through the barriers imposed by widespread unemployment and economic the barriers imposed by widespread unemployment and economic contraction to find employment of any sort, let alone that employment best suited to their individual capacities and temperament. It is to compensate for these special difficulties imposed on young people by this period in our history and this stage of our economy, that the National Youth Administration came into

It is not a new departure for the Federal Government to assist young people in meeting these problems. In the period of our geographical expansion the Government assisted States and Terrigeographical expansion the Government assisted States and Territories to educate their youth through grants of public land, and provided an outlet to energetic and ambitious young people seeking their place in the Nation's economy by free homesteads on the country's wide frontier. Today the Government's aid must take new forms, adapted to the economy and geographical limitations of our time, but the spirit and the motivation are the same. A country must find ways to provide for the uninterrupted and concountry must find ways to provide for the uninterrupted and constructive absorption of its young people into its life if it is to remain a healthy, dynamic democracy.

The National Youth Administration has undertaken to perform its function of assisting young people through the medium of jobs

and it is this factor which, in the final analysis, distinguishes it from other youth-serving agencies. Work is provided for young people in high schools and colleges in order to permit them to earn the necessary funds to continue their education. Work is pro-vided for needy young people who are out of school and unem-ployed in order to provide them with a small income and with the work experience so essential to the finding of a job in private employment.

I am one who believes that public work is to this generation I am one who believes that public work is to this generation what free land was to earlier generations. It is the means whereby the Government undertakes to compensate for the apparent tendency of our economy to contract its employment opportunities. It is the means whereby the Government undertakes to fulfill the first responsibility of a democracy, the responsibility of guaranteeing to every able-bodied individual a place in the national economy through which he may contribute to its wealth and receive in return his share of the national income. It is a function of Government which benefits society by making use of availa-

economy through which he may contribute to its weath and receive in return his share of the national income. It is a function of Government which benefits society by making use of available manpower to create new public facilities and services, which benefits our economy by maintaining a steady flow of purchasing power, the lifeblood of any economic system, and which benefits the individual by providing him not only with the income necessary for his survival but also with that sense of pulling his own weight, which is so basic in our society to what we call morale.

In the case of young people, assistance in the form of work has an additional value. One of the special trials of young people is their inexperience. When the young man or young woman goes to look for his first job, he is confronted with the unwillingness of employers to take any chances with a person who has never worked. Apparently employers feel that the very discipline and continued application of a job, of any job, is something that takes learning, and they do not feel that their offices, factories, or farms can afford to meet the cost of that educational period. It seems logical, therefore, that the public's agent, the Government, which has already made such a large investment in the education of its young people, should carry them this one stage further and provide them with that first job, without which all other employment becomes so clusive.

But we in the National Youth Administration feel that this first job should, if possible, do more than provide that discipline and ability to apply one's self to the work at hand that comes with paid employment. Many young people have had little opportunity to discover their own aptitudes and so face the employment market with little or no conception of what they can or would like to do. Here again it is difficult to make these discoveries without actually trying one's hand at a fairly wide variety of occupations. And here again private employers see little to be gained in turning their business over to exploitation by young people in this essentially educational process. For this reason the National Youth Adminiseducational process. For this reason the National Youth Administration has tried to provide a wide variety of work activity, rotating young people from one job to another so that they may try themselves cut on many fronts and so find the field where they feel their own aptitudes will be put to best use. N. Y. A. projects are currently employing 242,435 young people on such projects.

We have also endeavored to supplement this actual work experience with vocational counseling and, insofar as possible, with actual placement in regular employment. Material has been prepared setting forth in simple but comprehensive terms for the benefit of young people seeking to find the work they would like to do, the nature of various industries and occupations. Young people

fit of young people seeking to find the work they would like to do, the nature of various industries and occupations. Young people on projects have been encouraged to attend classes in subjects related to the work they are doing. Vocational counselors have interviewed and tested young people on projects in an effort to help them to make the most effective use of this N. Y. A. employment and to discover their own best qualities as workers, the vocation toward which they might successfully train themselves and ment and to discover their own best qualities as workers, the vocation toward which they might successfully train themselves, and the resources available for this purpose. In addition the National Youth Administration has provided trained personnel to State employment offices in order to establish junior placement offices especially equipped to help young people to get over the hurdle of that elusive first employment. Such offices are now operating in 124 cities of 39 States. State employment services have been quick to recognize the value of this type of specialized service for young workers, as is evidenced by the fact that in 62 cities the financial responsibility for this service is now carried by the State employment services on their regular budget. As of March 1, 1939, 427,133 different young people have applied at these offices and 166,168 placements have been made in private industry.

The student-aid program of the National Youth Administration, providing stipends through jobs to 263,242 high-school students, 109,237 college students, and 2,950 graduate students, who could not otherwise have continued their education, is of particular

109,237 college students, and 2,950 graduate students, who could not otherwise have continued their education, is of particular interest to people in the field of education. We in America are proud of the fact that one of the first acts of the people who settled this country was to recognize the principle of free education for all children. We have felt that the extension of this principle to high-school and later to college education was one of the first safeguards to the continued vitality of our democratic institutions. But recently we have come to recognize that the provision of publicly supported or privately endowed institutions of learning does not in itself insure an education to all young people who wish such an education and could benefit from it. The economic situation of the family is also a factor in making education possible for individual young people. Education requires books, possible for individual young people. Education requires books, clothes, subsistence away from home in many cases, tuition expense, and, above all, the ability of the individual or his family to do without the possible income he might bring in if he were

employed. Poverty has thrown many a promising student onto an

already glutted labor market.

The National Youth Administration has undertaken to compensate, through its student-aid program, for this factor in the inequality of opportunity for education. Here, again, it has done this through the medium of jobs rather than through direct handouts or loans. It is our opinion, an opinion in which the many educators who help us administer this program seem heartily to concur, that work is not only the best way to give assistance without injury to morale, but that work experience, under direct educational supervision, is a desirable supplement to the academic work

tional supervision, is a desirable supplement to the academic work of regular school studies.

In order to provide the flexibility of decentralized administration and the advantages of educational control, the actual running of the student-aid program has been turned over to the institutions participating in the program. It is their responsibility to select the students who need this assistance and whose scholarship assures their benefiting from it. It is their responsibility to select the projects, seeking projects of maximum educational value to the students as well as value to the institution, and to supervise the work of the students so as to assure the diligent and efficient work which alone can instill proper work habits. This coperative arrangement with educational institutions, through which the National Youth Administration, supplies the funds and general direction, and the educational institutions the immediate supervision, has been to my mind a successful demonstration of the possibility of Federal aid to equalize educational opportunity without Federal dictation of educational policy.

vision, has been to my mind a successful demonstration of the possibility of Federal aid to equalize educational opportunity without Federal dictation of educational policy.

It is axiomatic and even trite to say that no problem confronting our country today is more critical than the problem of training our young people for intelligent participation in the democratic process and providing the means for their absorption into the functioning of our economy. For we in this country have had the advantage of observing the heartbreaking disappearance of democracy in country after country and should be forewarned as to the danger of a frustrated generation of young people. It is obvious that any system, and especially a democracy, cannot expect to long endure if it excludes from all active participation the very young blood which should be renewing its vitality. Youth must have its place in the sun; no generation will stand aside passively while life passes it by.

These are major problems involving an adjustment in our entire economy. It would be presumptuous, indeed, to claim that the program of the National Youth Administration alone could solve them. But it can perform a very necessary and basic function in easing the process of transition, in compensating for special handicaps imposed on young people coming of age during this period of transition. It is an agency of conservation in the most fundamental sense, for it is helping to conserve our most vital national resource—the citizens of the future.

H. R. 2, the General Welfare Act

EXTENSION OF REMARKS

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

PETITION OF CITIZENS OF WILKINSBURG, PA.

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition of citizens of Wilkinsburg, Pa.:

To the Members of the Seventy-sixth Congress of the United States of America, Washington, D. C.:

Whereas for the past 9 or 10 years our Nation, the richest in the whole world, has been confronted with an oversupply of labor and

whole world, has been comforted with an oversupply of labor and an underconsumption of goods; and

Whereas, after all "appeasement" programs between Government and business, together with all other efforts, the problem is still unsolved; and

Whereas day after day want, misery, and crime continue to stalk our fair land due to the fact of so many millions of idle people with no purchasing power; and

Whereas untold natural resources of every kind are ours, together

Whereas untold natural resources of every kind are ours, together with millions upon millions of dollars seeking investment, that now lie idle in our banks: Therefore be it Resolved, By the Townsend Club, No. 3, of Wilkinsburg, and the Thirty-first Congressional District of Pennsylvania, with a large number of the more than 1,400 members present, in regular session assembled, March 16, 1939, do hereby petition your honorable body and our representatives, to appeal to the Ways and Means Committee to send to the House the General Welfare Act, H. R. 2, and that you there consider well and act favorably on this bill. It is our belief, as well as that of many millions of others throughout

our Nation, that the principles involved in this bill are just and our Nation, that the principles involved in this bill are just and fair to all. Furthermore, it is our opinion that this method will pump the money right to the roots of the Nation's economy—across the counters of stores, in every city and town, in an ever-flowing stream, that will solve our problem of an oversupply of labor and an underconsumption of goods, with an established prosperity throughout our beloved land; be it further Resolved, To present these resolutions to our fellow townsman, the Honorable John McDowell, who is our Representative in Congress, asking him to convey this expression of our desires to the

gress, asking him to convey this expression of cur desires to the Members of the Seventy-sixth Congress at the proper time and in

the proper manner.

JAMES PETERSON,
President, WM. ADAMS, Vice President, AMANDA J. ADAMS, Secretary, Resolutions Committee.

The Townsend Plan

EXTENSION OF REMARKS

HON. ROBERT T. SECREST OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

RESOLUTION OF THE TOWNSEND PLAN ADVOCATES OF WASHINGTON COUNTY, OHIO

Mr. SECREST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

To the Honorable Robert T. Secrest,

Member of Congress, Washington, D. C.

We, the Townsend-plan advocates of Washington County, Ohio, in mass convention assembled, express our approval of legislation for the Townsend national recovery plan, as embodied in a bill pending in the House of Representatives, for the various reasons

whereas the problems of unemployment and social security are two of the most vital economic issues now confronting the people of the State of Ohio, as well as other States of the Union; and Whereas the United States Government has incurred an enormal of the States of the Union; and the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States Government has incurred an enormal of the States of the United States of the United States Government has incurred an enormal of the States of the United St

whereas the United States Government has incurred an enormous debt in providing a bare subsistence for several million unemployed persons; and

Whereas it will be impossible to continue such relief appropriations indefinitely without serious injury to the credit of the Na-

Whereas the economic problems of unemployment and social security cannot be properly handled by individual States but are national problems involving the general welfare of the whole Nation; and

Whereas the economic problems of unemployment and social security cannot be properly handled by individual States but are national problems involving the general welfare of the whole

Nation; and

Nation; and
Whereas the Townsend national recovery plan, as set forth in
the General Welfare Act of 1939 (H. R. 2), introduced in the present
session of Congress, provides for a 2-percent tax on business transactions and the pro rata monthly distribution of the proceeds to
persons over 60 years of age who agree to retire from gainful employment and expend their monthly allotment for the products of
American capital and labor; and
Whereas it is the purpose of such plan—

(1) To retire from active employment some four or five million
persons over 60 years of age and thus provide jobs for several mil-

persons over 60 years of age and thus provide jobs for several million persons under 60 years of age.

(2) To decrease, if not eliminate, expenditures for relief.

(3) To eliminate the necessity of hoarding to provide for needs

(4) To stimulate the necessity of hoarding to provide for needs incident to advancing age.

(4) To stimulate trade and industry by increasing the purchasing power of persons of advanced years.

(5) To relieve the present stagnation of money and credits by providing a market for products of American capital and labor: Now, therefore, be it

Now, therefore, be it

Resolved, That this mass meeting requests the Ways and Means
Committee of the House of Representatives, Representative Robert
T. Secrest, and Senators Vic Donahey and Robert A. Taft to support the proposed legislation (in order to accomplish the foregoing purposes) to immediately enact the said bill, a law providing for national old-age retirements system and create a fund for the maintenance thereof through a 2-percent Federal Government transactions-tax levy, the proceeds of which shall be distributed equitably to all citizens over 60 years of age, with the provision that it shall be expended within 30 days; and be it further

Resolved, That copies hereof be transmitted to said Ways and Means Committee and the Ohio legislators herein named, and they and each of them be requested to use all honorable means within their power to bring about the enactment of the Townsend recovery plan into law at the earliest possible time.

Respectfully submitted.

CHARLES H. WEBER, Chairman, EARL D. SCHOB, Secretary, EDWARD H. KINTZE Resolutions Committee.

Our Most Destructive Tax

EXTENSION OF REMARKS

HON. BEN F. JENSEN OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

EDITORIAL FROM NONPAREIL, OF COUNCIL BLUFFS, IOWA

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial captioned "Our Most Destructive Tax," by A. M. Piper, editor of the Nonpareil, Council Bluffs, Iowa, as follows:

[From the Nonpareil, of Council Bluffs, Iowa] OUR MOST DESTRUCTIVE TAX

Decision of the House Ways and Means Committee to recommend suspension of further increases in social-security taxes for 3 years is commendable, but it does not do a single thing to

solve the present problem.

What is breaking the backs of employers is the 3-percent unemployment-insurance tax. Until this is substantially reduced small businesses, employing eight or more people, will continue to go to the wall. Many of them simply cannot afford this drain. Almost every city and good-sized town has had examples of the destructive effect of this tax during the past

Firms in Council Bluffs have quit because of it, among them the Woodward Candy Co., employing from 150 to 200 people. A public accountant told us recently that more than 100 of the firms for which he made out income-tax returns were in the red last year because of the unemployment tax.

last year because of the unemployment tax.

The tax is a ghastly joke on the people it was enacted to protect. Here in Council Bluffs it has cost several hundred people their jobs. The State total runs into thousands.

But that is not all. It keeps people from getting jobs. Firms employing less than eight people almost invariably refuse to increase the number to more than seven, for the eighth worker makes the entire working force subject to unemployment tax, increasing the firm's overhead costs by several hundred dollars per year.

Furthermore, the unemployment tax results in wage cuts and causes workers to be discharged. Often the employer has no other alternative. He has to get the money to pay the unemployment tax somewhere, and if he cannot make it out of his business, he has to take it out of his employees.

We are informed that about 200 Iowa firms have not paid their unemployment taxes for last year and face legal action which may put them out of business.

The unemployment tax does more than any other one thing to discourage employment. It is easy to see why this is true. Every time an employer puts on a new worker at \$100 per month he adds \$48 per year to his tax bill—\$12 for old-age retirement and \$36 for unemployment insurance.

Would you be enthusiastic about giving a man a job if it cost you that much in taxes every year whether you had any profits or not?

Half of the unemployment tax burden is unnecessary. Unemployment taxes could be cut in two in most, if not all, the States if the system were put on a pay-as-you-go basis.

Congress could do more to help employers and workers by cutting the unemployment tax in two than by any other legislation it could pass during the present session. State legislatures could then change the State laws to conform to the Federal reduction. Those that have adjourned could be called into special session for a few

that have adjourned could be called into special session for a few days to take the necessary action.

We believe a 50 percent reduction in unemployment taxes would put a million men to work within a year, besides saving the jobs of hundreds of thousands who will be thrown out of work if the present tax remains in effect and puts more and more firms out of business.

Why doesn't Congress wake up and do something about this?

Silver

EXTENSION OF REMARKS

HON, GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

EDITORIALS FROM THE AMERICAN METAL MARKET

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the American Metal Market relative to silver:

[From the American Metal Market of January 21, 1939] THE SILVER "GOLD BRICK"

As Senator Townsend is a member of the Senate Silver Investigating Committee, the bill he introduced this week which provides for the cancelation of all administration powers to acquire further supplies of silver, or to further issue silver certificates, and to revoke the President's power to revalue silver and place an embargo

revoke the President's power to revalue silver and place an embargo on silver imports, it seems likely that our legislators will be given an opportunity in the near future to place themselves on record by either endorsing or repudiating the silver racket.

During the past couple of years we do not recall that any person or organization of any standing has had a word to say in defense of the Silver Purchase Act, with the exception of a few members of the so-called silver bloc headed by Senator Pittman, while on the other hand, there has been frequent condemnation, backed by logical argument and devastating statistics, by outstanding bankers. other hand, there has been frequent condemnation, backed by logical argument and devastating statistics, by outstanding bankers, industrialists, economists, and the press everywhere. There has been no sensible reply from the small handful of men who sold the country a gold brick on the installment plan which, up to the present, has cost in the neighborhood of \$1,000,000,000. Such answers as have been made by Senators PITTMAN and KING have only served to further emphasize that the false premises of the original scheme are supported only by other premises equally false and equally dangerous. and equally dangerous.

and equally dangerous.

Col. Percy E. Barbour, in a careful analysis of the economic and practical results of the Silver Purchase Act, recently published in the New York Sun under the proper and informative caption "16 to 1 and a Billion Gone," put his finger on the spot when he said:

"Silver ceased being a precious metal and has become a common metal. That is why it lost its place as a monetary metal in most parts of the world. And there is nothing that can be done about it except to have someone, like the American people, come along, buy all the silver that is produced or offered at a fancy uneconomical price, and then bury it at a beautiful mausoleum at West Point, built to get the stuff out of sight."

True, there is nothing to be done which can make a common

True, there is nothing to be done which can make a common metal precious, but something can be done to put a stop to a further accumulation of this common metal at fictitious prices in the world's market, plus an extra 50-percent bonus to domestic

producers.

At any rate, it is pleasing to think that at long last this monstrous gold brick will have to be analyzed by Congress, and when this has been done the public will have an opportunity of counting and identifying the noses of those who may still be in favor of perpetuating one of the worst rackets ever imposed upon the American people.

[From the American Metal Market of February 10, 1939] FOREIGN APPRECIATION OF OUR SILVER AID

The Northern Miner in an editorial under the caption "More

Aid for Silver," says inter alia:

"For every ounce of domestic silver purchased under its silver-buying policy the United States is estimated to have bought 6 ounces of foreign metal. This has included practically the entire Canadian output during the past 5 years. The aid to Canadian silver pro-ducers, which include most of our base metal companies, has been substantial and for this reason the extension of the Washington policy is welcomed in this country."

And concludes:

"Canadian silver producers, fortunately, have never put much faith in the theory that silver would become a partner of gold as an international standard of value. The ideal, which still persists in some circles, with sufficient influence to keep the price at artificial levels, has meant millions of dollars to this country, however, and it would appear the advantage is not to be lost, for some time

Every other foreign silver-producing country in the world feels the same way about it. Wasteful Government expenditures in our own country at least keep our substance at home. Giving

our substance away to foreign countries for something we cannot use and can only bury is thoroughly dumb-if the motivating cause is not worse.

[From the American Metal Market of April 14, 1939] THE TITULAR AND REAL OBJECT OF SENATOR PITTMAN'S SILVER INVESTI-GATING COMMITTEE

It takes a great deal of courage to wade through the reports of some Senate committee hearings, even when the task is imposed by moral duty. However, there is found some compensation, not in much information, but in some grim humor and sometimes a grain of truth of vital import.

The bill authorizing the so-called Pittman silver committee was "a resolution authorizing a special committee of the Senate to investigate the administration and the economic commercial effect of the Silver Purchase Act of 1934." That is printed on the cover leaf of the report of the hearing March 23, but on page 123 the real purpose

"Mr. Eccles. Now, this is the silver hearing, for the purpose, I suppose, of justifying the continued purchase of silver not only domestically but foreign silver, for the purpose of assisting recovery, of assisting the price level, of helping to maintain stability, etc.

"Mr. Treent. That is right."

"Mr. TRENT. That is right."

Senator Pittman was not presiding at the moment or he would have been quick enough to head off this damaging admission by Mr. Trent, who is technical director of the Rocky Mountain Metal Foundation, who, Senator Pittman announced, has been working for him "on various subjects for about a year."

There is really a great deal of difference between "investigating" a subject and "justifying" it.

Now, it happens that Senator Townsend, of Delaware, has a bill to abolish the Silver Purchase Act and is also about to hold hearings, but he is also a member of this Pittman committee.

This Pittman committee hearing, well along in the third session.

This Pittman committee hearing, well along in the third session, had devoted almost all of its time to the matter of Federal Reserve

had devoted almost all of its time to the matter of Federal Reserve control of prices, bank reserves, prosperity, and depression, developed by a set of questions designed by Mr. Trent for Senator Pittman, when Senator Townsend got beautifully snubbed.

"Senator Townsend, Mr. Chairman, I think Mr. Eccles has made a very interesting statement. It would seem to me from that statement that there would not be much reason for any effort to increase reserves. Now, I only have time to ask you one or two questions. We will leave out of the question domestic silver, but what effect would the cutting off of the buying of foreign silver have upon the situation?

"Mr. Eccles. I have said privately, but I do not mind saving—

"Mr. ECLES. I have said privately, but I do not mind saying—
"The CHAIRMAN (interposing): Let me say this, if I may at this point; I am not going to interfere with your questions, but let me say that the hearing will last for a month unless we can proceed and not leave one subject to go to another every few minutes. I want to say that as chairman of this committee I have had Mr. Trent here studying the Federal Reserve System with relation to this subject for a long time, for a year. He had prepared a series of questions at my request which were to develop the whole ques-tion before the committee; then the committee could ask any ques-tions they may want to ask, and in that way proceeding along the

logical line.

"This session opened up today with a statement by Mr. Eccles—
a perfectly justified and valuable statement. That is the question
that is in the minds of the members of this committee right now;
and why get clear off the question again onto another subject absolutely another subject?

"Senator Townsend. I guess I misunderstood it, then, Mr. Chairman. I thought this was a committee to consider the silver proposition."

It is of incidental interest to note that Mr. Eccles in reply to one question said "I am not an authority on monetary history."

Would it be dumb to suggest that the Chairman of the Board of Governors of the Federal Reserve System, occupying the position in control of the United States monetary and fiscal system, might well be a man who is an authority on monetary history?

Taxation and Business

EXTENSION OF REMARKS

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

LETTER FROM THE PHILADELPHIA RAPID TRANSIT CO.

Mr. RUTHERFORD. Mr. Speaker, I have just received the following letter from the trustees of the Philadelphia Rapid LXXXIV-App-116

Transit Co. relative to the effect of the present tax laws upon industry and containing some pertinent suggestions as to what should be done to relieve the situation. It seems to me that the time has come when more attention and consideration should be given the views and suggestions of these who have to meet the pay rolls and pay the taxes. For 6 years the New Deal economists, who have had no actual experience in business problems, have been trying to tell businessmen what should be done, with the result that business is in a worse condition now than it ever was. Let us now listen to the suggestions of businessmen on matters of taxation and business and I am sure that the results will be beneficial. Every Member should read the letter.

The letter is as follows:

PHILADELPHIA RAPID TRANSIT CO., Philadelphia, April 28, 1939.

The Honorable Albert G. Rutherford, 1711 House Office Building, Washington, D. C.

My Dear Congressman Rutherford: The situation of business is such that it can stand no increase in taxation. Any increase in the present taxes will stifle private enterprise and react detrimentally upon both business and the country. Pay-roll taxes are particularly unfavorable because their effort is even more damaging to labor them this to industry. than it is to industry.

OLD-AGE BENEFITS

The tax for old-age benefits under title VIII of the Social Security Act is now 1 percent of the pay rolls upon both the employer and employee. This tax rate should not advance for at least 5 years in order to give business an opportunity to regain its feet. The increase in this tax rate scheduled for 1940 will make private enterprise considerably more difficult and force employers to convert to labor-saving devices to compete in a market made by those mechanized processes to avoid the highly taxed labor overhead. Such an increase in the tax rate will accumulate a huge fund diverted from the normal channels of commerce and prove a stagnating influence upon private initiative. We urge amendment of the Social Security Act to keep the tax at a rate no higher than we now have.

UNEMPLOYMENT COMPENSATION

There are two credits against the tax imposed by the Social There are two credits against the tax imposed by the Social Security Act for unemployment compensation designed to coerce the States into passing legislation to effect two purposes. The principal purpose was to effect a stabilization of employment through a system of experience rates. Most of the States have included merit rates in their employment compensation laws, but the majority of these provisions are inadequate to accomplish stabilization. Thus, this legislation has failed to accomplish one of its objectives—stabilization; one which, if accomplished, would make the other objectives unaccessary tives unnecessary.

tives unnecessary.

To accomplish this the cost of unemployment compensation should be placed directly upon those employers causing it through a system of experience rates. Having these rates designed to place the tax burden upon the employer directly in proportion to the compensation his employees receive is not only equitable and fair among taxpayers, but is also the only incentive expedient for bringing about stabilization of employment. The unemployment compensation laws of all States give as a purpose of that legislation the overcoming of the social evils arising from fluctuating employment. A few States make no attempt to correct this situation in their law and the attempt in most of the other States is inadequate. and the attempt in most of the other States is inadequate.

The operation of the unemployment compensation laws is proving very inequitable among the various industries, among employers within an industry, and among employers in various States, giving some a competitive advantage and even subsidizing some of this unfair competition. For instance, in Pennsylvania the transit industry uses about 8 percent of the funds which it pays in unemployment compensation tax. In New York it is 7 percent. Other industries use several times as much as the tax they pay. This discrimination is particularly unfair to industries such as the transit industry, which generally pay 50 percent or more of their gross earnings in wages, as compared to 15 to 25 percent of gross earnings in other industries. It is believed that 90 percent of the benefit claims in Pennsylvania are paid to employees of one-tenth of the tax-contributing employers. Ninety percent of employers should favor complete experience rates. Thus, the flat 2.7-percent rate causes unemployment because some employers, desirous of getting a return for their expenditure, set up stagger systems which The operation of the unemployment compensation laws is provgetting a return for their expenditure, set up stagger systems which use the compensation for lay-off pay. Unemployment compensa-tion is a proper business expense which should be borne by each employer in proportion to the liability he creates. It is a social insurance, the premium costs of which should be distributed as in all insurance, i. e., as near to the actual liability risk as may be reasonably computed.

Employers who operate in a stable manner do so at additional cost, and must compete with employers who do not have that cost, and then must pay the same rate of tax into a fund which the unstable employer uses in lieu of lay-off pay. The inequality of the present arbitrary rates is also found in competing industries

situated in various States. Some have merit rates, wherein a stable employer may reduce his overhead, competing with a similar concern in another State where even partial merit rates have been impossible because of the political domination by industries in a favorable position because of the inequality of the law.

We urge you to revise the social-security law to bring about comwe trige you to revise the social-sectivity law to bring about complete experience rates because they are indispensable to the proper function of this law. They are needed to stabilize employment and thereby reduce the tax requirement for unemployment compensation to make the tax fair and equitable among the taxpayers, to promote more stable markets, and the general social welfare of the

promote more stable markets, and the general social welfare of the community.

Senate bill 2203, introduced by Senator Byrnes, includes an amendment which will require that unemployment contribution in State laws must not be less than 2.7 percent of the total annual pay roll of employers of the State in order for those employers to qualify for the credit against the Federal tax. This particular amendment would preclude the possibility of much needed merit rates and is definitely inadvisable. With the possible stabilization of employment, there is no need for a State tax rate averaging as high as 2.7 percent of the annual pay roll. The only amount of tax required is that sufficient to pay the cost of the compensation benefits and it is inadvisable to freeze the tax rate at such a high figure as 2.7 percent and to thereby negate all incentive for stabilization. It arbitrarily imposes a needlessly high pay-roll tax.

CORPORATE SECURITIES

Under the rules of the Internal Revenue Department and the boldings of the Supreme Court, corporations are not permitted to purchase their own outstanding securities at any price less than the price for which the securities were originally sold, without reporting the difference between the original selling price without reporting the difference between the original selling price and a lesser purchase price as a profit to the corporation. Many corporations, in the interest of a sounder financial structure, have desired to purchase their own securities at the presently reduced market values but have been unable to do so because the difference in cost would have to be reported as a profit on which income tax is assessable. A profit resulting from the purchase of a corporation's own securities is not an actual profit but merely an accounting or expert worst and is not profit but merely an accounting or paper profit and is not a proper basis for income-tax assessment. This situation should be corrected in order that corporations may conduct their financial matters in a sound manner.

Very truly yours,

H. RENNER, Jr., Assistant Comptroller.

Sale of War Materials and Supplies to Aggressor Nations

EXTENSION OF REMARKS

HON. J. HAROLD FLANNERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

RESOLUTION OF THE FEDERATION MEN'S BIBLE CLASSES OF HAZELTON, PA.

Mr. FLANNERY. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following resolution of the Federation Men's Bible Classes of Hazelton, Pa.:

As our fathers regarded freedom worth fighting for to obtain, so we regard it worth fighting for to preserve, if necessary, though we do not advocate war, but oppose it as a means of settling differences wherever possible, without sacrificing rights worth fighting

for.

And as we value freedom for ourselves, we concede the right to it to others, and oppose being placed in the position of aiding tyrants in depriving others of it: Therefore be it

Resolved by the Luzerne-Carbon County Federation of Men's Bible Classes, That we urge Congress to provide by law that aggressors be denied the help of obtaining supplies in our country that will strengthen them in preparing for or prosecuting any war to impose their wills on other people, so soon as their intentions have been made known.

tentions have been made known.

That any objection to such action because it might involve us in war is inimical to freedom, whether it arise from timidity or otherwise for if we are denied control over our actions in such matters, we have already lost freedom.

That copies of these resolutions be sent to our Senators, Hons. Joseph F. Guffey and James J. Davis, and to our Representative, Hon. J. Harold Flannery, for presentation to the Senate and House of Representatives, respectively.

The Retirement Pension Issue Will Not Down

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

LETTER FROM THE GENERAL SECRETARY OF THE GENERAL WELFARE FEDERATION OF THE TWELFTH CONGRESSIONAL DISTRICT, CALIFORNIA

Mr. VOORHIS of California. Mr. Speaker, sooner or later Congress will have to meet the issue of retirement pensions. To do so now-to pass a genuine effective law providing direct Federal pensions for our older citizens-will make this one of the great Congresses in American history. To delay, to refuse to act, will not mean that this issue will be forgotten. The logic, the economic necessity, and the evident justice of retirement pensions are too great for that. To delay will merely mean additional suffering for many people, a yet more insistent demand, and perhaps all too hurried action in some future session. We have spent all day today on a bill to put 460 aliens in concentration camps. When are we going to spend some time meeting the needs of 10,000,000 Americans?

As another bit of argument on this matter, I submit herewith a letter from the general secretary of the General Welfare Federation of the Twelfth Congressional District, California. He speaks for a movement of earnest people who are working for a cause. They stand ready, as I do, to do anything in their power to promote that cause. They support first their own bill. But they will support any workable proposal which will reach the same objective.

The letter is as follows:

GENERAL WELFARE FEDERATION, TWELFTH CONGRESSIONAL DISTRICT OF CALIFORNIA, Baldwin Park, Calif., March 22, 1939.

Hon. ROBERT L. DOUGHTON,

Chairman, Committee on Ways and Means,
House of Representatives, Washington, D. C.
GENTLEMEN OF THE COMMITTEE: I have received a copy of the transcript before your committee of February 1 to 10, inclusive, dealing with the Social Security Act, including testimony on H. R. 11 and H. R. 2, viz, the General Welfare Act and the Townsend General Welfare Act.

I have been intensely interested in the testimony of Mr. Arthur L. Johnson, Hon. Harry R. Sheppard, Hon. H. Jerry Voorhis, Hon. Charles H. Leavy, Hon. J. C. Oliver, Mr. McMasters, and others.

For more than 40 years I have been a businessman, for years owner, publisher, and editor of my own newspapers, and for many

years a newspaper writer and correspondent. For many more years I have been in the real estate and insurance business, and for years secretary of chambers of commerce, businessmen's organizations, and active in municipal, public, and civic affairs.

During all of those years I have been something of a student of

economic industrial and technological trends and conditions. For the past 4 years or more I have made a careful study and analysis of the fundamental principles of the Townsend and general-welfare plans and have always endorsed the improvements made in these acts as time and experience has demonstrated the wisdom of mak-

acts as time and experience has demonstrated the wisdom of making certain changes that would more nearly meet the changing political and economic thought of our Congress and of the business interests of the Nation as a whole.

I therefore approach this subject of national old-age annuities from several standpoints, which, with your permission and indulgence, I want to present to your committee from the standpoint of a businessman who for more than 40 years has been in daily contact with the common everyday citizens of this Nation, and whose tact with the common, everyday citizens of this Nation, and whose viewpoint, I believe, I quite thoroughly represent in the arguments I want to herewith present to your committee for its earnest consideration.

First. I contend the past few generations—especially the past First. I contend the past few generations—especially the past three generations—have created the principal part of the wealth of this Nation. This wealth was created from the natural resources of the Nation found here at the beginning of our national existence, therefore was the property of the Nation as a whole and not of any individual, group of individuals, or corporations.

From these natural resources, therefore, the property of all of the people these past generations have created all of the wealth of the Nation was now how each only at the property of the second of the second or the second

Nation we now have and enjoy. If, therefore, in other words, this

wealth was created through the labor, sacrifice, ingenuity, and inventive genius, coupled with intelligence and frugality, should not those who created this wealth have some share in that wealth and should not that share be distributed to those citizens who have

should not that share be distributed to those citizens who have worked, let us say, for the 40-year period of from 20 years to 60 years? If this be true, and I cannot see how any member of your committee can successfully demonstrate that it is not true, then the citizens of this Nation 60 years of age and over now have stored up in that national wealth they have created an annuity, or, if you please, a dividend, the same as an annuity or dividend created through a life insurance or annuity policy which they had carried and on which they had paid assessments for the period of 40 years. My contention is, therefore, that the citizens now 60 years of age and over have stored up this reserve through their 40 years of labor and are now entitled to have this dividend paid to them in monthly installments.

installments.

Second I contend that the most equitable method of paying these dividends so far conceived, is through a national 2 percent gross income tax, which would meet the maximum spread and reach the greatest number of taxpayers on an equitable basis, as has been thoroughly demonstrated by the successful operation of this tax both in Hawall and the State of Indiana, the full details of which I have on file in my office.

this tax both in Hawall and the State of Indiana, the full details of which I have on file in my office.

Third. According to the most authentic governmental figures available such a tax at this time would, if properly administered, create a fund somewhere around \$7,000,000,000 to \$8,000,000,000 per year. From a business standpoint there seems no reason why such a tax would not produce this result. If, therefore, let us say \$7,000,000,000 a year was collected and distributed to some \$,000,000 or more citizens as annuities of \$60 per month and when this \$7,000,000,000 was put into circulation by these annuitants no member of your committee can fail to realize that it would mean a great volume of business which does not now exist, and mean a great volume of business which does not now exist, and when we consider the natural turn-over of this \$7,000,000,000 of a number of times each month it is very evident as an undisputable business fact that a vast increase of business throughout every State in the United States would be the result. Let it also be distinctly realized by your committee that any balance collected, after paying the annuities of \$60 a month and after all administration expenses had been taken out, would be turned into the Treasury of the United States to be applied on the national debt, or other governmental expenses.

Fourth. And what would this mean from the standpoint of the taxpayer, of whom this writer has been one for many years? It would mean that millions and billions would be saved to these taxpayers every year through the reduced cost of maintaining huntaxpayers every year through the reduced cost of maintaining hundreds and thousands of public hospitals, sanitoriums, relief departments, and other public institutions of a relief and charitable nature; for with millions of new jobs created through the constant circulation of these annuities millions now on relief and being aided by doles and charity would then be able to earn a decent wage and be in a position to take care of themselves, thereby relieving the taxpayer to a great extent. Another tremendous saving would come through the decrease of crime and the cost of crime, which is admitted by all psychologists to be caused to a great extent. which is admitted by all psychologists to be caused to a great extent by poverty and idleness, which go hand in hand. Our crime bill is given as \$15,000,000,000 to \$16,000,000,000 a year, many billions of which would be saved the taxpayer if poverty and idleness were substantially decreased.

Fifth. Special emphasis should be put on the salvation of the youth of this Nation. It is an established fact that we are graduthousands upon thousands of young men and women from our high schools, colleges, and universities, who when turned out into the world face an unemployment stone wall. With millions of new jobs created through the passage of H. R. 11 the youth of the Nation would be given opportunities in many fields of endeavor which are now filled and overflowing.

Sixth. In the consideration of those citizens under 60 years of

which are now filled and overflowing.

Sixth. In the consideration of those citizens under 60 years of age, who, we are often told, must pay through their labor and sacrifice the pensions of the aged, it must be thoroughly understood that when the young man or woman reaches the age when he or she enters the work world and participates in the work of the Nation, let us say at 20 years of age, that worker begins at that point to create wealth and through the production of that wealth to participate in the production of a national wealth fund, and that every year thereafter through the 40-year work period between the ages of 20 and 60 years that worker will continue to contribute his share, or his proportion, of wealth to this national fund, from which fund this annuity or dividend should be paid for the remainder of his life after reaching the age of 60 and can no longer secure employment in any industrial plant. Those between the ages of 20 and 60 are not, therefore, paying the annuities of those over 60, but are merely paying from year to year for their national insurance policy, the dividends from which are to be returned to them after they have reached the age of 60, the same as would be done on a life-insurance policy on which they had been paying assessments for 40 years. Those who would receive this annuity would have already paid their assessments for the 40-year period and would be entitled to receive this dividend.

Seventh. And may I stress the fact, which is generally conceded, when the citizens of the Nation have security of employment, with a fair wage scale, the morale of that community or of that nation is a better place in which to live and rear a family.

is raised to a much higher plane; that such community or nation is a better place in which to live and rear a family.

The establishment of the fundamental principles embodied in H. R. 11 is, therefore, more than the establishment of an equitable annuity for the citizens over 60 years of age and more than a

national economic recovery plan. It is an outstanding humanitarian, Christian movement and obligation on your committee and

upon the citizens of this Nation.

May I thank you most sincerely for your careful consideration of the arguments I have herewith presented?

Most sincerely.

S. HOWARD LEECH. Secretary-Treasurer.

A National Airport Program

EXTENSION OF REMARKS

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

REPORT OF SPECIAL AIRPORT COMMITTEE TO THE CIVIL AERONAUTICS AUTHORITY

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the Record, and because of the interest of many Members of Congress, I include a report of a Special Airport Committee which early this year submitted a report to the Civil Aeronautics Authority. The report should be considered in connection with the airport survey report recently submitted to the House and Senate by the Civil Aeronautics Authority. The report was drafted for the committee by Mr. Paul V. Betters, executive director of the United States Conference of Mayors, and contains recommendations which have been approved by various aviation groups and public agencies throughout the country.

The report is as follows:

Your subcommittee has given careful consideration to many phases of the general airport problem. Specifically, the committee has directed its attention to the two major questions presented in the section of the Civil Aeronautics Act authorizing presented in the section of the Civil Aeronautics Act authorizing the airport survey: (1) Whether the Government should participate in the construction, improvement, development, operation, or maintenance of a national system of airports, and (2) if participation is recommended, the basis for such participation. In this connection, at a series of meetings held by the subcommittee, careful study has been made of the evidence presented at the board of inquiry hearings. Additional data developed by the subcommittee itself have been reviewed. This report, therefore, represents the conclusions of the working subcommittee. The committee is unanimously of the opinion that the cities

fore, represents the conclusions of the working subcommittee.

The committee is unanimously of the opinion that the cities of the country are financially unable to provide further those airport facilities necessary: (1) To the Postal Service; (2) to the proper development of commercial air transport; and (3) to the national defense. The testimony on this aspect of the problem is clear and includes the following points:

1. Most municipalities are financially unable properly to maintain present facilities and to make necessary extensions.

2. Cities have limited tax-levying and debt-incurring powers. Relief expenditures have exhausted the resources of many communities.

Local taxpayers are increasingly opposed to further airport expenditures for the reason that their purposes and services and utility extend beyond the jurisdictional scope or tax-levying power of the community.

4. Owing to increasing traffic, larger aircraft, stricter Federal standards and air-line requirements, many communities will lose their present airport investments unless further expenditures are made for expansion and improvement.

5. Lacking increased Federal participation, communities will have to defray expenditures by increased charges on the transport industry, private flying, and on various military and civil branches of the Federal Government, and, thus discourage increased usage and development of aircraft.

6. Units of the Federal Government that use municipal airports, seldom pay adequate rental and other charges. The cities are, therefore, in effect, subsidizing the National Government. The proposed development of schools of instruction for civilian flyers and mechanicians will require further expenditures at local airports which expenditures should be assumed by the whole economy

ports which expenditures should be assumed by the whole economy where they have benefit.

7. Almost without exception, airports are operating at deficits. With these points we are in complete agreement.

Further, there is need for a more complete exposition of point No. 3, that the service rendered by an airport extends beyond the taxing jurisdiction of the local community. It must be stated that even if the municipal financial situation were such as to make possible additional expenditures for airports, the status of

public opinion in most of our cities is unfavorable toward community responsibility for the entire burden of air terminals. Taxpayers point to the well-known fact that any adequate civil airport must serve largely, perhaps principally, purposes far beyond the jurisdictional scope or the tax-levying power of the local civil division. The airport has taken on more and more a character comparable to the harbors, the inland waterways, and the network of Federal-aid highways of the Nation.

There is little questioning of the basic contention that airports serve needs intercity and interstate and national in character. As prought out in the hearings:

serve needs intercity and interstate and national in character. As brought out in the hearings:

"Aviation is essentially an interstate activity (mail, passenger, and express) having a vital military aspect, and it requires a more positive policy of Federal regulation, development, and assistance."

The extent to which even a medium-sized city is subsidizing the flow of air travel and the delivery of the mails is well illustrated by a report from a western municipality:

"A check on local business in this city shows that for the past 9 years every passenger that left, together with every one that arrived, by United Airlines received a contribution of \$10 toward his trip by the city taxpayers and, in addition, \$100 was paid toward the cost of transporting each ton of mail and express, both going and coming."

Likewise the civil airports of the country form an integral part of our national-defense needs. Aside from the fact that most all terminals are used for military maneuvers of one kind or another, there are permanently based on these airports over 40 component units of the military branches of our Government, as well as many units of the ancillary services of aviation operated by Federal Government.

The late Chief of the Army Air Corps stated: "The principal basis for defense against air attack is the network of civil airports, extending into all the strategic areas of the continental United States."

Realizing the national character of those airports fundamental to the Postal Service, civil air transportation, and the national defense, the problem presented, and the task required in the survey, may be stated as follows: To evaluate and appraise the contribution of municipal airports to commercial and military aviation and the adoption of a Federal program based on such evaluation and appraisal.

In the main we find that the basis for such an evaluation, as well as its actual application, is contained in the Civil Aeronautics Act of 1938 itself. That act clearly and squarely placed upon the Administrator this specific duty:

"Sec. 302 (a) The Administrator is empowered to designate and establish civil airways and, within the limits of available appropriations made by the Congress, (1) to acquire, establish, operate, and maintain along such airways all necessary air navigation facilities; (2) to chart such airways and arrange for the publication of maps of such airways, utilizing the facilities and assistance of existing agencies of the Government so far as practicable; (3) to acquire, establish, operate, and maintain, in whole or in part, air navigation facilities at and upon any municipally owned or other landing area approved for such installation, operation, or maintenance by the Administrator; (4) to provide necessary facilities and personnel for the regulation and protection of air traffic moving in air commerce."

And the act went further and, in a detailed manner, defined the

in air commerce."

And the act went further and, in a detailed manner, defined the exact meaning of "air navigational facilities":

"'Air navigation facility' means any facility used in, available for use in, or designed for use in, aid of air navigation, including landing areas, lights, any apparatus or equipment for disseminating weather information, for signaling, for radio-directional finding, or for radio or other electrical communication, and any other structure or mechanism having a similar purpose for guiding or controlling flight in the air or the landing and take-off of aircraft" (title I, sec. 1 (7)).

The congressional intent of these two provisions is apparent. Congress was insistent on providing for every possible item having

The congressional intent of these two provisions is apparent. Congress was insistent on providing for every possible item having to do with safety. It, therefore, following the precedent in other fields of transportation (as, for example, marine transportation), placed upon the Federal Government responsibility for all "air navigation facilities." Certain testimony introduced at the hearings is of interest and explanatory of this point:

"I. Aviation is essentially an interstate activity and with a definite military aspect, and is so recognized by the very fact of the Federal control and supervision always heretofore exercised and now to be more comprehensively established through the C. A. A.

"II. Federal agencies now control and furnish navigation aids for both water and aircraft in motion or flight; such aid and control by the control of the property of the prop

"II. Federal agencies now control and furnish navigation aids for both water and aircraft in motion or flight; such aid and control should not cease when an aircraft enters the zone of an airport. On the contrary, the same agency of control should function until the craft is at rest.

"III. The runways of an airport are not separate and disconnected entities but are essential parts of the airways and comprise perhaps the singly most important 'facility to air navigation.' The Federal Government recognized the necessity of landings when it provided emergency fields all over the country; it should, in the further interest of safety for air navigation, be financially responsible for the more essential and continuously required terminal runways.

runways.

"IV. Lighting and traffic-control facilities, including localizers and landing beams, are similarly a part of the airway system and should be completely federalized. Airport control towers, where they are necessary, should be provided and operated by the Federal Government; it is incongruous and makes for confusion for these

to be locally operated. An unnecessary and wasteful duplication of personnel can be avoided where the C. A. A. combines the airport and airway-traffic control. At major airports it already maintains personnel for airways communication, range operation, airways lighting, etc., and could readily complete and coordinate the traffic-

control function as its own."

The working subcommittee thus suggests that in our efforts to find a solution to this pressing problem of airports we simply carry out the intent of the Congress as contained in the Civil Aeronautics Act of 1938. Let the Federal Government extend its responsibility to all air navigational facilities as defined in the law instead of limiting, as it does at present, its jurisdiction and functioning to only certain aids. If this proposal is adopted, we will have the following division of financial responsibility as between the National Government and the local civil divisions.

FEDERAL RESPONSIBILITY

1. All communications and required radio devices.

Weather control facilities.

3. Landing area proper (runways, including such costs of con-struction and reconstruction involved in providing and maintaining a safe landing area).

4. All costs of lights and other facilities or devices necessary for

LOCAL RESPONSIBILITY

1. To provide the land. (Except in such cases where, because of national requirements, the Civil Aeronautics Authority finds it necessary to provide land.)
2. All buildings required. (But all agencies using floor and office

necessary to provide land.)

2. All buildings required. (But all agencies using floor and office space, includings Federal, commercial, and private agencies, should and would be expected to pay reasonable rentals.)

3. Management of the airport.

4. Routine maintenance of landing area.

This is a division of responsibility which can be upheld on the basis (1) of the law of the land as it stands today, (2) of the economics of the problem, (3) of the feasibility of its efficient administration, and (4) of the responsibility of the whole economy to assume the burden of facilities necessary to the whole economy. In the evaluation of the extent to which airports render a national service and the application of Federal financial responsibility for such costs as are properly chargeable to the Nation we, in effect,

for such costs as are properly chargeable to the Nation we, in effect, are simply presenting a plan under which the 1938 act can be properly carried out. The working subcommittee is not proposing a Federal-aid plan such as is involved in Federal-aid highways. This is a plan for sharing certain responsibilities and represents solely an extension of the present system under which it is the national duty to establish airways and provide aids to navigation. In this respect the proposal is similar to the traditional principles embodied in the rivers and harbors program of the Government.

the proposal is similar to the traditional principles embodied in the rivers and harbors program of the Government.

Of course, adoption of this recommendation involves appropriations. The amount of such appropriations as may be authorized is dependent upon future action of the Congress. On the assumption that Federal appropriations for all types of air navigation aids are made, our suggestion is simply that the Civil Aeronautics Authority be empowered to distribute such funds on the basis of the best interests of aviation from the standpoint of the Nation. In the past airways and other navigation aids have been developed by the Government. airways and other navigation alos have been developed by the Government in this manner. We must deal with all air navigation aid requirements from this standpoint. In the final analysis, the Civil Aeronautics Authority and the Administrator are responsible for the development of aviation and discretion must be vested in them with regard to the application of such Federal funds as are authorized by the Congress. We are sure that in this task the Authority and the Administrator will seek the active cooperation of all agencies and groups concerned, including the many State aviation commis-

and groups concerned, including the many State aviation commissions which are in existence.

It is assumed, of course, that prior to the allocation of any funds which may be made available to the Civil Aeronautics Authority for the purpose of providing adequate air navigational facilities, the Authority will adopt a national airport plan, wherein each community will know the status of its airport in the national network. This is the crying need at the moment. In our judgment, the same factors which make aviation and airports largely an interstate and national problem should determine the national network, namely, the needs of: (1) The Postal Service, (2) civil air transport, and (3) national defense. In this connection it may well develop that certain private terminals, as distinct from public airports, as well as certain fields used primarily for miscellaneous flying, must be as certain fields used primarily for miscellaneous flying, must be given consideration. As an example, reference might be made to those airport facilities which would be needed and used should the Government undertake a national program of training pilots and

mechanics

mechanics.

In conclusion, the working subcommittee wishes to call to the attention of those concerned that the program outlined above is nothing new or novel. Even before the Civil Aeronautics Act of 1938 had been enacted, a committee of the United States Senate had formally recommended this approach to the problem.

In the report of the Senate Committee on Commerce, entitled "Safety in the Air" (pursuant to S. Res. 146, 74th Cong.), dated March 17, 1937, these recommendations were made:

"City pride results frequently in a municipality's assuming an unjustified obligation to provide facilities which keep its terminal in satisfactory condition for interstate air commerce. The ownership, operation, and maintenance of an airport used in interstate commerce should be assumed by the largest possible political division enjoying the benefits from the facility, just as is the case now with our inland waterways. The present and future construction

and maintenance of the inland waterways and the facilities for coastwise shipping is assumed by the public at large. A similar arrangement should exist for air navigation facilities used in interstate air commerce. A further and supporting reason for suggest-ing Federal control and support of such landing areas along Federal airways is the growing use of municipal air terminals by military aircraft. The necessity for centralized control of every part of our Federal airways system, including air terminals, is indicated by the rapid development of radio control over all airplane movements on our Federal airways.

"The present system of airway traffic control has in it a missing link, caused by the fact that the control of the Federal Government does not reach within the boundaries of the air terminals. The complete control of the Federal Government along the Federal airways should not be jeopardized by breaks in the system. The navigation of the airplane should be controlled, not only while the airplane is in the air along the airways, but also during its maneuvering on or about air terminals. There is every evidence that such a development is mandatory and should not be delayed."

such a development is mandatory and should not be delayed."

On the basis of our studies and the statutory mandate of the present law, we urge adoption of what the Senate committee recommended nearly 2 years ago. This plan is one on which practically every aviation group in the United States is agreed. It does not propose placing the Government in any land-buying scheme. It does not place on the shoulders of the Government actual management of the air terminals—this remains a local responsibility. It does not involve the Government in construction or operation of airport buildings. It simply gives to the Civil Aeronautics Authority the job which Congress intended it to do, namely, to accept and carry out full and complete responsibility for the development of American Aviation, and insure safety in its operation.

Let Us Look on the Brighter Side

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

EDITORIAL FROM THE WICHITA (KANS.) BEACON OF MAY 3, 1939

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely editorial which appeared in the Wichita (Kans.) Beacon of May 3, 1939:

> [From the Wichita (Kans.) Beacon of May 3, 1939] LET'S LOOK ON THE BRIGHTER SIDE

We've read so much and heard so much about Europe and its recurring crises that we overlook some very important facts about things here at home. We can't see the forest for the trees. We've heard so much about what we have not that we've forgotten to

list the things we still have.

We've been flooded with figures and more figures on the number of unemployed, on this factor, and that trend. For a change let's take a look at the other side of the picture—at the silver lining behind the clouds. The following statistics are from Department of Commerce reports:

Jobs: More than 43,000,000 Americans still have their regular jobs; they still buy food, clothing, cars, radios, refrigerators, and go

Automobiles: More than 30,000,000 Americans still own and drive

Automobiles: More than 30,000,000 Americans still own and drive cars, and buy about 60,000,000 gallons of gasoline a day. Entertainment: More than 10,000,000 men and women in America still go to the movies every day.

Holiday: More than 10,000,000 Americans are taking vacations, planning fishing trips, or journeys to the mountains, the seashores, or the two world fairs. Most of them are taking their vacations on pay and will spend about \$4,000,000,000 on their trips.

Education: More than 27,000,000 young Americans are still attending school, preparing themselves for useful work in the years ahead.

ahead.

Banks: Millions of Americans sleep peacefully every night be-cause they have no fear of losing the \$57,000,000,000 they have on deposit in the banks of the country.

Radio: More than 27,000,000 Americans own radio sets over which they hear programs that have not been packed with propaganda. Newspapers: American newspapers are still selling 114,000,000 papers a day, continuing to print unbiased news to readers without fear of expressing their opinions about their Government.

Optimism: American businessmen are spending \$450,000,000 this year in advertising products which they fully expect will be bought

by the American public.

This Nation has 7 percent of the world's population but half of the world's wealth; 6 percent of the world's acreage, and yet

harvests more than half of the world's crops. We make 90 percent of the world's automobiles and use 75 percent of them. We consume 75 percent of the world's rubber and 75 percent of the world's silk.

We spent in 1935, \$3,000,000,000 for education, or five hundred million more than all the rest of the world. Our 7 percent of the world population seems to be getting along quite well, in comparison with our foreign neighbors. Let's don't throw away all the advantages we have.

New Deal Foreign Trade Policy is Driving American Fur Farmers Into Bankruptcy

EXTENSION OF REMARKS

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

STATEMENT BY N. S. LIDDELL

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I have repeatedly called the attention of the House to the disastrous effect of the administration's reciprocal-trade policy upon American agriculture. Other Members of this body have joined with me in the demand for a repeal of the reciprocaltreaty law which now permits the President to reduce the tariff duties on farm and other commodities. We have appeared before the Committee on Reciprocity and entered vigorous protest against reductions in tariff duties on competitive products. The President and his committees have disregarded our protests. To the contrary, the program of giving away our market to foreign producers has been enlarged to such an extent that a large part of our industrial and agricultural activity is now being forced out of business.

The reciprocal-trade program has worked against the interests of American producers. If this program is not now repealed, and adequate protection restored, many branches of our industrial and agricultural structure will be put out of business.

Today I want to call your particular attention to what has been done to the business of fur farming as a result of the reduction of the duty on furs produced in other countries. Fur farming has been a thriving new development in agriculture. This business has spread over the entire country and has gone far in producing a high type of fur for domestic use. The trade agreement with Canada, in which the duty was lowered, has now demoralized the fur market in the United States. The domestic price level has been driven down as a result of foreign importations to a point where the domestic producers are now being forced into bankruptcy.

I can give the Members of the House and the country the best picture of the situation by quoting hereafter a statement made by Mr. W. S. Liddell, the president of the Gold Star Fur Ranch at Owatonna, Minn., who portrays the actual situation as it is found today in the United States relative to fur farming.

Mr. Speaker, I ask unanimous consent to extend my remarks by including therein the statement just referred to. The statement is as follows:

To the honorable Congress of the United States:

GENTLEMEN: You have been receiving a great deal of informa-tion of late pertaining to the insolvent status of the fur-farming industry, which was brought on by the reduction in the duty on silver fox pelts coming into the United States from foreign counsilver fox pelts coming into the United States from foreign countries. As you are now aware, this reduction has thrown the gate open to all favored nations, when we already had an overproduction of silver fox pelts here in our own country and were working hard to find a way to market the surplus of this country; then we get this reduction in duty, which is uncalled for—the net result being a 36-percent direct drop in pelt prices from 1937-38 season market levels, plus all the natural improvement in quality from year to year by selective and scientific breeding. Silver foxes of today are so superior in quality to the foxes of even 10 years ago that the fox of 1929 would not even resemble the 1939 fox; yet our market decline is so great that this great improvement cannot keep pace with it but drops 36 percent in 1 year. So the improvement seems as nothing as far as prices are concerned. All of this is beyond our ability to endure and still survive.

My object is to furnish you with a conservative estimate of the value of our industry and to call to your attention some of the other industries in the United States that are depending a great other industries in the United States that are depending a great deal upon the fur farmers as consumers of their products. If you have not analyzed this situation from this point of view, permit me to remind you that the fur-farming industry consumes enormous quantities of farm products, such as wheat, corn, oats, barley, alfalfa, soybeans, sugar beets, and other vegetable matter, together with millions of pounds of meat products from the farms and packers; enormous quantities of whole-milk and dried-milk products. Besides we are large consumers of mineral feeds medical supucts. Besides we are large consumers of mineral feeds, medical supplies, steel and wire, aluminum dishes, dairy palls, food choppers, grinders, mixers, and other machinery, electric motors, refrigerators, ice machines, lumber, cement, tile, roofing, paint, salt, fuel, automobiles, trucks, oil, gas, hardware, and many others too numerous to mention.

It is evident from the above that the fur farmer is one of the consumers in every major industry in the United States, and this strangulation of our industry by the Government will mean quite a set-back to business in general, from the steel manufacturer to the strangulation of our industry by the Government will mean quite a set-back to business in general, from the steel manufacturer to the dirt farmer and dairyman. And, mind you, some of our fellow fur farmers have already been forced to quit, broke, and many, many of us will follow if we do not get aid at once, with the restoration of the tariff, to keep our fur buyers from going abroad to buy or have the pelts shipped in here for them to buy cheaper than we can produce them here, because the foreign countries can raise them cheaper than we can, and then come here and steal our markets; yes, it is the same as stealing them when our Government lets the bars down and lends a deaf ear to our distress call. Don't we deserve consideration from the Government? Aren't we paying taxes to support this Government? Do the foreigners in foreign countries pay taxes here to support this Government? Do the foreigners interest themselves in our welfare? No. Isn't every Member of Congress sent to Washington to protect our interests? Certainly. We need help now, not in 1940, because we will be dead as far as our fur farming goes and on relief; and think of the unemployment it will cause when fur farmers are stamped out of existence. What else can anyone call it except stamping us out by cutting off our source of revenue, our markets, and giving them to foreigners? Would they do as much for us? When foreign nations want money, men to fight, or markets they "come crawling" to the United States, and we are foolish enough to let them have all they want. What did they do about the payment of the war debt? The writer of this spent 5 of the best years of his life in the Army during the World War.

I remember our President said, when he took office the first term, that we should all be patient and try things, and if they did not work out he was willing to change them. Well, we have tried this

that we should all be patient and try things, and if they did not work out he was willing to change them. Well, we have tried this tariff reduction on 1 year's crop, and it was ruinous; why have another year of it and all go bankrupt? Restore the silver-foxpelt tariff now.

As a concrete example of my statements in the foregoing paragraphs, I have worked out the following figures based upon our own ranch operation and taken from our own records. Assuming own ranch operation and taken from our own records. Assuming that the United States fox farmers total 5,000, which is the quoted number of fox farms, and that their breeders produce annually 350,000 pelts, I place the breeding herd at 100,000 female foxes (forgetting the male foxes), which makes a total of 450,000 animals. Now, if we had this herd on our ranch at our present operating cost our yearly expenditure would be as follows:

Food supplies for 1938

Meat and meat products	\$4, 797, 000
Cereal food or farm grains	3, 150, 000
Milk and milk products	1, 350, 000
Vegetables, fresh and canned	540,000
Fruits, fresh and dried	500,000
Eggs, fresh, frozen, and dried	31, 500
Hay and straw for litter	75, 000
Mineral foods of all kinds	486, 000
Cod-liver oil	36,000
Consequent of all complete or a second	10, 965, 500
Medical supply, 1938	
Worm capsules, all sizes	\$90,000
Flea powder	
Mite oil	
Disinfectants	18, 000
Miscellaneous medicines	6, 020
Albertaneous medicines	0,020
	11, 219, 020
Other overhead, 1938	
Electricity	\$1,508,500
Electricity	1, 100, 000
Paint and repairs	900,000
Fuel	1,000,000
Insurance	1, 250, 000
Automobiles and trucks at \$600 per year	3.000.000
Automobiles and trucks at \$600 per year	
Oil and gas	450,000
Oil and gas	450, 000 6, 000, 000
Oil and gas	3,000,000 450,000 6,000,000 675,000

Other overhead, 1938—Continued Pelt insurance to market (blanket insurances, by dealers, etc) Transportation and cleaning	_ \$180,000
Operating expense	28, 163, 500
Then there would be the cost of equipment, as follows:	
Breeding pens	
Breeding kennels Furring sheds	2, 250, 000
Guard fence	1,000,000
Machinery	5, 250, 000
Tools (hand)	500, 000
Dishes (feeding)	100,000
Pails (feeding), etc	60, 000
Total	51, 573, 500

Plus real estate, which is impossible to figure.

Now, if we have to incur \$28,163,500 in operating expenses to feed 450,000 foxes per year, and be compelled to sell 350,000 of them as pelts, for an average of \$30 per pelt, we would be taking a net loss of over half of the cost of production, because the pelts would bring \$10,500,000. An adequate tariff should be placed on silver foxes to protect the breeders of this country against the importation of foreign pelts; and that tariff, in view of foreign standards of living, wages, and food costs, should range between 75 percent and 100

foreign pelts; and that tariff, in view of foreign standards of living, wages, and food costs, should range between 75 percent and 100 percent of the full and true value of the pelts or live animals.

Your constituents—the fur farmers of the United States—are depending upon you, the honorable body of Congress, our representatives, to see to it for us that the above-mentioned tariff is immediately placed upon all silver fox imports into this country in order that we may have the opportunity to dispose of our pelts in this spring's sales (1939) at true American prices, and save our industry from bankruptcy. industry from bankruptcy.

Capital City Described

EXTENSION OF REMARKS

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1939

ARTICLE FROM THE ARIZONA REPUBLIC OF APRIL 30, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, I have asked unanimous consent to extend in the RECORD an item taken from the Arizona Republic of April 30, 1939, it being an accurate description of the physical plant of our Government in Washington, D. C. So concise and informative is this article that I believe Members of Congress will find a need for it among their constituents, for this word picture paints so clearly the Government set-up in the Nation's Capital that citizens the country over, to whom it may be accessible, can easily fancy they have made a trip up Constitution Avenue.

Because the schools of Arizona and of the Nation at this time of year are studying the make-up and the functioning of the Government of the United States, and because Members of Congress receive letters daily requesting public documents and any printed material pertaining to our Government at the Nation's Capital, I believe this article will be most helpful as partial answer to their numerous requests.

The article is as follows:

[From the Arizona Republic of April 30, 1939] CAPITAL CITY IS DESCRIBED

(EDITOR'S NOTE.-Washington as the compact dynamo of wide fung governmental force is sketched this week by Mrs. John R. Murdock. The "Congressman's wife" tells, not about "Washington life," but about the structures housing the departments of government and the functions of all these departments. Her letter to Mrs. Herman Hendrix, of Phoenix, might serve as a permanent source of reference on the Capital's architectural and functional design.)

MY DEAR MRS. HENDRIX: I've been writing to Arizona for 2 years now about happenings in the Nation's Capital, and I've never really sketched for you Washington as the center of the Government of the United States. That would have been my first letter had it not taken me all this time to learn first-hand about the Government buildings and something of what they contain.

I have just been given copies of an air-view picture of official Washington. It is so well done and so pride provoking that I am induced to picture by words that section of Washington which houses the major part of the Government of the United States. The District of Columbia, as presented to Uncle Sam, was 10 miles square, but the Washington on which is built most of our beautiful Government buildings is only about 2 miles square.

Let us imagine we are in an airplane directly over the Lincoln Memorial, where Warten Anderson gave her governers. Easter connects

Memorial, where Marian Anderson gave her gorgeous Easter concert

Memorial, where Marian Anderson gave her gorgeous Easter concert. Or would you be just as happy in a hydroplane? You see, I shall later have to land you on the Potomac.

Three landmarks will be outstanding: The Capitol dome, the Washington Monument, and the Lincoln Memorial. If you'll imagine a huge Easter cross about 2 miles long, lying flat on the ground in such manner as to place the Lincoln Memorial at the very top, the Capitol at the very bottom, and the Washington Monument as the giant white nail that holds the cross-arm in place, it will be comparatively easy for you to locate many of the Government buildings. This plan of the cross is said to have come down from the days of L'Enfant, the Frenchman, whom President Washington chose to be designer of our capital.

But first I must tell you that just north of the Monument, and

But first I must tell you that just north of the Monument, and at the tip end of the cross bar is the White House, and just south of the Monument, at the other tip end of the cross bar, is the new Jefferson Memorial, now under construction. Between the Monu-Jefferson Memorial, now under construction. Between the Monument and Lincoln Memorial is the long and slender reflecting pool,
and between the Monument and the Capitol dome is the wide and
green expanse of well-kept lawn called the Mall. Behind the Lincoln Memorial is the beautiful Potomac, and running from the
Potomac toward the Capitol and parallel with the Mall, but some
distance north, is famous Constitution Avenue. (On the day Marian
Anderson sang, cars were going toward Lincoln Memorial five abreast
on this spacious avenue, and it is never a one-way street, either.)

HUGE CHECKERBOARD

I have told you before that Washington is divided into a huge checkerboard by streets running north-south and east-west. The foundation streets, from which the other checkerboard streets are

checkerboard by streets running north-south and east-west. The foundation streets, from which the other checkerboard streets are numbered or lettered, are the north-south Capitol, which would go through the dome, only, of course it stops, and the east-west Capitol, which would also go through the dome, only of course it stops, too. In fact, there is no West Capitol because the Mall is where West Capitol ought to be.

Now if you'll imagine four wide diagonal streets also cutting through the Capitol you can easily locate the famous Pennsylvania Avenue, forming many triangles of land, as it cuts past those east-west streets. It is said that all the grand parades of past history went up and down Pennsylvania Avenue, from the White House to the Capitol, and from the Capitol to the White House. In fact, so well known was this Pennsylvania boulevard that Washingtonians referred to it simply as the Avenue.

But in recent years Constitution has stolen the show, for this wide, scenic thoroughfare boasts so many Government buildings that one can go up Constitution and see practically all the Departments of Government. Let's try it!

First we must leave our hydroplane on the smooth and lovely Potomac. As we start up Constitution Avenue we see to our right two immense low buildings that don't even stop for streets or blocks, and they're not very elegant looking, but they serve as headquarters for the Army and the Navy Departments. These two sprawling buildings were put up as emergency construction during the World War, and are still helping to house these Departments.

By the way, we couldn't even walk through all of these Government buildings, much less around them, so I'm going to confiscate

the way, we couldn't even walk through all of these Government buildings, much less around them, so I'm going to confiscate a few of the sightseeing busses that are visiting Washington now by the hundreds. They line up by the day while the students visit the Library of Congress. We can take a dozen or so of those busses, make our trip around, and have them back at the Library before the students have seen half the paintings and statues and exhibits.

ORNATE CASTLE

The Department of War was established by the first Congress in 1789. The Department of the Navy was established almost 10 years later. Both of these Departments were housed, before the World War, in the old State, War, and Navy Building. We can look north and easily distinguish that structure, for it somewhat resembles a fort or a castle, or a hundred old Civil War landmarks huddled together, with thousands of windows and almost as many little porches and turrets and ornate trimmings.

The State Department, the first to be established (July 1789), has spent the last 65 years under this old roof, and the rambilingmass of gray stone looks all the more antique beside the grace and dignity of the White House, which is just across the street. The State Department has to do with our foreign relations and with ambassadors and ministers and trade agreements and treatles and with the issuing of passports. The Department of War was established by the first Congress in

with the issuing of passports.

Across the street and east of the White House is the Treasury Across the street and east of the white house is the freship Building, with heavy doors, heavy columns, and heavy guards. This Department was also established by the First Congress, and was originally meant to take care of revenue, but today it has varied duties, such as preventing violations of narcotic laws, coining money, collecting of import duties, preventing smuggling, looking after the Public Health Service, engraving and printing Federal Reserve Public States securities previous reserves. eral Reserve notes, United States securities, postage stamps, and revenue stamps.

It requires two huge buildings to house the Interior Department, and they are just to the left as we look up Eighteenth Street toward the White House from Constitution Avenue. The Interior Department has to do with "promoting domestic welfare." It looks after such home features as mining, reclamation, grazing, education, all Indian affairs, and the entire national-park system. There are in the United States some 277 Indian tribes. We have in Arizona about 45,000 Indians, and this figure exceeds that of every other State with the possible excentions of Chicken

out of 27 national parks, Arizona has the Grand Canyon. Out of 27 national monuments, Arizona has the Grand Canyon. Out of 77 national monuments, Arizona has 15, and nearly all of these were established before 1930. Let me name them:

Canyon de Chelly, Casa Grande, Chiricahua, Grand Canyon, Montezuma Castle, Navajo, Pipe Organ Cactus, Petrified Forest, Pipe Spring, Saguaro, Sunset Crater, Tonto, Tumacacori, Walnut Canyon, and Wupatki.

They tell me at the Interior Department that a national park is an area of superlative scenery and large size, set aside by Congress for recreational use, and that a national monument is a smaller area of historic, prehistoric, or scientific interest set aside by proclamation of the President of the United States.

proclamation of the President of the United States.

But we must go on up Constitution Avenue. There are so many beautiful white Government buildings on the point of land made by the crossing of slant Pennsylvania over straight Constitution, that the group has been called the Federal Triangle. Four Government departments are stored away in that triangle—the Department of Justice, the Post Office Department, the Department of Commerce, and the Department of Labor. All together these four Departments employ 14,000 Government workers.

We'll try not to be on Constitution Avenue when the "Government lets out," for traffic is paralyzed every afternoon at 4 o'clock when 115,590 Government workers begin swarming the streets of Washington.

ENFORCEMENT-AND-

ENFORCEMENT—AND—

The Department of Justice was created to enforce the Federal laws, but it also has general supervision over Federal prisons and prisoners; deals with questions concerning indictments, grand juries, search warrants, alien enemies, and extraditions; and has charge of cases involving crimes on the high seas and violations of the naturalization laws. The Federal Bureau of Investigation, under the Department of Justice, investigates offenses against Federal laws—only counterfeiting and narcotics traffic are taken care of by the Treasury Department.

The Post Office Department was created in 1794. The original purpose of this Department was to provide "the best means of establishing posts for conveying letters and intelligence throughout this continent." It has been enlarged in this manner: Postage stamps were authorized in 1847; registered mail, 1855; Railway Mail Service, 1862; City Delivery Service, 1863; postal money orders, 1864; foreign money orders, 1867; special delivery, 1885; rural delivery, 1896; postal savings, 1911; village delivery, 1912; parcel post, 1913; and air mail, 1918.

1913; and air mail, 1918.

ALABASTER CITY

The Agricultural Department was eighth to be established (1862). It was not housed in the Federal Triangle because it needed several city blocks of ground space, so it is just south of the Federal Triangle and south of the Mall, but we can easily see the buildings from Constitution Avenue, since they resemble a little alabaster city all to themselves. This Department engages in agricultural research. It tries to control or wipe out plant and animal diseases and to improve crops and livestock. It has charge of the Weather Eureau, protects wildlife, and cares for the Nation's forest lands. It also helps with the construction of public roads and enforces the Food and Druss Act. the Food and Drugs Act.
The Department of Commerce came in ninth, in 1903. It is con-

cerned with developing foreign and domestic commerce, manufacturing, shipping, and fishing; it takes the decennial census of the United States, which covers population and unemployment; it

turing, shipping, and fishing. It takes the decennial census of the United States, which covers population and unemployment; it operates fish hatcheries; it conducts research in civil aeronautics; it establishes and maintains navigation aids, such as lighthouses and buoys; it surveys and charts the coasts of the United States; it develops working standards of measurements used in science, engineering, industry, and commerce; and it has charge of all matters pertaining to patents and patent laws.

The Department of Labor (1913) was the last Government department to be established. This Department has to do with promoting the welfare of the American wage earner. It collects and publishes statistics on all matters pertaining to labor; it has a Children's Bureau and a Women's Bureau; it administers naturalization laws and looks after the deportation of obnoxious aliens; it attempts to make peace between employers and employees; and it promotes a national system of employment offices.

But our busses have tarried a long time between the National Museum and the Federal Triangle, so we'll continue up the hill on Constitution Avenue toward the Capitol. On the way, if you'll look across the Mall you'll see a towering castlelike superstructure made of reddish sandstone that doesn't at all harmonize with the other Government buildings. It was designed in 1852, more than 20 years after James Smithson, an English scientist, without having even visited the United States "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." So the Smithsonian Institution is a private foundation under Government trust. The

National Museum belongs to the Government of the United States, but is managed by the Secretary of the Smithsonian Institution.

Near the tip of the Federal Triangle is the beautiful new Gov-

renment Archives building, that looks something like the Lincoln Memorial, and holds many of the Lincoln papers, as well as most of the precious old books, records, treatles, and manuscripts of the United States. Here the temperature and moisture and light are so controlled as to preserve forever the valuable Government documents. The beautiful pink marble structure, growing before our very eyes, across Constitution from The Archives, is to be the National Gallery of Art. You remember that Andrew Mellon gave an art collection to the United States in 1937, valued by experts at \$50,000,000, and offered to build a National Gallery of Art, as well as make an endowment fund of \$5,000,000 for the project. The Gallery is now being built by the A. W. Mellon Educational and Charitable Trust at an estimated cost of \$17,000,000.

Going on up Constitution avenue we realize that the Capitol is really on an elevation. This elevation at though only \$8 feet shows

Going on up Constitution avenue we realize that the Capitol is really on an elevation. This elevation although only 88 feet above the Potomac, is high enough to create the colloquial expression, "On the Hill." The two House Office Buildings, containing the offices of the United States Representatives; the Senate Office Building; the Supreme Court; and the Library of Congress, with its gorgeous white marble annex, are all "on the Hill."

The Capitol itself is the oldest Government building in Wash-

ington, having had its cornerstone laid by Washington himself in 1793. Flags fly over the Capitol by day, and immense floodlights play on its dome by night. The architecture of Washington is so planned that no structure overshadows the majesty of this

precious old building.

We'll leave the busses now at the Library of Congress where they haven't been missed, because the students are still exclaiming over the sculpture, the paintings, and the books in the grand old Library. We'll climb to the top of the dome. It's a winding hidden stairway that leads up some 285 feet to an exterior gallery where we can stand outside and see again what we have seen. As we look out this time over our Capital let us think of the three great branches of the Nation's Government. The judicial branch is typified by the Supreme Court Building; the legislative branch by the Capitol itself, spread out beneath our very feet, because by the Capitol itself, spread out beneath our very feet, because within this old building is the Senate Chamber over in the north wing and the House Chamber in the south wing; the executive branch is typified by the 10 departments down Constitution Avenue, together with the President in the White House.

And so I leave you, in imagination, on the dome of the Capitol of the United States. At any time you wish you may look out over beautiful Washington, your Capital, or you may look up at the statue of Freedom, or you may simply stand reverently and think on the meaning of the Government of our great Republic.

—Mrs. John R. Murdock.

A Midwesterner's View of War and Neutrality

EXTENSION OF REMARKS

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

STATEMENT BY HON. VINCENT F. HARRINGTON, OF IOWA

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I include herein a statement addressed to the people of the Ninth District of Iowa covering my views on legislation to preserve neutrality and keep our country out of

The statement is as follows:

So many of the good people of the Ninth District have written to urge me to support rigid neutrality legislation and keep our country out of a European war that a few remarks on the subject seem to be in order.

First, in regard to a neutrality act. We already have one. Since its adoption there have been three wars, and in each case our neutrality policy seemingly has played into the hands of the parties thereto that we commonly consider the aggressors; namely, Italy,

Japan, and General Franco.

It is evidently impossible to devise any type of neutrality law that will not favor some nations and retard others in case of war. that will not layor some nations and retard others in case of war. Our present act and practically every plan proposed obviously benefits the stronger nations—those with the ships to blockade the seas or the money and power to buy or seize what they need. In effect this legislation guarantees to would-be aggressors that we will not interfere in whatever ruthless conquests they may undertake, provided they stay away from our shores. If this is what we want, we already have it. My belief is that any and all neutrality legislation is only as good and as strong as the public opinion behind it. If public opinion is poisoned by propaganda or outraged by wanton aggression and ruthless atrocity the passion of our people is bound to get out of hand. It is doubtful if any neutrality policy could stand up against such pressure. Assuming that Congress would then change or repeal the policy we would be deliberately antagonizing one side or another and such an act would be sure to invite retaliation. Then we would be in for trouble.

There is some sentiment in Congress that the best solution is

There is some sentiment in Congress that the best solution is no neutrality act at all. This way we would continue to reserve our freedom of action in foreign affairs and go along and mind our own business as best we could. Its advocates argue that this course has proved the best policy in the long run. Also by this method no aggressor could be sure in advance of inadvertent American cooperation, as is the case under the present law and other plans suggested.

On one point all neutrality sponsors seem to agree: That we should retain the provision in the present law forbidding Americans to travel on belligerent ships and keeping our citizens out of

Regardless of the policy that Congress elects to follow, it can only succeed if backed up by a desire and determination on the part of our citizens to make it succeed, come what may.

Second, I do not agree with those experts who insist that if there

is another major war in Europe we simply can't keep out of it. I am pretty sure that we can keep out if we want to, and I, for one, am determined that we shall keep out.

In the last World War, if you remember, quite a few nations managed to keep clear of the fighting, notably Norway, Sweden, Holland, and Denmark. It is true that they lost a great many Holland, and Denmark. It is true that they lost a great many ships and suffered inconveniences, insults, and indignities in varying degree, but they kept away from the trenches, and most of their fighting men of that era still enjoy normal good health. It will be recalled, too, that after their shipping had been pretty badly shot up they worked out a deal with both sides whereby their normal needs, based on the previous 10 years' average, was permitted to go through the blockade, and after that they got along fairly well. They may have lost some of their "honor," but they certainly saved their hides!

I am not an expert, but I fall to see where maintaining our

they certainly saved their hides!

I am not an expert, but I fail to see where maintaining our foreign trade and protecting our foreign investments is more essential than keeping our present crop of soldier material out of European trenches. After all, we are a pretty resourceful nation, blessed with practically everything we need in the way of things to eat, wear, be comfortable, and enjoy ourselves with; so why worry so much about possible interference with our foreign shipping in case of war? Maybe we can learn to do without some of the things we now import and which, I am told, our own farmers and chemists can be taught to produce.

Third, I do not agree that the President is necessarily exceeding his authority by what the critics call meddling in foreign affairs. Under our Constitution the President is charged with the responsi-

Under our Constitution the President is charged with the responsibility of conducting our normal relations with other countries. That is his business. It is also his right and duty to use every peaceful means to exert the moral influence of this Nation in the interest of world peace and justice. If he can stop, delay, weaken, or confuse any elements seeking to start a war that would eventually endanger our peace, isn't it worth the effort? If he should go too far or show poor judgment, public opinion can and should stop him.

On the other hand, he has no authority to declare war, no authority to draft our boys to fight in European trenches. That is your business and my business. Only Congress can do that, and here is

one Congressman who won't!

Fourth, I am going to repeat what I have said many times before—"All our investments abroad and all our foreign trade are
not worth the slaughter of a single American boy. If so, what
mother will furnish that boy?" This means I am opposed to any
war except in defense of our national coast lines (island possessions
not included)—and I don't believe any foreign nation or group of
nations is going to be rash enough to attack us on the home
grounds providing we keep abreast of them in aircraft and defensive armament. fensive armament

Fifth, I do not honestly believe there is any serious danger of the United States becoming actively involved in a European war—unless the rank and file of the people want to engage in such a war (which they don't). Congress is responsive to the people, and if American citizens will stifle their sympathies and close their eyes and ears to foreign propaganda, I feel sure they will not get mad enough to want to go overseas and fight.

Yes, some of you may say, but look what happened in 1917. My answer is that this country learned an impressive and sorrowful lesson in the last World War and one which none of us cares to

lesson in the last World War and one which none of us cares to repeat. Will we profit by that experience? I think that we will. It is altogether up to you folks at home.

All of this may sound like a naive country boy talking, and maybe the so-called "experts" can shoot my arguments full of holes. But there are just enough naive country boys in Congress, who are either too dumb or too bullheaded to listen to the experts right now, and as long as we continue that way we are not going to send our children overseas again—unless you folks at home absolutely insist on it. absolutely insist on it.

Resolution in Behalf of Coffee Growers of Puerto Rico

EXTENSION OF REMARKS OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of Puerto Rico, with accompanying letters:

> HOUSE OF REPRESENTATIVES OF PUERTO RICO. San Juan, P. R., April 15, 1939.

Hon. SANTIAGO IGLESIAS.

Resident Commissioner for Puerto Rico in Washington,

House Building, Washington, D. C.
Sm: For the information of Your Honor I take pleasure in enclos-SR: For the information of Your Honor I take pleasure in enclosing herewith English copy of House Concurrent Resolution No. 9 of the third session of the Fourteenth Legislature of Puerto Rico entitled "Concurrent resolution to request from the Congress of the United States that it resolve the critical situation of the coffee growers of Puerto Rico," duly signed by the speaker of the House of Representatives and the president of the Senate of Puerto Rico, and certified to by the secretary of the House of Representatives of and certified to by the secretary of the House of Representatives of Puerto Rico.

Respectfully,

ANTONIO ARROYO, Secretary.

GOVERNMENT OF PUERTO RICO,

BUREAU OF TRANSLATIONS,

San Juan, P. R., April 15, 1939.

George W. Roberts, chief of the Bureau of Translations of the
Legislature of Puerto Rico, hereby certifies to the Governor of

Puerto Rico; and Luis A. Deliz, assistant chief of the said bureau,

certifies to the president of the Senate and to the seader of the Puerto Rico; and Luis A. Deliz, assistant chief of the said bureau, certifies to the president of the Senate and to the speaker of the House of Representatives of Puerto Rico, that each of them has duly compared the English and Spanish texts of a certain act (H. Con. Res. 9) of the third session of the Fourteenth Legislature of Puerto Rico, entitled "Concurrent resolution to request from the Congress of the United States that it resolve the critical situation of the coffee growers of Puerto Rico," and finds that the same are full, true, and correct versions of each other.

George W. Roberts.

GEORGE W. ROBERTS, Chief, Bureau of Translations. Luis A. Deliz, Assistant Chief, Bureau of Translations.

House Concurrent Resolution 9

Concurrent resolution to request from the Congress of the United States that it resolve the critical situation of the coffee growers of Puerto Rico

Whereas various agencies of the Federal Government have for some time been aware of the serious situation confronted by coffee growers in the insular possessions of the United States, and al-though several remedies have been suggested no definite program has been put into effect to resolve the difficult crisis experienced by these growers;

Whereas the coffee growers of Puerto Rico and of Hawaii, although whereas the conee growers of Puerto Rico and of Hawaii, although separated and at great distance from each other, and although their conditions are different, have in essence the same problem, inasmuch as both are forced to buy in a protected market having high prices and to sell their exports in unprotected markets, and it appears clearly that their condition can be remedied only through the grant of at least some measure of recognition by the Government of the United States, such as is granted to the sugarcane

Whereas since there are over 14,000 coffee plantations in Puerto Rico and around 1,000 in Hawaii, and since 500,000 inhabitants depend for their subsistence on the success of these plantations, the problem is urgent, involving not only a social problem but also just recognition of an old and well-established agricultural

industry;
Whereas on the financial condition of the coffee industry depends directly the welfare of almost half a million people residing in the coffee districts, and indirectly the welfare of 2,000,000 people, it becomes very important that the critical condition of the said industry be recognized, with a view to remedying the situation;

Whereas coffee plantations occupy a considerable portion of the territorial area of the island of Puerto Rico, and coffee is the only commercial product of importance cultivated in such portion and occupies 25 percent of all the tillable land of the island, and it being a product grown in the most mountainous regions, no substitute has so far been found that will yield better results to the growers:

Whereas the cost of producing coffee in Puerto Rico amounts to approximately 14 cents a pound, of which approximately one-half is a fixed cost, inasmuch as almost the whole industry is laboring under the burden of heavy indebtedness dating from the hurricane of 1928:

Whereas the high cost of production and the high standards of living in Puerto Rico and in Hawaii hinder the coffee growers thereof from competing with other coffee sold in the market of the

United States;

Whereas Puerto Rican coffee had a very good market in the various countries of Europe, which market it has gradually lost through the restrictions imposed by many of the various governments, and through the failure of the United States of America to take it into consideration in making its reciprocity treaties, the Puerto Rican growers find themselves in the difficult plight of not being able to export their coffee at prices in consonance with their high cost prediction:

of production;
Whereas since the continental United States consumes more coffee than any other nation in the world, and since consumption therein has reached, during the last 3 years, an approximate average of 1,750,000,000 pounds, it would be easy for the United States to solve the problem;

Whereas in order to enable growers to compete successfully it would be necessary to grant each grower a subsidy or compensation of 5 cents a pound;
Whereas through a direct compensation of 5 cents a pound made to the coffee growers of Puerto Rico and Hawaii, these could attain sufficient stability, and the emigration en masse of the mountain people to the cities, which will come unless the situation with which they are confronted is not permanently resolved, would be

prevented: Whereas the payment of this compensation of 5 cents a pound

would serve, among others, the following purposes:

1. Of allowing coffee growers under the American flag to compete in the American market with foreign growers of Arabian-type coffee;

 Of bringing with it a saving in direct emergency relief;
 Of rehabilitating the coffee industry of Puerto Rico, on which depend several hundred of thousands of people, and which is now experiencing deplorable conditions;

4. Of enabling the coffee growers to save their plantations from mortgage foreclosures, said plantations being now heavily burdened with liens the growers will not be able to meet at maturity; 5. Of enabling the United States to have a source of supply of coffee in case the Nation should be cut off from any South American

countries through such internal revolutions or disturbances as may occur in some of these countries;
6. Of greatly improving the general stability of the leading coffee

districts of Puerto Rico and Hawaii and eventually rendering them capable of self-support;

capable of self-support;

7. Of lessening social unrest and preventing an increased number of persons from leaving the coffee districts to move to the central cities, which are already overpopulated;

8. Of entailing recognition and encouragement of an industry in every way entitled to recognition and encouragement, and which, due to the absence of investments of American capital and to the distance which separates it from the continent, has found scant backing and small opportunity to protect itself, and, lastly, the possibility of furnishing through this compensation protection to the coffee growers of Puerto Rico against the consequences of the hurricanes by continuing the payment of 5 cents to the growers to the coffee growers of Puerto Rico against the consequences of the hurricanes by continuing the payment of 5 cents to the growers whose crops and trees are destroyed, taking as a basis therefor the average production of said growers during the 3 years preceding the hurricane, these annual payments assisting them in great measure in the rehabilitation of the plantations destroyed by the hurricanes and of farms in general by providing a source of income until such time as the farms are again in production: Now,

therefore, be it

Resolved by the House of Representatives (the Senate of Puerto Rico concurring):

First. To request from the Congress of the United States, as it is hereby requested, that a tax be levied on each pound of coffee imported into the continental United States (an import duty and

imported into the continental United States (an import duty and handling tax) and that the amount of this tax be one-fifth cent on each pound, to be applicable to all coffee imported, including the coffee from insular possessions.

Second. That a copy of this resolution be sent to the President and to the Speaker, respectively, of the two Houses of the Congress of the United States, to the President of the United States, to the President Commissioner for Puerty Ricc in Washington, and to the Resident Commissioner for Puerto Rico in Washington, and to the Governor of Puerto Rico.

MIGUEL A. GARCIA MENDEZ, Speaker, House of Representatives. R. MARTINEZ NADAL, President of the Senate.

Farmers' and Consumers' Financing Corporation Bill

EXTENSION OF REMARKS

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

Mr. LEMKE. Mr. Speaker, Members of Congress in amazement are asking, "What in thunder happened to the House Committee on Agriculture? Why did it not report out the cost-of-production bill?" Nothing happened to the committee. It has consistently refused to support and recommend real farm legislation. It has consistently supported and reported for passage make-believe, Alice in Wonderland legislation.

It has consistently refused to support the Frazier-Lemke refinance bill or the Massingale cost-of-production bill. It has consistently refused to consider the Farmers' and Consumers' Financing Corporation bill, H. R. 2766, the bill in which my friend Benjamin Marsh, of the People's Lobby, is vitally interested. It has consistently refused to consider this bill because it might interfere with the gamblers in food and food products. It has consistently refused to consider this or any other bill that would bring about just compensation to the farmers who feed and clothe the Nation, and at the same time assure just and reasonable prices to the consumer.

The Farmers' and Consumers' Financing Corporation bill will not interfere with legitimate handlers or distributors of agricultural products. But it will cut out the gambling, at the expense of human misery, in such products. For example, it will cut out the selling of millions of bushels of imaginary wheat, oats, corn, and barley each day. All this gambling is at the expense of the consumer and the producer. For example, when a farmer offers a thousand bushels of wheat for sale and then some gambler offers a hundred million of imaginary wheat in competition, you can readily see that the farmer will get the worst of the deal.

The final solution of our consumers' and agricultural problem is to cut out useless gambling in agricultural products. Let us have an honest distribution and an honest marketing system for that which the farmer produces.

Ever since 1920 there has been a real agricultural problem. Ever since 1920 farmers by the hundreds and thousands have lost their homes by mortgage foreclosure, tax, judgment, or forced sale. Hundreds and thousands of innocent men and women and children have been evicted from their homes—hundreds and thousands more lost their farms and became tenants or sharecroppers and serfs for absentee landlords. All this because they have been compelled to accept less for their products than it cost to produce.

While at the same time millions of boys and girls and men and women went undernourished—in fact were starving, slowly dying of malnutrition—in our overcrowded cities and towns. Ignorant people call this overproduction. Intelligent and reasoning men and women know that it is underconsumption and maldistribution.

Ignorant people say it is the law of supply and demand. Intelligent men and women know that the farmer had the supply and the hungry and starving people had the demand but for some strange reason the demand could not hook up with the supply. They had the urge but did not have the means. They had the desire to eat but the supply was beyond their reach because they lacked purchasing power. Too many middlemen and gamblers in food and food products drove the price up beyond their reach.

Since 1920 over 10,000,000 farm boys and girls have been driven from the farms into the already overcrowded cities and towns to swell the ranks of the unemployed—compelled to look for W. P. A. jobs or doles. This is an insult to our

intelligence. This condition has been brought about because we have compelled the men, women, and children who live on the farms to feed the Nation—to feed us—below the cost of production.

While, on the other hand, the consumers have been compelled to pay unreasonable tribute to the gamblers in food and food products. On an average the farmer receives only about 25 percent of what the consumer pays for the products produced. This condition the Farmers' and Consumers' Financing Corporation bill intends to remedy.

I am sorry that the House Committee on Agriculture does not see fit to report this class of legislation favorably out of the committee. But it seems that anything that interferes with the mighty gambling machine is always looked upon with suspicion. Not that the Members of Congress do not know the situation but because they are afraid to disturb existing conditions. They feel that gambling in the necessities of life always existed and therefore always must exist. Their slogan seems to be let bad enough alone for fear we will make it worse.

Our trouble never has been overproduction, but maldistribution and underconsumption. If the Committee on Agriculture would hold hearings and report the Farmers' and Consumers' Financing Corporation bill out for passage, then it would take the first step in the right direction. We have heard no valid criticism against the desirability of this class of legislation. There is not a single Member on the House Agricultural Committee who does not feel the necessity of doing something that will close the wide spread between what the farmer gets for his products and what the consumer pays.

This bill has for its object the bringing of the farmers of North Dakota, South Dakota, Montana, and other distant States closer to the markets of the East—to the consumer. When it becomes a law then it will not be necessary for millions of bushels of potatoes, apples, and other farm products to go to waste because of prohibitive prices to consumers.

When this bill becomes a law, mass production will be met by mass consumption. The North will then meet the South and the West will meet the East in the exchange of their commodities. New fields of industry and new fields of consumption will be opened. It will facilitate the exchange of farm products with manufactured commodities—the things produced by human energy—the wealth of this Nation—can then be exchanged without penalizing anyone, but it will prevent excessive gambling and speculative prices to the consumer.

The farmers' and consumers' financing bill is sponsored by the People's Lobby, an organization of many years' standing here in Washington, which represents the best interests of the consumers and also of the producers. The aim and purpose, among other things, of this organization is to protect the consumers from excessive prices due to gambling in agricultural products.

We have not been able to get this bill reported out of the Agricultural Committee. It seems strange that the committees always suppress legislation that the people really want and need. There is no reason why this bill, and many other bills, should not be reported out of the committee and discussed on the floor. Then the Members can get all the light and all the pros and cons and use their own best judgment when they dispose of the bill on its merits.

We have everything at our fingertips to bring about real prosperity. Our farmers are willing to produce and our consumers are willing to consume. Yet, the great American engine is stalling. The Executive at one end of Pennsylvania Avenue does not know how to open the throttle and start it going. Congress at the other end of Pennsylvania Avenue has become thoroughly demoralized and is afraid to move. In the meantime, the 13,000,000 unemployed and millions more ill-fed, ill-housed, and ill-clad demand action.

When the cost-of-production bill was up before our committee the other day a few subsidized farm leaders, whose membership for years has endorsed the principle of cost of production, sent letters and telegrams and called up mem-

bers of the committee, asking them to oppose the bill. They falsified and misrepresented the bill in every possible way in order again to deceive the farmer and at the same time to fool the consumer.

As a result, only one Democrat on the committee voted to report the bill out, together with five Republicans. Thirteen Democrats and four Republicans voted to suppress this legislation—voted to prohibit it from coming up on the floor of Congress so that the Nation might know who is who.

This star-chamber proceeding behind closed doors I always have and shall continue to condemn. Millions of men and women want the cost of production, the Frazier-Lemke refinance, and the Farmers' and Consumers' Financing Corporation bills reported out of the committee so that they may know after all the light has been turned on, why their Representatives in Congress are either for or against this legislation.

Yet the hour has arrived for sanity. The intelligent people must solve the agricultural and the unemployment problems or the unintelligent will solve them in the way that we will not like. These problems must be solved now. The Farmers' and Consumers' Financing Corporation, the cost of production, and the Frazier-Lemke refinance bills are the solution.

Get back of these three bills. The cost of production bill will save the small farmer and it will save the large farmer. It is not a "division of the wealth" bill. It is an agricultural bill which will take the whole agricultural structure out of the mire and make it self-sustaining. The Farmers' and Consumers' Financing Corporation bill will largely cut out the gambling in food and food products to the benefit of both the farmer and the consumer.

H. R. 5643-A Belated Measure

EXTENSION OF REMARKS

HON. JOHN R. MURDOCK

OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, much has been said in this debate today about rash legislation adopted in the hysteria of the moment, and it has been suggested that we are being swept off our feet in a patriotic impulse akin to a wartime emotion. The intensity of the debate most of the afternoon does reveal strong feelings as this debate has worn on, but I want to assert that my vote has not been influenced by any such hysteria. This bill is not quite as I would like to have it, but my vote is for it, and I expect to see the changes, which I would like inserted, to appear in the final legislation.

It is not cruelty nor hard-heartedness on my part that causes me to support this measure, but, instead, it is the safety of our people. While this country has been blessed by many noble spirits who have come here from many lands, it has also been cursed by dangerous criminals, and we are derelict in our duty if we do not protect our people from such alien criminals. It is indeed unfortunate if, after an alien has been ordered deported because of crimes for which he has been tried in our courts, the country from which he came will not receive him. It has been suggested here this afternoon by the gentleman from New York that such a bill as this enacted into law will give offense to many other nations. It must be very offensive, indeed, for us to detain an alien criminal who is so dangerous that his own country will not admit him to its shores. Would they have us turn him loose upon our society when they will not claim him? My own feeling is that this measure will be offensive only to the individuals who are detained and to their friends and accomplices, and I would like to know how much we owe aliens who have been pronounced criminals by our courts and who, accordingly, are dangerous to be at large in this country.

My opinion is that this law gives enough discretion to the Secretary of Labor to show any leniency that ought to be shown. We have been assured that crimes committed under the eighteenth amendment and the prohibition law will not enter into this matter. I see no reason why that should be brought up, and I would not want to see a law long since repealed enter into it whatsoever. Personally, I would like to have this measure provide for an appeal to the Supreme Court of the United States. In a private conversation with Congressman Hobbs, I find that he is not opposed to such a provision, and no doubt it will ultimately be added to this measure.

I feel that we might have had some such provision as this during the last 30 years, not because of any wartime hysteria, but as a simple protection for our people against dangerous characters that ought not to be at large among us. So I regard this as a peacetime measure and feel it was just as needful in 1913 as it is today or any time since the Great War.

I have received two letters within the last few hours from thoughtful men in Arizona, one an educated American citizen of German extraction, who severely condemns the work of the German Bund and a spokesman for it—William Kunze. He feels that racial groups and foreign "isms" are playing havoc with our institutions and recommends the utmost severity on the part of this Government in dealing with these enemies within our gates. The other letter is from the pastor of a great church, and he implores Congress not to go wild with wartime hysteria, such as he recalls in 1917–18, and he greatly fears that such legislation as this bill is but a step in the direction of establishing concentration camps, which have become a horror in Europe.

I agree with both of my friends so far as their conflicting philosophies will permit. However, I do not feel that it is justifiable to say that we are here setting up concentration camps in the European sense; but I do agree with the pastor who reminds us of the war hysteria of a generation ago. I remember what terrible things were done in the name of loyalty, when patriotism became pat-riot-ism. I do not wish to see such violent outbursts again, and I pray God there may be no occasion for such; but I do think we ought to distinguish carefully between a safe and sane peacetime measure, which this is, and the immoderate enactments which frequently go with war psychology.

Mining Needs Encouragement

EXTENSION OF REMARKS

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, one of the basic industries of our country, one upon which our national prosperity depends in large part, and upon which local prosperity in the far West depends absolutely, has been sadly neglected by national lawmakers. I refer to metal mining, not including gold and silver. Of course, the present administration deserves great credit for having stimulated domestic production of gold and silver, but the field that has been neglected has been the mining of copper, lead, zinc, and some of the strategic war materials, such as manganese and tungsten. I have lately traveled over a portion of the mining West and talked with hundreds of small mine operators, who have outlined a dozen or a score of legislative enactments needed to put mining on its feet again.

These are some of the things they have suggested: That the mining code be entirely revised; that the Government facilitate the sale of newly mined gold on the part of the small operators at its present price of \$35 per ounce; that the price of domestically produced silver be raised to 77 cents per ounce, or, as some would have it, 92 cents per ounce, although

a few demand \$1.29 an ounce; that R. F. C. regulations be changed to permit of loans for mining development with greater facility; that the S. E. C. rules be modified in such a way as to induce new capital to come to the mining field, and that the development of mining of strategic materials at home be directly encouraged. This list is not complete, for there are many other things that ought to be done to encourage mining.

At the suggestion of several councils of small mine operators in Arizona, particularly at the instance of the Yavapai Council at Prescott, I have introduced a bill, H. R. 6131, for the purpose of creating a Mines Finance Commission and authorizing funds to carry on its purpose. We of the West frankly recognize that mining is a venture and we feel that the Securities and Exchange Commission has been given a great task to protect the investing public from those who would sell chunks of blue sky or any worthless stock, as promoters have done so frequently in the past. However, we do recognize this, that investments in mines are different from investments in any other industrial enterprise and should be under different regulations both in the interest of the investing public and in the interest of developing this vital industry. That is the reason why we feel that we ought to have a separate commission for the encouragement of mining.

We are well aware of the fact that in late years there is a tendency to create too many commissions, thus making Government top-heavy, cumbersome, and expensive. Nevertheless, mining, from its very importance, deserves special consideration from our Government. All other lines of industry have been encouraged by tariff walls or by subsidies or by regulation both in the public interest and in the interest of the industry. Mining alone has been excluded from such benefits. My bill seeks for mining the same consideration

that other industries have long had.

Asking for this new governing body and set of regulations at this time is very opportune when we consider the stagnant condition of mining in this country, but inopportune when we consider the mounting national debt and our frantic effort to economize and balance the Budget. Let it be remembered that many of the industries that have been aided by our Government have received outright gifts, while some of them have been partially self-sustaining. The mining industry of the West feels that the money which they wish set aside to encourage mining shall not be a gratuity but shall be the Government's profit on the silver which is domestically produced. In other words, the seigniorage is asked to be set aside to further encourage mining in general.

The present price paid for domestic silver is sixty-four and a fraction cents per ounce. It passes indirectly into our monetary system at \$1.29 per ounce. It is only fair that Uncle Sam should place at the disposal of western mining this 100-percent profit which he makes on silver, so it seems to the miners. This is not asked, of course, as a subsidy or gift but as a liberalized loan, just as citizens receive productive loans through the Reconstruction Finance Corporation. the Farm Credit Administration, or the Home Owners' Loan set-up. We westerners feel that such a provision would be as safe and sane and reimbursable as the reclamation fund. which has done so much to build up the West agriculturally.

"My Thought Is of America"

EXTENSION OF REMARKS

HON. FRANCIS H. CASE

OF SOUTH DAKOTA IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

OBSERVATIONS ON OUR PRESENT FOREIGN POLICY

Mr. CASE of South Dakota. Mr. Speaker, an undeclared war is now going on in Europe-an economic war. The people whom I have the honor to represent, the people of western South Dakota, are tremendously interested in knowing the temperature of the war fever in Washington. They are alarmed by the obvious lack of neutrality in many newspapers and in many utterances by the President. They realize, as the Honorable Alfred M. Landon said in Kansas City a night or two ago, that "economic quarantine and economic assistance mean the inevitable sending of our sons to France to die."

Under permission granted by the House, I desire to place in the Record a comment on Mr. Landon's speech written by Mr. Ernest K. Lindley, known in Washington as a writer who has been generally friendly to the administration. The article is from today's Washington Post, headed "Neutrality Abandoned-Mr. Landon's Views-The President Has Abandoned Neutrality."

In his speech Wednesday night Alfred M. Landon redefined his

attitude toward the President's foreign policy.

He endorsed the President's appeal for a peace conference and urged him to try again. As he read Hitler's speech, the door is still left "slightly open for further discussion of the common destiny of the common people of this world."

But Mr. Landon at the same time put his finger on the point of weakness and of denger in the President's foreign policy. This

of weakness and of danger in the President's foreign policy. This is, that insofar as he is able to do so, the President has "abandoned neutrality for the United States." Mr. Roosevelt does not approach the European scene with impartiality. He has chosen sides—in fact, he has almost succeeded in making himself the chief spokesman for one side. Thereby he has weakened himself and the United States in the role of intermediary.

The dangerous aspect of the President's policy, as Mr. Landon sees it, is that if the great European war does break out, the measures "short of war" with which the President proposes to help

one side may lead to our full participation in the war.

MAY MEAN SENDING OF AMERICAN TROOPS

"If the side we are helping is winning, we may be able to stay out," Mr. Landon thinks. "But the situation is different, both actually and psychologically, when our side is losing. We—a proud people—would then be in the position of starting something we won't finish. Therefore we have an exact duplication of the situation when we entered the World War."

Mr. Landon wants us to face frankly the fact that "economic assistance means, in the end, 'doughboy assistance'"—the sending of American boys into the cockpit of Europe to fight.

of American boys into the cockpit of Europe to fight.

Mr. Landon's speech is extremely important, because for 2½ years he has been upholding the President's hands in the foreign field. After his defeat in the 1936 election he came to Washington and declared, in substance, that politics should stop at the water's edge. During the Panay crisis he called upon the Nation to back the President, and he was helpful to the administration in heading off the Ludlow resolution. Last winter he went to Lima, as second man in the American delegation, to prove to the world that the Monroe Doctrine is a national and not a party policy.

MIS POLICY MASS, ON LOWER MANY.

HIS POLICY IDEAS ON LOFTY PLANE

By action, as well as word, Alf Landon has put his consideration of our foreign relations on a lofty plane. If there has been any thought of partisan politics in what he has said, it has been very high-class politics. There was no suggestion of partisan politics in his speech Wednesday night, in which, for the first time since the 1936 election, he indicated where he disagreed with the President's foreign policy. He was temperate in tone and constructive in his attitude

Throughout the campaign of 1936 I traveled with Alf Landon as a newspaperman. I know that he is a man with a lot of "horse sense." You might not have suspected it from some of the speeches he made, especially during the latter part of his campaign, when he had been broken to harness by the Republican National Committee, the party's big contractors, and an extremely conservative "brains trust." But left to himself he can come as near as anybody I know to expressing the sentiments of the intelligent middle-class American citizen in the area between the Alleghenies and the Rockies.

As he said Wednesday night, he does not like to see people who claim to be American citizens organizing in "pro-Hitler bunds" or in "stop Hitler parades." He does not like to see people who claim to be American citizens "organizing as Czechoslovakians to regain the independence of that country." He wants a thoroughly American foreign policy—based upon our interests, not upon emotion. Throughout the campaign of 1936 I traveled with Alf Landon as

can foreign policy—based upon our interests, not upon emotion. But he acknowledges that emotional, economic, and other pulls are already making themselves felt. He is fearful that we couldn't stay out of a prolonged general war.

BELIEVES AMERICA USUALLY IS "SUCKER"

He believes that our naval power assures our security for his time, and probably for his youngest child's time. But he wonders "how long popular government can survive in a world armed to the teeth and constantly attacking or threatening to attack."

He believes we have usually played the "sucker" in our relations with Europe, and he remembers that we were involved in a World War by another President who tried to act as a mediator. But he urges the President to keep on appealing for peace.

There is not a trace of dogmatism or smugness in Alf Landon's speech. Nor is there any effort to belittle the gravity of the crisis that gribs Europe and Asia.

that grips Europe and Asia.

Alf Landon, moreover, has the courage to say that even though Hitler is Hitler, the Germans have a case. One of Mr. Roosevelt's great errors, I believe, has been his failure to acknowledge that the Germans have a case. If he had acknowledged it and stated it earlier, he would be in a stronger position now to act as an intermediate in confict to preserve the confict to the confic

mediary in an effort to preserve peace.

Alf Landon's speech ought to be read carefully in the Roosevelt administration as well as in the chancelries of Europe. Better than anyone else, I suspect, he has worded the sentiments of a great body—perhaps a majority—of the American people.

Mr. Speaker, evidence that Mr. Lindley is correct in that estimate of the sentiments of the American people is to be found in every newspaper that comes to my desk from South

May I call to your attention the opinion expressed in the following editorial from one of the smaller newspapers, the Belvidere Times:

OPINIONS IN HOME-TOWN NEWSPAPERS

The press and radio are still announcing daily that the greatest war on earth is to get started right away, and a flood of propaganda is being loosed in this country in an attempt to get the United States to stick its neck out if and when the big mass murder starts States to stick its neck out if and when the big mass murder starts over there. We have plenty to do to restore normal conditions right at home without butting in on European politics, and if President Roosevelt can't do any better in handling Europe's troubles than he has at home, Europe will be a lot better off if he doesn't meddle. Then, too, everyone knows that when an outsider attempts to step in and tell a bully that he can't pick on some smaller guy, he must be ready to whip the bully, if necessary. We can whip either one or both of them if it is necessary, but it isn't necessary to send thousands of American boys over there to be murdered just to show that we are a "good neighbor" of either England, France, or any other European country.

And here is the opinion expressed in the largest newspaper published in the district, the Rapid City Daily Journal:

IF EUROPE FIGHTS, IT WILL BE OVER EUROPEAN ISSUES

Today anyone with a long memory has a dreamlike feeling that

Yes; it was in 1914 that an expanding, ambitious imperial Germany, bitterly complaining of "encirclement," ran headlong into war. And the cry rang out, "Save the world from this barbarism, this militarism."

Imperial Russia, that historical defender of the rights of minor ities and of small neighbor peoples, rushed into war, and with her France, bound by a military alliance. England hesitated a bare moment, then plunged into the maeistrom.

It was a crusade, we were told, to halt the onrush of militarism and Kaiserism and barbarism. And the millions fought and died, and finally the United States joined the crusade.

Now the crop is harvested, a crop of dictatorships and woe and basic problems left quite unchanged after all the horror.

We know now that Britain, France, and Russia went to war for one basic reason: to prevent the rise of a great German power on the continent of Europe.

Today it is happening all over again. A resurgent Germany again seeks domination over Europe, and again Britain and France seek to prevent it.

Again Germany cries "Encirclement!"
Again the cry of democracy is raised, but Britain allies herself with the Polish dictatorship, and seeks aid from totalitarian Russia, while France gives dictatorial power to her own ruler.

A world recoils with horror at the German purges and persecu-

tions of minorities, yet we are asked to sympathize with Poland, whose treatment of minorities certainly leaves something to be desired, and with Russia, whose arbitrary and brutal purges rival

Let's not fool ourselves! What goes on in Europe Democracy? is a naked struggle for power that is not a whit higher in principle than that of two savage jungle tribes shooting and braining each other for possession of the best hunting grounds.

It is possible, of course, that if the British Fleet were destroyed,

the Empire broken up and transferred to a Germany that was supreme in Europe, the United States might be in an uncom-

fortable situation, perhaps in active danger.

But this time we ought to think in terms like that, in terms of stark and sordid realities and interests—and not in terms of a starry-eyed crusade or a slippery slogan.

At such a time and under such conditions, Mr. Speaker, it seems appropriate to recall what Woodrow Wilson said in 1914. In his appeal for a true neutrality of heart and mind, to which public attention has recently been directed by Mr. Arthur Peter, of Bethesda, Md., Mr. Wilson said:

THE EFFECT OF THE WAR UPON THE UNITED STATES WILL DEPEND UPON WHAT AMERICAN CITIZENS SAY AND DO

The spirit of the Nation in this critical matter will be determined largely by what individuals and society and those gathered in public meetings do and say, upon what newspapers and magazines contain, upon what ministers utter in their pulpits, and men proclaim as their opinions on the street.

It will be easy to excite passion and difficult to allay it. Those responsible for exciting it will assume a heavy responsibility, responresponsibility for no less a thing than that the people of the United States, whose love of their country and whose loyalty to its Government should unite them as Americans all, bound in honor and affection to think first of her and her interests, may be divided in camps of hostile opinion, hot against each other, involved in the war itself in impulse and opinion, if not in action.

My thought is of America. I am speaking, I feel sure, the earnest wish and purpose of every thoughtful American that this great country of ours, which is, of course, the first in our thoughts and in our hearts, should show herself in this a nation that neither sits judgment upon others nor is disturbed in her own counsels and which keeps herself fit and free to do what is honest and disinterested and truly serviceable for the peace of the world.

Mr. Speaker, if war comes-if military methods come-if the instruments of death and destruction are loosed, and if the position of the United States is committed without a declaration of war, those who dare to speak for international understanding and good will will be misunderstood and efforts will be made to muzzle their utterances.

Surely that time has not yet come. Surely every effort must be made to establish understanding and to keep open the paths of peace. Our ability to contribute soundly to solving the world's problems depends upon our ability to keep America from becoming a partisan in quarrels that do not directly concern us.

Everyone agrees that the Monroe Doctrine is the cornerstone of sound American foreign policy. No foreign footholds in this hemisphere. How can we tell European nations to stay out if we insist on mixing in over there? "My thought is of America."

American Neutrality

EXTENSION OF REMARKS

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

RADIO ADDRESS BY HON, BENNETT CHAMP CLARK, OF MISSOURI, ON MAY 5, 1939

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the senior Senator from Missouri [Mr. CLARK], over a national broadcast on Friday evening, May 5, 1939, on the very important subject of American neutrality.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Probably there is no question now confronting the American people which even approaches in importance the question of what our attitude is to be in the event that a war develops abroad which the President of the United States will be compelled to recognize as a state of war.

recognize as a state of war.

It is so plain that he who runs may read that the situation with regard to war in Europe is far more ominous and more threatening than at this time of the year 1914, just a few months before the outbreak of that titantic struggle to which we commonly refer as the World War. Far worse and far more tragic in its implications is the fact that already we are much further along the road to actual involvement and active participation in the next European war, even before it develops, than we were even 3 months before our entrance into the last war after 2½ years of carnage abroad. years of carnage abroad.

Already the effort is being made to have us choose sides and commit ourselves irretrievably to one set of prospective belligerents before as much as a single gun is fired in the war. Already the effort is being made to bring about commitments on our part the effort is being made to bring about commitments on our part which will again set our feet upon the path which inevitably leads to war. Already while we are still talking about our obligation to make the world safe for democracy, there is being made the suggestion of our responsibility to participate, if necessary, in another "war to end war," in which we will again send the best and bravest of our youth to die on foreign fields, thousands of miles from home, in quarrels which do not in any degree whatever concern us. Already high Government officials, including some eminent Senators, have contributed what they could toward bringing us into conflict by consistently thumbing their noses and making faces and shaking their fists at certain nations abroad. Already, while they still owe us nearly a score of billions of dollars from our advancements to them in the last war, the nonpayment of which is largely responsible for our continuing a 10-year period of economic depression. plans are already afoot to permit these European nations to make so-called token payments; that is, an insignificant portion of their old debts and in return be permitted to make new raids upon the Treasury of the United States, either in preparation or for the prosecution of a new and even more dreadful war. Already, while there is talk of our efforts being limited to "measures short of war," the effort is being made to commit us to policies which must inevitably lead us not only into participation in war but into bearing the financial burden of the whole war and in all probability the military burden as well. More than a year ago I charged in the Senate on my responsibility as a Senator that the Nation was to be subjected to a deliberate, amply financed, ably led propaganda participated in by high officials of the Government including high-ranking officers of the Army and Navy designed to make this country war minded and to prepare public opinion in the country for another costly adventure abroad. That prediction has literally come to pass and we have had in the public press, over the radio, and in the utterances and writings of high public officials the efforts to lash our people into the prewar frenzy that will ultimately lead to our being called upon to offer up hundreds of thousands of lives and billions of dollars of our national wealth in quarrels with which we have no direct concern. of our national wealth in quarrels with which we have no direct concern.

The desire to keep the United States from involvement in any The desire to keep the United States from involvement in any war between foreign nations is still very strong today—well-nigh universal in spite of all of the efforts of all the propagandists to involve us in war. But we cannot forget that there was an almost equally strong demand to keep us out of the last war. In August 1914 no one could have conceived that America would be dragged into a European conflict in which we had no part and the origin and ramification of which we did not even understand. Even as late as November 1916—after more than 2 years of carnage in Europe—the American people reelected Woodrow Willstand. Even as late as November 1916—after more than 2 years or carnage in Europe—the American people reelected Woodrow Wilson "because he kept us out of war." And yet, 5 months later we were fighting to "save the world for democracy" in the "war to end war." How hollow those slogans seem tonight!

In the light of that experience it is high time that we seriously apply ourselves to the hard practical question of just how we pro-

pose to avoid war if war comes again. No one who has made an honest attempt to face the issue will assert that there is any easy No one who has studied the history of our participation in the World War will tell you that there is any simple way out. There is none—no simple panacea, no magic formula. But if we have learned anything at all we know the inevitable and tragic end to a policy of drifting and trusting to luck. We know that however strong is the will of the American people to refrain from mixing in other people's quarrels, that will can only be made effective if we have a sound, definite policy from the beginning. No lesson of the last war is more clear than that such a policy cannot be improvised after war breaks out. It must be worked out in advance before it is too late to apply reason. I say with all possible earnestness that if we want to avoid participation in another war we must have a definite policy beforehand based upon an understanding of the problem confronting us.

I trankly confess that I make no pretension of knowing of a policy which can provide an absolute and infallible guaranty against involvement in war. Certainly there is no such policy which can be written into law or enacted as legislation. The only sure way to avoid involvement in another war is for another war not to break out. I have advocated preventive measures, and I have advocated preventive measures, and I have supported disarmament and settlement of disputes by peaceful means. But if these fail, or if nations insist on arming to the teeth for conflict and that conflict comes, then I insist that we must do everything in our power to stay out. And I believe that the United States can stay out of the next war if it wants to and if it understands what is necessary to preserve neutrality and is willing to pay the price for peace. Such a policy means the sacrifice of the transitory profits which come from warmongering and trafficking in death. It will be far, far cheaper for us in the long run in blood and treasure and in the perpetuation of our most sacred institutions. It will cost us millions but it will save us billions. It will save us from footing the bills for other nations whose aims are not our aims and whose democracy is not our de-mocracy. It will save us from sacrificing the flower of our youth—

your boys and my boys—in quarrels in which we have no interest.

In line with this policy and with the overwhelming sentiment of the American people, Congress has in the last few years passed and the President of the United States has signed three measures which, taken together, embody the neutrality law of the United States. I am proud to have been one of the authors of the original resolutions upon which the first Neutrality Act was based.

The present act is by no means perfect. It represents much less The present act is by no means perfect. It represents much less than the proponents of the original law advocated and sought to provide. But, imperfect as it is, the present neutrality law does take the American flag off of munition ships. It does prevent loans and credits to belligerents resulting in pre-war inflation and tending to involve us in the affairs of other nations. It does prevent us from entering upon the fake, spurious prosperity, which depends upon the ghastly trade in munitions and instruments of death. It does prevent the American flag's being used as a shield to protect a handful of American adventurers in their pursuit of the tear-rusted blood-stained gold to be made by trafficking in the the tear-rusted, blood-stained gold to be made by trafficking in the agonies of other people.

The present Neutrality Act, passed by an almost unanimous vote of both the Senate and House and signed by President Roosevelt, is now under vicious attack in the press and in the Senate. As I predicted would happen more than a year ago, a most serious effort is now being made to break it down and to destroy our theory of neutrality. To discuss briefly these efforts and to point out the import of the various proposals now pending before the Foreign Relations Committee of the Senate is the purpose of these remarks this evening. this evening.

this evening.

Let me say at the outset that the remark frequently heard that the Neutrality Act has been proved a failure and therefore should be changed is fallacy pure and simple and takes no account whatever of either the law or the facts. The Neutrality Act could not have been proved a failure because the Neutrality Act has never been invoked. On the other hand, the President has flatly disregarded the plain terms of an act which he signed himself and has flagrantly disregarded the specific provisions of the law which required him to put the Neutrality Act into effect in the case of the existing war between Japan and China.

The excuse is made that there is doubt as to the application of the

of the existing war between Japan and China.

The excuse is made that there is doubt as to the application of the Neutrality Act to undeclared wars. But there is nothing in the act itself which makes possible any such construction. Nor is there anything in the act which leaves any discretion in the President, after he has made a simple finding of fact based upon ordinary evidence. The law does not mention declarations of war. The law says, and I quote: "Whenever the President shall find that there exists a state of war between or among two or more foreign states, the President shall proclaim such fact, and it shall thereafter be unlawful to export, or attempt to export, or cause to be exported arms, ammunition, or implements of war from any place in the United States to any belligerent state named in such proclamation. United States to any belligerent state named in such proclamation, or to any neutral state for transshipment to or for the use of any such belligerent state." Here is no delegation of discretionary power. Here is only the imposition of the simple duty of ascertaining facts with, of course, the implication that the task of finding the facts will be diligently pursued and the finding of facts beneathy made. honestly made.

Certainly I would not so far reflect upon the intelligence and information of the President of the United States as to suggest or intimate that he does not know that a state of war exists between Japan and China. Everyone in the world knows that. But if such a state of war does exist then the obligation of the solemn public statute of the United States is upon the President, and has been upon him, to impose an embargo on munitions. Yet, despite a universally recognized fact, the United States has gone ahead supplying Japan with the instruments of death. The Chinese-Japanese situation does not represent a failure of the neutrality law but a failure of the executive department of our Government to enforce the

plain provisions of a public statute.

Furthermore, I should like to point out that the application of the Neutrality Act to Spain had nothing whatever to do with the principles or provisions of the original Neutrality Act and pro-ceeded upon an entirely different and diametrically opposite theory. No such provision was contained in the act as originally introduced by Senator Nys and myself. That provision was contained in a special resolution introduced by Senator Pittman at the urgent request of the State Department and rushed in for passage under whip and spur under the excruciating wall that a sudden emergency existed. Even if the noble Pittman and the distinguished experts of the State Department are now prepared to repudiate their own brain child—with which I am in entire agreement—it has nothing on the face of the earth to do with the real Neutrality Act, which I repeat has never been tried, which has never even been involved. been invoked.

been invoked.

There are three major proposals for amendment of the Neutrality Act before the Foreign Relations Committee of the Senate at the present time. No matter what may be the action of the committee, all of these proposals will later be before the Senate and the Congress for action. To my mind, it behooves every intelligent American citizen, particularly every father and mother, to study these measures and their effect. I cannot conceive of any more valuable purpose to which they could devote their time.

The three principal suggestions may be briefly summarized.

First, there is the proposal by Senator Elebert Thomas, of Utah, for returning to the old League of Nations theory of sanctions, the failure of which was notably exhibited by the complete failure of

failure of which was notably exhibited by the complete failure of the proposed Hoare-Laval sanctions against Italy. To choose any aggressor nation and impose sanctions is to choose sides and commit an act of war. It commits us to a war without the people of the United States knowing that we are doing it. It takes us down the path of foreign entanglements against which Washington and Jefferson, Monroe, Madison, and the Adamses solemnly warned us

Jefferson, Monroe, Madison, and the Adamses soleming warned as and prayed over us.

There are in the United States perfectly honest and intelligent people who conceive that it is our destiny and our duty to act as policeman for the world, to send American boys to die on foreign fields to protect Great Britain and France and Russia in the far-flung dominions which they have taken by ruthless force throughout the years. Those who hold such a view should support the Thomas amendment. I do not, and therefore I shall oppose it with averaging a tray command.

every vigor at my command.

There are those who regard war in the world as inevitable and who conceive that in the event of such a war it will be inevitable or may be desirable for the United States to be drawn into the war, to bear the principal burden of the war, and to make the major sacrifices both of men and money. Those who adhere to such a view should logically support the Thomas amendment. Some of

us who hold no such view will resist it to the utmost limit of our

mental and physical endurance.

In brief, the Thomas amendment is a proposal for us to choose up sides, even in advance of war, and to commit ourselves once more to a foreign war. Against it I solemnly protest, and I promise that no such policy will ever be enacted into law as long as some of us are able to stand upon our feet in the United States Senate

and discuss the issue.

and discuss the issue.

The next proposal is that of my friend, the distinguished chairman of the Foreign Relations Committee, Senator Pittman, of Nevada. His bill contains certain very meritorious features. If makes mandatory the operation of the Neutrality Act in the case of an undeclared war as well as a war following a formal declaration. I favor this, although I do not believe it to be necessary if the I favor this, although I do not believe it to be necessary if the President could be brought to carry out his plain duty under existing law. He reinstates and makes permanent the so-called cash and carry provisions of the old act which expired by limitation on May I. I favor that. But the Pittman bill wipes out the embargo now imposed by law upon the exportation of munitions to contending countries. It puts us again into the category of a nation building up a spurious prosperity by the sale of death-dealing agencies to one set of belligerents as against another set. It puts our feet again on a path which must lead inevitably to war. In its original form, Senator Pittman's bill makes us the ally of Great Britain and France in the Atlantic and of Japan in the Orient. For if we are to sell munitions on a cash and carry war. In its original form, Senator Pittman's bill makes us the ally of Great Britain and France in the Atlantic and of Japan in the Orient. For, if we are to sell munitions on a cash and carry basis that is the unescapable result. When the result of his own measure was pointed out to Senator Pittman, he introduced a new resolution imposing sanctions upon Japan. I do not like Japan. I do not like its ideology or its conduct. But I am not willing to send American boys to fight 7,000 miles from home in order to back up Senator Pittman's hatted of Japan.

The third proposal is a bill introduced by Senators Nye, Bone, and me. It is very simple. It simply continues the existing law with a few simple amendments. It makes the duty upon the President apply to an undeclared as well as a declared war. And in case the President does not perform his fact-finding function as to the existence of a state of war, it permits Congress by concurrent resolution, which does not require the approval of the President to make the necessary finding of fact.

If the United States actually desires to keep out of war, this seems to be the way. It provides by processes recognized by our Constitution the means of doing it.

Let us not forget that the greatest service we can possibly render to the cause of democracy in the world is to preserve democracy in the United States of America. War itself is the greatenmy of democracy throughout the world. Hitler, Stalin, and Mussolini, triple emblems of tyranny and murder, all owe their present power to the breakdown in national self-respect which followed the last war. It might be entirely possible for us to win a war against totalitarian powers and emerge as a totalitarian state.

I appeal to my fellow citizens for the old American way, the

state.

I appeal to my fellow citizens for the old American way, the way under which our fathers and mothers have lived, the way of the American Constitution. And to perpetuate that way I am certain that it is necessary for us to avoid entanglements with the quarrels of any nations whatsoever. Let us preserve dethe quarrels of any nations whatsoever. Let us preserve de-mocracy in the world by preserving democracy in the United States

of America.

Monetary Powers

EXTENSION OF REMARKS

HON. JOHN G. TOWNSEND, JR. OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, May 8, 1939

EDITORIAL FROM SATURDAY EVENING POST

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Congressional RECORD an editorial on monetary powers published in the Saturday Evening Post of May 6, 1939. The editorial is entitled "Power in the Closet."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Saturday Evening Post of May 6, 1939] POWER IN THE CLOSET

Mr. Roosevelt thinks the transfer of the financial capital of the United States from Wall Street to Washington will be remembered as one of "the two important happenings of my administration." That may well be; and it may be also that when we come to remember it we shall have a better understanding of what it

A Government that has seized the financial power out of private hands is not bound by that fact to assume a dictatorial character.

You cannot say so. You can say only that no government on its way to assume that character would fail to take that necessary step; and you can say that, of the governments in the world not step; and you can say that, of the governments in the world not yet arrived at the absolute form, the one that has most effectively employed financial power to gain control of the economic and political life is the American Government.

When Wall Street was the financial capital of the United States,

private bankers manipulated money and credit and administered the capital resources of the country, not without evil, certainly, yet they did it under two very definite limitations. Firstly, they were limited by the law of solvency; secondly, they could not alter the basic value of the dollar in which they were obliged to balance

Now that the financial capital is in Washington, the Government manipulates money and credit and administers the capital resources of the country under no limitations whatever. It is bound by no law of solvency and it has the power to debase the money in which its liabilities are calculated.

It is the fashion now to say that the financial power is too dangerous and too easily abused to be left in private hands; only the Government can be trusted to exercise it for the general wel-That is, of course, a very fine saying. Never does a governfare. That is, of course, a very fine saying. Never does a government extend its will and authority over the lives of people but to say it is done for the general welfare. Fascism, nazi-ism, Stalin-ism—all rest upon that saying. But that is another subject. What we are talking about here is a single thing—namely, the seizure of financial power by the Government.

When the financial capital was in Wall Street business was a selfish activity, and that was both good and bad. With the transfer of the financial capital to Washington, business becomes a political activity, and that is wholly bad.

activity, and that is wholly bad.

activity, and that is wholly bad.

From time to time an unguarded phrase lights up the administration's way of thinking about its financial power. A few weeks ago, at a White House press conference, the reporters asked Mr. Roosevelt how he felt toward the proposal to repeal the law that permits him at any time he likes to issue three billions of fiat money. His answer was that although he had no thought of printing the money, still the law ought not to be repealed because the power was "a good club to keep in the closet."

was "a good club to keep in the closet."

It was an emergency law that put that three billions free into the hands of the President. The Congress that enacted it was in a panic. Six years have elapsed. The President still has the power and thinks of it as a club. Any use he might make of this club would presumably affect only our internal economy. But he has in his hands, besides, a secret fund of two billions that may be used, and has been used, to affect our foreign relations.

When in 1933 the Government debased the currency it made a profit of 40 percent on all the gold owned by the Treasury—just as the kings of old, controlling the mint, made a profit by diluting the pure coin of the realm with base metal—and of this profit the sum of two billions was set aside and called the stabilization fund, to be handled by the Secretary of the Treasury, and accounted for only to the President. only to the President.

One of the principal activities of the stabilization fund has been to operate in foreign exchange. That means to buy and sell the

money of other countries.

When the financial capital of the United States was in Wall Street when the mancial capital of the United States was in Wall Street private bankers controlled the foreign-exchange market. They bought and sold the British pound sterling, the French franc, the German mark, the Dutch guilder, the Japanese yen, or any other national money, not with any political motive whatever but, selfishly, for profit.

Now, the United States Treasury, or, that is to say, the stabilization fund, controls the foreign-exchange market, and one of its applicated archievements have been to uphold the walks of the

applauded achievements has been to uphold the value of the French franc. Had it any political motive for doing so? The official answer is positively no. The French franc was in trouble, It might have collapsed. The United States Treasury saved it. The stabilization fund bought it with American dollars and it did not collapse and there was no chaos and everything turned out

did not collapse and there was no change very well.

Would the stabilization fund have bought the German mark or Mr. Mussolini's money with American dollars to save either of them? The question is offensive.

It was circumstantial only, very happily so, that the franc was French money and that France was one of the European democracles needing economic support against the dictators; and it happened very happily, too, that by upholding the value of French money we made it easier and cheaper for France to buy military planes in the United States just at a time when the President was planes in the United States just at a time when the President was promoting the emotional thought that we ought to arm the democracies of Europe against the dictators as a matter of our own national defense.

Yet when the Secretary of the Treasury went before Congress to argue for an extension of the stabilization fund, the law that created it being about to expire, together with the law that permits the President to change the value of the dollar, he said:
"This power is a weapon in reserve for the protection of American
interests. In the monetary field it is as important as a powerful
navy in the field of defense against armed attack."

Financial power regarded as an instrument of foreign policy, as a weapon—that is what we are talking about; that and the fact that it may be exercised in a discretionary manner by

Executive will.

Besides the \$3,000,000,000 club in his closet, besides the stabilization fund of two billions, the President commands the largest

banking institution in the history of the world. That is the R. F. C. It acts as a private bank, lending public money to private persons for all purposes; it acts as a Government bank, lending public money to Government agencies; and, thirdly, it acts as an international bank, sending public money on foreign errands; and the Aladdin fact about this bank is that if it loses money, to any amount, it has only to write the loss off and forget it because it is public money; and, in addition to this, the Government has a special bank, named the Export-Import Bank, that uses ment has a special bank, named the Export-Import Bank, that uses public money to finance such foreign trade as the State Department

public money to finance such foreign trade as the State Department is minded to promote.

When the financial capital was in Wall Street a foreign loan was for profit; it represented the voluntary-risk of private investment money, with no political implications.

Now that the financial capital is in Washington, it is the Government that lends money—public money—to foreign countries. These are bound to be regarded as political loans, and they are, in fact, political loans, however they may be disguised. Yet we find out about them after they are made.

There was a loan to China to finance the purchase of war supplies. The American public knew only as much about it as the angry Japanese public knew, and the United States Senate debated it after the fact.

There was a loan to Brazil through the Export-Import Bank. The

There was a loan to Brazil through the Export-Import Bank. Brazilian Government knew about it before the Congress had the

The only statement the stabilization fund ever offered to the

The only statement the stabilization fund ever offered to the scrutiny of Congress shows that it owns paper of the Central Bank of China valued at \$48,657,070 and holds for the Central Bank of China \$48,838,340 of gold. These are strange banking operations for the American Government to be engaging in.

Whose money is it? Does it belong to the Government or does it belong to the people? If it belongs to the people, were they asked if they wanted to lend their money to China? Not even Congress was asked. Among private American investors are thousands who hold defaulted Brazilian bonds. Were they asked if they wanted to lend any more of their money to Brazil? No. The Government loaned it for them, and they had nothing to say about it. Are the people whose money is risked in the maelstrom about it. Are the people whose money is risked in the maelstrom of foreign exchange ever asked which country's money they would prefer to uphold? No. The Treasury decides that. Not to speak of the money risk, who is aware beforehand of the political hazards involved in this foreign employment of public money?

The President makes loans to foreign countries. The Secretary of the Treasury, who was an apple grower, controls the foreign-exchange market. The Secretary of State, who was a Tennessee judge, makes the tariff schedules, not Congress any more. The State Department, the Department of Agriculture, the Export-Import Bank, and other Government agencies more and more conduct our foreign trade by a theory of commerce that was current

in the Middle Ages.

in the Middle Ages.

The material results are a matter of sad statistics in the annual book of foreign and domestic commerce.

Meanwhile, though it may be immaterial, economic freedom as we knew it when the financial capital of the United States was in Wall Street is very rapidly eroding for the greater benefit of all concerned, and now the principal business of the private banks that could not be trusted to manipulate money and credit and administer the capital resources of the country in a selfish manner is to exchange their depositors' money for the boundless bonds of a Government that treats solvency as a fetish and has given up trying to balance its own books.

And all of this has yet to be remembered.

Deportation of Aliens

EXTENSION OF REMARKS

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

EDITORIAL FROM SHREVEPORT TIMES OF APRIL 22, 1939

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial with reference to the deportation of aliens, published in the Shreveport Times of Saturday, April 22, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Shreveport (La.) Times of April 22, 1939] AFTER THE STRECKER DECISION

In the Joseph Strecker case the Supreme Court ruled that the defendant alien was not deportable, since he had severed his affiliation with the Communist Party prior to the institution of deporation proceedings.

Thus an alien agitator who thinks he may face deportation action need only withdraw from membership in his subversive organization. He is then free of any risk of ejection from this country.

The decision reveals the need for new legislation governing the deportation of aliens who advocate un-American doctrines. One of the best measures of this type now passing through the congressional mill is that of Representative Dempsey, New Mexico Democrat.

Under his bill, any alien who believes in or advocates, or who belongs to an organization believing in or advocating "the making of any change in the American form of government" would be subject to exclusion or deportation.

It is claimed that such legislation might be used improperly to

aliens. This "danger" does not deserve serious con-

sideration.

Aliens in the United States must avoid any appearance of association with subversive groups or movements. The aliens who are unable to do that deserve to be deported. It is up to the alien himself to conduct himself in such manner that he will not be suspected.

National Health Bill

EXTENSION OF REMARKS

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

RADIO ADDRESS BY HON. ROBERT F. WAGNER, OF NEW YORK, MAY 7, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting address delivered in the American Forum of the Air on the evening of May 7, 1939, by the distinguished Senator from New York [Mr. WAGNER]. The subject of the address is the National Health

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, this is the time of year when in every local community public attention is focused on the problems of childhood and maternity. As Child Health Day and Mother's Day pass in annual review, they stimulate searching inventories of health progress and mobilize sentiment for the better satisfaction of health needs. Their celebration this year has a special significance, for at last a broad-gaged national health program is being translated from expert blue prints into concrete legislation.

The national health bill which I have introduced does not break

The national health bill which I have introduced does not break with American tradition. In the earliest days of the Republic, Congress authorized Federal cooperation with the health regulations of the States and created a health-insurance system for seamen in the merchant marine. The sphere of Federal action has seamen in the merchant marine. The sphere of Federal action has steadily widened with the impact of social conditions and the march of medical knowledge. For two decades or more Congress has made some appropriations for cooperative health work by State and Federal agencies. From the outset of this administration our social-security program has conceived of health protection as an essential part of human security. The Social Security Act, which I sponsored in 1935, launched a program of Federal aid in maternal and child care, public health, and scientific investigation. Within the last 2 years Congress has approved special legislation for cancer research and venereal-disease control.

research and venereal-disease control.

The expanding role of the Federal Government in safeguarding the people's health has met with general approval. Today no responsible person challenges the proposition that the health of the people is a direct and vital concern of government—Federal as well as State. At this time it is obviously the part of wisdom to take stock of our unmet medical needs, to coordinate more effectively what has already been done, and to lay down a rounded program for future development. for future development.

America is justly proud of the world's finest resources of medical knowledge, facilities and personnel. But we have less cause for satisfaction with our efforts to make those resources serve the

needs of the people as a whole.

needs of the people as a whole.

As the general health level has been improved, inequalities in the distribution of medical care, hospitals and physicians have become more acute, especially as between rural and urban centers. As medical techniques have advanced, their cost has increased to a level far beyond the means of a large proportion of our citizens. This is not merely a problem for people on relief; the unpredictable cost of serious illness falls like a calamitous blow upon millions of families in the wage-earning and salaried groups.

These facts have been documented by survey after survey over the last 10 years, covering periods of prosperity as well as periods

of depression. Their bitter consequences are well known to many

a family within the range of my voice.

The American people are already meeting a bill for health services amounting to three and one-quarter billion dollars a year, 80 percent of which they pay directly in the form of private fees. Their plea is that the full blessings of medical science be brought within the reach of all. They ask, as eloquently expressed at the National Health Conference, that "our Government take health from the list of luxuries to be bought only by money, and add it to the list containing the inalienable rights of every citizen."

The national health bill was framed in response to that plea.

There is urgent need for its enactment now, if the lessons of the facts we have marshalled and the sound diagnoses we have de-

facts we have marshalled and the sound diagnoses we have developed are not to "lose the name of action."

The bill does not put the Federal Government into the business of furnishing medical care, or impose any program upon any State. The initiative will rest with the States, to make careful surveys of local requirements, to develop and administer their own plans suited to their local problems, or to decline altogether to cooperate under the legislation. The bill simply offers the helping hand of the Federal Government, through the time-honored methods of grants-in-aid, which has functioned so well under the public-health features of the Social Security Act. These grants would be available to aid cooperating State plans for maternal- and child-health services, for public health work and research, for the construction of necessary hospitals and health censearch, for the construction of necessary hospitals and health centers, for general programs of medical care, and for insurance of workers against loss of wages in periods of sickness. The Federal funds would be allotted and distributed so as to bring the greatest measure of Federal help to the States which are in the greatest need of health services and which are least able to meet those needs by their own resources. The program would thus work to

need of health services and which are least able to meet those needs by their own resources. The program would thus work to the special advantage of rural areas. To qualify for these grants the States must comply with certain necessary basic standards, including the selection of personnel on a civil-service basis, and the representation of the professions on advisory councils guiding the administration of State plans.

There are two aspects of the legislation which I want especially to emphasize. First, nothing in the bill requires the State to establish compulsory health insurance. Subject to appropriate standards to insure economy and efficiency of service, the nature and scope of any State plan and the method of its financing are for the State alone to decide. Second, the bill contains no threat of competition with existing voluntary and charitable hospitals or clinics. No new hospital construction will be financed except of competition with existing voluntary and charitable hospitals or clinics. No new hospital construction will be financed except upon a clear showing that existing facilities, private as well as public, are inadequate to supply the community's needs. Moreover, the States will be free to provide health services under State plans by compensating private hospitals, as well as private practitioners, for performing such services. The voluntary and charitable hospitals have an established place in our social system. That place has been jeopardized in recent years by the diminishing support of philanthropy. This bill, far from threatening such institutions, brings sorely needed financial help, to enable them to carry on more effectively the work which they have so long pursued, with unswerving devotion to the public service.

In effectuating a national health program, we propose to make haste slowly. Starting with a new appropriation in the first year of about \$80,000,000, the program would develop gradually under professional guidance in the light of experience and in the direction of clearly revealed human needs.

The enactment of this program would result in the practice of economy in the highest sense of the term. The national drain of medical bills, loss of earnings and earning power through illness and practice of a contractions of a contraction of the program and earning power through illness and practices of the term.

medical bills, loss of earnings and earning power through illness and premature death, reaches the staggering sum of \$10,000,000,000 a year. Federal, State, and local governments are already spending about \$500,000,000 a year for health services, devoted almost entirely to the care of human wreckage after disease has gained an unshakeable foothold. Beyond all that, sickness is responsible for fully one-third of all dependency on public relief or private charity. My State alone spends \$22,000,000 a year to maintain on home relief thousands of families whose bread winners have been incapacitated by sickness.

The essential problem is not so much to increase the total now spent for health services from all sources, but rether to redirect

spent for health services from all sources, but rather to redirect those expenditures more wisely and more economically. By the those expenditures more wisely and more economically. By the more prompt and widespread application of techniques and knowledge already available, we could save the lives of thousands of mothers who die in childbirth each year, as well as a large proportion of those doomed by cancer, tuberculosis, and other scourges of mankind. Increased public expenditures now, wisely directed, would yield substantial savings in the costs of medical care and the economic losses of illness and dependency—costs and losses which must inevitably be met later on out of the pockets of the American people, either as private citizens or as taxpayers.

There can be no question that from the long view the national health program is a sound and economical investment in the human

There can be no question that from the long view the national health program is a sound and economical investment in the human resources of America. That investment the American people are willing and eager to make.

In closing I want to pay deserving tribute to the enterprise and self-sacrificing labors of the medical profession in alleviating sickness and promoting the people's health. In the perfection of the bill and in its administration upon enactment we ask, and I am confident we will have, their constructive cooperation. For the national health program, like the profession, "has for its prime object the service it can render to humanity."

The State of the Union

EXTENSION OF REMARKS

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

ADDRESS BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN, AT ATLANTIC CITY, N. J., ON MAY 6, 1939

Mr. BARBOUR. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record a very excellent and embracing address entitled "The State of the Union," delivered by the senior Senator from Michigan [Mr. VANDENBERG | in Atlantic City on Saturday, May 6, at the twenty-fourth annual convention banquet of the Manufacturers Association of New Jersey. Having had the honor of introducing Senator Vandenberg to this large audience, I would appreciate the privilege of inserting his speech in the CONGRESSIONAL RECORD.

There being no objection, Senator Vandenberg's address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I am glad to come into this forum of commerce and industry tonight to discuss some vital phases of the state of the Union. I shall chiefly discuss domestic phases, because I believe our destiny must be settled here at home and not upon some alien battlefield. I decline to permit a war psychology, often mounting to a war hysteria, to dominate my thinking in this respect or to conveniently divert my notice from unsolved problems within our own too paralyzed United States.

I decline to rivet restless eves solely and exclusively upon alien

lems within our own too paralyzed United States.

I decline to rivet restless eyes solely and exclusively upon alien crises 3,000 miles away, despite their admitted influence upon our own economy. I decline because, even though war unhappily comes to other benighted continents, it need not necessarily come to ours. If we reject all needless interference in other people's business; if we refuse to surrender to the sinister, fatalistic propaganda that we cannot escape participation in other people's wars; if we embrace a rational neutrality which, no matter what our sympathies, declines to take the first steps that ter what our sympathies, declines to take the first steps that would put our feet upon the road to war; if these be our attitudes, there is no reason why we may not expect to keep America at peace and to keep democracy alive upon at least one continent in this distraught and war-scared world.

this distraught and war-scared world.

Certainly we cannot be blind to cataclysmic events abroad which remake an alien world and which inevitably affect the universal equilibrium. Neither can we be insensible to human suffering that flows from outrage and exploitation and conquest which we could never tolerate. But our own primary responsibility is to our own America. No objective could be greater, and no emotional internationalism can be a valid substitute. It is not our business to choose favorites and become partisans among the clashing imperialisms of the Old World. It is not our responsibility to police the earth. It is not our need to defend frontiers beyond the insulating oceans which, though foreshortened by science and invention, are still the greatest protection ever bestowed by Providence upon a favored land. We tried once before to "make the world safe for democracy," and we failed, despite heroic sacrifice which will continue to burden generations yet unborn. About the only will continue to burden generations yet unborn. About the only memento left to us is some \$12,000,000,000 of unpaid foreign war debts and a dislocated economy which has plagued two decades and will continue to plague many yet to come. Our task is to make America safe for democracy and to make democracy safe for our own United States.

We certainly shall not do that by going to war. Our participation in another world war would swiftly and necessarily force our own Government into the strait jacket of an American dictatorship. Even though victory be reasonably prompt—and we never yet lost a war—the new and unavoidable debt could crush the public credit. We cannot maintain our democracy that way; and we should incorrigibly resolve to keep out of war unless war comes to our own

America.

It is said, and often earnestly believed, that we can favorably influence the outcome of other people's wars—and thus serve our own welfare by proxy—by boycotts and embargoes and sanctions and other measures said to be "short of war." I think that phrase—"short of war"— is an utterly dangerous delusion. I do not believe we can be half in and half out of one of these modern wars. We stay thoroughly out or ultimately we are all the way in. If we are "going in," let us deliberately and consciously go all the way in, with all the might and thunder of our every resource, thus to make shortest possible work of such bad business. But until we are ready deliberately and consciously to go all the way in, let's deliberately and consciously stay all the way out.

LXXXIV-App-117

It is said, and often earnestly believed, that we might hasten peace for the world—and thus for ourselves—by taking moral sides as a sort of vicarious ally. My answer is this: A great historian, testifying before our Senate Foreign Relations Committee last week, asserted that President Wilson's great peace note of December 1916 might have stopped the World War if it had not been preceded by unneutral acts and attitudes which robbed it of the impartiality essential to success. The moral is obvious. True neutrality, so long as possible and practical, is our role of greatest pacific service to ourselves and to the world.

Having said these things. I dismiss the war equation from the

Having said these things, I dismiss the war equation from the balance of this discussion. I do not think it is necessary for us to go to war even if Europe goes to war. I do not think that the greatest dangers to the maintenance of democracy in the United States are across either ocean. I think the greatest dangers are right here at home. I think we grievously err if we concentrate our gaze on distant horizons and forget the domestic necessities of our own people and our own economy right here in home, sweet home. If our democracy dies, it will die from internal decay, not from external assault. I think the maintenance of democracy in the United States, linked as it inevitably is with our way of life, depends chiefly at the moment upon the restoration of profitable commerce and industry, which shall once more be liberated to make economic democracy work; liberated to revive private employment, private investment, and mass prosperity in the only way these things can be achieved; liberated to build anew the American system of free enterprise for a once-more happy and contented people.

The maintenance of democracy in the United States depends, of course, upon other factors, too. For example, it requires constitutional fidelity to the "checks and balances" of a free and independent Congress which declines to goose-step under "government by Executive decree," and which recaptures the delegated powers which Executive decree," and which recaptures the delegated powers which too frequently have given the President a one-man control over the destinies of 130,000,000 people. It requires constitutional fidelity to the "checks and balances" of a free and independent judiciary, culminating in a Supreme Court which acknowledges no obligation but its oath—a Supreme Court which was saved 2 years ago from a sort of New Deal "Munich Pact" when brave Democrats joined with loyal Republicans to repel a yoke of dictatorship which, please God, shall never curse America in any form. It requires constitutional fidelity to the Bill of Pights under which life liberty and tional fidelity to the Bill of Rights under which life, liberty, and property are vouchsafed to every citizen, no matter what his nativ-ity, his color, his race, or the altars of his religious faith. These

ity, his color, his race, or the altars of his religious faith. These are the rocks whence we are hewn.

The maintenance of democracy in the United States requires eternal vigilance against both fascism at the right and communism at the left, or any Washington paraphrase of these. We did not reach the heights—the land of greatest individual privilege and greatest common opportunity ever known to civilization—by submitting the minutiae of our lives to Government dictation and control. We did not erect the world's supreme achievement of effective and fruitful liberty by making the citizen the subject of the state. Of all monopolies, the most dangerous is the monopoly of political power, whether exercised by master minds or mobs. These alien ideologies, whether imported from Rome, Moscow, or Berlin, or whether built into the tyranny of domestic bureaucrats Berlin, or whether built into the tyranny of domestic bureaucrats who often differ more in name than method from the others, these alien ideologies are at violent variance with the institutions that are our inheritance, our benediction, and our only hope. They are vipers in Columbia's bosom. Against all such we must set ourselves like flint. This shall remain a representative Republic, in the traditional American system, or the lamp of liberty snuffs out for us and for the world.

The maintenance of democracy in the United States requires the preservation of legitimate States' rights and home rule. This country is physically too big, its characteristics are too complex, its sectional problems are too diverse, its people are traditionally too autonomous, to be run in all the intimacies of life from one central control. While we must frankly concede that there is constantly increasing need for Federal jurisdiction in constantly multiplying interests preprietties the great fundamental feet remains tiplying interstate perplexities, the great fundamental fact remains that we want, and we must have, the maximum retention of selfgovernment in State and local units or we shall finally face our

own Frankenstein.

I may say, parenthetically, that the whole problem of relief is involved at this point. So long as we have Federal dictation and control in relief we shall have needless and costly overhead; we shall have waste, extravagance, exploitation, and politics. Not until we have a unified relief formula under which State and local government, supported by Federal grants-in-aid, shall recapture sole responsibility for relief administration and for the selection of relief methods; not until we restore home responsibility as well as home rule shall the taxpayers get their money's worth or the reliefers themselves get their full share of the relief dollar.

The maintenance of democracy in the United States requires

The maintenance of democracy in the United States requires yet other things. It certainly requires a constantly progressing effort on the part both of our Government and of our society to distribute the largest possible dividends of democracy to the greatest possible numbers of our people. It requires practical social-mindedness sleeplessly at work for the common good. I emphasize social-mindedness as opposed to socialism. The one is a concept of fellowship in a free economy; the other is compulsory submission to deadening dogma. The one giorifes individualism and its opportunity—aye, its privilege—to helpfully serve the brotherhood of man; the other kills individualism and

any opportunity for anybody. The best answer to irrational radicalism is rational liberalism. I am not speaking of a "liberal" as one who has been too frequently correctly described as having his feet firmly planted in midair. I speak of the "liberal" as one who recognizes many maladjustments and maldistributions in this country and who proposes to give them practical correction without creating more problems than he solves; who rates human rights as infinitely superior to property rights, yet who does not neglect to remember that property rights are among the not neglect to remember that property rights are among the greatest of human rights; who wants to lift the lower one-third up without pulling the other two-thirds down; who is social-minded without being socialistic; and who, above all else, recognizes the Constitution of the United States as the most liberal

human document ever penned by man.

This brings me back to the particular theme that I wish to stress tonight; namely, that the maintenance of democracy in the United States finally depends upon the restoration of general employment and general prosperity through the restoration of conditions permitting profitable commerce and industry to thrive are steady of the winter restoration of a very again. Otherwise, we shall face the sinister creation of a vast, permanent relief population whose necessities and demands will declinate our resources, degenerate our morals, and confront us with the historically suicidal doctrine that "government owes every man a living." Government does not owe every man a living; but it does owe every man a chance to make a living and

a chance to make a life.

In the last analysis, I repeat, the maintenance of democracy in the United States requires renewed proof that this American system can once more function to produce enough real jobs at real wages to go around among those who are willing and who want to work. A contented people, living in their own homes, and profitably employed and enjoying their share of the comforts, the leisures, and the privileges of life; such a people are immune to the lure of and the privileges of life; such a people are immune to the lure of subversion. I do not mean that we lack the rugged character which will once more suffer, if need be, for the Republic. But I do mean that the whole world has moved into a new psychology of human relationships; and I do mean that the new spirit of a social-minded age requires of material democracy that it shall justify itself—that it shall, in the language of the street, "deliver the goods." I do not mean that we should trade liberty for security; those who try it usually lose both. But I do mean that, keeping liberty, we must strive for the greatest possible measure of security for the greatest possible numbers of our people.

That is democracy's prime challenge to business and government.

That is democracy's prime challenge to business and government. But it is a challenge first to government, because government must first give business a fair chance. Business has not had a fair chance the last few years. It does not have a fair chance today. If given a fair chance, based on dependable confidence and accepted in the spirit of this new day, I assert my deep conviction that America could be definitely out of its depression in 6 victorious months.

Do not mistake me. Business cannot unload all responsibility on government, any more than government can unload all responsi-

government, any more than government can unload all responsibility on business (as it often has tried so desperately hard to do). Business must forget its yearnings for "the good old days" when "everything went." America will never go back—never should go back—to the old deal of frenzied finance, speculation, exploitation, and piracy in the market place. Business must faithfully cooperate in whatever new social-minded devices prove ther practical and rational value in the defense and promotion of the general welfare. Business, more than ever, must accept its opportunities and responsibilities in the nature and the spirit of a quasi public trust. But it is not called upon to surrender its birthright of free enterprise. It is not required to surrender to so-called "planned economy"—not, at least, without a fight—when it can read the League of Nations charts showing that among 20 leading industrial nations of the world, we (as a result of our "planned economy") stand twentieth at the bottom of the list in degree of recovery between 1929 and 1938. It is not required to surrender to those who have said "we planned it this way, let no one tell you differently"; it is not required to surrender, when it knows that the International Labor Office at Geneva reports 9 major countries with less unem-Labor Office at Geneva reports 9 major countries with less unemployment during the first quarter of 1939, and 13 countries with more unemployment, while the United States shows the greatest increase in unemployment in any country in the world. It is not required to subordinate individual initiative to the mandates of required to subordinate individual initiative to the mandates of collectivism dictated by central bureaucrats, most of whom never met a pay roll in their lives. Nor can it be expected to overcome, with its own resources, the fateful handicaps that may be flung upon it by unwise, unsympathetic, or improvident government. Business is the door, but government is the key. I repeat my profound belief that the "key" can open the "door" behind which lies the happy destiny of 130,000,000 people.

All right; what can government do?

Well, first of all it can put its own fiscal house in order. It can turn back from its pell-mell, headlong dash down the slippery road that leads either to bankruptey or to equally suicidal inflation or to the repudiation of debts. It can guit deliberate deficit spending

that leads either to bankruptcy or to equally suicidal inflation or to the repudiation of debts. It can quit deliberate deficit spending—I believe it is now politely called "deficit investing"—which proceeds on the Houdini notion that you can turn a \$60,000,000,000 country into an \$80,000,000,000 country by spending the difference. It can quit the prodigal tempo which counts \$15,000 going out of the Federal Treasury every minute of each 24 hours while only \$8,000 comes in. Until it does there can be no such thing as the restoration of reliable business confidence and the creation of a reasonable business assurance that taxes piled on taxes—like Pelion on Ossa—will not bury what is left of business under mountains of disaster.

The total cost of government, National, State, and local, in 1937 was seventeen and one-half billion dollars. How much is seventeen and one-half billion dollars? It is the total annual income enjoyed that same year by all the people in all the States Mississippi River.

In 1913 the cost of all government in the United States was \$34 per family. Now it is \$540 per family. The cost of all government is more than the year's yield from soil and earth—crops, livestock, metals, coal, oil, and lumber. It is more than we spend for food, clothing, and rent. And Washington sets the pace! If we were to confiscate every dollar of every American income in excess of \$5,000 as shown by the income-tax returns it would not pay the bill for the Federal Government alone. Out of every nine persons employed in the United States, one—one out of nine—is on a government pay roll. ment pay roll.

Our net Federal deficit from 1931 to 1938 actually totaled more Our net Federal deficit from 1931 to 1938 actually totaled more than all the deficits of all the other major nations of the world combined for that same period. Our deficit this fiscal year will pass \$4,000,000,000. The Treasury announced on February 15 that it had paid out in the first 7½ months of this fiscal year \$90,000,000 more than the estimated revenue for the whole 12 months. In other words, every penny spent from February 15 to next July is money we do not have and cannot get, despite the fact that our taxes already are an all-time record high.

These are shocking facts. They also are significant facts. New York State had a Governor in 1932 by the name of Franklin D. Roosevelt. On July 30, 1932, he said:

"Any government like any family can for a year spend a little

"Any government, like any family, can for a year spend a little more than it earns; but you and I know that a continuation of that habit means the poorhouse."

He was right:

The United States had a President in 1933 also by the name of Franklin D. Roosevelt. On March 10, 1933, he delivered an heroic message to the Congress in which he dedicated himself bravely to retrenchment as the way to recovery, saying:

"Most liberal governments are wrecked on the rocks of loose fiscal

Again he was right! Indeed, he was so right that by faithfully following this policy his administration produced more economic recovery in the subsequent 120 days than was ever previously rerecovery in the subsequent 120 days than was ever previously recorded in a like span of time in all economic history. Then something happened—and it has been happening ever since. We completely reversed the course. And that's the chief thing that is the matter with us. It is the greatest of all deterrents to business and reemployment. Therefore it is the chief hazard to the maintenance of democracy in the United States.

Oh, but they say, "You cannot balance the Budget today; it is impossible." Let's be entirely frenk about it. It is impossible.

Oh, but they say, "You cannot balance the Budget today; it is impossible." Let's be entirely frank about it. It is impossible—this year or next. We have created too many new instrumentalities of government in recent years, many of which are sound in principle, which the people would not permit to be abandoned. But we can stop the creation of new instrumentalities where we are.

ciple, which the people would not permit to be abandoned. But we can stop the creation of new instrumentalities where we are. We can quit making new ones until we have pruned the old ones and caught up with the bills for those now existing. We can postpone every new governmental enterprise not immediately essential and provably indispensable. We can clean house, wherever possible, in respect to existing undertakings. An evidence of a real will to thrift, an evidence of a dependable conservation purpose, will go far toward anticipating the solvency and stimulating the confidence which this national crisis so badly needs.

I think there is something to the Presidential theory that we must have an \$80,000,000,000 country in terms of annual income in order to sustain the Government structure and the Government services now demanded by the people, because it is not easy to see how we can close the unavoidable portion of the budgetary gap without increasing revenue from increased wealth rather than from increased taxes. But here's the question: How shall we get an \$80,000,000,000 country? There are two schools of thought. One—the one, fortunately, in receding control of popular thinking at the moment—says the way to do it is to spend your way to higher levels, to borrow yourselves out of debt, to lift yourselves by your bootstraps, to out-Ponzi Ponzi, and to bet on Aladdin's lamp. You are entitled to correctly suspect that I do not belong to this school. The other school—to which I do belong—believes that the quickest, surest way to become an \$80,000,000,000 country is to embrace reasonable governmental economy; to strive toward a balanced Budget; to set the public credit once more on firm foundations: to ensurest way to become an \$80,000,000,000 country is to embrace reasonable governmental economy; to strive toward a balanced Budget; to set the public credit once more on firm foundations; to encourage public and private confidence; to stop the throttling dread to more and heavier taxes; and thus to stimulate the release of the forces of American private enterprise and investment, which, given the chance, can and will produce the wealth to make a sound and solvent \$80,000,000,000 country in which life once more will be a benediction, and in which democracy will be entirely safe.

But this is far from all that Government must do as its share in

But this is far from all that Government must do as its share in this partnership recuperation. Mind you, I am not talking about saving business for its own sake. I am talking about saving business as the one and only instrumentality which can save the rest of us. Every man, woman, and child in America has a vital, personal, individual stake in healthy business. The truest slogan I ever saw plastered across the billboards of this Nation was that famous poster which shouted "What hurts business hurts you!" It

famous poster which shouted "What hurts business hurts you!" It is on that clinical basis that I proceed.

Government must do some other things. It must quit putting itself into commercial competition with its own citizens. No private business can compete with public business. The battle is lost before it begins. Government can and must police business at points

where a definite public purpose cannot be otherwise subserved. Obviously, for example, Government must effectively regulate monopoly wherever it permits monopoly to persist. It must regulate competition, too, wherever competition involves unfair trade practice. But all regulation should be the minimum consistent with a sound public purpose. It should not be the mere meddlesome, snooping, inquisitive activity of over-zealous bureaucrats who, unconsciously or otherwise, bring us uncomfortably close to some of the curses of totalitarianism. Why, some of them can think up so many questionnaires that the average businessman spends half his time trying to puzzle out the answers and is finally reduced to the temperament of a jitter-bug. An essential minimum of regulation—a vitally essential maximum of legitimate freedom—and no public competition with private business—that should be the rule. the rule

and no public competition with private business—that should be the rule.

Then when Government, experimenting in unexplored fields, finds that it has made a mistake, it should frankly admit its error, retrace its steps, and start over again. It should not doggedly give the guinea pig another shot of poison on the theory that its victim's death is preferable to its own confession of infallability. As a matter of fact, confession of fallability is a refreshing and encouraging thing, because it is a human thing, and nothing is more disastrous than to have our overlords get the idea they are superhuman. We have very recently enjoyed the novelty of our first contemporary experience with this human quality. After 2 years of relentless bombardment, the Government has grudgingly confessed that the "full reserve fund" under title 2 of the Social Security Act, that monstrosity which would ultimately accumulate the unthinkable sum of \$47,000,000,000, is unnecessary; and, therefore, that it is necessary for pay-roll taxes to increase 50 percent next year and 200 percent in the subsequent 8 years. We shall probably be permitted to legislate accordingly. This will be a tremendous boon to every employer and to 40,000,000 workers. It is the most encouraging thing that has happened in a long while. There is no discredit to its authors in conceding that such a far-flung experiment as the Social Security Act was not born perfect—like Minerva from the brain of Jove. The hopeless thing is to pretend otherwise.

There are numerous other opportunities for this sort of helpful appraisal and improvement. Emphatically one of them involves the

There are numerous other opportunities for this sort of helpful appraisal and improvement. Emphatically one of them involves the Wagner Act and the National Labor Relations Board. Nothing would be more effective as both sedative and stimulant to business than a realistic resurvey of the Wagner Act, not only for the sake of the public welfare but also for the best long-range welfare of labor itself. I would not take away from labor one single privilege set up for it in its new statutory bill of rights. It is entitled to organize and to bargain collectively through agents of its own choosing, wholly and completely free from all duress and all coercion. It is entitled to unrelenting protection against adverse employer tactics, which in some instances have shocked the public conscience and which could not persist along with maintained democracy. But, secure in these rights, labor itself should be selfishly eager to remedy any inequities embedded in the original law, because it should be selfishly eager to pacify industrial relationships in the interest of uninterrupted jobs. Labor harms its own cause when it permits innocent employers to be the helpless victims of jurisdictional disputes. There is no sound reason why employers, under such circumstances, should not have the right to appeal for determinative elections. Again, the dignity of collective heads of the self-shall grain when contracts these well are a self-shall grain when contracts these well appeared the self-shall grain when contracts the self-shall grain whe There are numerous other opportunities for this sort of helpful employers, under such circumstances, should not have the right to appeal for determinative elections. Again, the dignity of collective bargaining will immeasurably gain when contracts, thus voluntarily achieved, are policed against infraction. Again, the board which administers the Wagner Act should be an independent tribunal—not plaintiff, prosecutor, judge, and jury, often serving all the intolerances of an inquisition. Meanwhile, the law should say that there is no place for violence, for coercion, for duress, for lawlessness, or trespass by anybody, any time, anywhere in these or any other situations.

We need a friendly, sympathetic meeting of minds upon these

or any other situations.

We need a friendly, sympathetic meeting of minds upon these problems of employer-employee relationships. We need an end to hymns of hate—both ways. We need the mutual acknowledgment of partnerships. We need cooperation. We need to realize, upon the one hand, that labor is entitled to an ever-broadening share of the fruits of its own production; upon the other hand, that employers cannot share a profit until they are permitted to make it. Jobs must exist before they can be passed around. We need government of all the people, for all the people, by all the people once again.

need government of all the people, for all the people, by all the people once again.

Now let me refer to one final thing—although it far from finishes a complete inventory—that government can do to create a fair chance for business to answer "reveille" and "forward march." It can remove all the artificial uncertainties which are needlessly created by maintaining vast, floating, executive powers to be used at the whim and discretion of the President—powers nominally and rationally and constitutionally exercised by 531 Members of Congress, reflecting the deliberative judgment of the whole Nation. Under these extraordinary executive powers—temporarily granted to serve an emergency which seems never to end—the President can change, over night, the value of the American money in which business must figure its commitments and expectancies. He can change, over night, the protective tariffs upon which American business often indispensably depends for its assurance of a domestic market. He can manipulate a \$2,000,000,000 so-called "stabilization fund" with no questions asked, and none permitted. He can use blank checks for relief in almost any fashion his fancy dictates—and it too often dictates blighting competition for private industry. He can do these things solely on his own responsibility as completely as Bergen controls McCarthy. In the face of such

unpredictable hazards, business is irresistibly at the mercy of government. More specifically, it is at the mercy of 1600 Pennsylvania Avenue, where hostile "purges" and conciliatory "appeasements" too indiscriminately succeed each other to permit of any dependable prophecies for longer than 24 hours at a time. A major contribution to the restoration of natural opportunities for business, American style, would be for Congress to reclaim these floating powers-all of them—and to reestablish a representative republic.

I must conclude this analysis. It is by no means the whole story respecting the perplexing jeopardies that beset "the state of the Union" tonight. For example, I have had no opportunity to speak of agriculture and the fundamental need to assure it its fair share of the annual American income. But I have wanted to concentrate upon some of the problems in which my auditors tonight are particularly concerned. I have wanted to concentrate upon my profound belief that a realistic rapprochement between Government and business—the creation of a new and sympathetic and dependable and forward looking and cooperative "era of good feeling"—is the vital American necessity if we are to have recovery before it is too late. It is necessary in order hopefully to anticipate reemployment. It is necessary in order to prevent national bankruptcy. It is necessary in order to restore stability to our institutions. It is necessary to the maintenance of democracy in the United States. the United States.

National Youth Administration

EXTENSION OF REMARKS

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

LETTER FROM H. D. WEATHERS

Mr. BANKHEAD. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. H. D. Weathers, superintendent of education for Conecuh County, Ala., in which he makes a statement about operations in that county under the N. Y. A. The accomplishments have been so large and the results of the N. Y. A. in that county so constructive that I have felt that the facts relating to the activities of the N. Y. A. in that county should be made available to others who are interested in the subject.

There being no objection, the letter was ordered to be

printed in the RECORD, as follows:

CONECUH COUNTY BOARD OF EDUCATION, Evergreen, Ala., May 2, 1939.

Senator BANKHEAD,

Senator Bankhead, Washington, D. C.

Dear Mr. Bankhead: This letter is to tell you just how much the N. Y. A. has meant and is now meaning to the schools of Conecuh County, and I, as a schoolman, urge you to lend your influence and support in making the N. Y. A. a permanent educational project in Alabama. At present I am operating a county-wide N. Y. A. repair and building project in this county. During the past year, with about 30 Negro boys and a Negro foreman, I have succeeded in constructing one \$10,000 school building and a \$3,000 county-wide school repair shop. At present with this same group of Negro boys I am building a brick veneer addition to the Evergreen City School. Also, we have planned two other much-needed school buildings in the county to be constructed next year. In addition to this we have the county to be constructed next year. In addition to this we have planned to repair and paint 25 school buildings in the county. Our present strained school finances in this county would not have enabled me to do any of the above-mentioned improvements. During the depression, for the past 10 years, the school buildings in Conecuh County have become in a very bad state of repair, and I conecun county have become in a very bad state of repair, and I can truthfully say that if it had not been for the N. Y. A. our school buildings would have been in a wretched condition. However, if we can continue our N. Y. A. projects we shall again get the school buildings all in fine shape. Besides this the boys are learning a useful trade in the way of brick masonry and carpentry work. Many of the boys we have trained are now profitably emplored.

In addition to the work, as I have already explained, we are oper-In addition to the work, as I have already explained, we are operating in Evergreen a county-wide school repair shop. The workers in this shop are N. Y. A. white boys, and they, too, are learning a useful trade. We are repairing our bus bodies, building new school furniture, building windows and doors, etc. If we could continue for several years this shop work and other work, I have just mentioned, we can get the school buildings and equipment in Conecuh County in fine shape. Mr. Ledbetter, of the State Department of Education, after visiting and inspecting our shop, stated that we were doing some of the most constructive work in Alabama. We very urgently ask you to do all you can to make the N. Y. A. a permanent educational project whereby so many youths will get useful training and whereby so much needed work will be done in our county.

Very truly yours,

H. D. WEATHERS,
Superintendent of Education, Conecuh County.

American Neutrality

EXTENSION OF REMARKS

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

STATEMENT BY THEODORE H. HOFFMANN

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD a statement made by the chairman of the National Council of the Steuben Society of America, Theodore H. Hoffmann, on the subject of the pending neutrality issue.

There being no objection, the statement was ordered to be

printed in the RECORD, as follows:

New York, April 11, 1939.

The Steuben Society of America, founded in 1919, respectfully submits to the Foreign Affairs Committee of the Senate, now examining into the advisability of amending the neutrality law, the following:

First. Bearing in mind that we are living under and wish to First. Bearing in mind that we are living under and wish to preserve a government of the people, by the people, and for the people, as defined by Abraham Lincoln at Gettysburg, we oppose every endeavor to abridge the right of the people to deliberate and determine for themselves what their course of action shall be in any given instance, especially when it concerns itself with the question of peace or war.

While foreign governments may decide for themselves that it is to the interest of their people to empower a single individual to manage their foreign affairs, our own people having so often and vehemently declared themselves against transplanting such a system to our shores, logically cannot agree to place such power in the hands of one individual, though he be the President. We, therefore, deem it inadvisable to give the President the power to determine in any given event who among contending nations shall be termed the "aggressor." Having done so, such decision would inevitably draw us into a war against the alleged aggressor.

Right here may we suggest that we heed the warning not to be misled by the "tyranny of words." China may soon become the victim of Japan's undeclared war and be compelled to sign a so-

victim of Japan's undeclared war and be compelled to sign a so-called peace treaty. Would that be classed among the sacred treaties and would China, chafing under its debasing terms, attempt to burst its shackles, wage war on Japan, be classed by the President as the "aggressor," a disturber of world peace? Then, again, suppose the "subject" people in Asia or Africa, of im-perialistic countries of Europe, Great Britain, and France, may some-day rise in rebellion against their oppressors. Would they be classed as "aggressors," disturbing the peace of the world, and would it then become our duty to assist their rulers in preventing them from gaining their liberty? from gaining their liberty?

If we as a people are of a mind to stand by Great Britain and France under all circumstances, to assist them in holding what they have garnered against those who are asking for restitution, let us say so in so many words, but let us get away from the hypocrisy of stating that we are at their beck and call because they are fighting for the principles of democracy against autocracy. It is a case of power politics, and nothing else.

Should these countries now intervene to check Italy, we should

clearly understand before we act that what is going on there is a struggle for the domination between those foreign powers for the control of the Mediterranean and adjacent waters

Principles of democracy have nothing to do with it.

Principles of democracy have nothing to do with it.

At the outbreak of the Russo-Japanese War, Theodore Roosevelt said, "All officials of the Government—civil, military, and naval—are directed to abstain from either action or speech which can cause irritation to either combatant. It is always unfortunate to bring Old World antipathies and jealousies into our life, or by speech or conduct to excite anger and resentment toward our Nation in friendly foreign lands; but in a government employee whose official position makes him in a sense the representative of the people, the mischief of such actions is greatly increased."

The President, being the representative of the people, especially in foreign eyes, might well take note of these words uttered by his illustrious namesake.

illustrious namesake.

If amended, the Neutrality Act should contain a provision taking from the President the power to impose economic sanctions or commit any other act "short of war" against foreign nations with which we are at peace. Our tariff legislation was never intended to give him that power. The American people have not given expression to a belief that they have a world mission to perform, which is to maintain law and order in all parts of the globe.

The President should bear in mind and recognize the fact that he is but the agent of a free people who wish to remain at peace with all the world.

with all the world.

The road to peace lies not as has been suggested in an agreement to disarm but rather in arriving at some adjustment of the economic inequalities causing universal unrest among the nations. The haves must surrender to the have nots sufficient of their holdings to enable the latter to afford a decent living to their peoples. If it is true that "new instruments of public power have been forged that might someday provide shackles for the liberties of the people if they come into improper hands," our Representatives in Congress should make certain that those powers be not now further extended to permit the creation of a situation in the conduct of our foreign

to permit the creation of a situation in the conduct of our foreign relations which might force us into war.

If "we have a rendezvous with destiny," it is to prove to the world that our system of government is superior to that of any other. Empty phrases about the blessings of democracy prove nothing. With millions out of employment, millions on the dole, industry at a standstill, agriculture in a precarious condition, and, as the President himself advertises to the world (which includes the totalitarian states) that one-third of our people are ill-housed and ill-fed, with a crime bill which goes into the billions of dolars, corruption in the ranks of even the judiciary, we are not in a position to boast about the blessings of democracy in many major respects.

respects.

It is our duty to move heaven and earth to remove these blots

The Steuben Society of America is interested in not what takes place in Europe, Africa, or Asia. What it strives for is to put our own house in order, give employment to those that seek it, and bring the greatest modicum of happiness and contentment to our own. We deem it unfair to attempt to distract the attention of our people from these problems by drawing their attention to the troublous affairs of state in foreign countries, with the intimation that we may become involved therein.

For many years we have issued the slogan: "No Presidential wars," with all that these words imply.

Respectfully submitted.

THEO. H. HOFFMANN.

America's Foreign Policy

EXTENSION OF REMARKS

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Monday, May 8, 1939

STATEMENT OF DR. L. W. STILWELL, OF DARTMOUTH COLLEGE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement on America's foreign policy made before the Committee on Foreign Relations by Dr. L. W. Stilwell, of Dartmouth

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

printed in the Record, as follows:

This issue before this committee is a question of commitments, will this Nation tie itself now to the British and their allies or will we keep our independence?

Any plan which gives discretion to the President means alliance with the British. Every speech and act of the President for 2 years points in that direction. He feels intensely that the British are all right, that the Germans are all wrong, and that the United States must marry itself to London now. Any plan which provides "cash-and-carry" in wartime commits us to Great Britain. The law itself might be technically impartial. But it is the British who have the power to pay cash. They could raise \$10,000,000,000 in gold and American securities if they had to—enough to pay for 2 years' supply of United States war goods. And it is the British who can carry. They rule the seas so far as that is possible. They have the merchant marine. They could carry all they could buy and buy all they could carry, without any help from United States ships or United States banks for at least 2 years. Later on, when American business was all tied up with war orders, the law could be liberalized if necessary. The State Department knows that "cash-and-carry" means a working alliance with the British. That is why they favor it.

On the other hand the Neutrality Act as it stands is noncommittal. It says America stays free. We are making no comcommittal. It says America stays free. We are making no commitments, no promises and no half-promises to any foreign office. We are reserving judgment. One beauty of a really neutral policy is that it can be changed. Later on, if we thought we absolutely had to, we could still take sides in Europe. But "cash-and-carry" or presidential discretion would commit us now so thoroughly that we could not back out. To move from neutrality to belilgerency to neutrality is almost impossible. A great many Americans would prefer to keep the whole case open, and to keep the whole case where it belongs, in the hands of the Congress of the United States. If you gentlemen should pass the Pittman or the Thomas measures you would sign away your constitutional birthright. You would become the rubber stamps not merely of the White House but of Downing Street.

They tell us that real independence for this country is im-

House but of Downing Street.

They tell us that real independence for this country is impossible—that we should be inevitably drawn into a European slaughter. That is plain nonsense. We can keep out if we want to keep out. We kept out officially from the last war for 2¾ years. We kept out of the actual warfare for 4 years. American troops really fought for only 4 months—about 8 percent of the time-duration of the war. If Champ Clark had been President and Bryan Secretary of State or if [a few] more Senators had voted against war, we would have staved out entirely. War is not an against war, we would have stayed out entirely. War is not an act of God.

Even better proof that neutrality is entirely possible is the record of the European neutrals. Norway, Sweden, Denmark, Switzerland, and the Netherlands were in the thick of the whole business, subject to all sorts of pressures. But they stayed out because they wanted to stay out. And they are planning to stay out again. And Belgium has joined them. If little democracies within gun range of a great war can keep free, surely a great democracy protected by a great democracy protected by a great ocean can do likewise.

The jingoes play a variant on this theme of inevitability by scaring

a great war can keep free, surely a great democracy protected by a great occan can do likewise.

The jingoes play a variant on this theme of inevitability by scaring us with the assertion that if there is a war, and if the Germans conquer England and France, America will be next. That is not only plain but fancy nonsense. Any nation which has overcome the British and French powers combined will be so bled white in that process that it will be entirely incapable of further aggression for the next 20 years. Even if that were not entirely obvious, any attack on America by any power or combination of powers ranks next to an attack on Mars for military fabulousness. Armies, navies, and air forces all require bases—big bases, heavily supplied and heavily fortified. And those bases must be located within a tleast 1,500 miles of the object of attack if any plan of conquest is to have the slightest chance. There are no such bases within 1,500 or 3,000 miles of the United States nor any sign of the establishment of such a base. Therefore, whatever happens in Europe or in Asia, the United States is safe as a kitten in its basket—entirely safe.

Another variant of the scare propaganda is the old cry, "Make the world safe for democracy." If ever this people had experience with an idea, it is with that idea. We have tried making the world safe for democracy; and it was made "safe." I mean that we won the war and President Wilson told us "All America's ideals have been achieved." We have been growing more and more bitter about that achievement ever since. We learned many things at Versailles, but one thing especially. The British and the French weren't interested in democracy. They were playing straight power politics, and that was all. So they lied to us. They lied to us about the causes of the World War. Their official White Books and Yellow Books were full of deliberately altered documents. They lied to us about the remains the nord of the war. They lied to us about the secret treatles. We didn't know that they had already

an American stomach—the delivery of 180,000 milk cows and heifers at a time when German babies were already dying for lack of milk. If you gentlemen still feel credulous about the high ideals of the British and French empires you have only to observe the recent moves. It is straight power politics all over again. The next war for "democracy" is going to be fought to maintain the dictatorship in Poland, or the dictatorship in Greece, or the dictatorship in Rumania, or the dictatorship in Turkey, or the dictatorship in Portugal, or the dictatorship in Russia. When all the petty tyrannies of Europe start lining up with Britain, and all the free democracies of Europe—the Swiss, the Dutch, the Belgians, and the Scandinavians avoid British "protection" as if it were the plague, we Americans better all move to Missouri and stay there. and stay there.

and stay there.

Or the war for "democracy" will be fought to maintain British domination over Gibraltar, Malta, Cyprus, Palestine, Egypt, Tanganika, or Hong Kong—or to maintain French domination in Morocco, Tunis, Syria, Jibouti, or Annam. This sort of thing has been going on for 300 years. We fought a war for independence once to get free and clear from such world-wide, arrogant entanglements. It would be, perhaps, appropriate to reread the remarks of Thomas Jefferson and George Washington on just this point. this point.

What I've tried to indicate thus far is that there is no real reason for Americans to concern themselves about the present European muddle. Indeed, that not only prudence but common honesty and decency require that we keep clear of Europe as it stands at present.

But there is one more point in the argument, the strongest point of all, namely, the fact of modern war. That fact lies under

and around every phase of this discussion.

Suppose that we did have real grounds for mixing into Europe (which I deny entirely). How could we act effectively without a war? And if it came to war, what would that mean?

What is going on at present is a gigantic game of bluff. sides in Europe are using the threat of war as means of national policy. Neither side intends war, neither side wants war. Everybody prays before God that there will be no war. But they pile up the armaments in the hope of scaring the other side into sur-render. Four men have hold of a great keg of dynamite. The man who holds a fuse the closest to that keg without actually touching it can dictate to the others for the moment. Yet it is desperately clear that if that man does touch off that dynamite, he and all the others will be blown to kingdom come, and nobody at all will win the argument. That is the picture now in Europe. Our Chief Executive wants to sit in as a fifth man around an

even bigger keg. With or without Mr. Roosevelt the game may work. One side or the other may really have the strongest nerves and scare the other side into submission. But a game of bluff for such high stakes is very, very risky. If the bluff gets called, every-body will get exploded. There will then be no triumph of any principle, no victory at all for anyone.

principle, no victory at all for anyone.

Only an absolutely vital issue stated very definitely and accepted very deliberately by the whole people could ever justify America in going in for that sort of neck-or-nothing tactics. At the present time there is no vital issue, there is no issue at all that has been definitely stated, and there has been no endorsement or acceptance of such big bluffing on the part of the Congress or the people of America. So Mr. Roosevelt cannot really join the game. When he tries to, every foreign office in Europe understands that he has no mandate from his own people and simply smiles discreetly.

The other measure short of war is economic aid to Britain against Germany after the Europeans start to fight. We have had experience with that, too. That policy is also possible, conceivably, we might send aid enough to really count and might not have to kill our boys. But the probabilities are otherwise. The steps from economic aid to military aid are fairly straight and short.

Rill our boys. But the probabilities are otherwise. The steps from economic aid to military aid are fairly straight and short.

In 1915–16 we did send aid to the Allies—several billion dollars' worth. That aid made us a supply base for the allied armies. Naturally the Germans tried to cut the line of those supplies. They used submarines. The submarines sank ships and drowned people, and we got mad as hornets and went to war. If we had not sent supplies, there would have been no point in using sub-marines on the Atlantic trade route, and we probably would not have been dragged into war. Of course, if you kept American citi-zens off supply ships, that might mollify our anger when those ships were sunk. But remember that the Lusitania, the Arabic, and the Sussex were British boats—and that we might have been almost as wrathy if there had been no Americans aboard.

The other thing we learned in 1916 was a sense of moral shame. We were selling munitions for a war, getting rich out of that sale, and yet we weren't willing to go into that war. The Canadians told us, and the whole world told us, that we were "yellow." They called us "Uncle Shylock." We had a sneaky feeling they were right. Either that war was good enough for us to fight it or else.

it wasn't good enough for us to collect profits from it. Americans can't stand the charge of being profiteers in blood for very long. We are likely to go into the war to wipe off that stain.

So we face the fact of war itself toward which all roads lead. There is just this to say about that, and it must be said. Wars are ont what they used to be. There has been a military revolution. War in the nineteenth century was somewhat of an adventure for heroes. War in the twentieth century is a prolonged torture for victims. Gettysburg was—I speak carefully—a picture as compared with the Battle of the Argonne.

I am no pacifist. But I do know from careful study and from personal experience that war has got out of hand. You may still have one-sided wars as in Ethiopia or China without entirely destructive consequences. But an up-to-date general European war is literally more than a soldier boy can stand. One million men were killed at the Battle of Verdun. Our own First and Second Divisions had 25,000 casualties each—90 percent killed and wounded. That is too much.

We need to realize that the World War produced the first crop We need to realize that the World War produced the first crop of mental casualties—boys with sound bodies but destroyed minds. If there were a phonograph to reproduce the sounds of war you would know why. Or if we could reproduce the smells of war. Or express somehow the prolonged agony, lasting weeks, of a high-explosive shell. One-half the present inmates of our veterans' hospitals are mental cases. We all know that returned veterans (not training-camp veterans) won't talk. They can't stand it to rehearse their memories. We all know of ex-soldiers who couldn't hold a job, couldn't live with their families, lost self-control at some slight irritation finally went out and shot themselves.

some slight irritation, finally went out and shot themselves.

No country can absorb that kind of war result. The physically dead are buried and we go on. But the mentally dead live and their insanity is contagious. Another war and if we really got in it, would corrode this country, give us a whole generation of jittery, dull, ugly men—men without courage, without judgment,

without skill, without endurance-men who despise law, sneer at

morality, and hate their Government.

In all humility I offer very solemn warning to any statesman who votes for war, or for any measure that leads toward war. After that war you will have to face a vast crowd of young men suddenly grown old with horror in their eyes who will want

suddenly grown old with horror in their eyes who will want nothing better than to wipe out you and yours and all you stand for. They will want to "get the guys who sent us into that."

So I hope that this committee will stand for American independence which means peace for us at least in our time.

I know, too, the heat of a Washington summer. But I prayerfully petition that the Congress remain in session throughout this summer, continuously alert, because this people can no longer trust this present Chief Executive in this essential matter.

Prosperity and the Price Level

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

ARTICLE BY FRED A. BLETHEN

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I am including a paper on Prosperity and the Price Level, which has been written by Mr. Fred A. Blethen, one of my constituents and a man for whom I have the highest regard. Since, however, Mr. Blethen is of the opinion that we should seek a declining price level rather than a stable one, and since I disagree with him about this so far as the general price level is concerned, I wish I might say a word or two in introduction of his material.

Just in case Mr. Blethen or anyone else is laboring under the impression that my monetary control bill, H. R. 4931, requires a return to the 1926 price level, I should like to point out that the provisions of the bill are simply that the monetary authority shall not continue with an expansion policy beyond the point where practically full employment has been brought about and in no case beyond the point where the 1926 level of the buying power of the dollar has been restored. My whole interest is in a restoration of our people to work. And that is the standard set in the bill. The 1926 level is not a goal. It is a ceiling or limit set for expansion under the terms of the bill.

On the other hand, I certainly do believe that a rising price level is better than a falling one for the country as a whole and that a stable price level would probably be better than either. This is why the long-range policy provided for in H. R. 4931 calls for maintenance of stability in the buying power of the dollar once a decent level of employment has been restored.

Some observations on Mr. Blethen's paper which I should like to make are the following:

First. An increase or decrease in the volume of money in active circulation will affect sensitive prices more quickly and to a greater extent than it will affect controlled prices. Controlled prices are fixed at the point of maximum return already. A rising price level, therefore, is most likely to raise the prices that are too low and a falling price level is least likely to bring down the specific prices that are actually too high.

Second. As a matter of historical fact, farm prices, which are the ones that need raising the most, have responded more quickly and in wider range to expansion in the amount of money in circulation than any other prices. This is because farm prices, unlike many other prices, respond quickly to general economic influences.

Third. Mr. Blethen is in error in assuming that people who desire a somewhat higher general price level intend to try to directly influence specific prices of specific commodities. Everyone recognizes that the problem of excessive prices for certain commodities cannot be solved merely by monetary means, but involves the whole complex problem of monopoly and its influences.

Fourth. While obviously it would be ideal to have all our people employed and to have their wages rise while prices fall, nevertheless it is essential to remember that in an economy where credit is as important a factor as it is in ours, it is probably an idle dream to expect to escape depression under conditions where debts contracted on one price level must constantly be repaid in dollars of greater value than those which were originally borrowed. A declining price level-if it continued long enough-would have the tendency to increase the control over, and ownership of, real wealth in the hands of the lenders of money. This is, I think, basic. Certainly it is most important for the farmers of America. And certainly the increasing private debt burden was one of the major causes of the collapse of 1929.

Fifth. It seems to me idle to assume that by means of a declining price level the particular prices for certain industrial goods which are undoubtedly too high could be brought down. So far as I know these are the last prices to fall, for the very good reason that monopoly has always preferred to curtail production and maintain price rather than the opposite. A declining price level would bring down fastest and farthest the very prices which ought not to come down. We must look to other measures to bring down "sticky" prices in monopoly industries.

Mr. Blethen's paper follows:

PROSPERITY AND THE PRICE LEVEL (By Fred A. Blethen)

IF THE GENERAL PRICE LEVEL CAN BE BOOSTED TO THE 1926 LEVEL, WILL PROSPERITY BE RETURNED TO ALL THE PEOPLE?

Certain conclusions can be drawn from the record which have a definite bearing on the possibility of controlling the price level. First. Since manufacturing profits and individual savings in 1936 and 1937 reached pre-depression levels (when Brookings Institution says they were too high) with a price level standing at from 80 to 87 percent of the 1926 base, it is self-evident that costs of production must have declined to about 80 percent of preof production must have declined to about 80 percent of predepression cost levels.

Second. Since profits have reached pre-depression levels, it is evident that governmental policies requiring high taxes and encouraging high wage rates have not destroyed business.

Third. Technological advance has apparently more than offset increased tax and wage costs, since 1936 manufacturing profits equaled 1927 profits approximately, although the price level was only 78.6 in 1936 compared to 95 in 1927.

Fourth. Further increases in the volume of production will tend to reduce costs. If the price level does not fall with increased volume, profits will increase, causing further concentration of wealth and economic unbalance, since present "savings" are not entirely invested in new productive goods.

invested in new productive goods.

Fifth. It seems improbable that the price level can ever be forced up to the 1926 base without a very decided and harmful

forced up to the 1926 base without a very decided and harmful inflation taking place.

The last conclusion follows naturally after the first four and raises the very serious question whether continued efforts to raise the price level to 1926 levels will not result in severe economic unbalance and precipitate further business depression.

In testimony before the House Committee on Banking and Currency during the hearings on the Federal Reserve bill of 1938, Prof. Chester A. Phillips, dean, State University of Iowa, made the very comprehensive statement that "If costs of production in terms of human effort fall and prices are not allowed to fall, a vicious element of inflation enters." In other words, dangerous inflation can be caused by a falling cost level if the price level does not follow it down closely, in the same manner that rising prices with a fixed cost level can cause inflation.

This fact is often overlooked and has led to the belief that the stable price level of 1922 to 1928 was a healthy condition, when in truth the conditions of unbalance existing during that period were building up stresses that finally broke in the economic storm of 1929 and the following. The twenties were years of great industrial advancement. Technological advance was improving production that period were building up developed and having down costs with great randitive.

of 1929 and the following. The twenties were years of great industrial advancement. Technological advance was improving production methods and bringing down costs with great rapidity. When prices failed to follow lowered costs, net profits increased and huge sums in the form of dividends went into the hands of a comparatively small portion of the population. About one-third of the savings during this period went into additional capital goods (Brookings—Formation of Capital), and the balance served no purpose except to inflate the price of securities and real estate.

If, in complete disregard of the historical record, there are those who insist on continuing the attempt to raise the price level back to the 1926 base, they should be willing:

First. To explain the exact method by which they hope to ac-

First. To explain the exact method by which they hope to accomplish this purpose.

Second. To show some historical, statistical, or scientific evidence that their plan is feasible.

Third. To indicate just which of the 813 commodities compris-

ing the price index are going to be raised and how much.

It isn't possible by the mere wave of a wand to raise the entire price level uniformly, so that all classes will share equally. It isn't possible to raise some items of the index at all unless drastic measures are taken on these individual items. For example, "rubber" is now at about 30 percent of the 1926 level. This commodity is produced entirely outside the United States. We have no control over production costs, and these costs at the plantation have declined from about 12 cents a pound to less than 5 cents a pound. It is evidently absurd to attempt to raise this individual price. It might be done, however, by levying a tariff of several times the value of the rubber. This would raise the cost and price levels of all rubber goods and help boost the price index. Rubber carries about one-half percent of the weight of the entire \$13 items on the index; it therefore is important to consider what could be done with it could be done with it.

Then there are such items as bituminous coal, carrying over 4 percent of the weight of the index and now at 99 percent of the 1926 level; and electricity, with a weight of 21/3 percent at a present index of 105; all metal products, carrying a weight of 15½ percent, now at 95.7 percent.

These items, and many others, do not offer much leeway toward a price raise; in fact, if Congressman RANKIN's carefully prepared statistics are to be credited, electric rates are now about double what they should be. As for metal products, some of the greatest technological advances have been made in this field.

Some items of the index must be very low to counterbalance these high items, since the total index stands at about 80.

Let us consider some of these low-index items. Petroleum prod-Let us consider some of these low-index items. Petroleum products, for example, stood at 60.5 in 1937 and 55.9 in 1938. Profits for the leaders of the industry were 10.2 percent of net worth in 1937 and 4.7 percent of net worth in 1938. Not a starving industry yet, and one which has found ways and means to hold prices at practically the same level year in and year out. (For profits of major industries in 1937 and 1938, see National City Bank Bulletin for March 1939.) How much should this item be raised? It is a weighty one, carrying 6.33 percent of the index.

Of course, we know that farm products are low, and there is a hig clamer to do something about them. However, poultry, and

big clamor to do something about them. However, poultry and livestock were above the average of the index even in 1938. Grains were only 60.8 as a group, carrying about 3 percent of the weight, while at least one of the grains, barley, was above the general index and stood at 81.1.

Wheat stood at from 50 to 59 on the index, according to grades, Wheat stood at from 50 to 59 on the index, according to grades, and sold for from 77 to 92 cents per bushel. Perhaps wheat should sell for \$1.50 a bushel or more, but it doesn't square with cost figures that show that wheat can be and has been produced on efficient farms in Texas for as little as 40 cents a bushel. It would seem that we might look ahead with hope to the day when efficient wheat production will bring the "staff of life" within reach of the poorest family, but instead of that we sit up nights evolving a plan to fix the price of wheat for all time at \$1.25 a bushel (new A. A. A. plan), or we attack the problem from another angle and strive to boost the price level to the 1926 base, which would give us \$1.50 wheat.

Cotton is one of the farm crop problem items. It corries a

Cotton is one of the farm crop problem items. It carries a weight of less than 2 percent of the index and sold for slightly less than 9 cents a pound in 1938, at 50 percent of the 1926 index level. If we double the price of cotton, to 18 cents a pound, it will raise the index about 1¾ percent. Then what will happen to profits when the Rust cotton picker is placed into operation. operation

Silk and rayon are low industries on the index. Combined, they stand at only 29.3 percent of the 1926 level. While we have no control over silk costs and rumor has it that Japan reaps a rich harvest from her silk trade with the United States, we have been doing considerable with rayon costs. This new industry lends itself admirably to mechanization, and it is hardly safe to say that even present low costs will not be lowered. The low prices returned to the industry profits of 9.3 and 4.1 percent in 1937 and 1938 respectively. 1938, respectively.

Table 1 lists the principal groups of the index, shows the estimated volume in exchange in 1937, the 1938 average index level,

and the weight that each group carries in the index

An analysis of the complete list of items on the index, together with other known data concerning costs and profits in certain industries, gives convincing evidence that a moderate rise of prices in low profit industries may be wholly desirable but that such justified increases will not be sufficient to raise the total index to the 1926 level. If we insist upon raising the index to the base level we will be setting the stage for a perpetual state of economic unbalance.

The Naval Policy of the United States

EXTENSION OF REMARKS

HON. A. WILLIS ROBERTSON OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

ADDRESS BY HON. COLGATE W. DARDEN, OF VIRGINIA, MAY 5, 1939

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Colgate W. Darden, Member of the United States House of Representatives, before the students of the University of Richmond on May 5, 1939:

Mr. President, young ladies, and gentlemen, it is a genuine pleasure to be with you here today. It affords me an opportunity to visit again a great institution of learning, one which has made a notable contribution to the country as a whole and in particular to those States which lie south of the Potomac. I call back pleasant memories of friendships formed here during visits made while I was a student at Charlottesville and it is most gratifying to realize that these friendships have continued. You will find in later years that no small part of the pleasure to be had from life will be derived from contacts and friendships formed while you are students here.

here.

I regret that it was not possible for my colleague, the Honorable Dave Satterfeld, to join me on this trip to Richmond and the congressional district which he so ably represents in the House of Representatives. However, I bring you his best wishes.

The subject chosen for this discussion, the Naval Policy of the United States, is at best an excursion into a technical and difficult field. I warn you that the sentiments here expressed are by no means those of an expert but rather the observations of a layman interested in the subject. interested in the subject.

In order to properly appraise our present naval policy it will be necessary to review in a cursory fashion certain events which have transpired since the turn of the century, because these events, far flung though they may have been, have unmistakably

charted our course in sea power.

Following the Spanish-American War there was a revival of intreest in the Navy on the part of our people, an interest awakened, no doubt, by the success of our fleet in operations against the Spaniards. This interest was nourished and greatly enlarged by those of our citizens who, strategically situated in high places, proclaimed that we had become a world power and successfully urged that we acquire certain Spanish colonies, notably the Philippines,

as the reward for victory.

It is fair, I think, to assert that this impetus to naval power was part and parcel of the policy of imperialism, which started to sweep the country at the close of the last century. We had come of age, and to protect our distant possessions we did, in

come of age, and to protect our distant possessions we did, in fact, need to materially increase our sea forces.

Although we are now, 40 years later, attempting to divest ourselves of the guardianship of the islands which lie at the doorstep of Asia—and, incidentally, it is my fond hope that in this we shall be successful—there can be no denying the fact that this acquisition contributed in a major way to the expansion of our naval forces in the early years of 1900.

Theodore Roosevelt, on account of his interest and his knowledge of the Norm gave added impacts to its development. Notwith-

Theodore Roosevelt, on account of his interest and his knowledge of the Navy, gave added impetus to its development. Notwithstanding this development, however, our strength at sea was not great enough in 1914 to protect our commerce and force the belligerent parties to respect our rights at sea. It is barely possible that, had our naval strength been great enough, it might have prevented the launching of the program of unrestricted submarine warfare by Germany, which in the end contributed so much to our entry into the World War.

On June 28, 1914, a young fanatic named Princep assassinated the Archduke Francis Ferdinand and his wife at Sarajevo, the capital of Bosnia. These pistol shots ignited a smoldering Europe and were in truth heard around the world. At 5 p. m. on July 28, 1 month later, the great British Fleet then concentrated at Portland, following a review held at Spithead but a short time before, was ordered to proceed to its war-base at Scapa Flow, and passed at night through the straits of Dover without lights.

Europe was mobilizing and August 1, 3, and 4 marked the decla-

Europe was mobilizing and August 1, 3, and 4 marked the declaration of war by various powers whose troops were already marching and whose navies were prepared for all eventualities.

The struggle which ensued engulfed most of the civilized world and wore on for 4 desperate and exhausting years.

Few of us believed as we read the newspaper accounts of these grim happenings that before the cataclysm had run its course the Stars and Stripes would be planted on the battlefields of Europe and the United States Navy would be patrolling the North Sea.

At the outset of the war in Europe President Wilson determined,

At the outset of the war in Europe President Wilson determined, to the best of his ability, to maintain a course of strict neutrality. Every effort was made on his part to prevent the United States from becoming involved in the struggle. During the years 1915 and 1916 we intervened in the affairs of Haiti and San Domingo to put down revolutions which broke out in these two countries. These expeditions carried out by the Navy and Marine Corps were in the interest of peace in the Caribbean and formed no part of the struggle going on in Europe, although it is probable that the difficulties in Europe had much to do with the unrest, culminating in revolution which swept both Haiti and San Domingo shortly after the outbreak of the World War. However, it must be observed that for more than 100 years the affairs of both of

shortly after the outbreak of the World War. However, it must be observed that for more than 100 years the affairs of both of these countries have been far from tranquil.

Wilson's task was by no means an easy one. His observance of strict neutrality was accompanied by a policy of limiting our sea forces, and land forces to the establishments already provided for. Too late he was to learn that this step served only to make us the victim of those who found it in their interest to trespass on our rights. Both sides subjected us to treatment which otherwise might have been avoided.

By 1916 it had become apparent to the country and to the

By 1916 it had become apparent to the country and to the President that such a course was not in our interest, and in a speech at St. Louis on February 3, 1916, he declared for "incomparably the most adequate navy in the world." He persuaded Congress to take this view, and in August 1916 there was authorized the largest naval-building program ever undertaken by this country up to this time. The program called for the construction in 3 years of 10 giant battleships, 6 great battle cruisers, 10 cruisers, 50 destroyers, 67 submarines, and 13 miscellaneous vessels. vessels.

It is interesting to bear in mind that this great program was for the purpose of preserving the neutrality of the United States—not for the purpose of war abroad. In fact, it was followed by a national election in which the greatest possible emphasis was placed upon the fact that the President had been able to keep us out of war.

I shall not touch on that period which is so well known to all of you—1917 and 1918—during which we participated in the war in Europe, drawn in finally by a combination of circumstances difficult at best to analyze, and certainly too involved to be discussed in this talk.

The end of the war came suddenly in the fall of 1918. her allies beaten and broken, caved in from within. Strange to say, revolution broke out not in the army that had stood for months say, revolution broke out not in the army that had stood for months the most frightful punishment from the Allies now invigorated and encouraged by the arrival and participation of the American armies, but in the fleet—where the men, grown restive from inaction and confinement, joined with the discontented and poorly fed civilian workmen and ran up the red flag of revolution.

There gathered at Versailles a group to formulate a lasting peace.

There gathered at Versailles a group to formulate a lasting peace. A world grown weary of war hoped to compose its differences and write a new chapter in human affairs. How miserably they falled is no part of this story. Nor do I mean to imply that there was lacking a spirit to succeed. Certainly most of those who gathered there wanted more than anything else to guarantee peace for the future. President Wilson believed that he had evolved a plan which was destined to substitute reason for force and the conference table for the battlefield. Unfortunately, such was not to happen. He has followed the other giants who labored there down the silent and endless corridors of time. But note this well: Woodrow Wilson marked an era in world affairs and he has thrown to succeeding generations a torch which may yet light the way to world peace. Probably not in my lifetime or yours, but some place in the years ahead force must give way to reason.

The United States neither asked nor received anything in return for her gigantic efforts in the World War. She set her face resolutely toward a return to the ways of peace. The great naval program of 1916 was well under way. Its completion would leave us with the greatest navy in the world. The task of demobilizing our great Army and Navy was started. No decision was made as to the fleet itself for the time being; the task was too great to be accomplished at once.

By 1921 the general demobilization was over and the United.

plished at once.

By 1921 the general demobilization was over, and the United States turned its attention to the necessity of limiting still further military expenditures. The war depression had set in, and every effort was being made to meet the falling off of revenue by a cut in expenses. Then, too, the disarmament of Germany and the destruction of her once powerful fleet made it seem advisable to attempt to reach an accord as to the reduction of the world's naval

In May 1921 the Congress agreed to a resolution to this end, introduced by Mr. Borah, and on the 12th of November 1921 the Five Power Naval Conference met at Washington. There were represented Great Britain, France, Italy, Japan, and the United States. The comparative position of the three greatest naval powers at the time of the conference was roughly this:

	Built	Building
Great Britain United States Japan	1, 015, 825 728, 390 459, 528	172, 000 618, 000 289, 130

With our program completed, it can easily be seen that we would have occupied a predominant position insofar as naval strength was concerned. Not only was this true but the financial resources this country made it possible for us to maintain or augment this great force if necessary.

The role of the United States in the conference was decisive.

Mr. Hughes, who made the opening speech of the conference fol-lowing President Harding's address of welcome, declared forthwith for an absolute stabilization of the capital ships of the fire powers

for an absolute stabilization of the capital ships of the fire powers represented for a period of years. His program called for immediate and positive action toward naval disarmament.

Translated into figures, the proposal meant that the United States should scrap 15 capital ships actually under construction—618,000 tons—along with 15 older vessels, amounting to 227,740 tons. Great Britain should scrap 4 new ships which were being laid down—172,000 tons—along with 19 older ships—411,375 tons. Japan was to give up her building program and should scrap 7 ships under construction—289,130 tons—along with 10 older ships—159,828 tons. Certainly this was disarmament on a gigantic scale—and at a cost in naval tonnage greater to us than any other power involved. I shall not take the time to discuss the situation as it affected Italy and France, since both of these navies were far below the

Italy and France, since both of these navies were far below the big three and for the further reason that there were involved, so far as they were concerned, certain problems bearing on the Mediterranean which need not detain us here.

Upon the adoption of this plan the capital-ship strength of the big three would be as follows:

The state of the s	Ships	Tons
Great Britain United States Japan	22 18 10	604, 450 500, 650 299, 700

This would establish roughly the ratio desired of 5:5:3. The excess in tonnage of the British being offset by the fact that her ships were older than ours.

Certain adjustments were agreed to; Great Britain being allowed

to replace four of her older ships by two larger new ones—the Rodney and the Nelson. Japan was allowed to substitute in scrapping the Settsu for the Mutsu. The Mutsu, one of the most powerful ships affoat, had just been completed and had joined the Japanese fleet. The school children of Japan had contributed toward the construction of this giant and their Government was not willing to agree to scrap her

ward the construction of this giant and their Government was not willing to agree to scrap her.

France and Italy came into line on the capital-ship agreement and were allotted 175,000 tons each.

The agreement finally reached provided for the equality of Great Britain and the United States at 525,000 tons each of capital ships—315,000 tons for Japan and 175,000 tons each for Italy and France, and a stabilization at this point for 10 years from 1922.

The size of capital ships was placed at not more than 35,000 tons with guns not greater than 16-inch caliber. One exception was made—the Hood of the British Navy, which was already commissioned, was retained notwithstanding the fact that she was a little above 41,000 tons. The life of the capital ship was set at 20 years and a system of replacements was agreed upon to start in 1931.

Agreement was also reached as to aircraft carriers—guns being limited to 8 inches in caliber and tonnage as follows: United States and Great Britain 135,000 tons each; Japan 81,000 tons; France and Italy 54,000 tons each, with a maximum displacement of 27,000 tons. To the 27,000 tonnage limitation there was provided an exception permitting two ships of 33,000 tons each. This permitted us to convert two of our battle cruisers then building into a starters. permitted us to convert two of our battle cruisers then building into aircraft carriers—and they are today our two largest—the Saratoga and the Lexington.

The above agreements, along with the limitation of cruisers to 10,000 tons each with no limitation as to numbers, represent the conclusions of the conference insofar as fleet strength was concerned.

The Japanese demanded and received a guarantee that the status quo would be maintained insofar as insular naval bases in the western Pacific were concerned.

The agreement covering other incidental matters and containing certain escape provisions provided for further consultation and was signed in the city of Washington on February 6, 1922.

The sacrifice made by the United States in this effort to further the cause of peace was by far greater than that made by any of the other parties participating. Our willingness to go this far can be accounted for, I believe, by reason of two vaguely related views then entertained by our people.

First of all we believed that the World War had in fact gone far

First of all we believed that the World War had in fact gone far toward destroying militarism and making the world safe for democracy. We felt that great navies and great armies would no longer be necessary—Germany under the terms of Versailles had been forced to disarm and the Allies who signed the treaty had bound themselves to disarm as rapidly as possible. While we never ratified the treaty, our people were in accord with this view. We were not only tired of war but we were tired of armament.

Second, we were returning rapidly to our old position of isolation. Our dreams of empire were gone. We were appraising more realisticly our problems. The Philippines, instead of being the gateway to the richest market in the world, had become an expensive ward. Not only were financial sacrifices necessary to maintain a high standard of living in the islands, but labor and agricultural products of the Philippines were in competition with continental labor and products.

We were anxious to lighten our commitments abroad and restrict

We were anxious to lighten our commitments abroad and restrict our efforts to home markets and home industry.

As an evidence of this determination we refused to ratify the Versailles Treaty and led the way in naval disarmament. Our Naval Establishment was to be used for defense only. Our foreign trade was to be left to take care of itself. Our foreign policy had again dictated our naval policy. This time it brought about a great reduction in naval power, just as following the War with Spain it had laid the foundation for expansion.

This, however, was not true insofar as the other participants were concerned. The limitations agreed upon by them grew out of no real change so far as national policy was concerned. Economy was the controlling factor, together with the knowledge that the necessity, certainly so far as the present was concerned of great naval power no longer existed. Germany's Navy was no longer a challenge to Great Britain. France and Italy were primarily concerned with a balance of power in the Mediterranean, and Japan, with a guarantee of the status quo in the western Pacific, had accomplished in fact a material net increase in naval power by agreeing to the limitations. Her interests in Asia were of the greatest importance. The British and United States limitations, coupled with our agreement not to fortify our Pacific islands, left her with preponderant power in the East.

The Washington Naval Conference had opened the door of Asia to Japan. Whether Great Britain and the United States with great navles would have prevented the invasion of China is a question which cannot be definitely answered. That they were unable in 1930 to accomplish this had they desired is, I think, beyond dispute. The Washington Conference which set limitations, as we have

seen, to capital ships and aircraft carriers, was followed in 1926 and 1927 by conversations between the powers held under the auspices of the League of Nations. These conversations terminated without any agreement being reached. However, at the same time Mr. Coolidge in a message to Congress on February 10, 1927, and by memorandum the same day proposed to the Washington Conference powers that their delegates to the League meeting should be empowered to negotiate an agreement further limiting naval armament by covering the classes not covered in the agreement of 1922, viz, cruisers, destroyers, submarines.

Great Britain and Japan accepted, France and Italy refused, and the conference met in Geneva on Line 20. However, both France

the conference met in Geneva on June 20. However, both France and Italy were represented unofficially. The negotiations were fruit-less, and the conference adjourned with the suggestion that the conference fixed for 1931 by the Washington treaty should be held earlier. At a later date both Great Britain and the United States were able to compose many of the differences which divided them in 1927, and as a result of conversations held during 1929, the two states laid the groundwork for an agreement in the London Conference of 1930.

Unfortunately, we suffered badly in the years following the Washington Conference as a result of our failure to continue our naval building in these categories left free by the agreement. The other parties added greatly in this interval to their cruisers, destroyers, and submarines. The London Conference of 1930 found us far from

and submarines. The London Conference of 1930 found us far from the enviable position occupied in 1921 at Washington.

The powers that signed the Washington treaty met again in London on June 21, 1930, in an effort to extend the provisions applied at Washington to battleships and aircraft carriers to cruisers, destroyers, and submarines. The difficulties which arose between France and Italy in other than capital ships proved to be too great for adjustment and were left to negotiation between the two parties concerned. Great Britain, Japan, and the United States came to an agreement. It was agreed that no capital ships would be laid down before 1936. Italy and France were permitted to proceed with the capital ships which they were entitled to great down.

be laid down before 1936. Italy and France were permitted to proceed with the capital ships which they were entitled to lay down in 1927 and 1929 under the Washington Conference.

The cruiser question between Great Britain and the United States, the real question before the conference, was settled, 180,000 tons—eighteen 8-inch cruisers—going to the United States, and 15, viz, 150,000 tons, to Great Britain. Of 6-inch gun cruisers, Great Britain was limited to 192,200 tons and the United States to 142,500 while larger had a limit of 102,400 tons for 8 inch cruisers. Great Britain was limited to 192,200 tons and the United States to 143,500, while Japan had a limit of 108,400 tons for 8-inch cruisers and 100,450 tons for 6-inch cruisers. An agreement as to destroyers and submarines was also reached by the three major powers.

It seemed for a brief time that world naval disarmament was at last on the way. However, 1930 in fact marked the end of the ebbing tide of sea power.

One year after the London Conference went into effect Japan renewed her attack on China and in 1934 she gave notice of her intention to terminate the Washington agreement at the end of the

renewed her attack on China and in 1934 she gave notice of her intention to terminate the Washington agreement at the end of the 2-year period required. Thus the Washington and the London agreements expired together at the close of 1936.

The year 1930 saw increasing signs that the world was returning to power politics. The terrible American depression began to grip Europe and the attack of China by Japan in 1931 was but a fore-runner of violence in other parts of the world. The 1932 disarmament conference failed and in 1934 the Nazi putsch occurred. In Vienna this same group engineered the murder of Dollfuss. In 1935 Italy said strike down Abyssinia and in 1936 one of the most savage

Ment contende tailed and in 1934 the Nazi putson occurred. In Vienna this same group engineered the murder of Dollfuss. In 1935 Italy said strike down Abyssinia and in 1936 one of the most savage civil wars in history flared up in Spain. In 1937 Japan again launched a terriffic drive further into China and last year and this have seen Austria and Czechoslovakia overrun by Germany and Albania wiped out by Italy.

We are today in the midst of the greatest naval building program ever undertaken by this Government. It is actuated not by any desire to intervene abroad, not by any desire to acquire territory at the expense of any other State. The driving force behind our present naval program is a determination on the part of the Nation that we must be able to protect our people and our country. We have turned again to the course charted in 1916. The great Navy now built and building will be relied upon to effectively guarantee the safety and the territorial integrity of our people.

Today we live, grim though it be, in a period of international anarchy. Only those will survive who are able to defend themselves. Murder, tyranny, and oppression stalk across the world. Violence has become a national philosophy and those who would by peaceful means settle the perplexing problems of the day are branded as cowards and the governments which they represent are pictured as weak and decadent.

weak and decadent.

What the future holds no person can predict. The probabilities are too numerous and too uncertain to be touched upon here—even if time permitted, which it does not. However, one guess I will hazard, and it is that democratic institutions will outlast tyranny and oppression which seek to strike them down, and the desire for human freedom will eventually break asunder and destroy the bonds now being forged by the dictators of the world. National Keep America Out of Foreign Wars Week

EXTENSION OF REMARKS

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1939

ANNOUNCEMENT OF ESTABLISHMENT OF NATIONAL KEEP AMERICA OUT OF FOREIGN WARS WEEK, JUNE 11 to JUNE 18, 1939, INCLUSIVE

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following announcement, released to the newspapers of the country on May 8 and thereafter:

To the American people, irrespective of race, color, creed, or politics: The National Committee To Keep America Out of Foreign Wars, composed of 50 Members and former Members of Congress, invite the American people to join with them in voluntarily setting aside the week beginning Sunday, June 11, to Sunday, June 18, inclusive, for the purpose of conducting a Nation-wide campaign to keep America out of foreign wars.

The clergy of all creeds and denominations are urged to make special appeals from the pulpit to stop the war propaganda and hysteria that has been spreading like wildfire throughout our Nation, leading the American people into believing that if a war breaks out in Europe it is inevitable that our youth must again fight on foreign soil.

We appeal to all elements in our population to join with us in counteracting this vicious and false propaganda and in exposing the attempts to inflame the passions and hatreds of our people against foreign nations which have not the faintest intention or capacity of attacking us.

All religious, labor, farm, business, fraternal, civic, social, women's, veterans', educational, and other organizations are invited to hold meetings during the Keep America Out of Foreign Wars Week, to discuss and stress this vital issue. It is hoped that this program will be adopted as the theme for commencement exercises throughout the Nation.

The peace and safety of our country and our people are being threatened by foreign and Communist propaganda and by provoca-tive acts by those in places of great authority in our midst. We believe in adequate national defense, upholding the Monroe Doctrine, and the maintenance of our traditional foreign policies of neutrality, nonintervention, no entangling alliances, and peace.

on all those Americans who believe in these principles and established policies to participate in regular or special meetings in the Keep America Out of Foreign Wars Week, June 11–18, 1939, which includes Flag Day, June 14. All persons or organization desiring information and data should communicate with the National Committee To Keep America Out of Foreign Wars, House

tional Committee To Keep America Out of Foreign wars, House Office Building, Washington, D. C.

Baer, North Dakota; Edward Keating, Colorado; Ralph A. Horr, Washington; James Simpson, Jr., Illinois.

To Fortify or Not To Fortify

EXTENSION OF REMARKS

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1939

On an amendment offered to the naval appropriation bill whereby it was sought to include millions for improvements and developments at Midway, Johnston, and Palmyra Islands

Mr. PLUMLEY. Mr. Speaker, you should not, and I am sure will not, be misled by the generosity of the concessions shrewdly made. If you vote for this amendment now, in my opinion, you later will have to vote for the inclusion of Wake Island and the others when the bill comes back from conference, compromise agreement or not. It is a question of "whole hog" or none.

You should understand, as doubtless you do, that much more is involved in the proposition than appears on its face. If you are prepared to impliedly make a commitment with reference to the entire far eastern problems involving those bound to arise relative to the Philippines; if you have made up your mind as to just what you will do relative to the confused situation as certain to confront you as the sun is to rise, as to whether or not one will defend the Philippines at all hazards, why then, of course, you will vote for this "harmless little expenditure" of many millions for the alleged purpose of dredging harbors and making landing fields, which when accomplished will be the graveyards of millions of the dollars of the people of the United States spent in the fortification and defense of these projects and the protection of our property.

I am going to take the liberty to substantially quote from statements made by those recognized military and naval authorities: George Fielding Eliot and R. Ernest Dupuy, authors of The Ramparts We Watch and If War Comes, books with which every American citizen who desires to be well informed should be familiar.

Do not be misled. As has been said, American Samoa possesses, at Pago Pago, the best and most commodious harbor in the South Pacific. While it does not lie on any route from the United States to Japan, it does flank our communications with Australia and would be a valuable point of support for cruisers and convoys if that trade route were menaced. It would, moreover, be useful for stopping Japanese trade with South America if that became necessary. In enemy hands it would be a continual source of danger and trouble. Finally, it is a stopping place for our projected air route to New Zealand. Samoa has neither garrison nor fortifications at present. It should be noted that Samoa is the southern post of our mid-Pacific air-patrol line. Unalaska-Midway-Wake-Canton-Samoa, along which our large patrol planes can operate to cover the approaches to Hawaii from the Japanese-mandated area. This is an important part of our strategical arrangements in the Pacific.

You should think of this proposition in terms of Guam. Take a look at this picture. Strategists call attention to the fact that offensively Hawaii initiates a line of operations which, prolonged step by step through the Japanese mandates via Jaluit, Ponape, and Truk to Guam, would, when we had arrived at the last-named island, establish us in a position but 1,300 miles from Yokohama or 1,500 miles from Manila.

From this point our cruisers could begin to exercise the pressure of distant blockade upon Japan, operating in the South China Sea against her trade with Europe, Africa, and southern Asia, while that with Australasia and South America would already have been cut off as we moved forward from Hawaii. Such a distant blockade could not, in the nature

of sea warfare, be completely airtight; and it would demand of us a tremendous effort. Neverthelesss it could be done, and if long continued would certainly force the Japanese fleet to give battle in the hope of breaking our strangling grip upon the life line of the Japanese people, increasingly dependent as these are upon foreign markets and foreign sources of raw materials. Notably, in the military sense, the Japanese would have to fight before they were reduced to impotence by the cutting off of their supply of petroleum.

Thus Hawaii affords us the initial means of bringing about a decision favorable to ourselves in the unhappy event of a

war with Japan.

It must be emphasized that a war fought across the breadth of so vast an ocean as the Pacific is fraught with very great difficulties. For us to carry out a step-by-step advance through the mandated islands, as suggested, would involve the necessity of fighting for every stepping stone. We would have to employ considerable forces of troops for this purpose and, as we drew nearer to the source of Japanese power, the resistance would increase in degree and intensity. We would have to keep up a tremendous flow of supplies outward from our West coast ports to Hawaii, and from Hawaii to our advance bases. This would involve the use of large numbers of merchant ships, which would have to be convoyed by destroyers and escort vessels, imposing a severe burden on the fleet. After each advance, we would be compelled to "mop up" all the adjacent islands, a task whose magnitude may be suggested by the fact that the Eastern Carolines alone number 383 separate islands and atolls. Yet it is a task which would have to be accomplished before the next advance could be made, else the new line of communications would be open to constant attack by Japanese airplanes and flotilla craft.

As each main phase of the advance was completed, we would have to bring forward to the new advance base great quantities of fuel and supplies, and to establish there a temporary repair base by the use of floating equipment. A garrison sufficient to assure the place against raids and equipped with mobile heavy guns and antiaircraft artillery, would be required. A regular system of air patrol between the various islands would have to be established.

All this would take time. Presuming, as is indeed certain, that Guam would be taken over by the Japanese in the early days of the war, we might expect that, to reinstate ourselves there, to secure the base by clearing the Japanese out of adjacent Saipan, and to begin our distant blockade operations, would take anywhere from a year to 2 years from the time the first move was made from Pearl Harbor.

Our tenure of Guam would, moreover, be insecure and difficult, because it would be dependent on a line of communications from Pearl Harbor almost 5,000 miles in length, supported by positions having no resources of their own and little natural strength, but entirely dependent upon artificial means for defense and supply. We would be, on the other hand, but 1,300 miles from the largest Japanese naval base at Yokosuka—near Yokohama—and about 800 miles from their fortified advance base in the Bonin Islands.

Therefore our fleet would have to be in readiness to fight at the Japanese "selected moment" with its own average strength, which means that at Guam, or perhaps at Truk, as more sheltered from direct attack, would have to be set up and maintained a base adequate to all the needs of the fleet, which could not afford to be constantly sending ships back 5,000 miles to Pearl Harbor for repair and overhaul, as too great a percentage would be constantly absent. Great care would have to be taken of the heavy ships—battleships and large carriers—to protect them against torpedo, air, and mine attacks.

This would require incessant activity on the part of our destroyers, patrol vessels, mine sweepers, and aircraft. Convoy escorts for the line of communications would still be needed, as against long-range Japanese submarines; these could probably be largely furnished by gunboats or Coast Guard cutters, but would need a proportion of cruisers

against the chance of enemy cruiser raids. Our cruisers, meanwhile, would not only have to bear the burden of all the distant blockading operations, but also provide some cruisers for such fleet duties as reconnaissance and distant screening. Rapid and extensive new warship construction would therefore be imperative. The writer is unable to estimate the merchant tonnage which would be required to maintain the fleet in this distant position, to supply all the intermediate bases, to transport troops for their garrisons and the necessary reliefs and reinforcements. It would assuredly be

If, in your judgment, we must absolutely have these naval bases in order to protect and defend ourselves and the Philippines and Hawaii, then vote for them, as such, with your eyes wide open. Do not be lulled to sleep by the soft and persuasive "for civil purposes" lullaby, and wake up with the nightmare of reality staring you in the face.

Now, one word about the battleships. It is the well-considered judgment of those competent to know, both naval strategists and civilian experts, that of all combatant ships, the battleship is the only one designed to stay and "take it." Nothing else is tough enough because nothing else has sufficient size. That is the main and outstanding reason why battleships are necessary. Under all conditions of weather and sea, and for protracted periods of time, the battleship can steam and fight and remain afloat under punishment. Such ships must-at least under present conditionsremain, in Captain Ingram's words, the ships upon which will depend the final decision in sea warfare.

Duty Requires Congress to Remain in Session Until the Next Regular Session

EXTENSION OF REMARKS

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

Mr. LUDLOW. Mr. Speaker, I have introduced the following resolution fixing the date of adjournment of the present session of Congress:

Resolved by the House of Representatives (the Senate concurring). That the first session of the Seventy-sixth Congress shall adjourn on January 2, 1940.

When international relations are tense and there is a prospect that we may become involved in war the place of Members of Congress is in the city of Washington. There have been so many intemperate, ill-advised, truculent, and war-promoting speeches by Cabinet ministers, near Cabinet ministers, and others that the country has become genuinely alarmed and is looking to Congress to do its part in maintaining the international equilibrium and in keeping America out of threatened foreign entanglements. The country we represent abhors the crimes and cruelties of dictators but it assumes that we do not have any divine commission to correct these wrongs and it is convinced that the welfare of our own people should be our first consideration. One thing the country is determined upon, finally and for all, is that we are not going to send troops into any foreign war, and that, come what may, our military activities shall be confined to defending our homeland and to carrying out our obligations under the Monroe Doctrine. We Members of Congress are being swamped these days with letters and telegrams imploring us to keep America out of war. The adoption of the resolution which I have introduced would be reassuring to the entire country in this time of general alarm and deep concern, as it would show that Congress does realize its duties and responsibilities in respect to international relations and its obligations in the maintenance of peace. I would be glad to remain in Washington until snow flies to promote the cause of peace, and I am sure many other Members feel the same way about it.

My Country, 'Tis of Thee

EXTENSION OF REMARKS

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

EDITORIALS FROM THE OREGONIAN, PORTLAND, OREG.

Mr. ANGELL. Mr. Speaker, Mr. Ronald Glenn Callvert, associate editor of the Oregonian, published at Portland, Oreg., was awarded the Pulitzer prize for his editorial work on the Oregonian during the year 1938, and particularly for his editorial entitled "My Country, 'Tis of Thee," published last October. As announced, the Pulitzer award was made for "distinguished editorial writing" during the year 1938, limited to the editorial page, the test of excellence being clearness of style, moral purpose, sound reasoning, and power to influence public opinion, due account being taken of the writer's editorial work during the whole year. The editorial follows:

> [From the Oregonian, Portland, Oreg.] MY COUNTRY, 'TIS OF THEE

In this land of ours, this America, the man we choose as leader dons at no time uniform or insignia to denote his constitutional position as Commander in Chief of armed forces. No member of his Cabinet, no civil subordinate, ever attires himself in garments

his Cabinet, no civil subordinate, ever attires himself in garments significant of military power.

In this land of ours, this America, the average citizen sees so little of the Army that he has not learned to distinguish between a major and a lieutenant from his shoulder straps. When the Chief Executive addresses his fellow countrymen they gather about him within handclasp distance. Goose-stepping regiments are not paraded before him. When he speaks to the civilian population it is not over rank upon rank of helmeted heads.

In this land of ours, this America, there is no tramp of military boots to entertain the visiting statesman. There is no effort to affright him with display of mobile cannon or of facility for mass

affright him with display of mobile cannon or of facility for mass production of aerial bombers.

In this land of ours, this America, there is no fortification along

the several thousand miles of the northern border. In the great fresh-water seas that partly separates it from another dominion no naval craft plies the waters. Along its southern border there are no forts, no show of martial strength.

In this land of ours, this America, no youth is conscripted to

labor on devices of defense; military training he may take or leave at option. There is no armed force consistent with a policy of aggression. The Navy is built against no menace from the western

aggression. The Navy is built against no menace from the western hemisphere, but wholly for defense against that which may threaten from Europe or Asia.

In this land of ours, this America, one-third of the population is foreign-born, or native-born of foreign or mixed parentage. Our more numerous "minorities" come from 14 nations. The native-born, whatever his descent, has all political and other rights possessed by him who traces his ancestry to the founding fathers. The foreign-born of races that are assimilable are admitted to all these privileges if they want them. We have "minorities" but no minority problem.

minority problem.

In this land of ours, this America, the common citizen may criticize without restraint the policies of his Government or the aims of the Chief Executive. He may vote as his judgment or his conscience advises and not as a ruler dictates.

In this land of ours, this America, our songs are dedicated to love and romance, the blue of the night, sails in the sunset, and not to might or to a martyrdom to political cause. Our national anthem has martial words—difficult air. But if you want to hear the organ roll give the people its companion—"America * * * of thee I sing." In lighter patriotism we are nationally cosmopolitan. United we sing of Dixie or of "Ioway, where the tall corn grows," of springtime in the Rockies, or of "California, here I come."

In this land of ours, this America, there is not a bomb-proof shelter, and a gas mask is a curiosity. It is not needed that we teach our children where to run when death-hawks darken the sky. In this land of ours, this America, our troubles present or prospective, come from within—come from our own mistakes, and injure us alone. Our pledges of peace toward our neighbors are In this land of ours, this America, our songs are dedicated to love

pective, come from within—come from our own mistakes, and injure us alone. Our pledges of peace toward our neighbors are stronger than ruler's promise or written treaty. We guarantee them by devoting our resources, greater than the resources of any other nations, to upbuilding the industries of peace. We strut no armed might that could be ours. We cause no nation in our half of the world to fear us. None does fear us, nor arm against us. In this land of ours, this America, we have illuminated the true road to permanent peace. But that is not the sole moral sought herein to be drawn. Rather it is that the blessings of liberty and equality and peace that have been herein recounted are possessed

nowhere in the same measure in Europe or Asia and wane or disappear as one nears or enters a land of dictatorship of whatever brand. This liberty, this equality, this peace, are imbedded in the American form of government. We shall ever retain them if foreign isms that would dig them out and destroy them are barred from our shores. If you cherish this liberty, this equality, this peace that is peace material and peace spiritual—then defend with all your might the American ideal of government.

It is interesting to note the circumstances under which this editorial was written by Mr. Callvert, as set forth in the Oregonian's editorial of May 2, 1939, which is:

It was on October 1 that Hitler began the military occupation of Czechoslovakia while all the world wondered. Here in Portland, in the editorial room of the Oregonian, confronted by the day's work, Ronald Glenn Callvert, associate editor, read the dis-

day's work, Ronald Glenn Calivert, associate editor, read the dispatches. Comment on the European situation was clearly indicated, and he needed a topic. He brushed his correspondence and clippings aside, took the case off his typewriter, and began writing. The editorial he wrote had for its theme the caption which rang through his mind—the words of a song he sang when he was a schoolboy. He intended to call it, as he did, "My Country, "Tis of Thee." It grew as he wrote it, naturally and without conscious effort; for the truths he was minded to declare had been with him since earliest memory. It was an editorial of contrast, gratitude effort; for the truths he was minded to declare had been with him since earliest memory. It was an editorial of contrast, gratitude to Providence for what we have and are, for our institutions of democracy and our deeply abiding love of liberty. It spoke the thought of millions of Americans in those times when an armed might made mockery of the rights of the weak.

My Country, 'Tis of Thee proved a phenomenally successful venture in editorial expression. It was widely reprinted in the national press. Thousands upon thousands of requests poured in upon this newspaper for copies. Requests still are coming. Friends of its author sent it away in national annual competition—and a

of its author sent it away in national annual competition—and a very noncommittal silence ensued.

Your pardon for printing the editorial again in this paper today, where it has twice before appeared.

The occasion is an exceptional one.

It isn't every day that a newspaper may boast of winning a

Pulitzer prize.

We are so boasting today.

It was, the judges found, the most distinguished editorial of the year.

Mr. Speaker, the Oregonian, a pioneer publication in the Pacific Northwest, has been an outstanding force through the years for the development of the whole Oregon country. Mr. Callvert, as associate editor, has distinguished himself in his work on this publication through a long service, and his many friends are grateful for this well-deserved recognition of his editorial work.

Money Supply, Farm Prices, and Prosperity

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

Mr. VOORHIS of California. Mr. Speaker, on May 4, the gentleman from Michigan [Mr. Crawford] delivered what was in many respects a most excellent speech on our general economic problem and the great and central importance of monetary control as a means of solving that problem.

It happens that Mr. CRAWFORD pointed out in that speech certain things that I myself have for some time very much wanted to say. He analyzed the movement of farm prices in relation to money supply of the Nation and, using a chart from the Bureau of Agricultural Economics, showed that ever since 1910 farm prices have risen when money supply was rising and fallen when the amount of money in circulation was being reduced. Indeed farm prices have risen more and fallen more than the correlative variations in money supply. Yet as Mr. CRAWFORD points out this is quite the opposite of the claim of the Federal Reserve Board that prices are not primarily affected by the quantity of money in circulation.

I think Mr. CRAWFORD's statement is to be criticized only on two counts. In the first place, it seems to me he could have made considerably more than he did of the fact that, whereas the Board may be right that the controlled prices of monopoly products are not sensitive to variations in money supply, nevertheless the very prices-namely, farm-commodity prices-which it is most important to raise are extremely sensitive to variations in the supply of money. And further, that an increase in money supply is likely to raise farm prices-again the ones which more than any others should be raised-much faster than the general price level, whereas, a deflation in money supply will cause farm prices to drop clear out of sight while monopoly prices remain suspended in midair as if by some magical power.

In the second place, while I agree with Mr. CRAWFORD'S general analysis, and with his criticism of what he calls the "bank subsidy policy effected by bond sales," I do not believe he is altogether correct in assuming that the whole cause of the failure in recent years of per capita income to rise as fast as money supply has increased has been due to the low interest rate and Government sales of bonds for bank credit with subsequent expenditure of that credit.

I believe there are other and more important reasons why national income has not risen as fast as the money supply has been increased in the period since 1932. A more accurate statement would, I think, be to follow out to its logical conclusion one of Mr. Crawford's own statements:

That the way in which the supply of money is created and floated can and does have a vital effect on the way it comes to be used in trade, and therefore on the level of prices.

The real truth, I believe, is that our trouble lies in the fact that we depend for our supply of money upon the borrowing of bank credit, created for the purpose of making loans. To cure the trouble I believe we must have a system of bringing our national money originally into circulation without anyone's paying interest or contracting debt in order to accomplish it. Of course it would be of vital importance to limit such an increase in money supply to an amount which can be absorbed readily by expanding production and consumption. So that on the one hand I believe that until we make this necessary change in our monetary system it is perfectly obvious that whenever business does not or cannot borrow Government must do so in order for the Nation to have anything like an adequate money supply.

But, on the other hand, I eagerly admit that to rely on such Government borrowing and increase in national debt amounts not only to a subsidization of the banks-by virtually giving them Government bonds in return for costless credit—but is inadequate to solve the problem.

The reason it is inadequate is twofold. First, Government deliberately refrains from spending its money in the most productive ways. True it builds some power dams, reclaims land, and does some other things which add directly to national income. But, in part, it is true that Government is more likely to spend into circulation the money it borrows for services to the people or for national improvements which will only indirectly or over a long period of time raise the national income. Second, income from these Government bonds has been tax exempt and should not be. Since we are now definitely in a period when we have too many pieces of paper calling themselves "capital" in the Nation and too little consumer demand for goods, it necessarily follows that, until we find a way to directly sustain a larger consumer demand, this paper capital will seek safe, secure, and, whenever possible, tax-exempt places in which to hide. I do not think we should issue any more tax-exempt securities, and I believe if we did not, the hoarding-which, I take it, is what lies at the bottom of Mr. Crawford's objection to lowinterest rates-would in part at least be discouraged. In the third place, I am of the opinion that the rate of interest on bonds, mortgage loans, and other pure evidences of debt is not too low, but probably too high. For I believe the lower the rate of interest goes the more likely it is that people will prefer to invest in productive enterprise, instead of merely purchasing evidences of debt.

To raise the interest rate may make bankers more anxious to loan money, but it certainly will not make anyone better able to borrow it or more willing to do so. A higher rate of pure interest, as opposed to income from investment, would clearly cause more, not less, tendency to buy bonds, mortgages, and the like, and less, not more, tendency to invest |

in productive enterprise.

I am convinced that the key to the door that will lead out of our difficulty is to be found in a ledger book of national credit which so far has never been opened. It is necessary, first, that money be brought into circulation by the payment of old-age pensions or in some very similar way; second, that it come into circulation interest free; and third, that it be fed into the stream of business as the national economy requires it. If this were done, I do not think there would be the disparity between the curve of money supply and that of per capita income of which Mr. Crawford complains. And I should like to point out that one of the main reasons hoarding takes place is because people are hoping that money will rise in value in terms of goods-that is, that the price level will fall. If we had a stable dollar and maintained it, would not one of the greatest causes of hoarding be removed? I believe so. Indeed, I am inclined to think that in any economy where credit plays as important a part as it does in ours, the burden of private debt is certain to periodically break the back of prosperity unless either, first, the monetary reform I have suggested is instituted, or, second, a constantly rising price level is maintained in order to lessen the real burden of debt in terms of commodities.

In closing, let me say that I believe we must take it for granted that the tendency of people to put their money into the safest forms of investment they can find, such as Government bonds or Government-guaranteed loans or debentures, is going to continue. Therefore, I believe we need to devise at once a mechanism whereby funds so invested can be channeled through some agency into productive enterprise. Particularly is this important from the standpoint of little business. A system of industrial finance banks under Government auspices, selling consolidated debentures and stock to the public, but making credit and even equity capi-

tal available to producers may be the answer.

And I also think we must see clearly that even if not one dollar of current income were hoarded, even if all of it were either spent for consumer goods or invested, still it would be essential to prosperity for Government to increase from time to time the supply of money in consumers hands. This is true because investment means not only a certain amount of current expenditure but also a storing up in additional productive machinery of a portion of current income. And that additional productive capacity has got to be matched by brand new, interest-free consuming power if our economy is to be kept in balance.

Moral Rearmament

EXTENSION OF REMARKS

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

ADDRESSES BY DR. FRANK N. D. BUCHMAN AND H. W. (BUNNY) AUSTIN

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses by Dr. Frank N. D. Buchman, founder and leader of the Oxford Group, and H. W. (Bunny) Austin, British Davis Cup tennis player, before the National Press Club, Washington, D. C .:

Address by Dr. Frank N. D. Buchman, Founder and Leader of the OXFORD GROUP

A world force adequate to make peace permanent. A world force adequate to banish war. A world force adequate for any crisis. Three great tasks confront this generation. To keep the peace and make it permanent. To make the wealth and work of the world available to all and for the exploitation of none. And with

peace and prosperity as our servants and not our masters, to build a new world, create a new culture and change the age of gold into the Golden Age.

Often men have believed they could achieve the Golden Age by their own efforts. But man's wisdom has proved wanting. Today we are at our wits' end. The new civilization of our dreams will not come by our own wisdom but by obedient cooperation with God in the task of Moral Re-Armament. M. R. A. points the way. It is

the task of Moral Re-Armament. M. R. A. points the way. It is God's answer to this generation.

What this age needs is a new pattern of democracy designed by God and worked by everyone. As a number of members of the British Parliament recently stated, democracy without high character disintegrates. Nor is it enough to be the self-appointed judge of other systems. In an age when lowered moral standards have become the breeding ground for destructive forces is it not time for democracy to seek again the sources of her strength and to demonstrate to the world the power of moral principles? The great issue that divides the world underlies the more obvious conflicts of party, class, nation, or ideology. The battle for peace must be fought in the heart of the individual and thus throughout the community if it is to be won in the world. it is to be won in the world.

Lord Athlone, brother of Queen Mary; Lord FitzAlan; Admiral of the Fleet Sir Osmond Brock; Author Ian Hay; and former Ambassador to Washington, Lord Howard of Penrith, published these words: "Victory in this battle is the one thing needful for the world in which we live. It implies first of all a change of heart. Experience which we have a world that such a change can take place and that it comes to

which we live. It implies first or all a change of heart. Experience has proved that such a change can take place, and that it comes to those who turn from judging others and their systems to a sense of their own faults and a determination to live under the guidance of God. The choice is moral re-armament or national decay."

The first sovereign to lead in moral re-armament was the Queen of the Netherlands in a personal word to her people which was broadcast to the 60,000,000 in the Dutch East Indies as well as to the 8,000,000 at home. She not only gave the outline of moral re-armament but also expressed her determination to carry it into vertice in the retired life.

the it into practice in the national life.

The history-making letter which stirred Europe and which is the voice of the fighting forces included among its signatories a Marshal of the Royal Air Force, an Admiral of the Fleet, and two Field Marshals, as well as senior statesmen like Lord Salisbury and Lord Baldwin:

"Were we, together with our fellow men everywhere, to put the energy and resourcefulness into moral and spiritual rearmament that we now find ourselves obliged to expend on national defense, the peace of the world would be assured. This same spirit can transcend conflicting political systems, can reconcile order and freedom, can rekindle true patriotism, can unite all citizens in the service of the nation, and all nations in the service of mankind."

We need to find a new national unity, a new creative program for the unemployed, and a youth which will be the framers of the peace of tomorrow. Sisley Huddleston in his book In My Time

"Only a change of heart in individual men in all countries can bring us peace. Neither leagues, nor foreign secretaries, nor armies, nor navies, nor airplanes, nor alliances, nor communism, nor fascism, nor anything else will serve except a growing force of men and women who know and live peace. They will be at peace with themselves and at peace with their fellows. It was while I was at Geneva that I first made the acquaintance of members of the Oxford Group who seemed to me to have precisely the

right idea about peace and to be doing infinitely more for it than the foreign secretaries and the League ladies and gentlemen."

Longing for peace is a universal bond between all peoples, but it must be a right idea of peace.

Statesmen acknowledge the force of Moral Re-Armament. At a recent luncheon given in Geneva, attended by diplomats and delegates from 53 nations the President of the Norwegian Parlia. delegates from 53 nations, the President of the Norwegian Parlia-

ment spoke as follows:

ment spoke as follows:

"Some of us delegates to the League Assembly have asked you to come here today to meet and to hear Dr. Buchman and some of his fellow workers in the Oxford Group. We have done so because we have felt that in this hour of grave apprehension and fear it is of vital importance to meet hope and faith and strength. We have the impression that these people have succeeded in fundamental things where we have failed. They have created a fellowship of men and women irrespective of nationality and political doctrine. They have created that constructive peace which we have been men and women irrespective of nationality and political doctrine. They have created that constructive peace which we have been seeking in vain for years. So we have asked them to come to give us the right mind for preparing that Moral Re-Armament which they have already prepared amongst so many nations. Where we have failed in changing politics, they have succeeded in changing lives, and giving men and women a new way of living."

No movement for world peace can succeed which does not have the support of labor. Fortunately the movement for Moral Re-Armament has this support. The chairmen of the Trades Union Congress for the past four years, including the present chairman, representing 5,000,000 workers, are wholeheartedly back of it. This is the new thinking and the new philosophy that everybody wants.

is the new thinking and the new philosophy that everybody wants. The whole Moral Re-Armament movement was cradled in East London, the birthplace of the labor movement, and from the very earliest days labor has made a great contribution. Here's what Tod Sloan, a watchmaker by trade, and an agitator by nature,

"Here in East London the people are really hungry for a new leadership. They want this new thinking, and since the Moral Re-Armament came to West Ham it has reached out in all direc-

tions, and today there are many homes where whole families are living this quality of life."

He concludes: "This to me is the only revolution that matters—the change

in human nature—and it does happen. From yours ever, Tod."

Let me recall to you, as this country takes up the challenge of Moral Re-Armament, those words of Emerson, words which may prove to be prophetic: "America may be God's last chance to make a world."

Address by H. W. (Bunny) Austin, British Davis Cup Tennis Player

Sportsmen morally rearmed can unite the world.

Sportsmen morally rearmed can unite the world.

That is the belief of an increasing number of sportsmen of all nations who are today forming themselves into a world front to oppose the encroaching forces of chaos.

M. R. A. is the spiritual power that enables sportsmen to live out the ideals inherent in the games they love.

These ideals can be made dominant in the life of individuals and communities. They must be made dominant if the divisive forces at work in the world today are to be conquered and civilization saved from disaster.

tion saved from disaster.

Sport, we know, provides a natural meeting ground where men can gather on an equal footing irrespective of nationality, of party, class, and creed. Sport rises naturally above all barriers. It is a perfect instrument for the promotion of international friendship and internal strength and unity in nations. But it has

It is a perfect instrument for the promotion of international friendship and internal strength and unity in nations. But it has been mishandled. Sportsmen have used it selfishly, and sport, in consequence, has failed to achieve constructive ends. Sportsmen, morally rearmed, can create through sport a mighty instrument capable of transforming the thinking and living of the world.

To do this is every sportsman's responsibility and everybody can be a sportsman. The world as it is cannot be patched up. It must be remade. Sport and sportsmen must become the warp and woof of a newly woven world.

The achievement of these ends is the program of the 37 leading sportsmen of Great Britain who issued a manifesto last fall on Moral Re-Armament Through Sport, which was printed widely in the press of 19 countries and of which 40,000 reprints were absorbed by sports clubs in Great Britain.

The call of these sportsmen was reechoed throughout Scandinavia, was taken up in Holland, was responded to enthusiastically in France. Today the top American athletes are themselves calling for this new spirit of sportsmanship which they say can get the conflicting forces of their country to play ball. Thirty-three of their number are preparing a striking manifesto which, I understand, will be released in the near future. It is as follows: stand, will be released in the near future. It is as follows:

"MORAL RE-ARMAMENT THROUGH SPORT

"Every sportsman knows what it means to give all he has for his sport—the discipline, sacrifice, and daring. Can we American sportsmen bring these qualities to our country?

"To rearm America morally is the greatest sporting challenge of our time. It is a game on a national field with Olympic scope.

"Moral Re-Armament is a battle for peace where sportsmen must take the lead—and everybody can be a sportsman. There is no room for grandstand quarterbacks. Every one must get into the

"A well-known prize fighter, who, with 36 other leading athletes, called for this new spirit in Britain last fall, puts it this way: "The idea in Moral Re-Armament is the same as in boxing—to give more

than you get.'
"Moral Re-Armament means sportsmanship everywhere. It means teamwork, fair play, and clean living—personally and nationally.

nationally.

"A program of Moral Re-Armament accepted personally by sportsmen can create a new moral fibre in the Nation, what the President calls 'the underlying strength of citizenship.'

"Sport unites the Nation on sandlot, court, and stadium. A new sporting spirit can unite the Nation in office, workshop, and home. We can get all the conflicting forces of America to play ball.

"We Americans have prided ourselves on being go-getters. As go-givers our batting average can be even better. The new patriotism can set world records in national self giving.

"We can train a world team of sporting nations to win the race against chaos.

against chaos.
"Sportsmen morally rearmed can unite the world."

SIGNATORIES-MORAL RE-ARMAMENT THROUGH SPORT

Grantland Rice, commentator "The Sportlight." George Herman (Babe) Ruth, world's record holder baseball

Wilmer L. Allison, United States tennis champion, 1935. J. Donald Budge, Australian, British, French, and United States tennis champion, 1938.

Richard Harlow, football coach, Harvard University. Carl Hubbell, pitcher, New York Giants Baseball Club.

James Hull, captain, Ohio State University Big Ten championship basketball team, 1938–39. Robert T. (Bobby) Jones, British amateur and open, United States amateur and open golf champion, 1930. Donald Lash, national cross-country champion since 1934, world's record holder 2-mile run, holder Sullivan trophy for sportsmanship, 1938.

Joe McCarthy, manager, New York Yankees Baseball Club.
Connie Mack, manager, Philadelphia Athletics Baseball Club.
Devereux Milburn, American International Polo Team, 1909–1927.
Glenn Morris, Olympic decathlon champion.

David O'Brien, quarterback, Texas Christian University football team, holder Heisman and Maxwell trophies as outstanding football

player, 1938.

Mel Ott, captain, New York Giants Baseball Club.
Francis Ouimet, United States national open golf champion,
1913; national amateur, 1914, 1931.

Jesse Owens, world's record holder, 100-yard dash (coholder),
220-yard dash, 220-yard low hurdles, running broad jump.

Al Patnik, United States diving champion.

A. M. Reid, president, United States Golf Association.
Capt. E. V. (Eddie) Rickenbacker, aviator; president Indiana
Motor Speedways Corporation; chairman, advisory sports committee, New York World's Fair.

Branch Bickey, vice president, St. Louis Cardinals Baseball Club.

Branch Rickey, vice president, St. Louis Cardinals Baseball Club. William Sefton, coholder world's record pole vault.
W. H. (Bill) Terry, manager, New York Giants Baseball Club. Gene Tunney, world's heavyweight boxing champion, 1926–28.
H. Ellsworth Vines, Jr., United States tennis champion, 1931, 1932. Charles Yates, American Walker Cup Team 1938 and British mateur golf champion.

amateur golf champion.

Our Domestic and Foreign Policy

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

Mr. SPRINGER. Mr. Speaker, every American has heard the old adage, "Don't stick your head out unless you want to get your ears knocked down." That statement has become literally true within the past few days, and our own Government has witnessed the effect of too much careless talk on the part of those who are the helm of our Government. Warmad Europe, under the domination of dictators, carries a chip on her shoulder, and those nations who are under the direct rule of the dictator become irritated at the slightest provocation on the part of the nations in the Western Hemisphere, regardless of the motives which actuate their utterances; therefore, unguarded remarks should be entirely eliminated by those in authority.

We have not forgotten the remarks made by President Roosevelt, at Chicago, on one of his many trips across the country, which occurred a very short time after the appointment of Justice Black to the Supreme Court of the United States, which disturbed some of the European powers to the point that war was predicted. Those careless remarks might have involved our country in war. The people of our Nation do not want war. They want a permanent peace, Quite recently, following the transmission of the note by

President Roosevelt to the Italian Government, there appeared in the Il Papolo D'Italia, one of the great newspapers in Italy, this headline:

Unworthy Maneuver of Roosevelt Will Get the Response It

In that same great publication the following statement appeared in the same connection:

We deny the President any right to intervene in European questions because his country is not directly interested, as well as because he, personally, has not the slightest claim to assuming the role of friendly and impartial mediator.

However, in that same article, and in that same great publication, it was stated that President Roosevelt "sought to divert American opinion from the unemployment which grows day by day." The truthfulness of the article makes it very interesting, indeed. The rapidly growing list of the unemployed and the needy people in our country make our

relief rolls mount higher, yet there is no apparent effort on the part of the national administration to cut the cost and expenses of the administration, the number of employees, the "white collared" bosses, and the various and numerous supervisors and inspectors who are on that pay roll, yet not entitled to any relief whatsoever. If the administrative cost of the W. P. A. were reduced, as it should be, then there would be ample funds for the unemployed and the needy, and without discharging the needy people from the relief rolls. However, at this very hour, the W. P. A. administrators are engaged in discharging the poor and the needy people from the relief rolls, and at the same time it maintains its vast army of employees and office force without any perceptible reduction, and it continues to pursue its policy of reckless spending of the money which, in right, should be available for the unemployed, the poor and the needy people of this country. This unbusinesslike policy in this relief agency is abhorrent to the thinking people of this country and it is contrary to every policy the workers on the W. P. A. have ever known; this policy has been such that it has attracted the attention of the people in Europe, as evidenced by the comment in the Italian press.

May I suggest, Mr. Speaker, that with our vast army of unemployed people, numbering approximately 13,000,000 in all, many of whom are wholly destitute, and in this vast number are many children who are half-clad and half-fed, and which lengthened list of idle people has grown in the face of the plan adopted by the administration now in power, and with a staggering indebtedness of more than \$40,000,-000,000, which established a mortgage upon the future of every boy and girl in this country, we have a big job at home which must be accomplished by Americans in an

American way.

We hear the people of our Nation clamoring for neutrality; our people do not want any foreign alliances or entanglements, and they do not want to become involved in any European war. We, therefore, should endorse a strict neutrality policy which will, in itself, insure us against any entangling alliances or engagements with any foreign powers, and in the end this is a safeguard against our involvement in their wars.

When we speak of neutrality, I am constrained to say that this enlightened policy should not be limited to the sale, barter, or exchange of arms, supplies, equipment, and munitions of war, but it should be extended to the method of speech of our own citizens, and especially should this theory of neutrality be extended to our President, and to those in authority, in this country, who speak for our people. Their speech should be guarded with diplomatic care and extreme caution. They must recognize today that our people do not want war. They want a permanent peace. Our people seek to build in this Nation, they do not want bloodshed and the awful carnage of war. They want the boys and girls of our country to know and to fully understand peace-not the awfulness of war.

Therefore, may I urge that we extend the theme of neutrality, as our people desire it, to the speech of our people, and to those who speak for us, and let us mind our own

business and solve our problems at home.

Business Taxes

EXTENSION OF REMARKS

HON. JOHN W. BOEHNE, JR.

OF INDIANA IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

ADDRESS BY LOUIS RUTHENBURG, MAY 3, 1939

Mr. BOEHNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Louis Ruthenburg, president of Servel, Inc., delivered before

the congressional delegation from Indiana with a representative group of Indiana businessmen at Washington, D. C., May 3, 1939:

Having been asked to discuss business taxes briefly, I think I should assure you at the outset that I shall not indulge in a discussion of fine-drawn theories about taxation. I say this for two very good reasons. The polite and conventional reason is, of course, that I do not want to impose upon your patience. The mere compelling and personal reason is that I am completely ignorant about such theories.

My business friends with whom I have discussed the subject of

My business friends, with whom I have discussed the subject of business taxes, clearly recognize the great difficulties under which our legislators labor when they deal with the tax question. These men think realistically and therefore believe that considerable time will elapse before tangible progress will be made toward great economies in the Budget. From this premise they naturally reason that taxes must be imposed which will produce the required revenues, and that the total tax requirement will be greater before it

It seems to them that the necessity for continued and for probably increased tax revenue is a most compelling reason for carefully reviewing the present tax situation with the aim of relieving business of restrictive, punitive, destructive tax burdens. The Nation's only hope for future financial solvency seems to rest upon an early and substantial increase in the Nation's total annual income. This necessary expansion must come from business activity, and it will come from business activity when our legislators relieve business of the many burdensome laws which now tend to dry up the one source from whch increased tax revenues can be

had.

When business management asks for relief from restrictive legislation it speaks as the trustee who must fairly serve the interests of millions of employees, millions of customers, millions of stockholders. It speaks in the ultimate interest of the same public whose interests our legislators strive to serve. This plain fact frequently is confused by critical and emotional attitudes which generate far too much heat and all too little light.

In the final analysis American business simply pleads for the privilege of continuing to function effectively as the public servant which has played an important part in bringing to the American workingman and the American public generally, including the American officeholder, the highest material standards

cluding the American officeholder, the highest material standards of living ever achieved in the history of the world.

The best services of American business are now needed as never before by every American social group and by every American citizen. Lashed and starved and strangled by punitive legislation, American business simply cannot function as it should—nay, as it must—if our pressing economic and social problems are to be solved.

We are told that the slave owners of the old South were seldom so short-sighted as to whip and starve their servants.

Business unrestrained by present restrictive, punitive, and de-

seldom so short-sighted as to whip and starve their servants.

Business unrestrained by present restrictive, punitive, and destructive legislation, not only in the field of taxes but in other areas of business activity, can go forward rapidly to create a greater national income than we have had at any time in the past—an income that will surpass the most optimistic hopes of the present. However, if business continues to be restricted by these repressive measures, every group in our complicated social structure will be hopelessly oppressed by the operation of a law whose penalties can be incurred but which cannot be repealed nor amended by human legislation. I refer to the fundamental law of diminishing human legislation. I refer to the fundamental law of diminishing return.

There is reason to believe that our legislators and businessmen even now are in agreement upon the broad premises which I have just outlined. The people of the United States are naturally gratified by recent constructive and cooperative expressions on the part of the Treasury Department and on the part of the House Ways and Means Committee, and it is my purpose not so much to discuss theories of taxation or to suggest specific remedies as to urge effective and immediate legislative action to effectuate remedies already represedy by the Treasury Department and by members of the

tive and immediate legislative action to effectuate remedies already proposed by the Treasury Department and by members of the Ways and Means Committee.

The Ways and Means Committee has earned the gratitude and congratulations of all straight-thinking citizens by their proposals to defer an increase in old-age annuity taxes and to fix a top limit of \$3,000 a year on wages subject to unemployment taxes.

The first proposal implies recognition of the impracticability of the fabulous "reserve" which has brought forth so much just criticism of the present act. Implicit also in this proposal is a sincere desire to remedy a system of income taxation actually used for cur-

cism of the present act. Implicit also in this proposal is a sincere desire to remedy a system of income taxation actually used for current Budget purposes while it parades, thinly and shabbily disguised, as a beneficent measure for social welfare. This same proposal would also indicate recognition of the straight forward common-sense principle that we shall "pay as we go."

The second proposal to eliminate the unemployment tax on that part of incomes in excess of \$3,000 appeals to all right-thinking people as a measure of common sense and equity.

But, gentlemen, "time's awastin'." Please give us action!

Moreover, it is urgently requested that prompt legislative action be taken upon the Treasury Department's proposals. To quote a famous Democratic President, the country at large, including all American business, is confronted by "a condition, not a theory."

American business, is confronted by "a condition, not a theory," and, to paraphrase the title of a recent important book, "it is later than we think."

It seems likely that constructive statesmanship will now recognize the fact that the time has passed when we can afford to confuse and obstruct the taxing power by hazardous experimentation. Sufficient data are now available to demonstrate conclusively that these confused experiments have produced negative results. Is it not vitally important that we now recognize the lessons for which the Nation has paid so dearly, place behind us for all time further futile experiment in the field of taxation and press forward toward constructive measures which will produce maximum revenues without further strangulation of the only

goose that can lay our golden eggs?

There is no longer time to experiment with taxes which aim to reform and control, garnished by so-called rewards which actually result in the application of penalties and the restriction of business

activity.

The people with whom I have talked believe that the following specific suggestions are wholly consistent with the principles that have been set forth, with your own current thinking and with that of the Treasury Department:

(1) Remove for all time the last vestige of the tax upon undistributed profits. By so doing you will eliminate a wholly vicious practice which is just as absurd and just as destructive as would be the assessment of a confiscatory tax upon the seed corn of the farmers.

(2) As a corollary proposition, it is believed that no need exists for an increase in the income-tax rate on corporations by reason of the final elimination of the undistributed-profits tax. Business

set at liberty can produce sufficient tax revenue at the current rate.
(3) Business would be greatly encouraged by suitable provision for allowing the deduction of corporate losses in years subsequent

to that in which the loss was incurred.

(4) The reduction of surtaxes upon individual incomes should result in greater tax revenue by causing increased investment in

private enterprise.
(5) Provision of equitable and realistic treatment of capital gains and losses for individuals and corporations would tend to increase the velocity and earnings of business.

So much for urgently needed, immediate measures of relief.

A final suggestion for long-range planning is made which may be too idealistic for realization. Would it not be a measure of constructive statesmanship to place tax planning and specific recommendations in tax matters to the Congress within the control recommendations in tax matters to the Congress within the control of a well qualified, permanent, nonpartisan board, which would approach our present confused, inefficient, self-defeating aggregation of tax measures with an objective, long range, constructive viewpoint, calculated gradually to bring order out of chaos and to develop a carefully correlated tax program, scientifically planned to produce maximum revenue and to avoid undue restriction of those activities which are essential to develop increasing national income?

income?

Our terribly serious tax problem can be partially solved by immediately relieving business of restrictive tax burdens.

Attainment of ultimate optimum results, however, will require consistent, scientific study by properly qualified experts, whose work must be continued indefinitely.

Has American statesmanship ever faced a more compelling challenge? How else can we arrest the alarming decline in the standard of living which has been apparent for 10 years and which now shows no sign of improvement? In the absence of such constructive measures, there is every reason to believe that the operation of the inexorable law of diminishing return will force the American standard of living to ever lower levels until a return to those living standards which existed in 1929 will no longer be possible.

Please give us prompt, effective legislative relief. "It is later than we think."

Jute, a Foreign-Produced Commodity, Is Being Used in America Instead of Cotton

EXTENSION OF REMARKS

HON. WRIGHT PATMAN OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

Mr. PATMAN. Mr. Speaker, the members of the Texas delegation in Congress have received the following resolution from the Legislature of Texas:

Whereas all cotton produced in the United States is sold on the basis of the gross weight of the bale, which includes the weight of the bagging and tie, and there being no uniformity in the weight of said bagging and ties, this making it impracticable for buyers to arrive at the actual net weight of the cotton when setting a

price for same, this resulting in the producer receiving a price at variance with the posted price for like grades of cotton; and Whereas cotton produced in all other countries is sold on the net weight thereof without regard to the weight or character of bagging

Whereas there is now prevailing in the Congress of the United States a bill requiring that all American-produced cotton should be

sold on the net-weight basis, thus making it possible for the use of a lighter weight bagging in the wrapping of the American cotton, and further resulting in the use of low-grade cotton in the manufacture of bagging, also helping to reduce the stocks of low-grade cotton in the United States, and removing from the market much of the low-grade cotton, which is held in competition with the higher grades; and

Whereas the bagging used now almost exclusively throughout the United States is manufactured from materials imported, and much of the finished bagging being imported, thus requiring the American cotton growers to use foreign manufactured bagging in competition with a bagging that might be manufactured from their own product, this establishing an unethical and badly unbalanced economic condition; and

Whereas the Texas Cotton Ginners Association and the Texas Cooperative Ginners Association, representing a very large majority of the cotton ginners of Texas, at their annual convention held in Dallas on April 11, 1939, both, by unanimous vote, resolved to wrap their gin bales in cotton as soon as a net-weight law was enacted, and further voted to give full cooperation to extend the use of cotton in every way possible by their example and precept: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Congress of the United States be, and is hereby, memorialized to enact a law as soon as possible requiring that all American-produced cotton be sold on the basis of the net weight of the bale;

and be it further

Resolved, That copies of this resolution be sent to the Congressmen and United States Senators from Texas, and to United States Senator Ellison D. Smith, chairman of the Senate Agricultural

Several Members of the Texas delegation have interested themselves in this proposal for a number of years.

Certainly Congress should do everything within its power to save the American market for the American farmer. Jute is produced in India with very cheap labor, yet we import it into this country and displace over 2,000,000 bales of cotton. The following table with reference to this displacement is selfexplanatory:

Estimates of the quantities of cotton that would be consumed if jute and hard fibers were replaced entirely by cotton

IMPORTED JUTE	
	Bales of
Bags:	178 lbs. net
Mill feed	
Fertilizer	
Sugar	
Potatoes (white)	. 56,000
Wheat (bran and shorts)	50,000
Flour (all kinds)	19,000
Other (for other products and sundry purposes)	111,000
Total	620,000
Bagging for wrapping bales of cotton (12,000,000 bales)	135,000
Textile wrapping (bales covering manufacturing goods) _	
Wool carpets and rugs	95, 000
Twine and cordage (including tying United States mails)	75,000
Road building	100,000
Rags for U. S. Navy, low-grade cotton	8,000
Other	85,000
Total	
Grand total	
IMPORTED HARD FIBERS	
Binder twine and rope	550,000
Other (mostly twine and cordage)	
Grand total, hard fibers	1, 150, 000
Grand total, jute and hard fibers	2, 358, 000

Congress recently made a very short step in the direction of substituting cotton for jute when it provided that at least 25 percent of the money appropriated to the Post Office Department to buy twine should be used to purchase cotton

The Fulmer net-weight bill, which will carry out the wishes of the Texas Legislature, as expressed in the aforesaid resolution, has been favorably reported by the House Committee on Agriculture. In order for this bill to be considered, a rule must be obtained from the Rules Committee. An application for such a rule is now pending and I am hopeful that it will be granted in the near future and the bill passed by Congress.

APPENDIX TO THE CONGRESSIONAL RECORD

The General Welfare Act

EXTENSION OF REMARKS

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1939

Mr. HILL. Mr. Speaker, nearly every day I receive from one to a dozen or more letters from the people of my district, urging my support of H. R. 2, the Townsend plan, or H. R. 11 and H. R. 5620, the General Welfare Act.

By united effort, those of us in Congress who believe in enacting an adequate old-age pension to replace the present inadequate Social Security "dole," succeeded in persuading the Ways and Means Committee to hold hearings on this subject. H. R. 2 was represented by Dr. Townsend, and H. R. 11 by Arthur Johnson. Both made convincing presentations of their bills, and we had hoped that the committee would recognize the merit of the proposals and report them to the floor of the House. Weeks have passed, and the bills are still in the committee's "pigeonhole," where those of us who are not members of this committee cannot reach them.

The other night the radio broadcaster gave out the news that the committee had decided to report out amendments to the Social Security Act. Does this mean that they will also permit H. R. 2 and H. R. 11 to be offered as amendments so as to permit us to discuss these measures on the floor of the House and put our votes in the RECORD in black and

white? I sincerely hope so.

Mr. Speaker, I am not here now to argue with my good friends in the House who are for one bill and against another. The fate of both bills is decided negatively unless we are able to bring them out on the floor for discussion and vote. Therefore, I call upon the friends of them both to join me in again urging the Ways and Means Committee to bring this legislation to the floor of the House, where those of us who are not committee members may have the opportunity to help provide an adequate pension for the aged of the United States.

In the greatest democracy of all governments, surely we here should insist, as representatives of the people of our districts, upon the right to register our votes on a measure of this importance. Will not all of the friends of both bills, whether they are privately for H. R. 2 or H. R. 11 join me in urging the members of this committee to give us this right by reporting the bills to the floor of the House.

Last year over 125 members of the House signed the discharge petition (and I am proud to have been one of them) in an effort to obtain the right to vote on H. R. 4199. Must we again resort to a discharge petition to show the members of the Ways and Means Committee that we are not only interested, but demand the right to vote on this subject?

I, for one, am confident that if the Members of this House have an opportunity to enact a liberal old-age pension, they will heed the prayers and petitions of our old folks and register an almost unanimous vote in favor of providing decency and comfort for them in the twilight years of their sojourn here on earth. This is not only a solemn duty but a splendid privilege that we, as Members of Congress, should welcome.

Relief to Counties

EXTENSION OF REMARKS

HON. LEX GREEN OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

MEMORIALS BY THE LEGISLATURE OF THE STATE OF FLORIDA

Mr. GREEN. Mr. Speaker and my colleagues, I enclose herewith House Memorials Nos. 3, 4, and 6, recently passed

by the Florida Legislature. I strongly commend to my colleagues the substance of each of these memorials and urge your cooperation for the purposes expressed.

House Memorial No. 3

Memorial to Congress requesting that the Congress of the United States by some appropriate method give relief to the several counties of the State of Florida for the loss of taxes sustained by counties of Florida in which Federal agencies have acquired lands, thereby striking same from the tax rolls of said respective counties. counties

Whereas during the last several years, and particularly the last 5 years, various agencies of the United States Government, and particularly the Department of Agriculture, have, by purchase, condemnation, or exchange, acquired sizable tracts of land in numerous counties in the State of Florida; and Whereas by virtue of such acquisition said lands have been by operations of Federal law stricken from the tax rolls of the counties in which said lands are located; and Whereas said counties have therein and thereby been deprived of substantial sums of money which would have been paid in to them as taxes had such acquisition not been made, thereby resulting in great financial loss to said counties; and Whereas such a loss of revenue has resulted in said counties now

Whereas such a loss of revenue has resulted in said counties now being confronted with chaos and embarrassment; and

Whereas the projects are for the benefit of the State and Nation rather than the counties: Now, therefore, be it

Resolved, That the Congress of the United States in its wisdom

pass and appropriate relief legislation for the use and benefit of the several counties of the State of Florida in which said acquisi-tion of real estate has reduced the tax income of said counties, and

tion of real estate has reduced the tax income of said counties, and that such relief legislation provide to such counties an appropriation equal to the amount of taxes which would accrue to said county if the lands were owned by individuals; be it further Resolved, That a copy of this memorial, under the great seal of the State of Florida, be immediately forwarded by the secretary of state to the President of the United States of America, to the President of the United States Congress, to the Secretary of Agriculture of the United States, and copies to be forwarded to the delegation representing the State of Florida in both the House the delegation representing the State of Florida in both the House and Senate of the United States Congress; be it further Resolved, That a copy of this resolution be spread upon the journal in both the house of representatives and the State senate, and that sufficient copies be furnished to the press.

House Memorial No. 4

Requesting that the Congress of the United States of America, without further delay, pass H. R. 3747, entitled "An act to provide for improved agricultural land utilization by authorizing the rehabilitation of drainage works," introduced by Wall Doxey, of Mississippi

Whereas this bill provides for improved agricultural land utiliza-tion by authorizing the rehabilitation of drainage works in the several States; and Whereas it would provide an exceptional opportunity to perfect

plans for the solution of acute problems confronting our drainage districts through Federal cooperation, which has heretofore only been available to the arid and semiarid Western States; and

been available to the arid and semiarid Western States; and
Whereas such Federal assistance will result in the improvement
and utilization of the agricultural land drained; and
Whereas the bill in question provides for an annual appropriation of \$10,000,000 for each of the fiscal years ending June 30, 1939,
June 30, 1940, June 30, 1941, and June 30, 1942: Now, therefore, be it
Resolved, That it is the sense of the memorialists, the members
of the Florida Legislature, that the Congress of the United States of
America should enact the bill without further delay; be it further
Resolved, That a copy of this memorial, duly authenticated, be
sent by the secretary of state to the President of the Senate, to the
Speaker of the House of Representatives of the United States to

Speaker of the House of Representatives of the United States, to each Senator and Representative in Congress from this State, to the President of the United States, and to Congressman Wall

Doxey, of Mississippi.

House Memorial No. 6

Memorial to Congress requesting that the Congress of the United States, by appropriate legislation, authorize and empower the Surplus Commodities Corporation to purchase, handle, and dispose of sea foods and the products thereof

Whereas it is recognized by all that the sea food industry of Florida represents to this great State one of its basic industries, providing employment for many thousands of people who contribute much toward the economic well-being of the State; and Whereas the industry is now beset by many perils, chief among which is an unstable market, due largely to the accumulation of surpluses of all varieties of sea foods in the freezers and cold-storage plants throughout the Nation, and because of the activities of the Federal Government in making the American public "agriculture conscious": and culture conscious"; and

Whereas it has been determined to be the consensus of those identified with the industry in the State that something must be done immediately to preserve the continuation of this industry, founded upon the ingenuity, resourcefulness, and determination of the men engaged: Now, therefore, be it

Resolved by the Legislature of the State of Florida now in session at Tallahassee, Fla., That the Congress of the United States be, and

is hereby, memorialized to bring about the immediate enactment of such legislation as will authorize the Federal Surplus Commodities Corporation to buy sea-food products on a parity basis with that authority the agency now has to buy other agricultural products and, further, that the legislation so enacted provide the necessary

and, further, that the legislation so enacted provide the necessary funds therefor; be it further

*Resolved**, That the Congress of the United States be, and is hereby, memorialized to enact legislation of such type as will provide funds for the use of the Bureau of Fisheries for an extended advertising program and educational campaign which shall be designed to increase the consumption of sea-food products; be it further

*Resolved by the Legislature of the State of Florida now in session, That copies of this resolution be dispatched immediately to the Honorable President of the United States Senate, the Honorable Speaker of the House of Representatives, the Honorable Senators and Representatives from the State of Florida with the request that this resolution be read and inserted into the Congressional Record.

Compensation to Counties for Land Taken for Federal Use

EXTENSION OF REMARKS

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1939

LANGLADE COUNTY BOARD OF RESOLUTION OF THE SUPERVISORS

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call your attention and the attention of the Members of this House to the importance of paying counties for lands for Federal uses. These counties are in need of funds, and every effort should be made to see that these funds are provided in fairness, equity, and justice to the peoples of these counties.

To the Langlade County Board of Supervisors:
Whereas there is a bill before the House of Representatives of the United States to provide for payment to counties and to reimburse them for loss of cash receipts on account of the use of certain land by the United States; and

Whereas it is set out in said bill that the Secretary of the Treasury is authorized and directed to pay annually to each county in which said lands are situated, and which title is in the United States, and which lands are included in a national park, national forest, national monument, or national wildlife refuge, amount equal to 10 cents for each acre or fraction thereof of such land located within the country said represents to be made at the and of each

to 10 cents for each acre or fraction thereof of such land located within the county, said payments to be made at the end of each fiscal year, ending June 30, 1938: Now, therefore, be it Resolved, That this county board of supervisors go on record as in favor of such bill, with the provisions that the county receive its share proportionately at the end of each fiscal year, and including the lands owned by the Government for the year 1938, and that a copy of same be sent to our Representatives in Senate and House of Representatives in Washington, D. C.

Dated this 3d day of May 1939.

R. E. LABELLE, WM. ALFT. STEPHEN STENGEL. JOHN MAUER. GEO. HANDEYSIDE. WALTER KAMPS.

Navy's Wartime Flyers Must Be Saved

EXTENSION OF REMARKS

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

EDITORIALS FROM THE LOS ANGELES EXAMINER AND THE RALEIGH (N. C.) NEWS AND OBSERVER

Mr. COOLEY. Mr. Speaker, the press generally throughout the country agrees that H. R. 4929 should pass the Senate and become law. As evidence of the support of this measure by the newspapers of the country I desire to call attention to the following editorial appearing in the Los Angeles Examiner in its issue of May 6:

> [From the Los Angeles Examiner of May 6, 1939] INCONSISTENT-WHY DROP SKILLED NAVAL MEN NOW?

President Roosevelt's recent appeal for retention of middle-aged workers in industry came surprisingly at a time when the United States Navy is dispensing with the services of many skilled officers

in that age class.

The President, in his proclamation of employment week, made a particular point of the fact that "among those over 40 and still actively in the labor market are practically the entire group of World War veterans (whose average age is 46), a group that is surely entitled to look to our society for security and economic independence."

independence."

In view of this sentiment, with which the country is in entire agreement, there is an amazing inconsistency in the fact that during the present month the Navy proposed to forcibly retire a large number of competent officers by reason of middle age, including a considerable group under 46 years of age who had World War

This is happening, of course, under the hightly controversial selection system by which the Navy periodically advances a limited number of officers to higher rank and arbitrarily retires those not so advanced.

The purpose is to make room for younger men in the higher commands, in itself a commendable aim.

However, two considerations argue for extreme caution in carry-

one is the admitted fact that the Navy is seriously undermanned at the moment, particularly in the ranks of commanders and lieutenant commanders, which are most affected by the forced retirements.

It is said that there is now a shortage of 2,000 officers in the

It is said that there is now a shortege.

The other consideration is the present state of world alarm.

With war threats coming constantly out of Europe and Asia, the maintenance of our naval forces at maximum strength is an urgent necessity.

And thus it seems an especially unfortunate time to be dispersing with the services of a large group of skilled and experienced naval officers who, in addition to having been trained at great public expense, have proved their worth in long years of service, including actual war service.

At the very least, the necessities of the naval service and the tension of the times argue for a suspension of wholesale retire-

tension of the times argue for a suspension of wholesale retirements under the naval selection system.

Congress met exactly the same situation a year ago by suspending retirements, and by that means averted serious impairment of the efforts of the Navy to carry out its program of construction and expansion.

and expansion.

Nothing has happened in the meantime to change the situation, and, in fact, new authorizations for ships and bases have greatly augmented the Navy's need for competent and experienced officers in the higher ranks.

Entirely aside from the humanitarian factor, which President Roosevelt has cited in appealing for a place for the middle-aged in industrial life, the Navy should not dispense with men it cannot replace.

WARTIME SECRETARY OF THE NAVY JOSEPHUS DANIELS' PAPER THINKS WARTIME NAVAL FLYERS SHOULD BE RETAINED IN SERVICE

I also desire to call attention to an editorial from the News and Observer of Raleigh, N. C., which is of great significance in view of the fact that the News and Observer is owned and operated by Hon. Josephus Daniels, wartime Secretary of the Navy. I quote the editorial from the News and Observer:

> [From the Raleigh (N. C.) News and Observer] FLYERS

This seems to be a poor time for the Army and Navy to dis-pense with the services of crack pilots, and yet it appears that the Navy Department is prepared to do just that, unless Congress intervenes

Navy Department is prepared to do just that, thiess Congress intervenes.

Nine World War flyers, who entered their country's service in time of need and are now in the prime of life, are about to be retired for one reason and one reason only. The policy of the Navy is not to promote any line officer beyond the present rank of these men, that of lieutenant commander, unless they can command a ship at sea. In other words, the avenues of promotion are closed to any person not a graduate of the Naval Academy.

Of course, if ships were the only fighting craft possessed by the Navy, the rule would be quite understandable. But it is difficult to see why knowledge of ships is essential to an officer in the Flying Corps. Each of the nine officers in question has a distinguished record as a flyer and each has many more years of usefulness by any ordinary standards.

It so happens that one of the nine officers affected is Lt. Comdr. Andrew Crinkley, of Raleigh. But the incident involves a question of policy more important than the fate of this individual officer or the fates of all nine of them.

Naval officials are strongly opposed to the suggestion made from time to time that the national defense be consolidated and that

there be one flying corps, independent of both the Army and Navy. Incidents like this one will do much to create sentiment both within and without Congress for that kind of a policy of con-

Fortunately, there appears a strong chance that Congress will intervene in this case, due to the present acute international

I earnestly hope that the Senate will pass H. R. 4929 in substantially the same form in which it was passed by the House to the end that justice and fair treatment may be accorded wartime naval aviators who are about to be retired and will actually be retired unless this bill is enacted into law. The loss of these men, their experience, skill, and training will be at least an immediate irreparable injury to the efficiency of naval aviation. Many fine officers are about to be sacrificed and it is the duty of Members of Congress to save these men for naval aviation and to save the admirals from their own folly.

My interest in the welfare of naval aviation and primarily in the welfare of the men who are about to be sacrificed is no doubt intensified by my associations with naval aviation during the World War. At the time the armistice was signed I was a student naval aviator and shipmate of some of the men who are about to be retired and happened to know the very definite assurances and promises made to them upon a cessation of hostilities which followed the signing of the armistice. Unless Members of both Houses of Congress wake up to the "crime" which is about to be perpetrated upon naval aviation the most valuable men in the Naval Flying Corps will be placed on inactive duty.

P. W. A. Should Be Continued

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

EDITORIALS FROM THE BRAWLEY (CALIF.) NEWS AND EL CENTRO (CALIF.) POST-PRESS

Mr. IZAC. Mr. Speaker, under leave to extend my remarks I include editorials appearing recently in two California newspapers concerning the proposed continuation of the Public Works Administration. These refer to the Starnes-Mead bill now pending in Congress calling for extension of the P. W. A. and an appropriation for pending approved projects.

> [From the Brawley (Calif.) News of April 17, 1939] CONTINUANCE OF P. W. A., AT LEAST TEMPORARILY, DESIRED

appears to be widely expressed opinion that the measure should pass during this session.

In Washington the belief is growing that it is one of the Federal units that is likely to be retained, at least temporarily, if it does not become a permanent governmental institution. So far P. W. A. has been comparatively free from congressional attack, for along with the C. C. C. it has escaped the criticism heaped upon nearly every other "initialed" agency set up at the National Capital during the past 7 years.

It must not be confused as it often in the past of the confused as it often in the past of the confused as it often in the past of the confused as it of the confused as it

It must not be confused, as it often is, with the W. P. A.

a purely relief proposition—around which has amassed so much incompetency and graft that our National Legislature feels like throwing the whole mess into the scrap heap.

Imperial Valley has been abundantly favored by the P. W. A. and undoubtedly we have seen some outstanding examples of

and undoubtedly we have seen some outstanding examples of permanent public works which we would not have had today had it not been for the help of the Department over which Harold L. Ickes, Administrator, presides.

Notably among them, of course, is the all-American canal and the electric-power projects now being rounded out into the final stages. The canal is practically completed, a \$36,000,000 project which will begin functioning within another year. The power project is already in operation with electricity generated from the Diesel plant in Brawley built at a cost of more than a million dollars, and bids already invited for an additional unit. From this source power is being sumplied to every community in the this source power is being supplied to every community in the

valley, through the intercity and rural electric lines—there are 700,000 miles of rural transmission and distributing lines—erected

700,000 miles of rural transmission and distributing lines—erected during the past year and giving the farming areas service which they had heretofore been unable to obtain. Meanwhile, contracts have been let to equip two water-power plants which will go into operation simultaneously with opening of the canal to supplement the Brawley plant in the growing demand for more power. We have seen many municipal and school projects completed under P. W. A. In Brawley, for instance, it has been possible to rebuild and extend the water and sewer systems, including construction of a filtration plant for the water department; the Brawley High School Board has erected as P. W. A. projects the science building for the junior college and a six-classroom unit for the proposed new high-school building.

With possibility of the bill now before Congress, the prospect is

posed new high-school building.

With possibility of the bill now before Congress, the prospect is brightened for other municipal and school projects being revived.

These are just some of the reasons why a continuation of P. W. A. is desired not only in Imperial Valley but elsewhere abroad the land, for we are getting something permanent in return that will benefit posterity while supplying employment for present-day workers. workers

The W. P. A. as it has been conducted has tended to promote idleness, while the P. W. A. has encouraged thrift.

[From the El Centro (Calif.) Post-Press of April 16, 1939] P. W. A. A BOON TO UNITED STATES; SHOULD BE CONTINUED

If there is any other New Deal agency besides the Civilian Con-If there is any other New Deal agency besides the Civilian Conservation Corps that deserves perpetuation in one form or another, it is the Public Works Administration. Yet, with the strange reverse order of politics, officials in Washington have given serious thought to discontinuing P. W. A., even while they went blithely ahead on the assumption that the Works Progress Administration—a far less worth-while agency—will be continued as a matter of

The greatest drawback facing the Public Works Administration is that the initials by which it is commonly known are so unfortunately similar to those used to designate the Works Progress Administration. Even the most careful of us now and then say W. P. A. when we mean P. W. A., or the other way about. The truth is, there is not the slightest similarity between the two agencies.

agencies.

W. P. A. is a relief agency, outright. P. W. A. is an organization set up to encourage private industry and offer additional employment through worth-while public works which might otherwise not be accomplished. The difference between the two is, you might say, the difference between a job and the dole. They are of altogether different economic schools.

say, the difference between a job and the dole. They are of altogether different economic schools.

P. W. A. has helped build needed public structures, dig needed canals, and make other needed improvements in practically every part of the United States. Imperial Valley has been only slightly more fortunate than most communities in its dealings with this agency—but consider what P. W. A. has meant to the valley. The All-American Canal, for one thing. The canal power system, for another. And, besides these, there are school buildings, city halls, gymnasiums—a hundred other things which were badly needed, but which would never have been built had it not been for P. W. A.

but which would never have been built had it not been for P. W. A.

The New Deal undoubtedly will go down in history as marking a definite change in the social and economic life of America. It is safe to predict that historians will write of the Public Works Administration as one of the soundest of New Deal innovations. Considering this, it seems hardly wise to allow P. W. A. to lapse while other less worth agencies continue in existence.

Congress, we believe, should give serious consideration to continuing P. W. A. and possibly to making it a permanent part of the United States Government's framework.

of the United States Government's framework.

The P. W. A. in Nassau County, N. Y.

EXTENSION OF REMARKS

HON. CAROLINE O'DAY

OF NEW YORK IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1939

EDITORIAL FROM THE NASSAU DAILY REVIEW

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Nassau Daily Review of April 27, 1939, containing information concerning the public-works program in Nassau County, which I believe is of vast interest at this time.

> [From the Nassau Daily Review of April 27, 1939] THE P. W. A. IN NASSAU COUNTY

Secretary Harold L. Ickes, P. W. A. Administrator, has announced that when all available P. W. A. funds were allocated there re-

mained applications for 25 Nassau County projects to cost \$4,850,000. Grants of \$1,200,000 for the projects had to be denied due to lack of funds. The list included 11 schools, 3 water tanks, 3 fire stations, 3 street-paving projects, 2 water-front improvements, 1 electric-system replacement, an administration building, and a library.

Col. M. E. Gilmore, regional director of the P. W. A., announced this week that 3,011 men are employed on projects in Nassau and Suffolk Counties. He estimated that by June 19 the peak of employment on the projects will be reached with 4,650 men. The P. W. A. has thus been a factor in maintaining employment while it enabled local communities to obtain needed improvements under favorable financing conditions. The greatest drawback to the availability of this money is the probability that it has encouraged costly and unnecessary improvements in some communities which could ill

favorable financing conditions. The greatest drawback to the availability of this money is the probability that it has encouraged costly and unnecessary improvements in some communities which could ill afford them. For communities needing the improvements they have obtained it has been a godsend.

Since the founding of the P. W. A. agency 6 years ago, Nassau County has built or is now building under P. W. A. auspices, public improvements costing approximately seventeen and one-quarter millions of dollars on 43 projects. Of this amount, P. W. A. has granted six and a quarter millions of dollars, the balance being supplied by the community interested. These projects comprise hospitals, incinerators, sewer systems, sewage-treatment plants, water systems, fire stations, highways, public buildings and schools. An outstanding example of the joint efforts of Federal and local authorities, is the beautiful county courthouse now under construction at Mineola, which will cost \$2,600,000.

Nassau communities in most instances, have financed their share of the funds through the local sale of bonds although the Federal Government in some cases, has on request, purchased the community's bonds when local sale could not be accomplished. This was done in the case of the Long Beach School. The Government took its bonds at 4 percent interest.

The Public Works Administration operates, insofar as control is concerned, somewhat on the basis of a mortgage company. To establish the right of control, to encourage the community to proceed with its needed project: to provide needed work at the site

is concerned, somewhat on the basis of a mortgage company. To establish the right of control, to encourage the community to proceed with its needed project; to provide needed work at the site and at the mills; to guide the community along the lines of good construction, economy, and benefit to the greatest number, the gift offer of a grant is made. When the grant offer is accepted, the community, not the Government, builds the project. Through public competitive bidding, private contracts are awarded and the successful contractor then proceeds with the work in accordance with good standard practice. The contractor has the right to hire and discharge his own employees, providing discrimination is not attempted. Payments to the contractor for work performed and his payment therefrom for labor employed and material purchased is guaranteed.

is guaranteed.

Coordination is provided by P. W. A. through a staff of executives in engineering, legal, and financial fields, who join hands with the owner's staff and provide means of maintaining a smooth running, systematic, and harmonious operation. Such cooperation has produced very happy results in the past and continues to

Heed Senator Johnson's Plea for Peace

EXTENSION OF REMARKS OF

HON. THOMAS M. EATON OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

M THE LONG BEACH (CALIF.) PRESS-TELEGRAM OF MAY 3, 1939 EDITORIAL FROM

Mr. EATON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial entitled "Heed Johnson's Plea," which appeared in the Press-Telegram of Long Beach, Calif., under date of May 3, 1939:

[From the Long Beach (Calif.) Press-Telegram of May 3, 1939]

Although some may question the feasibility of Senator Hiram Johnson's plea that Congress remain in session as long as there is a chance of war, the vast majority of Americans are heartily in

accord with his sincere desire for peace.

The Senator's remarks in the Senate yesterday, at least as quoted The Senator's remarks in the Senate yesterday, at least as quoted in the news dispatches, reveal the importance of careful analysis of world affairs, and particularly the study of the actual meaning of terms used more or less indiscriminately. For example, what is war? There has been warfare somewhere on the face of the earth almost constantly since the signing of the armistice which ended the World War. And in many cases the United States has given economic aid to the combatants; sometimes to the attacked, as in the case of Ethiopia and sometimes to the aggressor as in the case the case of Ethiopia, and sometimes to the aggressor, as in the case

But, obviously, these sporadic wars with all their casualties and bloodshed are not considered when the average person asks, "Will there be war?" The popular concept of war probably is one in

which Britain and France would be alined on one side and Germany and Italy on the other. But, then, what is meant when well-intentioned citizens say, "The United States must keep out of war"? This country's participation in such a war might mean anything from sending another A. E. F. to Europe to the supplying of munitions and foodstuffs to the favored powers and placing an embargo on the other powers. As a matter of fact, the United States already has partially effected an embargo on Germany and has aided Britain to the extent that the British Asiatic fleet is available for use in the Mediterranean.

To understand Senator JOHNSON'S position and to grasp its

To understand Senator Johnson's position, and to grasp its importance, it, therefore, is necessary to define some of these ambiguous terms and to decide this country's proper interests with

relation to foreign affairs.

Certainly Europe's upheaval and the struggle in the Far East cannot warrant another American Expeditionary Force, and to what extent economic aid may be given depends more upon conditions at home than abroad. It is inevitable that the Americas, North and South, must maintain an economic Monroe Doctrine, but the foundation of this is a sound economic basis within the United States

States.

Senator Johnson undoubtedly had in mind the enormous amount of domestic work to be done by Congress, as well as foreign problems, when he opposed speedy adjournment by that body. This Nation's security is no less dependent upon business conditions, recovery, and the solution of the vexing unemployment situation than upon warships and aircraft to fight foreign powers. Members of Congress who recognize this vital truth are, indeed, loyal patriots. Senator Johnson's recent announcement that he would seek reelection in the 1940 campaign came as welcome news to thousands of Californians. It would seem a foregone conclusion that anyone venturing to oppose him in the campaign would find exceedingly thin endorsement.

The True Story of Independent Unions

EXTENSION OF REMARKS

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

RADIO ADDRESS BY FRANK T. BOW, MAY 5, 1939

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Frank T. Bow, general counsel for the National Council of Independent Unions, May 5, 1939:

The National Council of Independent Unions desires to express its appreciation to the Mutual Broadcasting System for this oppor-tunity to present to the Nation the true story of independent

unions.

Have you ever wondered why all the international labor unions, the high-salaried officers of the American Federation of Labor and the C. I. O., the Communist Party, and several powerful bureaus of the United States Government, especially the National Labor Relations Board, have ganged up on the independent labor unions; that is, the local or unaffiliated labor unions, in a bitter attempt to destroy them? And have you ever wondered how the independent labor organizations have managed to live, even to thrive, under this persecution by our own Government, by labor politicians, and by outright labor racketeers? The fact that they have lived and have had the strength to rise from the ashes of the repeated attempts have had the strength to rise from the ashes of the repeated attempts to destroy them is the strongest testimony to the inherent vitality of democracy and freedom in the hearts of the working men and women of our country, and their courage in adversity. Independent unions have not needed the helping hand of Government and statutory crutches to aid their progress. They have progressed in

spite of hostile legislation and a corrupt administration of the law.

The answer is easy. Independent unions are the natural and normal way for men to associate themselves together for the purnormal way for men to associate themselves together for the purposes of collective bargaining and self-protection. It is the course that men take of their own free will. It is the truly democratic way, where men can participate in the management of their own affairs, to the end that their own interests be served and not the interests of their absentee self-styled leaders.

With many of the ancient sprawling international labor unions democracy" has become merely a word to use as a screen for actions "democracy" has become merely a word to use as a screen for actions and policies as cynically autocratic as those of any czar or commissar. The leaders of those unions shrink from the practice of democracy as from a plague. They know that democracy would destroy them.

Without compulsion they could not live.

Independent labor unions, on the contrary, thrive on democracy. All they need is freedom. They have a fine scorn for the closed shop and the check-off and compulsory membership and violence and gangster methods. And they have a finer scorn for the labor

politicians who pander to those who use such methods. Let me say that some day soon—sooner than many want to admit—the wrath of the great mass of the peaceful, independent working men and women and their families is going to catch up with the politicians who have peddled the workers' birthright to corrupt union officials. There are more than 40,000,000 independent workers. That is a figure to be pondered.

The reason, of course, that independent unions are distasteful to

The reason, of course, that independent unions are distasteful to the international organizations is that workers too often choose them when they make a truly free choice. The great, wealthy, politically powerful organizations cannot live and compete with the free independent unions. Therefore they and their political friends set out to smear and to destroy the latter. Under the national labor relations law they have developed a standard technique. The C. I. O. and the American Federation of Labor enlist the Labor

C. I. O. and the American Federation of Labor efficient the Labor Board to help them discourage membership by workers in unions of their own choosing and to force them into the international unions. They complain to the Labor Board that the independent union is "dominated" by the employer. Now that may mean almost anything. It may mean nothing more than an attitude of friendship and understanding and cooperation between the union and the and understanding and cooperation between the union and the employer; that condition of industrial peace that the Labor Board and the international unions talk so much about and do so little about. The Labor Board shows every favor to the complaining union and every evidence of disapproval of the independent group. And the Board finally orders the employer not to deal with the independent. Thus, through no fault of their own and for nothing that they have done or are charged with having done, but purely because of a charge, often fictitious, against the employer, the independent employees are deprived of their rights, are deprived of the union of their own choosing, and it is made clear to them that they cannot have a union with the approval of the Labor Board unless it is affiliated with the C. I. O. or American Federation of Labor. Thus does the Government serve the international union leaders. national union leaders.

national union leaders.

It serves them in other and more subtle ways. It is almost impossible for an independent to get an election from the Labor Board. The Board holds elections at the convenience of the opposing union, or frequently not at all. The Board certifies independents grudgingly or belatedly and sometimes not at all.

Despite all this, so tough and tenacious is the spirit of freedom and independence that the greatest pressure today upon Congress for amendments to the mistaken National Labor Relations Act and the shelltone of the mistaken Relation Relations are the mistaken Relation of the property of t

the abolition of the misguided Board which administers it comes from the independent labor unions and independent workers generally, who insist upon their right to be heard and their right to choose their own organizations without compulsion from any source,

choose their own organizations without compulsion from any source, including a Federal bureau.

I want to say a word more about the matter of coercion from any source. The Labor Board inanely says that State and local laws take care of physical violence and such forms of compulsion at workers to compel them to join certain international unions. Suppose it does. Can anyone tell me why the United States Government should encourage such violence against workers by confirming to unions advantages which they have sought or have got by illegal methods? Let me say this—if Congress will not pass laws which tend to discourage such practices and which tend to protect

by illegal methods? Let me say this—if Congress will not pass laws which tend to discourage such practices and which tend to protect workers, then the free workers, union and nonunion, will elect a Congress which will pass such laws.

Let this be understood. The National Council of Independent Unions is not a third national labor union, nor is it a political party, but it is what its name infers, a council of independent unions, and the national council is subservient to the will of its affiliates and not the affiliates subservient to the will of the council.

It has been the opinion of the independent unions that in the

and not the affiliates subservient to the will of the council.

It has been the opinion of the independent unions that in the American Federation of Labor and the C. I. O. there has been dictatorship in labor and that the return of democracy in labor will greatly improve labor conditions for the workingman and his cost of organization and the securing of collective bargaining will be upon a fair and equitable basis. The independent unions are opposed to the payment of tribute to individuals for the right to

The real and final sufferers from labor disputes in industry are The real and final sufferers from labor disputes in industry are the workers and their families. The autocratic exercise of power by some leaders of national labor unions tends to create labor disputes without reason. The privileges, immunities, and monopolies enjoyed by leaders of national labor unions tend to destroy the freedom of labor and as I have said, the workers in industry are frequently the victims of the ambitions of unbridled labor leaders. The present tendency in labor leadership and in legislation affecting labor relations is away from democracy in the management of the affairs of labor and in labor relations. In the administration of the law affecting labor relations there is a tendency agement of the affairs of labor and in labor relations. In the administration of the law affecting labor relations there is a tendency toward compulsory unionization in national unions. The administration of the law is taking from workers the right to choose their own organizations and is binding them against their will to unwelcome organizations. The vast majority of unorganized workers and workers organized in independent unions are disfranchised as workers and have for some time in the past lacked representation because of their lack of a common front. For this reason, and for the purpose of presenting a united effort, the National Council of Independent Unions was formed somewhat over a year ago.

So that it might be understood that in speaking of the independent workingman and the independent unions we are not speaking on behalf of a small minority but for the large majority of workingmen. Let it be understood that the combined claimed

membership of the American Federation of Labor and the C. I. O. is approximately 8,000,000. There are 40,000,000 independent workingmen, many of whom are organized in independent unions. I venture to say without fear of contradiction that there are many more workingmen in organized independent unions throughout the Nation than in the two national labor organizations to which I have referred, and it would also be interesting to know how many of the 8,000,000 claimed by the national unions would be members if they were given the freedom of choice and were not coerced into

of the 8,000,000 claimed by the national unions would be members if they were given the freedom of choice and were not coerced into these groups.

The National Labor Relations Board, the C. I. O., and the Communist Party have all come out stubbornly against any amendments to the N. L. R. A. It must be admitted that the declared policy of the Wagner Act is to be commended, but the manner in which the National Labor Relations Board has attempted to carry out that policy must be condemned. Since the event of the establishment of the National Labor Relations Board we have seen in America the creation of a tribunal exercising broad, almost unlimited, jurisdiction throughout the States and our possessions. Not only has the legal profession been shocked by the conduct and methods of the Board in its judicial aspect but the public looks on with awe at a branch of our Federal Government which might well be the agency of any of the totalitarian powers of Europe. Never before in the history of this great democracy has there been established a board or court exercising such widespread powers that has found itself in the position that members of the board or court have had to defend their own acts and personnel as have the National Labor Relations Board. We find that under the terms of the Wagner Act that the Labor Board acts as policeman to find the culprit, prosecutor to prosecute, and judge to try the accused. There must be a separation of these powers, for they are not compatible. A fair trial under such circumstances is impossible. This is not the American way nor did the framers of the Constitution ever dream of such a practice when they guaranteed due process of law.

Much could be said relative to the act and its administration to

Much could be said relative to the act and its administration to point out the defects, but it is assumed that most of these things are known to the independent workingmen of America. It is suggested, however, that they secure the proposed amendments to the act and study them and then urge upon their representatives in Congress the amendments which they feel shall serve them best. In conclusion, may I say that it is the intent and purpose of independent unions—

To protect free workmen.

To give a medium for the expression of the views of independent workers and their organizations.

To curb lawless, violent, and destructive forces which seek to prey upon free workers.

To prevent the destruction by law or administrative bureaus of independent workers and their organizations.

To work for legislation to protect free workers in the exercise of their rights as workers and as citizens.

To work for legislation to curb irresponsible and predatory labor

leadership. To preserve and to extend full freedom of association among employees for their mutual protection and advancement.

To promote democracy, freedom, and honesty in the management of labor organizations and in labor relations.

To advise employees of their rights under the law and to protect employees in those rights.

To study and to encourage mutual understanding and better relations between employers and employees; to restore and secure peace, prosperity, reemployment, and better working conditions for the workers in industry.

All of these are the fruits of true democracy.

The Washington Merry-Go-Round

EXTENSION OF REMARKS

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

ARTICLE BY DREW PEARSON AND ROBERT S. ALLEN

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson and Robert S. Allen:

> [From the Milwaukee Sentinel of May 6, 1939] THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson and Robert S. Allen)

President Roosevelt may be the deadliest enemy of dictators, but this week he is opening the doors of the White House to one of the most powerful dictators in the Western Hemisphere.

He is Gen. Anastasio Somoza, President of Nicaragua, and one of the first Latin-American dictators to upset the free and fair election theories of Secretary of State Stimson and the United

States in general.

Nicaragua, long under the rule of United States marines, been carefully nurtured on the principle of democracy. Frank B. Kellogg sent in the marines when Nicaragua failed to live up to its law of not recognizing revolutionary presidents. Later Henry L. Stimson set up Marine Corps supervised elections, and the Nicaraguan vote was the freest and fairest in the Pan-Americas.

But General Somoza, the man who is now spending the night in the White House, kicked all that out.

Somoza's uncle, Juan B. Sacasa, was elected President of Nicaragua during one of the Marine Corps elections. After holding the election, the marines withdrew. After they withdrew General Somoza kicked out his uncle and became President of Nicaragua himself.

Somoza kicked out his uncle and became President of Micaragua himself.

General Somoza has unique qualities as a dictator, and it may be that he learned them via the United States. He once sold automobiles in Philadelphia and New York, later returned to Nicaragua, where he trained with the United States Marines and was promoted by them to be head of the Nicaraguan National Guard.

As head of the guard it was a simple matter to kick out his Uncle Juan and send him to California in exile.

General Somoza is going to be a dictator for some time, because, just before his term was about to expire last month he "persuaded" the constitutional assembly to dispense with popular elections and extended his Presidential term 8 years more.

Note.—How closely Somoza desires to follow the European pattern is not known, but it is known that he recently taxed his treasury to purchase \$300,000 worth of Italian rifles, tanks, and ammunition left over from the Ethiopian campaign. It is largely to woo Somoza away from Mussolinii that Roosevelt is spreading himself to entertain the Nicaraguan dictator.

British Textile Competition

EXTENSION OF REMARKS

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

EXTRACT FROM THE WORTH STREET FORECAST

Mr. BOLLES. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and print therein an extract from the Worth Street Forecast of New York City, which is the bulletin of the textile industry.

Worth Street, New York, is the famous center for what we used to call dry goods. It still continues to be the pulse of the market for textile materials. I wish to call the attention of the House to one item wherein it is stated that an infant's gertrude made of American cotton by labor paid in American wages costs \$1.50, while the same imported article is sold in the new foreign-owned stores in Boston for 19 cents. The article from the Worth Street Forecast follows:

[From the Worth Street Forecast] PRIMARY MARKET

As soon as the war scare shall subside Worth Street will experience a slight "boomlet." It will be temporary and will only reflect orders held back. It will be a prelude to a better-than-usual summer and a fair-to-good fall. Other United States business will not be so good.

ness will not be so good.

Now, carefully note that we have said "so soon as" in talking about war alarms. Without doubt Mr. Roosevelt has frightened Hitler and Mussolini into caution. He has probably also frightened them into more thorough preparation. Neither of the authoritarian powers are in a position to take the risk of trouble with the United States unless they can count on Japan, and the latter nation is much too busy in China to wish to get involved at this time. Moreover, the axis is in a less favorable position to strike swiftly in Europe and win than it was 6 or 8 months ago. Credit Roosevelt, therefore, with a high-handed maneuver that is going to be effective in stalling off European war for a while. It may be for quite a while indeed if the old theory of "balance of power" can finally be restored so the two big groups are mutually afraid of fighting each other. A wise President would certainly stop at what he has done. Will Mr. Roosevelt? He has sown the seeds of our involvement and the situation we consider dangerous in his hands because he is politically on a spot. His do-

dangerous in his hands because he is politically on a spot. His do-

mestic program has shown itself to be a failure in many ways and the American people have little patience with failures.

He may have to seek concealment by war headlines. At this time you should carefully examine your own business. While the safest course is continued caution we also feet that a reasonable bullish gamble on the next 6 months is all right for those who can afford to take the chance and lose. The difference of opinion among business operators' fields is wide. One of the coolest and shrewdest and most consistently successful operators in the stock market has recently turned everything into cash for the moment. An advertising crowd we know of which is currently in a very strong financial position takes the view they should not push their clients into commitments for the next 4 to 5 months. Both of these as you will see are on the cautious side.

We of the Forecast, however, much as we despise the ineptness of the administration, are not yet ready to sell United States initiative short. Our dictum is and always has been, when the seller wants badly to or must sell, the 6 to 9 months' value of cash against goods favors the latter, in our opinion. It may be that you want to see "more of the whites of their eyes" before jumping in, but there is nobody that can give the exact moment and we think that "now" has its advantages.

MILLS

We reprint herewith a letter to the editor of the Boston Transcript by one Beatrice Abbott, whoever she may be. We think it summarizes what the New Deal has done for the South, what it has done for the textile industry, what it is actually doing for workers, better than anything that we have seen recently.

workers, better than anything that we have seen recently.

"In June 1932 cotton sold at a little over 5 cents a pound. In May 1933 the A. A. A. offered to pay the farmer from \$3 to \$11 an acre for cotton not planted. In 1934 the R. F. C. (ignoring the fact that Russia owed us over \$700,000,000) loaned Russia \$4,000,000 to buy American cotton. In 1935 our cotton exports dropped two-thirds of a million pounds. Our cotton imports increased 28,800,000 pounds. In May 1936 cotton sold at 12 cents a pound. In December 1936 it was published in Liverpool that the American Secretary of Agriculture had promised to restrict American cotton for 1937. In January 1939 the import of British cotton-bleached goods jumped from 2,401,364 (January 1933) to 6,325,295 square yards. Cotton-yarn imports for the same months doubled. "The working people of the United States have paid millions to have cotton plowed under, millions to buy and hold cotton not plowed under, millions to pay the difference between what our Government promised the wheat farmer and what the British would pay, and millions for relief for workers who might be raising cotton and making cotton goods.

raising cotton and making cotton goods.

"Any profit which workers might have gained, in increased jobs, from the Wagner Act, has been wiped out by the finished goods which are arriving from Great Britain and other nations most favored. Now the President would resell to the farmer the held cotton, at less than 1932 prices, in consideration of his giving up the idea of raising cotton altogether. If one wishes to know what Mr. Hull has done to the industry—an infant's contracted mode of American posters by the provided modes. know what Mr. Hull has done to the industry—an infant's gertrude, made of American cotton by labor paid American wages, costs \$1.50. The same imported article is sold in the new foreignowned stores in Boston for 19 cents."

GOVERNMENT

All businessmen should study government much more care-All businessmen should study government much more carefully than they do, principally because it is becoming ubiquitous and all-embracing. In order to earn a profit for one's stockholders you have got to understand what is taking place in government. Here are some thoughts that are well worth your inwardly digesting: (1) For a period of about 20 years prior to 1932 the Supreme Court was in fact the sovereign power. It protected the individual against the encroachments of the Government. (2) Bad times coming after the panic of 1929 caused the great mass of people to want a change and they promptly delegated their power to the executive department. Even the Congress itself virtually turned over the Government to the Executive. (3) After about 7 years the swing seems to be away from the executive After about 7 years the swing seems to be away from the executive and toward the legislative branch. What does this mean to you? It means just this: That the Supreme Court is going to validate nearly everything that Congress proposes to do. It means that the next President is going to be far more subordinate than the present one, even if he should be the same individual.

The tendency at the moment goes so far as to suggest a uni-cameral system not differing greatly from the English form of government where Commons is the Government without let or hindrance. Considering the character of the American people, we would probably be better off with what is known as a re-sponsible government and one that should resign when it cannot muster support. Of course the danger of that system in this country would be that of blocs and pressure groups. For the present, therefore, whatever hope you have of better conditions from the viewpoint as an employer (and as a matter of fact as from the viewpoint as an employer (and as a matter of fact as a job holder) rests with Congress. You had better keep an eye on your representatives, locally as well as nationally. Most especially you better watch representatives elected all over the country, because interstate commerce, in our opinion, is going to be all kinds of commerce, whether interstate or intrastate.

Keep This Nation Out of War

EXTENSION OF REMARKS

HON, FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

RADIO ADDRESS BY HON. FRANK B. KEEFE, OF WISCONSIN, ON MAY 5, 1939

Mr. KEEFE. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the Congressional Record an address made by me over the red network of the National Broadcasting Co., on Friday, May 5, 1939, entitled "Keep This Nation Out of War," as follows:

Men and women of America, on April 30, 1789, after concluding a long but triumphal stagecoach journey from Mount Vernon to the city of New York, George Washington was inaugurated as the first President of the United States. Last Sunday, 150 years later, amidst splendor and pageantry undreamed of by him, the New York World's Fair was formally opened to the people of the world as a fitting commemoration of this historic event. The people of the United States Joined with the representatives of nations throughout the world in paying homage and tribute to the Father of his Country.

States joined with the representatives of nations throughout the world in paying homage and tribute to the Father of his Country. It seems passing strange to me, therefore, that while we thus honor and revere the memory of Washington we should, in this day of great international stress, so completely forget the admonitions given by him to the people of America in his Farewell Address.

With prophetic vision and unexcelled clarity of thought, he gave to the people of this Nation advice which is as true today as it was when uttered, and I challenge the attention of the people of America to his admonitions, which to me should represent the very

when uttered, and I challenge the attention of the people of America to his admonitions, which to me should represent the very ground work and foundation of our international policies.

He advised against the very things that are happening today in our foreign relations. He told us to act with justice toward all nations and to avoid inveterate antipathies against particular nations. He knew the abilities of Old World diplomats and cautioned us against developing particular attachments for other nations, and cautioned us against the insidious wiles of foreign influence. He knew, as we should know today, that in international relations the friends of today may become the enemies of tomorrow, and clearly pointed out the ingratitude of nations. Certainly after our experience in 1917, when we loaned our money and sacrificed our blood and treasure upon the altar of international war we learned, if we will ever learn, the truth of his advice when we recall the if we will ever learn, the truth of his advice when we recall the ingratitude of those nations who, after their appetites had been satisfied at the council table, accused us of being Shylock when we had the temerity to suggest the repayment of money honestly learned to them. loaned to them.

Washington knew from experience the utter lack of our common interest with the affairs of European nations, and clearly directed attention to their primary interests, which to us, as a people, have attention to their primary interests, which to us, as a people, have none, or, at best, a very remote relation. He knew that our geographic location was, and always would be, such as to enable us to remain aloof from the intrigues of foreign diplomacy, and asked the question then, which should be asked by every citizen of America today: "Why forego the advantages of so peculiar a situation; why quit our own to stand on foreign ground; why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

There are those in America today who say that the march of

There are those in America today who say that the march of progress throughout the world has been such that we can no longer accept the advice of the Father of his Country, but that we must again involve ourselves in foreign affairs, in order to save democracy. The same forces of hate and greed that so successfully engineered our entrance into the late World War are busily engaged again in a campaign of propaganda, designed and intended to force our active campaign of propaganda, designed and intended to force our active participation in the next European war. How familiar are the utterances of the present warmongers. In 1917 they whipped up the passions of the people under the plea that we must make the world safe for democracy, and today they are attempting to stir up and arouse the passions of the people of America under the plea that we must choose sides in the European situation, in order to save democracy. Save democracy.

Men occupying high public places in our Government have com-

pletely forgotten or are purposely ignoring the advice of Washington, and instead of treating all nations with justice, and instead of cultivating the good will of the peoples of the world, are indulging in a campaign designed to arouse the passions of hate

toward certain nations and to bind us with secret commitments and passionate attachments for other nations that will inevitably com-pel us to defend those commitments and those attachments in the event of another European war.

pel us to defend those commitments and those attachments in the event of another European war.

I believe that the people of America still adhere to the advice of the Father of his Country, and that they demand in no uncertain terms that we begin to attend to our own business and stop meddling in the domestic affairs of other nations.

I am sure that the great heart and soul of America goes out in sympathy to oppressed people wherever they may be found, but I am likewise convinced that the oppressed, the downtrodden, the weary, the hungry, and the underprivileged millions of America should claim our attention first. The cry that it is necessary to take sides in European affairs in order to "save democracy" finds little response in the hearts and souls of the people of America when we witness the efforts that are being made to aline us shoulder to shoulder with the hosts and legions of bloody Communist Russia. Who is there in America that believes that Stalin and his crowd, who for 20 years have murdered, plundered, and pillaged, and who have attempted to destroy democracy throughout the world, have any present intention now of abandoning their 20-year fight to communize the world and aid in the saving and protection of democracy? No, men and women of America, this is not the issue in the battle that is being waged by the diplomats of the Old World today. We must, once and for all, recognize facts that are true, and those facts demonstrate beyond the possibility of successful contradiction that the real fight is the attempt on the part of the British and French Empires to maintain their territorial integrity and to hang on, even at the risk of involving the world in another war, to the territories which they acquired as a result of the Treaty of Versailles, concluded at the end of the last World War.

We received nothing from that adventure except wee and misery. World War.

We received nothing from that adventure except woe and misery, and ask nothing today except to be let alone and be permitted to work out our own destiny.

Shall we, as a people, again make another supreme sacrifice by involving ourselves in matters that are not our direct concern? I know that the propaganda agencies are busy throughout America proclaiming that the fate of our democracy hangs in the balance, and that our future welfare demands that we must join in aiding European nations to maintain their territorial status quo, but I and that our future welfare demands that we must join in aiding European nations to maintain their territorial status quo, but I am certain that the people of America are too alive and too intelligent to be deceived any longer by this vicious type of propaganda. Why. I ask, when millions of people were being murdered in Russia and the temples of God Almighty were being destroyed, did not these same forces that are at work today, rise in protest and demand intervention then? No, they were strangely silent. No talk then of the necessity for saving democracy. On the other hand we gave aid and encouragement to that government by official recognition. Despite the fact that another nation is ravaging and pillaging in the most inhumane manner innocent men and women and children in China, barely a word of protest comes from these same sources that are so outraged over the actions of Hitler. Why, I ask you, is it that we are confronted with all of this "Stop Hitler" propaganda today? You, as sensible, intelligent citizens of America, know in your hearts the answer to this question. You know that it is not based upon the necessity of "saving democracy," but is based upon the demand that we aid the British and French Empires in maintaining and keeping their present possessions and that Hitler must be punished because of his racial intolerance. I say to you that as much as I regret the racial intolerance of Hitler, as a Member of Congress, I will never vote a declaration of war, based upon either of these premises.

The time to fight against war is when we are at peace with the world. Once the warmongers whip and stir up the passions of the people, and incite them to the frenzy of war, calm and dispassionate judgment disappears, and our actions are guided by prejudice and hate rather than logic and tolerance.

The greatest contribution that America can make to the cause of world democracy does not lie in our involvement in foreign war but

The greatest contribution that America can make to the cause of world democracy does not lie in our involvement in foreign war but world democracy does not lie in our involvement in foreign war but in our ability to demonstrate to the world that a free people with unbounded resources and unparalleled wealth are able to solve the problems of the unemployed, the underprivileged, and the aged here at home. It lies in our ability to demonstrate to the world that we can solve the problems of a paralyzed industry and agriculture, and that we as a free people can provide opportunity for youth and can so handle the bounty and abundance that God Almighty has given us that we can banish forever from our Nation the specter of want and misery. In the solution of these pressing problems at home lies the future of our democracy.

Enlightened public opinion everywhere concedes that another

Enlightened public opinion everywhere concedes that another world war will destroy democracy and perhaps even civilization

war. Rise up in the exercise of your privilege under the Constitu-tion and tell those in authority in this Government, "We want no war." Add your voice to the ever-growing about the constitu-Men and women of America, stand firm in your convictions against war." Add your voice to the ever-growing chorus that is swelling throughout America, demanding peace and good will among men and among nations of the world.

Jefferson Day Speech

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

ADDRESS BY HON, EDWIN C. JOHNSON OF COLORADO

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the junior Senator from Colorado [Mr. Johnson] on May 7 last, Jefferson Day, at Milwaukee, Wis.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I would rather come to Wisconsin than go to any other State in the I would rather come to Wisconsin than go to any other state in the Union, with the single exception, of course, of my own beloved Colorado, to deliver a Democratic speech, because I am anxious to do my bit in the renaissance of the liberal movement in Wisconsin. Democratic leaders from the highest to the lowest ought to come Democratic leaders from the highest to the lowest ought to come here to give aid and comfort to their Democratic brethren struggling with their backs to the wall in their heroic efforts against great odds to keep this State a potent factor in the national Democratic political picture, and to let you courageous leaders know that the whole party is in this fight with you to the finish to restore liberalism in Wisconsin and continue it in the Nation. In the old parable the Good Shepherd left the ninety and nine and searched for the one lost sheep. The Democratic Party of the United States of America needs Wisconsin ever so badly, and Wisconsin, as I see the picture needs that party. the picture, needs that party.

NOT SUNSHINE PATRIOTS

It is not easy to be a party leader in a minority party facing defeat after defeat. I know because I have served my party under both easy victory and crushing defeat, and I understand the kind of courage and stamina required to fight the battles of a lost cause. The only ally one has in such a time is the joy and satisfaction of fighting for the sake of principle. It takes real men and women to carry forward under such circumstances, but from such an experience of the sake of principle. perience patriots emerge. A victorious party gathers momentum and numbers as it glides along to easy victory. Folks are naturally anxious to hop on the band wagon of certain success, and they are anxious to hop on the band wagon of certain success, and they are even willing to contribute generously of their time and effort to a cause assured of victory. There are too many persons in the field of politics—as there are in other fields—who just cannot take defeat. They are great players, but fade out when the going gets rough. But, thank God, there are courageous souls in the political arena so imbued with a religious fervor for the righteousness of their cause that they fight hardest when all is dark despair.

It is never safe to count that kind of a contestant defeated; you may gray by the carth and trample him in the dust hut he will

may crush him to earth and trample him in the dust, but he will rise again and fight on to victory. Let no man think that the Democratic Party and the liberal cause are hopeless in Wisconsin. A hard struggle ahead, yes, but whipped, never.

The world has always admired such fighters, and the poets have sung their praise. The words of Tom Paine, uttered in the stress of the American Revolution, apply appropriately to the situation in Wisconsin at this very hour:

In Wisconsin at this very hour:

"These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country, but he that stands it now deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict the more glorious the triumph. What we obtain too cheaply we esteem too lightly; it is dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods, and it would be strange indeed if so celestial an article as freedom should not be highly rated."

POLITICAL INSURRECTION IN WISCONSIN

POLITICAL INSURRECTION IN WISCONSIN

The political history of Wisconsin for 50 years has been unique and unlike that of any other State. It was solidly Republican in the old days because of sectional strife, just as Mississippi was solidly Democratic. Following the Civil War big business secured a strangle hold in Wisconsin and formed a close partnership with the Republican politicians who were in control. Liberals and conservatives alike were stanch Republicans. Such an unholy alliance could not and did not last. The liberal element, thoroughly disgusted with the rule of monopoly control, brazen plutocracy, ironclad machine politics, and boss rule—perhaps the most arrogant and pernicious in any State—finally rebelled against the powerful and corrupt Republican Party leadership. The old preju-

dices of Civil War days, traditionally antagonistic toward the Democratic Party even though that party under the enthusiastic leadership of the great commoner William Jennings Bryan was extremely liberal, that deep-seated prejudice restrained the Wisconsin Republican liberals from joining the Democrats. Instead they organized a faction within the Republican Party and attempted the hopeless task of reforming conservatism.

So the Democratic Party in Wisconsin for two generations has been squeezed and ground between the upper and nether millistones of the old reactionary, conservative Republican Party on the one hand, with all of its brazen stupidity, wicked shortcomings, and outmoded philosophy, and the very much localized, impractical, so-called Progressive Party on the other hand, loaded down with good intentions and miserable performance. When we contemplate the terrific death struggle which has occurred here for the past 50 years between these two powerful, determined, political antagonists, we should not be surprised that the Democratic Party in Wisconsin is a minority party; we should be amazed that there is a Democratic Party here at all.

LIBERALS DIVIDED

LIBERALS DIVIDED

There is room for a conservative party in America, room for a liberal party, and room for a radical party too, provided the radicals do not advocate the overthrow of our Government. Opposing political philosophies, whatever those philosophies may be, should be expressed openly and honestly. In America, under our present form of representative government, such expression can only be made through the media of political parties. Voters have a perfect right to freely choose the party vehicle in which to register their political preferment as to both candidates and issues. In fact, we want every voter to have a party, for to hold membership in a political party in this country is an indication of constructive citizenship, and to be an active worker in a political party here is practicable patriotism. Ours from the first has been a government by political party.

In 46 States the Democratic Party has been recognized as the liberal party. In two of the States—one of which, of course, is Wisconsin—a local party without important affiliations in any of the other 46 States has succeeded in dividing the liberal movement, making it possible in the election of 1938 for the reactionary, discredited Republican Party to again take over complete political control and give the Farm Laborites, the Progressives, and the Democrata a sound trouncing. Liberals in these States have very foolishly divided their forces. The question for Wisconsin liberals to decide is, shall they remain in a purely local party without standing outside of their own State or shall they join the majority party of the Nation with 150 years of liberal history behind it and have a voice in determining the policies of that national political party? It does not seem to me that the decision should be difficult. National issues and national economies know no State lines. In these days of quick transportation and instantaneous communication between the States no State can without injury isolate itself politically days of quick transportation and instantaneous communication be-

days of quick transportation and instantaneous communication between the States no State can without injury isolate itself politically or otherwise. In this modern day of free interstate intercourse there should be an end to local political parties, for they belong to the "horse and buggy" days.

A real crisis faces American liberalism in 1940. Conservatism is again thoroughly united. It stands ready for the fight of its life on the old policies to which it clings with a tenacity worthy of a better cause. It has learned nothing except the strength of unity. Liberalism, on the other hand, is torn by a thousand dissensions. If it would win, it must be through with inconsequential differences. It must fight unity with unity. This is no time for the tail to try to wag the dog. It is poor judgment for liberals in any State to jeopardize the whole American liberal movement by trying to run a one-horse local show of their own when duty plainly beckons them to unite in the Nation-wide program of their liberal brethren.

DEMOCRATIC PARTY IS LIBERAL

It seems to me that the opportune time has come for the Demo-cratic Party to assume once and for all the liberal leadership of Wis-consin. The liberal element of the old disintegrated local party must consin. The liberal element of the old disintegrated local party must look for a new vehicle and a new banner, but these Wisconsin liberals are not going to be satisfied with a lot of empty political gestures and idle and hypocritical lip service. They are too sincere and too discerning for that. They are still liberals even though their party organization is gone. They still have a great and genuine concern for the plight of the common man, and they want to keep Government at the services of the masses. I am talking about real liberals not radicals. I need not waste time in trying to tell Wisconsin people or in attempting to describe to them what a radical is—they know. They have seen radicals' impractical, vicious, and destructive efforts at close hand. The radical element which has taken over the old Progressive movement is not an asset to any party and will likely go its own way with less and less public confidence, or it may affiliate with the Communist Party where it probably belongs and where it will doubtless find kindred spirits. Radicals for the most part are not interested in liberalism, which is entirely too slow a process for their impatient revolutionary tendencies.

revolutionary tendencies.

Ralph Waldo Emerson might well have been talking about the radicals and conservatives of Wisconsin of this day when he issued this statement in 1844:

"The spirit of our American radicalism is destructive and aimless; it is not loving, it has no ulterior and divine ends; but it is destructive only out of hatred and selfishness. On the other side, the conservative party, composed of the most moderate, able, and cultivated part of the population, is timid and merely defensive of property. It vindicates no right, it aspires to no real good, it brands no crime, it proposes no generous policy, it does not build nor write, nor cherish the arts, nor foster religion, nor establish schools, nor encourage science, nor befriend the poor, or the Indian, or the immigrant."

As a matter of fact, there are two forms of communism in America equally bad which should be avoided by forward-looking America equally bad which should be avoided by forward-looking people. One is radicalism, the other conservatism. One would regiment industry and mankind under a Stalin, the other would foster an industrial control under the collectivism of capital and wealth. Either is equally bad. Grover Cleveland referred to such a situation in this significant and descriptive language:

"Communism is a hateful thing and a menace to peace and organized government, but the communism of combined wealth needs."

organized government, but the communism of combined weath and capital, the outgrowth of overweening cupidity and selfishness, which insidiously undermines the justice and integrity of free institutions, is not less dangerous than the communism of oppressed poverty and toil, which, exasperated by injustice and discontent, attacks with wild disorder the citadel of rule."

BUSINESS RAN THE COUNTRY

We tried the communism of conservatism under President Hoover and found out to our sorrow what it would do to us. In those evil days we let business run the country in the way it wanted the country to be run. Business had no reason to be afraid then. There were no causes for jitters emanating from the White House in those glorious days of business supremacy. There was no undistributed-profits tax to vex and no restraining regulation of wild speculation of the stock exchange curbing the spirit of adventure. In that day speculators were given the encouragement to swindle the unsuspecting public and trusting widow and helpless orphan. Fear of pecting public and trusting widow and helpless orphan. Fear of Government investigation did not dangle over them like the sword of Damocles. Business did not have to wait for the "magician at Washington" to pull rabbits out of the hat and tell them which way the economic wind was blowing. Wall Street was not being run from Washington. Quite the contrary. Appeasement of business was not necessary, for the bars of government restraint were completely down. There were no pay-roll, old-age, and unemployment taxes. Money out of the Federal Treasury was not being poured down a rat hole to buy the favors of the blind, the crippled child, the unemployed, the homeless, the farmer, and the little-business man. Banks were accountable to nobody for what they did with the deposits of the people. The Federal Government was not deliberately keeping down interest rates. No rubber-stamp Congresses and no rubber-stamp Supreme Courts. Business was not in a strait jacket. Free enterprise was not stifled and speculation was not abridged. Why, then, in that hour did we not realize the glorious day of American prosperity—the golden era of two chickens in ous day of American prosperity—the golden era of two chickens in every pot and two autos in every garage? Why were the banks not bursting with funds with which every legitimate business and industrial enterprise might be financed, and why did businessmen not throw away all of their red ink? There seems to be no answer to these "whys."

Strange to say, the pages of history for that period record neither prosperity nor progress. We should like to blot the whole hideous memory of the evil days of Hoover from our minds for-ever. We must have no more of that sort of unbridled license if we would save our institutions. In 1940 we shall learn whether or

not the burned child fears the fire. THE THIRD PILLAR IS ECONOMIC FREEDOM

We have long had political freedom in America. in Wisconsin entitled to a vote has the opportunity to cast that vote secretly with only his conscience and his God to witness. Wisconsin citizens are assured by the bill of rights, and by the State Wisconsin citizens are assured by the bill of rights, and by the State and Federal constitutions of freedom of religion, speech, press, and assemblage; the right of petition; the right to bear arms; freedom from unwarranted search and seizure and from quartering soldiers in private homes; the guarantee of due process and recompense for private property taken for public use; the right to trial by jury; protection against excessive bail, and excessive fines and freedom from cruel and unjust punishment. These civil liberates and political rights are extremely with law there is no conand freedom from cruel and unjust punishment. These civil lib-erties and political rights are extremely vital, but there is no con-troversy in this day concerning them. They have been won by a long, hard struggle of sacrifice, blood and effort, and have been handed down to us as our most valuable heritage. The burden of sustaining them is our only duty respecting them. If radicals who would destroy the Constitution be smoked out and their pernicious purposes of undermining it fully understood, there need be little concern about either the loss, the abrogation, or the abuse of these vital provisions which insure an American his political and religious freedom.

and religious freedom.

Religious freedom and political freedom are all important, but there is a third pillar required to make the trinity of the pursuit of happiness possible. Men cannot eat the bill of rights nor will they find physical shelter in the Constitution. They must have economic freedom also. Political freedom is a way to life, religious freedom is a way of life, but economic freedom sustains life. Political freedom is but a means to an end; the end is religious and economic freedom. A practical application of political freedom enables religious and economic freedom to be realized. Political freedom is mostly important for the power inherent in it.

Jefferson knew well enough that if men had political freedom, they could have religious and economic freedom if they really wanted them. As our country becomes more cultured and advanced, it becomes more complex and involved and the exercise of political rights more technical and intricate and the accomplishment of economic objectives likewise more difficult to attain.

economic objectives likewise more difficult to attain.

Jefferson never advocated equally dividing the wealth, because he knew that a new division would need to be made over and over almost day by day until finally there would be no wealth to divide. Nor did he propose community operation and direction of industrial activities. Jefferson, to the contrary, advocated free enterprise and the equalization of individual opportunity, which is quite a different thing. Encouraging and fostering thrift and private enterprise does not mean, however, that unregulated and uncontrolled accumulations of wealth and economic power shall be permitted to deny opportunity according to his capacity to the most humble. We regulate industry not only to share its production in taxes and wages but to give every man in and out of industry the fullest opportunity to life, liberty, and the pursuit of happiness. Only government with the aid and assistance of organized labor and an educated citizenry is powerful enough to cope with and compel industry to give all men affected by it an equal opportunity for economic liberty.

COLLECTIVISM OF CAPITAL AND WEALTH

COLLECTIVISM OF CAPITAL AND WEALTH

COLLECTIVISM OF CAPITAL AND WEALTH

Senator O'MAHONEY recently pointed out that there are 30 giant corporations in this country, 12 of them banks and 18 of them industrials or public utilities, each one of which has assets of more than a billion dollars; and that at the same time there are 22 sovereign States of the Union wherein the total value of all the real estate within their borders is less than a billion dollars each. The Senator, therefore, concludes that many modern corporations have become vast economic states, greater in some instances than the States of the Federal Union, and these great economic states have been made possible by the collective resources of millions of people who are their stockholders but who cannot exercise and do not exercise any power whatsoever over the government of these corporations; and, further, that they employ millions of workers who likewise do not exercise control or direction over them. The only check upon them is the will of the people, expressed through the Government of the United States of America. American liberalism, with the power of free political action, must accept the challenge they offer in their basic organization to the sovereignty of popular government. These industrial giants need not be destroyed in whole or in part, since it is admitted that they render a great and good public service. If they be compelled to subordinate themselves to the will of the whole people or the tendent of the states. stroyed in whole or in part, since it is admitted that they render a great and good public service. If they be compelled to subordinate themselves to the will of the whole people so that political freedom will not be abridged, followed by the denial of economic freedom to the least among us, we will be amply protected.

EQUAL OPPORTUNITIES FOR ALL

A political party that believes in democracy and the majority rule has no other function, no other purpose than to give expression to the collective will of the people, and it has been the will of the people expressed through the Democratic Party to champion and defend the cause of individual citizens and to courageously advocate and demand equal opportunities for all, including the most miserable and humble. President Roosevelt had the vision and the good sense to apply the idealistic philosophy of Jefferson to practical usages in such a cause and to buckle on the armor of the militant Jackson in waging his winning war against the forces of greed and special privilege to such buckle on the armor of the militant Jackson in waging his winning war against the forces of greed and special privilege to such an end. These things can all be accomplished under the capitalistic system of limited free enterprise without upsetting the democratic processes. There is a happy medium between the Republican ideals of rugged individualism of industry and unlimited free enterprise on the one hand and the radical ideal of communistic regimentation on the other. The virtue of private enterprise can be preserved without letting it run riot. Adherence to the principles of unlimited free enterprise and rugged individualism, capitalistically speaking, too often forms a polite excuse for not assuming social responsibilities and too often provides an excellent basis for an argument against taxation and regulation.

provides an excellent basis for an argument against taxation and regulation.

There are powerful natural impulses tempting us toward unregulated capitalism, but they must be denied to protect our liberties. The unrestrained privilege of the aristocracy directing industry that once upon a time enjoyed all the liberties of the pioneer adventurer must now exist only in the memory of the men of yesterday. Wisconsin could not, if it would, return to the irresponsible days of the pioneer, trapper and soldier of fortune; and Wisconsin would not, if it could, return to the irresponsible days when industry was run for profit alone. The wanton, sible days when industry was run for profit alone. The wanton, wicked waste and corruption that occurred in the devastation of Wisconsin forests is something to remember in a discussion of this point. The majority of American voters who have the right to decide such things will not let America return to the old deal of uncontrolled and unrequised controlled. uncontrolled and unregulated capitalism. They have adopted a policy of shared undertakings, shared responsibilities, shared interests, and shared natural advantages without State and community ownership. Too much of everybody for himself with no regard for others has departed forever in America because the Democratic Party ideal has been generally accepted as the proper policy to pursue.

THE NEW DEAL

The New Deal sponsored by the Democratic Party pictures an industrial and agricultural society with particular stress on eco-

nomic security and public health in factory and home, both urban and rural, decent prices for farm products, fair wages, reasonable hours, no cutthroat and chiseling business methods, no stock juggling and riotous speculating, decent interest rates and honest banking, regulated public utilities and unmonopolized natural resources; taxes high—yes—but a satisfactory compensation in educational, recreational, and other desirable public services provided out of the taxes collected. In short, the New Deal champions a cational, recreational, and other desirable public services provided out of the taxes collected. In short, the New Deal champions a happy and ideal combination of the profit motive with the service motive, which is entirely in keeping with Democratic Party traditions. The common interests of all the people under the New Deal nullify the special privileges of a part of the people under the Old Deal. Tolerance imbued with sympathy for the lowly and with a broad understanding of perplexing social problems affecting all men replaces prejudice and hate, and the coordination of conflicting interests supersedes devastating competition. The value of this new social order, if by such a name it may be designated, is measured by the extent to which its advantages are shared by all the people, and it is well to remember that it is being developed through the regular orthodox democratic processes provided for in the Constitution of the United States of America.

Political party performance in America today must be judged by the degree to which it provides for social betterment in the way of youngster care, mother compensation, oldster assistance, unemployment and health insurance, housing programs and slum clearance, rural electrification, and in many, many other similar services to the underprivileged. Promoting and securing higher standards of living, both rural and urban, and greater benefits from the machines for which the worker must furnish direction and to which he in turn is tied is the true test of twentieth-century statesmanship.

FRANKLIN D. ROOSEVELT

FRANKLIN D. ROOSEVELT

It might be well to state here and now in this connection that it is my firm conviction that when all current political propaganda, is my firm conviction that when all current political propaganda, political jealousies, and ulterior motives of every nature have been deleted and when every historical fact is placed in its proper perspective and an unbiased and truthful history is written some years hence covering this period, it will unqualifiedly and emphatically hold that the first 4-year term of President Roosevelt was the most brilliant, the most constructive, and the most progressive Presidential term in all the glorious history of America. And I believe that when his second term finds its place upon the pages of history and the tremendous gains in wholesome legislation inaugurated by him have been consolidated and perfected, it will be truthfully said that this earnest man held to the course of a true liberal and guided the Nation safely through the dangerous shoals not only of murderous international strife, but that he corrected grave internal social difficulties by sensible formulas founded shoals not only of murderous international strife, but that he corrected grave internal social difficulties by sensible formulas founded upon equity and justice under the capitalistic system and the American Constitution and thereby proved himself the outstanding champion of his century of true liberalism both at home and abroad. It is a history that should be honored by every man who loves his country and the humanity to which he belongs. The doctrines of

the New Deal are sound and will prevail.

If I may digress a moment, I would like to say in connection with my reference to foreign affairs that the sentiment in the United States Senate is overwhelmingly against this country getting into an European war, and it is overwhelmingly against the becoming into an European war, and it is overwhelmingly against its becoming into an European war, and it is overwhelmingly against its becoming involved in any European diplomatic entanglements. The majority of the Senate, too, believe wholeheartedly in honest neutrality, and that we can and must keep out of the real-estate quarrels and "dog-eat-dog" bickerings of Europe. Let us treat all nations of the world with the utmost friendship, without favoritism or prejudice. We will be glad to do what we can in the interest of peace and understanding, but we notify the whole world now that if any nation goes to war it goes without us, and that America will have

President Roosevelt will go down in history as the great conserver of human and natural resources for these things are the key to the future, and future generations in whose behalf they are now planned will in appreciation exalt him as a wise father. We had been a nation of profligate exploiters of the richest land under the blue canopy of heaven, but he has taught us to conserve these priceless natural and human resources as the foundation of our progress. The titanic struggle going on in Europe today is pri-marily caused and made necessary by the extreme shortage of nat-ural resources insufficient to support modern life in many thickly populated areas. The President is laying the groundwork to avoid that situation forever in America. Powerful influences have opposed his program with all the cunning and resourcefulness which special privilege forever employs; nevertheless, power development, flood control, reforestation, reclamation of arid lands, and soil, water, oil, control, reforestation, reclamation of arid lands, and soil, water, oil, mineral, and timber conservation have been effected and will be appreciated by the man of tomorrow and enjoyed by his children's children until the end of time. We are leaving future generations too many debts to pay, but in all fairness it must be said that they will have something substantial that their money could not buy, out of which to pay these debts if the Nation's natural resources be developed and preserved and not exploited and destroyed.

The President, however, is more than a cold-blooded, hard-headed, scientific conservationist. He is also a warm-hearted humanitarian. Christian people cannot consistently abandon the halt, the aged, the orphan, and the blind to the ravages of unrestrained nature. Yet strangely enough his administration is the

first in American history to courageously assume the heavy duty of Federal philanthropy to these unfortunate people, not because he wanted to usurp the responsibility of their care from local government but for the good reason that local government failed for one cause or another to accept the challenge of their support in whole or in part.

UNEMPLOYMENT IS WASTEFUL

Nothing is so costly, wasteful, or extravagant as is unemploy-ment. The loss to the Nation of ten or twelve million idle men ment. The loss to the Nation of ten or twelve million idle men amounts to a stupendous and terrifying liability that can never be made up. There are so many things that need to be done, so much natural wealth to pay for doing them, and so many persons needing the products of workshop and farm that unemployment is nothing less than a devastating indictment against modern man. Our party is determined to correct such an intolerable condition. Unless unemployment be solved, we can be certain that our economic system is not sound and therefore not permanent. It is the greatest challenge that we face and it cannot be sidestepped or ignored. It must be solved. The Public Works Administration, the Works Progress Administration, the Civilian Conservation Corps, the National Youth Administration, and the Unemployment Compensation Service, are each coping with slightly different phases of the major problem of unemployment and all of them are making definite progress in paying the way for a real and permanent solution. The conservation of the human element and the conservation of the Nation's physical values must go on without abatement. go on without abatement.

MIDDLE OF THE ROAD

MIDDLE OF THE ROAD

The party made immortal by Jefferson, Jackson, Cleveland, Wilson, and Roosevelt is neither conservative nor radical, but steers a happy and straight course between these two extremes. Human beings are its first concern. The average man and woman, whether in the factory, on the farm, or behind the business counter, knows in his heart that the Democratic Party is not operated in the interest of property and privilege, but to give mankind greater security and opportunity. The Democratic Party had its birth simultaneously with the signing of the Constitution and will live and serve until that document passes into oblivion. It is not only the oldest political party in the world but it has accomplished more for the common man and his welfare and happiness than any other party of history. It has lived long, and it will live longer. It has lived well, and it will live better. It has seen the rise and fall of the Federals, Whigs, Know-Nothings, Populists, Progressives, Farm-Laborites, and Republicans, and will likely serve after the obsequies of many more mushroomed political movements which come and go with the pressure of the times. When the people tire of such innovations the good, old reliable Democratic Party that is the handiwork of millions of learned, patriotic, and discerning Americans stands ready to serve and give expression to the will of men.

REAL LIBERALS INVITED

And so I say to liberals who have not been identified with the Democratic Party in Wisconsin that now, today, is the accepted time to join in a great Nation-wide liberal movement; the door of welcome is open; the cause is great; and the need is imperative. In 1940 the whole liberal cause in America is threatened with disaster if the liberals in all States do not unite. This is no time to place pride above cause. We may not like this or we may not like that, but adjustments can be made and mistakes can be corrected. Misunderstandings and details can always be worked out if there be a strong objective ahead and a spirit of give and take within. Each cannot have his own way, regardless of how sweet that may be to him.

In 1940 a half dozen States will decide the election. Wisconding

Each cannot have his own way, regardless of how sweet that may be to him.

In 1940 a half dozen States will decide the election; Wisconsin will be one of those States. She is already classed as a pivotal State. A majority of Wisconsin voters are liberal, but the question is, Will they vote the liberal ticket? No one is expecting a landslide in 1940; everyone believes that it will be the hardest fought campaign since 1916, with the whole thing in doubt hours after the polls are closed on election day. The victory will go to one or the other of the two major parties—either a conservative or a liberal will be elected President. No radical or "red" will receive more than a handful of votes. The successful candidate will either be a Republican or a Democrat. The Republican will be a conservative of the old school or the Democrat a liberal with strong New Deal tendencies, because no one else can win the respective nominations of the two parties.

The Democratic Party, with the mantle of devotion to the people's cause of Jefferson draped about its shoulders, the militancy of Jackson in its heart, the indomitable will of Cleveland in its character, the idealism of Wilson in its soul, and the combination of all of these virtues as personified by Roosevelt in every fiber of its being, will attract honest liberals and patriots wherever they may be to its standards of progress and righteousness.

The Democratic Party has made its share of mistakes; it is neither infallible nor is it omnipotent, having strength only as the people give it strength; but it has pursued a straight course ahead, neither enamored with the luxurious life of conservative inertia on the one side, or the temptation of impatient radical imprudence on the other. It will keep its eye and its mind upon its great objectives of human well-being; it will never lose its enthusiasm for that magnificent cause or accept failure or dishonor as its destiny.

Civil Liberties

EXTENSION OF REMARKS

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. MEAD. Mr. President, on May 8 the junior Senator from Washington [Mr. Schwellenbach] made an interesting and able address over the radio regarding the work of the Senate Civil Liberties Committee. I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every Member of Congress who reads his mail meets two appeals every morning. The first is that we should keep the United States out of war. The second is that we should maintain the democratic institution of government here. Offnand these two appeals may seem to be separate. Anyone who thinks them through must realize that they cannot be separated. The chief reason our people want to stay out of war is that they know that if we go into war, we probably will not be a democracy when it is over. These same people know that the best chance we have to stay out of war is to protect and preserve and rely upon the democratic nature of our Government. We have many arguments among ourselves as to what we should do to maintain our democratic institution of government. No one can or does argue about the conclusion that the first thing we must do to maintain our democratic institutions is to keep in our own hands the tools of democracy which we now possess. Any workman called upon to do a job, whether he is digging a ditch or building a skyscraper, knows that he must have his tools and have them in good shape. The tools of democracy are contained in the first 10 amendments to the Constitution. Every Member of Congress who reads his mail meets two ap-

knows that he must have his tools and have them in good shape. The tools of democracy are contained in the first 10 amendments to the Constitution. They are known as the Bill of Rights or as Civil Liberties. The most important of them are freedom of speech, freedom of press, freedom of religion, freedom of assembly, freedom of thought, and freedom in the home.

Your first reaction may be that nobody ever questions these rights in this country. There may run through your mind the question of why anybody should take the time to discuss them. I say to you that today, more than ever before, we face the danger of impairment of these fundamental rights. When a Senator of the United States frankly confesses upon the floor of the United States Senate that he believes that concentration camps should be set up in this country for persons of whose ideas he disapproves. States Senate that he believes that concentration camps should be set up in this country for persons of whose ideas he disapproves, when a dignified Member of the Congress actually introduces a bill providing for concentration camps, the time has come when we should worry about the future of democracy in this country. If the tools of American civil liberty are to be dulled by actions of this kind, each one of us should worry about our personal liberty, which we have thought was guaranteed us under the Constitution. It is so easy for each one of us to plead that those with whom we disagree should be suppressed. You and I look upon ourselves as patriotic American citizens interested only in the future welfare of our Nation and our Government. We are inclined ofttimes to look upon those, of whose theories we disapinclined ofttimes to look upon those, of whose theories we disapprove, as being enemies of our Government and its future welfare. What is hard for you and me to understand is that if we prevent them from stating their point of view, we, at the same time, de-prive ourselves of the protection of the tools of democracy upon which we rely for the furtherance of the doctrines we espouse.

prive ourselves of the protection of the tools of democracy upon which we rely for the furtherance of the doctrines we espouse.

On June 6, 1936, the Senate of the United States recognized the necessity for the protection of the principles of civil liberties by directing the appointment of a committee to investigate and make public acts violating those civil liberties by various groups and individuals throughout the country. That committee consisted of the Senator from Wisconsin, Mr. Robert M. La Follette, Jr.; the Senator from Utah, Mr. Elbert Thomas; and the beloved Senator from Iowa, Mr. Louis Murphy, who later was killed in an automobile accident. From that date up until the present session of Congress the Civil Liberties Committee has been functioning. Through lack of funds and of authority the work of the committee has now practically ceased. During this session of Congress Senator Downey, of California, and I introduced a resolution under the terms of which the committee would again resume its work. My purpose tonight is to explain the work of the committee. My hope is that by explaining its purpose I may enlist your support for the resumption of its activities.

Naturally the first question we ask in judging an investigation concerns the industry and fairness of the committee doing the investigating. Time does not permit on this program to detail the generally accepted view of the committee's work. Let me just shoot across the country with some newspaper quotations.

The Buffalo (N. Y.) Times said this. I quote: "The Civil Liberties Committee is entitled to the thanks of the Nation for its courageous and painstaking survey."

The St. Louis Post Dispatch, I quote: "The committee's industry and its careful methods have inspired public confidence in the

disclosures.'

On November 9, last year, the San Francisco Chronicle quoted a statement by Frank Patridge, secretary of the Southern Californians, Inc., which organization was about to be investigated by the committee, as follows:

"We are glad that Southern Californians, Inc., is now to have the opportunity to outline the straightforward objectives and candid

the opportunity to outline the straightforward objectives and candid principles upon which they are predicated to such a responsible fact-finding body as the Senate Civil Liberties Committee."

These quotations are typical of the attitude of those who have had experience with the careful, painstaking, judicious, and fair-minded way in which this committee has functioned.

The record of the committee is one of the most extensive and expensive of each conference investigations. In the 90 days in

exhaustive of all congressional investigations. In the 99 days in which it has sat the committee has heard testimony and entered documents in its record totaling approximately 18,000,000 words. These 18,000,000 words are contained in 50 volumes, 35 of them already published and the remainder to be released within a few weeks. In addition the committee has published nine reports summerizing its findings. marizing its findings.

The committee has heard nearly 600 witnesses and examined

more than 20,000 documents.

The material of the investigation being controversial, the committee has been faced with the demand of hundreds of partisans to be heard. The committee has endeavored to allow the fullest possible opportunity to these persons. The committee has never refused to hear a witness who asked for time and who could offer testimony relevant to the matter at hand.

You, I know, are asking why such a careful and important study

as this should be discontinued by the Senate. The fact is that the revelations of the committee have been so important that the committee itself has met with the violent opposition of many forces

in this country of great influence.

in this country of great influence.

Once again time will not permit me to do more than sketchily outline what some of these revelations are. The most important is the uncovering of a private spy system in the United States. We shudder when we read of Stalin's Ogpu, Mussolini's Ovra, and Hitler's Gestapo. Bad as these systems are, they at least have the sanction of their governments. The committee has proved that we have a private spy system in this country almost as efficient as any operated by a European dictator. Some 40,000 men are employed in it. They operate through the medium of a handful of organizations and sell their services to whomever wants to pay. The committee estimates that \$80,000,000 a year is expended in the employment of these spies. Their operations extend from one end employment of these spies. Their operations extend from one end of the country to the other.

The committee revealed that there are powerful organizations in the country manufacturing, supplying, and distributing muni-tions to those who believe they have the right to take the law into their own hands and stiffe the right of people to speak or assemble or petition or even to think of their own betterment. The committee revealed that in certain sections of the country for years there has been no such thing as freedom of assembly or of speech. The outstanding example of this was Harlan, Ky.

After the corruption of the duly elected public officials of Harlan Country Ky, by the coel interests and in response to appropriate the second of the sec

County, Ky., by the coal interests, and in response to numerous pleas from the mothers and wives and union officials the commit-tee undertook an investigation of civil liberties in that area. It

tee undertook an investigation of civil liberties in that area. It was found that the only civil liberties in the county were those of the coal barons and their 377 deputies. I don't believe that I have ever read as harrowing a tale as I have found in the committee's report on "bloody Harlan."

A minister of the Gospel who, from his pulpit deplored the callous indifference to human rights and suffering, was threatened and then withdrawn from the county, by his superiors, to save his life. In another church which was used for union meetings—"speakings" as they are called in the mountains—dynamite was "speakings," as they are called in the mountains—dynamite was planted. The lives of the preacher and his family were saved by their dog, who found the charge under the building and withdrew it. The county attorney who announced his intention of cleaning up the county was shortly thereafter blown to bits by a dynamite charge attached to the starter on his automobile.

The campaigns of terror that accompanied every effort of the Harlan miners to organize for their economic betterment resulted in numerous killings, almost all of which, testimony and official records show, were from bombings, and shootings from ambush and in the back. The oldest organizer in the county, a man over 70, Lawrence "Peggy" Dwyer, said he was ambushed 17 times and

dynamited twice.

However, of all the many murders of which I read in the hearings relating to Harlan, none strikes me as more cowardly than that of relating to Harlan, none strikes me as more cowardly than that of Bennett Musick, son of a preacher-organizer. One night while the family was gathered around the fire awaiting the return of the elder Musick, a fusillade of shots was fired into the house by thugs who drove past in four autos. After the firing ceased, in the words of the anguished mother, "We hushed for 2 or 3 seconds * * * and I said 'Are any of you shot?' And the baby boy said, 'I am shot in the arm,' and Pauline said, 'I am not shot.' * * The 14-year-old boy got behind the door. * * * I took Bennett by the shoulder * * * shook * * * he was dead. We did not have a light in the room, and Pauline and I just drug him to the door, where the light shined in * * and seen he was dead." After burying his son, Preacher Musick took his family out of the State for safety before continuing his work. They returned to their home in Harlan after the investigation of the committee

made it safe to do so.

The committee revealed numerous instances in which fictitious organizations were created. On the surface they appeared to be organizations of workers and farmers intended to benefit those whom they might interest in a cause. The fact is, however, they were conceived by, financed by and directed by those in violent opposition to the principles for which the organizations reputedly stood.

If we are to continue as a free America, these and similar practices used to thwart people's human desire for betterment of economic conditions must be stamped out. They can't be stamped

economic conditions must be stamped out. They can't be stamped out by any short campaign.

I believe the Civil Liberties Committee of the United States Senate should be a permanent institution. Can anyone deny that it is worth while investing \$100,000 a year in an effort to protect the rights guaranteed to us under the Constitution? We don't hesitate to spend many times that amount to build a battle-ship to defend us against a foreign foe. I consider that the maintenance of this committee is just good insurance to protect against the foes from within.

maintenance of this committee is just good insurance to protect against the foes from within.

There is another more specific reason why the committee should be continued this year. Last fall the committee made a preliminary investigation of a comparatively new organization known as the Associated Farmers. The Associated Farmers claim to be a bona fide organization of and by farmers for their own protection. I don't want to prejudge the case for or against the Associated Farmers. The investigation has not been completed. To make sure that I will not be unfair to the Associated Farmers. I am going to Farmers. The investigation has not been completed. To make sure that I will not be unfair to the Associated Farmers, I am going to limit my statement concerning them to what the organization itself claimed it was charged with in a telegram inserted in the Congressional Record by Senator Hiram Johnson, of California, on April 4 of this year. I quote: "First, it is charged that the Associated Farmers is a front organization for railroad and public utilities and big business interests and dominated by them. Second, it is charged that we operate to break up labor organizations and prevent labor organizations from taking hold among the agricultural workers of the west coast. Third, it is charged that we cooperate with sheriffs' offices, county prosecutors, and State officials. Fourth, the charge is made that huge private arsenals are maintained, including a sizable warehouse of submachine guns and sawed-off shotguns, for use in case of labor trouble."

In the wire to Senator Johnson, the Associated Farmers specifi-

In the wire to Senator Johnson, the Associated Farmers specifi-cally denied these charges and said this:
"Decency and fair dealing dictate that the Associated Farmers should have an opportunity to prove or disprove the charges mentioned."

A very insistent demand has been made upon the Senate that A very insistent demand has been made upon the Senate that this particular investigation at least be concluded. The National Grange, one of the oldest farm organizations, has requested it. Both the national labor organizations have requested it. And now the Associated Farmers themselves have requested it. There should be no doubt in the people's minds that these requests should be

granted.

May I conclude with thanking the National Broadcasting Co. for this opportunity to present, thus briefly, the work of the Civil Liberties Committee of the Senate. I think the work of that committee must be continued. We live in days which are troublesome. The whole world is confronted with seemingly insurmountable problems. There are many people who think that we ought to go out into the world and get ourselves involved in those problems. It seems to me best that we should first make sure that the institution of democracy shall be preserved here. It can't be preserved in the event that the tools which the Constitution gives us for its preservation become dulled or discarded. I like to think of our civil in the event that the tools which the Constitution gives us for its preservation become dulled or discarded. I like to think of our civil liberties as being summed up with the words "freedom of will." The American people must have the right to choose after having been given full opportunity to know the facts. There is no place in America for private armies, private spy systems, private arsenals. If eternal vigilance is the price of liberty, now is surely the time when we should know at what points and from what sources our liberties are being attacked. In the Senate Civil Liberties Committee we already have effective and efficient machinery to do this mittee we already have effective and efficient machinery to do this job. Surely no one can seriously urge that we should abandon that machinery during this troublesome time in our national life.

Exports and Imports Under Trade Agreements

EXTENSION OF REMARKS

HON. SHERMAN MINTON OF INDIANA

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

NEWS RELEASE OF MAY 8, 1939

Mr. MINTON. Mr. President, there was recently inserted in the RECORD some misleading information respecting the trade agreements entered into between the United States and other countries. I now ask unanimous consent to have inserted in the Appendix of the RECORD the answer to this propaganda in the form of data respecting United States exports and imports of grain, cattle, and other farm products under the trade agreements.

There being no objection, the data was ordered to be printed in the RECORD, as follows:

UNITED STATES EXFORTS OF GRAIN SHARPLY ADVANCE IN 1938; IMPORTS AT RECORD LOW LEVELS

Sharply increased exports, accompanied by drastic decreases in imports, characterized the foreign trade of the United States in grains and grain products during 1938, according to C. Roy Mundee, Chief, Foodstuffs Division, Department of Commerce.

A comprehensive survey of this trade, prepared by Ruch Spicer, grain specialist, Foodstuffs Division, will be available for distribution this week he said.

A comprehensive survey of this trade, prepared by Ruch Spicer, grain specialist, Foodstuffs Division, will be available for distribution this week, he said.

The survey shows that aggregate exports from the United States of grain and grain products reached a value of \$233,554,000 in the calendar year 1938 compared with \$91,095,000 in 1937. The grain and grain products export trade amounted to only \$29,-556,000 in 1936 and \$28,922,000 in 1935. The 1938 valuation, it is pointed out, was the highest recorded for any year since 1929.

The largest single item in the grain export trade was corn, of which foreign shipments in 1938 amounted to 147,505,104 bushels valued at \$94,496,089 or more than the combined value of all grains exported in any one of the 3 preceding years. Approximately half of the corn shipments were destined to the United Kingdom and Canada, the survey shows.

Wheat ranked as the second most important item in the 1938 grain export trade, shipments abroad totaling 86,980,843 bushels valued at \$78,141,208. This total was more than twice as large as that of 1937 and many times in excess of the 1936 and 1935 figures. The United Kingdom was the leading export outlet, followed by the Netherlands and Belgium.

Exports of milled rice in 1938 amounted to 297,724,882 pounds,

Exports of milled rice in 1938 amounted to 297,724,882 pounds, valued at \$7,830,359, an increase of 101,723,000 pounds and \$1,697,000, as compared with 1937. Smaller gains were registered in shipments of other grains, the only exception being rye, which

showed a slight decline.

Exports of wheat flour milled wholly from United States grain increased from 2,270,097 barrels valued at \$11,927,112 in 1937 to 3,701,193 barrels valued at \$15,927,112 in 1938. On the other hand, exports of flour milled from wheat imported in bond for milling and export decreased from 2,182,611 barrels valued at \$13,339,314 in 1937 to 1,511,597 barrels valued at \$7,419,277 in 1938

Exports of biscuits and crackers were higher in 1938 than in any of the 3 preceding years, as were shipments of macaroni, spaghetti, and noodles. All items of prepared cereals registered increases in the 1938 export trade over the preceding year with the exception of corn cereal foods ready-to-eat.

corn cereal foods ready-to-eat.

Imports of grains and grain preparations in 1938 were valued at \$7,976,000, which was only 7.8 percent of the value of \$102,392,000 reached by these imports in 1937 and compared with \$84,468,000 in 1936 and \$73,314,000 in 1935. Last year, it is pointed out, was the first year since 1934 in which the value of imports of these products was less than that of exports.

Practically all items in the United States grain import trade showed decreases in 1938 compared with 1937 and the years immediately preceding. The greatest decrease was in imports of corn which amounted to only 403,371 bushels valued at \$257,702 against imports of 86,337,248 bushels valued at \$56,184,246 in 1937.

The increased imports of cattle in the first 2 months of 1939 were due primarily to the rushing of shipments out of Mexico in antici-

The increased imports of cattle in the first 2 months of 1939 were due primarily to the rushing of shipments out of Mexico in anticipation of the possibility of an embargo by the Mexican Government. The amount of cattle permitted entry into the United States under the quota is only about 1½ percent of the average annual slaughter of cattle, including calves, in the United States. Of the January-February 1939 imports of 184,000 head, 108,000 head either were in excess of the quota or not subject to reduced trade-agreement rates, and, therefore, paid the full duty.

Hog imports in January-February 1939 were negligible. The United States is on an export basis in pork products, and exports are increasing owing to our expanded hog production.

Of the 2 months 1939 imports of 19,219,000 pounds of meat prod-

Of the 2 months 1939 imports of 19,219,000 pounds of meat products, 18,426,000 pounds were of items not subject to reduced duties under the trade-agreements program.

No reduction in duty on entry into the United States has been

No reduction in duty on entry into the United States has been made for flaxseed in the trade-agreements program.

Of the 31,485,000 pounds of edible vegetable oils imported in January-February 1939, only 773,000 pounds of palm-kernel oil were subject to any reduced duty under the trade-agreement program.

The tabulation in the Congressional Record fails to state that the two classifications of "cottonseed oil" and "olive, corn, and other oils" are included under the vegetable-oils total shown, and, therefore, represent a 100-percent duplication. Cottonseed oils and other edible vegetable oils, except palm-kernel oil, have not been the subject of any trade agreements.

Oil cakes and oil-cake meal have not been given reduced duties in the trade-agreements program. The United States is on an export basis with respect to these products, shipments, and exports in January-February 1939 totaling 109,730,000 pounds, as compared with imports during the same period of 33,868,000 pounds.

No concessions on butter have been granted under the trade-

agreements program.

Imports of grains during January-February 1939 were at negligible levels. The United States is on an export basis in grains. As contrasted with the import figures shown, exports during the first 2 months of 1939 were: Oats, 366,000 bushels; corn, 9,693,000 bushels; wheat, 18,999,000 bushels; and barley, 1,080,000 bushels.

Of the January-February 1939 wheat imports, only 11,000 bushels consisted of wheat for human consumption actually entering the United States. Of the total imports for those 2 months of 1,874,-000 bushels, 1,807,000 bushels entered bonded warehouses for grinding in bond and export and 57,000 bushels were of wheat unfit for

human consumption.

However, several concessions have been granted by the United States on grains. Among these were a reduction from 20 cents to 10 cents per bushel in the duty on corn from Cuba (effective September 3, 1934) alone (this concession was not extended to other countries); a reduction from 16 cents to 8 cents per bushel in the duty on hulled oats unfit for human consumption in the first trade agreement with Canada and the extension of the reduced rate to the classification "oats, hulled or unhulled," in the second Canathe classification "oats, hulled or unhulled," in the second Canadian trade agreement; and the reduction in the duty on wheat when unfit for human consumption from 10 percent to 5 percent ad valorem in the second Canadian trade agreement, effective January 1, 1939. Pearl barley was reduced in duty from 2 cents to 1 cent per pound in the trade agreement with the Netherlands effective February 1, 1936. Barley, hulled or unhulled, was reduced in duty from 20 cents to 15 cents per bushel in the second Canadian trade agreement. There were other duty reductions in grains, but these are the important ones pertinent to the commodities included in the tabulation. the tabulation.

More than one-third of the January-February 1939 imports of vegetables and preparations were of items on which no concessions have been granted in trade agreements. These included various starches on the free list in the amount of \$895,000 and canned tomatoes and tomato paste not the subject of any trade agreements in the amount of \$518,000.

Unmanufactured cotton is on the free list and therefore has not been the subject of any duty concessions in the trade-agreements

program.

Inedible molasses has not been the subject of any duty concessions in the trade-agreements program.

The large increase in January-February 1939 imports of maple sugar and sirup was due nearly entirely to the destruction of sugar maple trees in Vermont during the hurricane of last fall.

The duty on maple sugar on entry into the United States was reduced from 8 cents to 6 cents per pound by Presidential proclamation March 7, 1931, based on investigation by the Tariff Commission under section 336, 1930 Tariff Act, was further reduced to 4 cents per pound in the first Canadian trade agreement effective January 1, 1936, and further reduced to 3 cents per pound in the second Canadian trade agreement effective January 1, 1939. The United States import duty on maple sirup was reduced from 5½ United States import duty on maple sirup was reduced from 5½ cents to 4 cents per pound under section 336 effective March 7, 1931, and was further reduced to 2 cents per pound in the second Canadian trade agreement effective January 1, 1939.

Imports of certain farm products into the United States [Figures in round numbers]

Products	January and Feb- ruary 1926	January and Feb- ruary 1931	January and Feb- ruary 1938	January and Feb- ruary 1939	
Cattlehead	24, 000	9,000	46,000	184,000

Pleas for Peace

EXTENSION OF REMARKS

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

ADDRESSES BY THE POPE AND THE DUKE OF WINDSOR

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the appeal for peace by Pope Pius XII and also the text of the appeal for peace made yesterday by the Duke of Windsor. What impels me to do this is that some few days ago the President of the United States made such an appeal to the world and in several instances was criticized. I merely wish to show that there are others who have the same feeling.

There being no objection, the statements were ordered to

be printed in the RECORD, as follows:

TEXT OF POPE'S ADDRESS

VATICAN CITY, May 7 .- Following is a translation of the radio ad-

VATICAN CITY, May 7.—Following is a translation of the radio address delivered today by Pope Pius XII in French to the National Eucharistic Congress at Algiers, Algeria:

"For the twelfth time, very dear sons of the noble French nation, you are gathered by thousands around Christ, present in the Eucharist, to offer Him solemn homage of adoration.

"In the course of recent years Africa has already seen more than one ceremony of this kind. Carthage, mindful of having been the glorious metropolis of the North Africa churches and of having sheltered within its walls more than 30 church councils, started them with its International Eucharistic Congress.

"Then the movement was extended to regional and national congresses as far as southern Africa, the Congo, Madagascar, Tripoli.

congresses as far as southern Africa, the Congo, Madagascar, Tripoli, and elsewhere.

"Today the triumph of the Host is celebrated on these coasts, which for a long time were called Barbary. And our heart exults with joy as we participate in it doubly. We are present in two manners: visibly in the person of him whom we have chosen as our legate to preside in our name over these eucharistic days, our very dear son, the Cardinal Archbishop of Paris; invisibly but veritably present through our prayers joined with those of your spiritually enthusiastic crowds.

"IMPASSIONED PLEA FOR PEACE

"Neither the churning waves of the sea nor the crashing noise of armaments which is shaking these shores can check your mystic faith, the 'bonne mere' of the Garde who led you toward Our Lady of Africa [the Pope here referred to Notre Dame de la Garde shrine, erected to the Virgin at Marseille in behalf of those at seal, and in this host bleaming from both hills faith shows you the depth and very author of peace, that peace so ardently desired by uneasy

and very author of peace, that peace so ardently desired by uneasy humanity.

"That is what attracted you and encouraged you. That is what unites us intimately with you in this month of May, when we would like all the world consecrated to universal prayer—especially the prayers of infants, beloved of the Saviour—to make the peace promised to men of good will, peace in souls troubled by the appeals and seductions of false doctrines, and peace among nations trembling with incessant anxiety descend from heaven to earth through the hand of the Immaculate Virgin.

"If you have come here to hold your eucharistic session, it is especially to celebrate the centenary of an event ever memorable for the church and for France.

"A century ago the first Bishop of Algiers was installed in his cathedral. Thus was reborn after 800 years of apparent death this ecclesiastical province of Africa which had counted 500 bishops and which in the lists of its martyrs, of its popes, and its virgins included the incomparable Doctor of Hippo, Augustine, one of the most brilliant geniuses that God has ever given to the church and to the world.

to the world.

"But in 1839 the white city of Algiers flaunted its terraces upon the sea as a defiance to Christian peoples; Algiers, the city of tears and blood where thousands of captives had wept, prayed, suffered, and given their lives for Christ, counted but four priests.

"SEES ADMIRABLE RENAISSANCE

"Now with the Cross of Christ rising from one of its minarets, Algiers becomes the luminous gateway through which the light of revelation penetrates with growing rapidity to the heart of the Black Continent.

"Admirable renaissance, a new life, overflow of supernatural vigor. Today numerous bishops and apostolic vicars, hundreds of priests from various Christian nations or of native families, and several

Not separately shown.

million faithful attest throughout Africa the eternal youth of the church, the inexhaustible fecundity of divine grace served by human

"That is why our benediction goes out affectionately toward you sons of that France whose great religious destinies we were per-

mitted to recall 2 years ago under the roof of Notre Dame in Paris.

"But this benediction goes still further—to you neophytes and catechists scattered through the missions of Africa and finally to all you men whose souls, like ours, have been redeemed by the blood

of God become man.

"All nations have been given Jesus Christ as a heritage, and Providence has constituted us the guardians of this heritage; God has made us the pastor and the father of this humanity.

"May divine benediction, the fruit of blood shed for us by the Saviour, hidden but present in the Eucharist, descend upon all of you—the benediction of Almighty God, Father, Son, and Holy Ghost.

TEXT OF DUKE OF WINDSOR'S PEACE TALK

Text of Duke of Windsor's Peace Talk

I am speaking tonight from Verdun, where I have been spending a few days visiting one of the greatest battlefields of the last war. Upon this and other battlefields throughout the world millions of men suffered and died, and as I talk to you from this historic place I am deeply conscious of the presence of the great company of the dead. And I am convinced that, could they make their voices heard, they would be with me in what I am about to say.

For two and a half years I have deliberately kept outside of public affairs, and I still propose to do so. I speak for no one but myself, without the previous knowledge of any government.

I speak simply as a soldier of the last war, whose most earnest prayer it is that such cruel and destructive madness shall never again overtake mankind. I break my self-imposed silence now only

again overtake mankind. I break my self-imposed silence now only because of the manifest danger that we may all be drawing nearer to a repetition of the grim events that happened a quarter of a

The grave anxieties of the time in which we live compel me to raise my voice in expression of the universal longing to be delivered from the fears that beset us and to return to normal conditions.

NO PEOPLE SEEKING CONFLICT

You and I know that peace is a matter far too vital for our happiness to be treated as a political question. We also know that in modern warfare victory will lie only with the powers of evil. Anarchy and chaos are the inevitable results, with consequent misery for us all.

I cannot claim for myself the expert knowledge of a statesman, but I have at least had the good fortune to travel the world and therefore to study human nature. This valuable experience has left me with the profound conviction that there is no land whose people want war. This I believe to be as true of the German nation as of the British nation, to which I belong, as it is of you in America and of the French nation, on whose friendly soil I now reside.

International understanding does not always spring up simultaneously of itself. There are times when it has to be deliberately sought and negotiated, and political tension is apt to weaken that spirit of mutual concession in which conflicting claims can best be adjusted. The problems that concern us at this moment are only the reproductions on a larger scale of the jealousies and suspicions of everyday life. In our personal contacts we all strive to live in harmony with our fellow men. Otherwise modern civilization could never have come into existence.

DEPLORES PROPAGANDA SLOGANS

Are we now going to destroy that civilization by failing to do internationally what we have learned to do individually? In their public utterances the heads of all governments are as one in declaring that war would be disastrous to the well-being of their people. Whatever political disagreements may have arisen in the past, the supreme importance of averting war will, I feel confident, impel all those in power to renew their endeavors to bring about a peaceful settlement.

Among measures that I feel might well be adopted to this end is the discouragement of all that harmful propaganda which, from whatever source, tends to poison the minds of the peoples of the world. I personally deplore, for example, the use of such terms as "encirclement" and "aggression." They can only arouse just those dangerous political passions that it should be the aim of us all to

No; it is in a larger spirit than that of personal or purely national interest that peace should be pursued. The statesmen who set themselves to restore international security and confidence must act as good citizens of the world and not only as good Frenchmen, Italians, Germans, Americans, or Britons. The benefit of their own nation must be sought through the benefit of the wider community of which we are all members. of which we are all members

APPEALS IN NAME OF WAR DEAD

In the name of those who fell in the last war I urge all political leaders to be resolute in the discharge of this mission. I appeal to them in the name of the living, whose existence and happiness are in their hands. And I appeal to them especially in the name of the youth of the present day, with all its incalculable potentialities of future service to the human race.

The world has not yet recovered from the effects of the last carnage, which in each and every country decimated my genera-

tion. The greatest success that any government could achieve for its own national policy would be nothing in comparison with the triumph of having contributed to save humanity from the

terrible fate that threatens it today.

Somehow, I feel that my words tonight will find a sincere echo forward concrete proposals. That must be left to those who have the power to guide their nations toward closer understanding.

God grant that they may accomplish that great task before it is too late.

Loans Under the Mead Bill

EXTENSION OF REMARKS

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

ARTICLE BY ERNEST K. LINDLEY

Mr. MINTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record an article by Mr. Ernest K. Lindley entitled "'Little Man' Gets Help," which deals with loans under the bill introduced by Senator James M. MEAD, of New York.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"LITTLE MAN" GETS HELP (By Ernest K. Lindley) THE MEAD BILL

It begins to look as if this Congress, with the backing of the administration, would concect at least one stimulant to business This is the provision of more adequate credit facilities

enterprise. This is the provision of more adequate of for small- and medium-sized business concerns.

For years small-business men have been complaining that they for working capital and expansion. Their comcannot get credit for working capital and expansion. Their com-plaints have not gone unheeded. Access to credit has been pro-vided through the R. F. C., the Federal Reserve banks, and liberali-zation of the banking laws. But the resultant loans have been small in total volume, and the complaints from businessmen have

continued.

Possibly the bankers and the R. F. C. have been too timid or too exacting. Possibly many businessmen have felt that they could not go to the R. F. C. without labeling themselves as second- or third-rate risks. Possibly most of the small-business men who complain of inability to obtain loans are not good risks. Possibly what they really need is more customers, or, at most, "risk capital," not credit, which a soundly managed lending agency can be expected to provide.

AN UNMET NEED FOR SMALL LOANS

However, where there are so many complaints there must be an unmet need. Although less was heard about it in the balmy twenties, our credit system makes scanty provision for the small-and medium-sized business enterprise which wants to borrow up to \$1,000,000 for a period running up to 10 years. Wall Street and the other big financial markets pay little attention to the small enterprise. Ordinarily the small-business man has relied on his own resources and those of a few friends in his own community. Ordinarily he cannot market his own securities publicly except at exercitions. exorbitant cost.

excribtant cost.

More than a year ago William O. Douglas, then chairman of the Securities and Exchange Commission, proposed that a series of intermediate-credit banks be established to meet the need of businessmen who want to borrow, say, up to \$1,000,000 for a period running up to 10 years. This particular plan was frowned upon in the Federal Reserve Board, which saw no reason for setting up a series of special banks to do what it thought the existing healing system output, to do

various other schemes have been proposed. But lately opinion within the administration has been moving toward the plan presented in a bill introduced by Senator Mead, of New York.

"LITTLE MAN" BORROWS WITH UNITED STATES INSURANCE

"LITLE MAN" BORROWS WITH UNITED STATES INSURANCE
The Mead bill applies the insurance principle, which seems to be
working well in the financing of home building under the Federal
Housing Administration, to intermediate credits to small and
medium-sized business enterprises.
Under the plan now proposed, a businessman wanting credit in
an amount up to \$1,000,000 for a period up to 10 years would go to
his bank or trust company. The bank or trust company would
assume 10 percent of the risk—enough to insure that the loan
would not be made improvidently. The Reconstruction Finance
Corporation would insure the remaining 90 percent of the loan, at
a charge of not more than 1 percent annually on the original

amount of the loan. The insured loan would be eligible for discount or rediscount by a Federal Reserve bank. The Federal Reserve banks would also be authorized to sell these insured notes to private investors.

Loans made in this way would bear a maximum interest rate of 4 percent, plus a service charge of not more than 1 percent, plus the insurance premium of not more than 1 percent. They would be secured by mortgages having a value of at least 125 percent of the principal of the loan.

BANKER ASSURED OF HIGH LIQUIDITY

This scheme is intended to promote lending for business purposes at reasonable rates by limiting the banker's risk of loss, and, at the same time, to assure to the banker a high degree of liquidity to meet his deposit obligations.

It can be argued that nobody knows what the losses would be under such a system, so that the insurance premiums running up to 1 percent annually might prove to be inadequate. The answer is that the Government can afford to take some degree of risk in order to stimulate business enterprise.

It can be argued that this system will not provide "risk" capital—equity capital—which may be the real need of small- and medium-sized business. That is true. It is difficult to see how the banking system, with proper regard for its depositors, can be expected to put capital into highly risky ventures.

What this plan offers to small- and medium-sized enterprises is the kind of capital which larger corporations obtain by issuing bonds or preferred stock. Maybe there isn't a large unmet need for that kind of capital. At least, it would be worth while to find out whether or not there is. If there is, this plan should go a long way toward meeting it, thus stimulating business activity and increasing employment.

Admission of German Refugee Children

EXTENSION OF REMARKS

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

EDITORIAL COMMENT

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD certain editorials concerning the admission of German refugee children, as follows: The Brunswick (Ga.) News of April 19, 1939; Post-Gazette, Pittsburgh, Pa., of April 22, 1939; Nashville (Tenn.) Tennesseean of April 23, 1939; The State, Columbia, S. C., of April 25, 1939; New York Evening Post of April 25, 1939; Washington (D. C.) Post of April 25, 1939; Atlanta (Ga.) Constitution of April 26, 1939; Minneapolis (Minn.) Star of April 24, 1939.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

> [From the Brunswick (Ga.) News of April 19, 1939] A HUMANITARIAN MEASURE

In the maze of measures which have been introduced in Congress this session it was inevitable that some meritorious bills would be largely lost from public view. In this category lies a measure introduced by Senator ROBERT WAGNER, Democrat, from New York, which would provide for the admission annually to this country from Germany 10,000 children above the established immigration quota.

The bill, although temporarily sidetracked because of the pressure being exerted for war and economic legislation, is, nevertheless, one which should have the most earnest consideration of Congress. In fact, it may be safely said that it is one of the most important measures upon which Congress should act in that it deals with human life and liberty, man's two most cherished pos-

Under the bill as drafted by Senator Wagner the increased immigration would be in effect during the years 1939 and 1940 and would limit eligibles to ages between 1 and 14 years. The measure further provides that before admission is granted satisfactory assurances must be given that such children will be supported and properly cared for through the voluntary action of responsible citizens or responsible private organizations of the United States and consequently will not become public charges. It is further provided in the bill that children residing in areas which Chancelor Hitler has absorbed shall also be eligible.

The plight of those in Germany who, because of political or racial differences with the present regime, are being so mercilessly persecuted is so heart-rending as to almost defy description. But the most pitiful and helpless sufferers are the children of tender years. Senator Wagner's bill, designed to aid these helpless youngsters, should appeal to every liberty-loving American, and its passage should be vigorously demanded. To insure its passage it would be well for voters to write to their congressional delegations asking support for it.

The measure is being supported by a nonsectarian committee composed of such outstanding Americans as Cardinal Mundelein; William Allen White, noted Kansas editor; Gov. Herbert Lehmann,

of New York; President Graham, of the University of North Carolina; Canon Stokes; Bishop Shiel; and Miss Helen Taft Manning.

Although Jews, of course, are the greatest sufferers in Germany, the bill provides that only 50 percent of these children shall be of the Hebrew race. The remaining 50 percent is equally divided between Protestant and Catholic children.

[From the Pittsburgh (Pa.) Post-Gazette of April 22, 1939] BRAVO, MISS HAYES!

In Washington Thursday, a woman who has stirred the souls of thousands with her acting in stage drama played a "bit" part in a passing scene of the world theater that is all too frightfully

Bereft of grease paint and the costume of make-believe, Helen Hayes sat in a chair facing solemn men and as "an American mother" she pleaded for the succor of children cast saide by a civilization in debacle. She was a shy, timid little figure there in the big chair, but her stature also as an American citizen mounted

with her every word.

If for nothing more than "repudiation of race prejudice and brutality," the actress implored a congressional committee to ap-

brutality," the actress implored a congressional committee to approve legislation adjusting immigration laws to provide a limited number of German refugee children (10,000 this year and an equal number in 1940) haven in the United States.

Surely she must have struck a responsive chord with her single assertion that "the real feeling of every American family is that there is always room for one more." There was that room in her own home, for Miss Hayes is at once the artist and mother to her own child and to an adopted one—and there is space in her heart for another from across the sea.

for another from across the sea.

To shun these children, she said in a manner that touches the heart, "just isn't like us."

[From the Nashville Tennesseean of April 23, 1939] CHILD REFUGEES

Senator Wagner's bill to permit 20,000 German refugee children under 14 to be received into the United States outside of quota restrictions within the next 2 years has a broad humanitarian appeal.

There are estimated to be about 50,000 children of the stipulated age whose parents are in concentration camps or who, for other reasons, are dependent upon the compassion of the world. They represent many races, religions, and creeds. Under present conditions their plight is hopeless. Great Britain has already agreed to take 5,000 of these young people, and Holland has provided for

take 5,000 of these young people, and Holland has provided for 1,700 and is accepting more.

The Wagner bill, endorsed by both Catholic and Protestant churchmen and many other leading Americans, brings the problem home to the United States. Admission of the refugees would be predicated on satisfactory and voluntary undertakings by responsible citizens of private organizations that adequate provisions would be made for their maintenance and care, in homes of their own faiths.

It is a worthy cause and there is no question where American

It is a worthy cause and there is no question where American sympathies lie.

[From the State, Columbia, S. C., April 25, 1939] HUMAN CHILDREN

The State knows that undiluted Christianity will not be adopted as national policy by any nation. Always there have been economic, social, racial, and other qualifications in man's use of the Christian religion, and perhaps always there will be. But the State does wish we might see the plight of certain European children through eyes perhaps a little blurred to economic, social, and racial policies and prejudices—blurred by compassion.

That bill before the Congress to admit 20,000 children from Germany and Germany controlled lands over a stretch of 2 years does

many and German-controlled lands over a stretch of 2 years does not appear to be dangerous. It provides that beggar and begging children will not come. It requires financial sponsorship for the children. In the main it asks merely that we share our safety

They are not American children. That is true. They may be, and some of them are, non-Aryans. But they are human beings, and they are children, and they are in distress. Just a little of what seems to some as Christian recklessness, practiced in the interest of a small group of small children, might not do us much

[From the New York Evening Post of April 25, 1939] TWENTY THOUSAND HOMELESS CHILDREN AT THE DOOR

It is difficult to view the European situation today without wanting to do something about it. For many this natural desire seems to take the form of wanting to go to war to end fascism. But many others—the majority, we feel—believe that such a course would come dangerously close to compounding the evil.

Both those who believe that we should intervene in Europe and those who are against intervention can join in support of the

Wagner-Rogers bill which would permit 20,000 refugee children from Germany to enter this country.

Here is an opportunity to express, in a practical way that harms no one, the humanitarian instincts called forth by Nazi persecution.

no one, the humanitarian instincts called forth by Nazi persecution.

The Wagner-Rogers bill is neither a partisan nor a sectarian measure. Its chief sponsor is the Friends Service Committee, which will have charge of selecting the children to enter and which will find the homes in which to place them. Already 5,000 offers to adopt the refugees have been received.

The supporters of the bill range from Herbert Hoover and Dorothy Thompson to the American Federation of Labor and the Congress of Industrial Organizations.

The refugees themselves are of all faiths and their families have feed from Germany for a variety of reasons. Catholics and Protes-

The refugees themselves are of all faiths and their families have fled from Germany for a variety of reasons. Catholics and Protestants have been persecuted in Germany as well as Jews. Many families have been forced to leave their fatherland for professing the political principles on which the United States rests.

That is why our Government took the lead in sponsoring the Evian conference for the evacuation of refugees. No country can absorb them all—but we can do our share.

Holland, Britain, the Scandinavian countries—all far more crowded than the United States—are cooperating in the plan. Twenty thousand children will make no appreciable difference in our population, nor will they create any special problem here.

The bill limits eligibility to children below 14 years old. That means they will receive an American education and will be influenced in their formative years by American home training.

enced in their formative years by American home training.

If they bear with them throughout their lives a memory of what oppression has meant to their parents and themselves, so much

oppression has meant to their parents and themselves, so much the better for their value as future citizens of this democracy.

Waves of reaction have swept Europe before during the last 300 years. After every one of them the United States has been enriched by a wave of refugees, who have contributed more than their share to the building up of this country.

The Wagner-Rogers bill is one measure upon which conservative, liberal and radical, isolationist and interventionist, rich and poor can unite.

[From the Washington Post of April 25, 1939] IN GOOD HANDS

In his foreword to the latest annual report of the American Friends Service Committee, Rufus M. Jones, the chairman, speaks feelingly of the work this splendid organization has done. During the past year, he says, this work "has been heavier than during any year since the peak period of child-feeding in Germany, and there has been no year in its history when it has been called upon to face a greater variety of momentous tasks."

It was inevitable that this should be the case. Each change of frontier in Europe, each turn of the screw by the totalitarian dictators against those who for religious, racial, and political reasons have incurred their animosity, has increased the already staggering sum of human misery crying out for succor. Driven on by their deep concern to render what aid they can to the victims of man's inhumanity to man, the Quakers have also found their tasks multiplied because of the wholly justified confidence which has multiplied because of the wholly justified confidence which has been placed in them. Thus it is that the American Friends Service Committee report

for 1938 reveals a steady broadening in the activities of this organization. At home, the committee has sponsored very constructive community projects in regions devastated by chronic unemployment, work camps, health clinics, and institutes of international

Abroad, the committee has performed other extremely notable services. In Spain, the committee was entrusted with the task of feeding child war victims and its representatives did the job so well as to win the heartfelt gratitude of Nationalists and Loyal's salike. In Berlin and Vienna, the committee's centers rendered in-

which as to will the learning statute of Nationaliss and Boyaniss alike. In Berlin and Vienna, the committee's centers rendered invaluable advice and assistance to the victims of the Nazi terror and helped instill new faith and hope among those compelled to live "in a 'suicide world,'" as the report has it.

A new prospective task, assigned to the American Friends Service Committee, is to supervise the selection and emigration of 20,000 children, refugees from Germany, should Congress permit them to enter the United States outside the quota, as provided in the Wagner-Rogers bill. Undoubtedly one reason for the widespread support received by this humanitarian plan is the willingness of the Quaker body to administer it. That alone is an endorsement which stamps the plan as worthy of real support.

For in the hands of these splendid men and women the American people can be assured that this project will be carried out in a manner "consistent to the ideals of Christian love and impartial good will," to cite the description employed by the report in discussing the committee's extremely difficult but splendidly executed labors in Spain.

[From The Atlanta (Ga.) Constitution of April 26, 1939] REFUGEE CHILDREN

It is difficult to understand the reasoning of opponents to the plan to open the immigration doors of the United States wide enough to permit the entry, above the quota laws, of 20,000 refugee

children from central Europe.

These children are of an age when their characters are still subject to the moulding influence of environment and training. It is LXXXIV-App-119

certain that they will find homes, as adopted children, with worthy and responsible American families. This is assured by the fact that they will be placed for adoption, by organizations whose trained workers have had remarkable success in the placing of orphaned children.

The demand for children for adoption is always greater than the apply. There is not the slightest doubt that the 20,000 would be sorbed into the average substantial life of America without dis-

ruption.

absorbed into the average substantial life of America without disruption.

The number involved, when considered in ratio to the population of 130,000,000, is so small as to be negligible.

Not all these children are from Jewish families. The intolerance and persecution of the European dictators does not stop at the bounds of Jewry. A large proportion are children of non-Jewish parentage whose families for one fantastic reason or another, have been subjected to the heavy hand of Nazi oppression.

America is founded upon the theory that all men are born equal and that there shall be no discrimination because of race or religion. To oppose the admission of these 20,000 children on such grounds, is to brand ourselves as unfit for the privileges of American citizenship. Intolerance has no place in the heart or mind of any worthy citizen of this land of freedom.

Likewise, refusal to admit these little ones means that, forever after, the sneering charge of hypocrisy will be leveled by critics and enemies whenever American sympathy for the innocent victims of persecution is voiced. It is meaningless to voice horror at Nazi outrages when we ourselves are so intent upon remaining aloof that we turn deaf ears to the pleas of such youngsters.

There was a story, told long ago, about the victim of thieves and

There was a story, told long ago, about the victim of thieves and brutal attackers. In his case two men were given opportunity to save him. One was a Pharisee and one was a Samaritan. America is today faced with the same opportunity, the same choice between mercy and cruel indifference.

[From the Minneapolis Star of April 24, 1939] WE SHOULD LET THEM IN

Helen Hayes, speaking as "an American mother," pleads for passage of the Wagner-Rogers bill which would admit 20,000 German refugee children into the United States for the next 2 years.

In Europe, she said, children are being shunted back and forth over alien borders with only fear to look forward to, and no place to call home.

Certainly it is difficult to see how the admission of 20,000 homeless children could wreak much harm on our economic system or do anything to intensify the unemployment problem.

The plight of these children is heart-breaking, and they deserve the elementary protection most children enjoy—that of shelter and care and upbringing.

The national committee campaigning for this bill is to be highly commended for its unselfish and zealous efforts.

The Political Outlook

EXTENSION OF REMARKS

HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 8, 1939

RADIO ADDRESS BY JAMES A. ROE, DEMOCRATIC LEADER OF QUEENS COUNTY, N. Y.

Mr. BARRY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by James A. Roe, Democratic leader of Queens County, N. Y., population 1,300,000, delivered over station WWRL, Woodside, N. Y., Tuesday evening, May 2, 1939:

There have been expressions in this country, and elsewhere, to the effect that the Democratic Party is destined to be defeated in the national election next year. It has been said that regardless of who the candidate might be, a majority of the people have determined to change political control in Washington, and hence our position is virtually hopeless. Though unfortunate, it is nevertheless definite that this condition is creating an unnatural atmosphere of defeatism. In a few places political vision is obscured, and party morale depressed. This attack must be met with forthrightness. with forthrightness.

We can find nowhere any basis in fact for such a belief. No Democrat, hearing of defeat, should forget that the Literary Digest in 1936 predicted complete failure of our cause, and when the vote was tallied, our Republican friends had carried exactly two

It is to be expected that in 1940 we will lose some of the almost unanimous support received 3 years ago. We frankly admit this as a normal return toward a more satisfactory distribution of

strength between the two major political organizations. This is not only inevitable—it is even desirable.

But what are the forces behind this attempt to create the conviction of defeat? Whence the origin? How much is based upon fact and how much is inspired by professional and partisan propagators.

It has been pointed out that we cannot avoid losing some of the Republicans who voted Democratic in 1936. Obviously no form of government can please all people for all time. Where we must deal in the campaign with an honest opinion different from our own it in the campaign with an honest opinion different from our own it becomes our duty to assert the cause of the party with all possible force. Having performed that duty, if our effort is seemingly ineffective, then we must retreat with orderly respect for the sacred right of the other fellow to hold to his judgment. But it does not follow if we find those who will oppose our candidate in 1940 that a majority of this country or of the Nation is thinking the same way. Occasional repulses are never a certain indication of defeat. The history of the world is replete with the records of men and parties frequently set back before they achieved ultimate victories. Perhaps it would be well here to show that in order for the Democratic Party to be successful next, vear it is by no means essential

Pernaps it would be well here to show that in order for the Democratic Party to be successful next year it is by no means essential to win by the same overwhelming margin as in 1936. Why should we be concerned with trying again to win 46 out of the 48 States? Our only obligation as Democrats is to dedicate ourselves to victory, and not to the margin of victory.

Most of the partisan claims emanating from our opponents are based upon the hope, and I think a very forlorn hope, of winning the State of New York. This Republican hope, in turn, is predicated upon the closeness of the vote between Governor

winning the State of New York. This Republican hope, in turn, is predicated upon the closeness of the vote between Governor Lehman and Mr. Dewey. That is sheer nonsense. There is nothing in the vote of the two major candidates for Governor which might be considered indicative of how the people of this State feel toward the national administration.

The vote for Governor was comparatively close, it is true. It is likewise true, and to be regretted, that factors other than political and statesmanship entered into that contest, and had a very direct bearing on the final result. We all know. Democrate and Republicans alike, that from one end of the State to the other the campaign was not confined to honest issues, but was largely based on blind, cruel, and dishonorable prejudices, and of which the opposition profited to the utmost.

United States Senator Wagner and Representative Mean, also

which the opposition profited to the utmost.

United States Senator Wagner and Representative Mead, also a candidate for the Senate, were also running in the same election. Both men were, and had been for a long time, militant supporters of the President. Each was elected by a plurality of more than 400,000. So it must be very clear that if the people of this State intended to rebuke the National Government, they would have expressed that will against the national candidates. This State conclusively demonstrated last year its preponderant Democratic sympathy, and no impartial observer can find any material change in sentiment now. terial change in sentiment now.

It is to be remembered that even the Republican high command

realizes, and privately admits, that if they lose New York they lose all. Considering that, let us do our best toward improving the contribution Queens will make to the party, and we need not worry over the possibility that the opposition may win five States instead

Returning to political propaganda, this is the most important factor with which we must deal as the national campaign comes closer. Propaganda is dangerous, no matter how well fortified we might be against all other forms of attack. For one thing, we are might be against all other forms of attack. For one thing, we are living in a troubled world. The minds of most of us are disturbed from various causes. Men and women are deeply concerned and perturbed over their economic future. There are "wars and rumors of wars." It is virtually impossible to hold a sustained mental equilibrium. Standards of government are changing. Governments must assume new and uncharted responsibilities. Modes of living fluctuate with amazing rapidity. Most of us, whether we care to admit it or not, are partly bewildered either by strange and sudden turns in our personal affairs or by the new but ugly panorama of world affairs. rama of world affairs.

rama of world affairs.

All this has a tendency to lessen confidence in ourselves; and when that occurs, it follows that we have less faith in our established institutions. The foundation of our power to reason and think is shaken and we become unsettled.

Whenever uncertainties assail the mind one's normal defense against fear decreases. Fear is a stealthy intruder. Once this mental parasite gets into the emotional stream it lives like a small but invisible cannibal. It demands more fear on which to live. Fear, too, is a zealous protector of its own abode. More frequently than not it can destroy the combined forces of hope, truth, and reason.

This thing is the most formidable weapon in the armament of

This thing is the most formidable weapon in the armament of mercenary propagandists. In our case they are spreading the fear that if the Democratic Party is continued in control of the Gov-

that if the Democratic Party is continued in control of the Government for another 4 years, indescribable disasters will be visited upon the Nation. They are disseminating the false prophecy that "no Democrat can win next year." We can make ourselves impervious to those attacks by countering with truth.

What, precisely and briefly, are the salient factors to be found in the 6 years of Democratic control at Washington. Almost all the rest of the world has changed for the worse. Elsewhere, in many places, liberty and happiness have disappeared overnight. Whole nations, almost by some diabolical magic, have been converted between one sunrise and a following sunset from a peaceful society of free individuals into mass bondage and serfdom. These people will live, they still move about, but actually they

have no life. For life should mean something more than the enforced obligation of merely to exist as a body capable of motion. These millions of unfortunates are forbidden by decree, backed up by threats of death, to seek their own happiness and salvation. Here in the United States under a Democratic administration,

though the country has been subjected to the same economic onthough the country has been subjected to the same economic on-slaughts which have careened other nations, we still have complete liberty and the inalienable right to the pursuit of happiness. Here we still think of changes in government in terms of votes instead of bullets and bayonets. We still have the right to criticize the President. We may even call him harsh names—brutal names. We can even call down curses on the Government. Yet no secret police come to tear us from our homes and families for a torture chamber or concentration camp.

Our Democratic government has not been a perfect government.

Perfection in government, as in law or dressmaking, will never be achieved this side of the millennium. But faults to the contrary notwithstanding, we are the same intact Nation, weathering the storm on the same ship, and progress and security appear on the horizon. Democracy—our democracy—embattled against unprecedented world-wide upheavals has preserved our constitutional form of government with all its blessings and safeguards. We still

are, and this is most important, a free people.

Democracy has instituted and perfected changes in some of the old theories of government. There have been sparse periods of unrest, but there has been no cause for the people to rise in revolt and wade through the streets in blood because their government refuse to understand that men will kill before they suffer their

children to starve.

President Roosevelt has been subjected to incessant attacks. Some of his proposals, in my opinion, were properly criticized. Others have been woefully and willfully misunderstood and misrepresented. Should we expect an infallible President? God save us from the Pharisees who offer us one! Usually the most carping critics of the President resort to the cheapest and most vulgar of all forms of attack. His errors and mistakes are segregated, then all forms of attack. His errors and mistakes are segregated, then magnified, distorted, and misrepresented, while his accomplishments are ignored. In the tempestuous sea and strong winds of the economic storm of the last 6 years President Roosevelt could no more keep the ship of state on a straight course than the most skilled mariner could pilot an unvarying line for his vessel through a natural fog. At the least the ship has not been wrecked. We have not been forced to take to the fragile lifeboats of a totalitarian regime as a last hope of surviving regime as a last hope of surviving.

Imagine, if you dare think of horror, what would have happened to the United States if Hoover had been presiding over our

destinies the last several years.

Do our people forget the despair permeating the country prior to Democratic control? Can we ever cease to remember that the Army was summoned with cocked rifles and machine guns to drive the starved veterans out of Washington? Should we return to a political party of which the humanitarian equation was always one to be diverted to private benevolence and stark charity? Are we to go back to soup kitchens, apple stands, and bread lines in place of the W. P. A.? Wouldn't it be just as sensible to revert to surgery without antiseptics and without ether?

As leaders in this country we must destroy any fear of success next year. Eliminate fear, destroy the last vestige of sinister propaganda, and we cannot fail. The truth is still mighty, and the truth will continue to prevail. That means victory in 1940.

Potatoes and Trade Agreements

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

Mr. COCHRAN. Mr. Speaker, it has been stated by various opponents of the trade-agreements program that "Maine has been 'sold down the river' so that the rest of the United States might prosper"; that Hull's trade agreements have ruined the potato farmers of Maine. The representatives of potato growers have maintained that the reduction in duty which was given to Canada in the 1936 agreement and the reduction in duty in the Cuban agreement in 1934 have flooded the domestic market with foreign-grown potatoes and consequently reduced the price of Maine-grown potatoes.

From an examination of the following table it will be seen that our imports of potatoes have not increased since the agreements—in fact, in 1938 they were not even one-fifth of our imports in 1929. However, our exports of potatoes have risen until in 1938 they were over 75 percent of our 1929

exports.

Foreign trade in white potatoes, 1929 to 1938

Year	Exports	Imports	
1929	Bushels 2,735,000 1,899,000 1,090,000 912,000 719,000 1,171,000 1,808,000 1,294,000 1,822,000 2,083,000	Bushels 4, 276, 000 5, 030, 000 4, 567, 000 727, 000 1, 180, 000 1, 538, 000 410, 000 1, 266, 000 764, 000	

In the 1936 agreement with Canada we reduced the rate of duty on certified seed potatoes from 75 to 45 cents per 100 pounds (except during December-February, when the rate was reduced to 60 cents) but the reduction was limited to an annual tariff quota of 750,000 bushels. Any potatoes imported into the United States over the 750,000 bushels were subject to the regular tariff of 75 cents per 100 pounds. The agreement with Canada went into effect on January 1, 1936. In spite of this fact the imports of potatoes from Canada in 1936 were less than one-half of 1 percent of the United States production and less than 3 percent of the Maine production. In 1937 and 1938 imports of potatoes from Canada were less than one-fourth of 1 percent of United States production and less than 2 percent of Maine production.

For a number of years the Canadian duty on potatoes has been the same as the United States duty—75 cents per 100 pounds. In the new agreement Canada has agreed to permit free entry of potatoes except during the 6-week period, June 15-July 31, at which time the duty will be 37½ cents per 100 pounds. During the greater part of the year this new arrangement gives American potatoes a much better position in the Canadian market than they enjoyed even before 1930 when, under a duty of 35 cents per 100 pounds, this country supplied in some years up to a million bushels of high-priced new potatoes to the Canadian market.

In the new agreement with Canada we increased the quota on seed potatoes to 1,500,000 bushels per year. The rate of duty is reduced from 45 to 37½ cents per 100 pounds during the period from March 1 to November 30. It remains at 60 cents per 100 pounds from December 1 in any year to the last day of the following February, inclusive. The rate on table potatoes is reduced from 75 to 37½ cents per 100 pounds, except during December-February, when, by reason of the Cuban agreement, the rate is to be 60 cents. The duty reduction applies to a quantity not exceeding 1,000,000 bushels.

The maximum of two and one-half million bushels of seed and table potatoes combined, which in normal years may enter at reduced duties, are equal to about seven-tenths of 1 percent of the domestic production of potatoes and to about 5 or 6 percent of the production in Maine.

From the following table it will be seen that our imports of potatoes from Canada have never in the last 7 years been more than one-third of the 1929, 1930, and 1931 imports, and in most cases they have been much lower than that. In 1937 and 1938 they have decreased, whereas our exports, though less to Canada, have gained steadily in those years.

Exports to and imports from Canada, 1929 to 1938

Year	Exports to Canada	Imports from Canada
1929	Bushels 1, 208, 000 761, 000 305, 000 198, 000 167, 000 199, 000 168, 000 194, 000 255, 000 285, 000	Bushels 4, 052, 000 4, 780, 000 4, 440, 000 657, 000 1, 104, 000 1, 468, 000 349, 000 1, 199, 000 728, 000

It should be borne in mind that whereas American potatoes are allowed free entry into Canada except for 6 weeks out of the year, at no time is the duty on Canadian potatoes lower than $37\frac{1}{2}$ cents per 100 pounds.

In the Cuban agreement we reduced our duty on Cuban potatoes by 30 cents per 100 pounds for the period of December 1 to the last day of February—during the rest of the year the previous duty is still in effect. However, in that agreement we also received a reduction in the duty on American potatoes of 91 cents per 100 pounds for the period of July 1 to October 31 and succeeded in binding the previous rate of duty against increase during the rest of the year.

From the following table it will be seen that our exports of potatoes to Cuba rose from 208 bushels in 1933, the year before the agreement, to 1,227 bushels in 1935, the year after the agreement, which was a gain of 57 percent over the peak year of 1929. It will also be seen that, while our imports from Cuba have decreased as a whole since 1929 and have never reached the 1929 level, our exports to that country have increased since the agreement went into effect.

Exports to and imports from Cuba, 1929-38

Year	Exports to Cuba	Imports from Cuba	
1929	Bushels 781, 000 608, 000 249, 000 377, 000 208, 000 568, 000 1, 227, 000 686, 000 739, 000 966, 000	Bushels 67, 000 77, 000 66, 000 34, 000 3, 000 39, 000 47, 000 24, 000 30, 000	

In 1929, when the price of potatoes in the United States was very high, we imported from Canada 4,052,483 bushels of potatoes, valued at \$3,793,900; and from Cuba 67,300 bushels, valued at \$106,674. In 1935, when the price of potatoes was low, imports from Canada fell to 348,583 bushels, valued at \$231,520; and imports from Cuba amounted to only 38,667 bushels, valued at \$45,635. Again, in 1936, when the price of potatoes went up, imports from Canada rose to 1,199,167 bushels, valued at \$1,181,625; and imports from Cuba rose to 46,733 bushels, valued at \$52,344.

It would seem, then, that the price of potatoes was affected by the business slump in industrial activity in the United States rather than by imports of potatoes. Potato prices tend to rise when business activity and the national income are high and to decline in times of depression. The tradeagreements program, by reopening American foreign trade, stimulates domestic business activity in general, increases purchasing power, and promotes higher standards of living. When we increase our exports of farm and factory products the workers in those factories buy more potatoes. Thus it is apparent that by expanding foreign trade and helping to increase the industrial activity of the United States as a whole the trade-agreements program is in reality aiding rather than harming the farmers in Maine.

Why I Voted Against H. R. 5643

EXTENSION OF REMARKS

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

Mr. CANNON of Florida. Mr. Speaker, having just heard one of the most able debates of my short career in Congress, dealing with a most delicate subject, I feel moved to express my opinion in connection therewith. Legislation of this kind appears to me to be most dangerous, particularly at this time, when all of our neighboring countries are in a state of embroilment and have repeatedly resorted to principles involving citizens and government wholly at variance with what we know as American principles. I am vigorously of the opinion that the bill under consideration is wholly un-American and unconstitutional for the reasons which I shall attempt to set out. It will be borne in mind that this is a bill providing for the indefinite and indeterminable incarceration of aliens in this country falling in four classes: (1) Criminals, (2) violators of narcotic laws, (3) anarchists and kindred classes, and (4) immoral classes.

The effect of this bill is to immediately incarcerate those aliens falling in the above-mentioned classes for indefinite periods under the guise of arrangements for deportation which may never be made. Irrespective of the fact that each of said subjects before the law can be invoked must have been convicted for the crimes set out, and under our procedure and American practice it would naturally follow therefore that their debts to society will have been paid as a result of those convictions. I believe in every case the criminals so classified will have done terms in our American jails in payment for their crimes. In the event that such is not the case, we of this Congress are surely not called upon to interfere with the judicial branch of this Government, and I, for one, am quite satisfied with the conduct and good judgment of our Federal courts generally. I see no reason now to delegate judicial powers to the Department of Labor, as this bill seeks to do, merging those powers with the discretionary power of the Department of Labor.

At the outset I would like it clearly understood that I have no sympathy for criminals, nor do I in anywise subscribe to their conduct. More particularly am I not sympathetic with alien criminals, but it is my firm conviction that the Constitution of the United States blankets itself as a protection around all persons in this country and upholds American standards not in keeping with the vicious bill which I discuss.

I know of but two ways where a criminal may be brought to justice and ultimately incarcerated. One is by presentment; the other is by indictment. But irrespective of that fact, the bill under discussion would permit the Department of Labor to summarily incarcerate the above-mentioned classes pending their deportations, which may be and in many instances are prohibitive.

I believe the able gentleman who prepared this bill and who steered it through, was sincere and thorough in his study, but I believe his anxiety and stand against alien criminals was stronger than his good judgment. Surely his expression is shared by many Americans and obviously by the majority of this House, since only 61 of its Members voted against the bill, one of whom I happen to be. The bill and its passage reflect intolerance in America, which, in my opinion, is most dangerous.

The bill, in operation, lends no encouragement to a former alien convict who may be interested in becoming a valuable citizen if he be permitted.

The bill speaks of "detention" of the criminals in question in a jail or jails to be created in the United States under the operation of said bill, but the effect of this law has no uniformity because of the fact that two criminals may have been previously convicted of the same crime, whereas one of said subjects may be a citizen of Great Britain in the one case and a citizen of Czechoslovakia in the other.

In the one case the English subject may be incarcerated and ultimately may be released because his traveling papers may be procured from England, and in that case even though his incarceration, in my opinion, was still unconstitutional, the English prisoner will have enjoyed his freedom by release, but in the case of the subject of Czecho-

slovakia, he would never enjoy his freedom from that unconstitutional incarceration because there is no Czechoslovakia, in that that little country is now controlled by a dictator, and unless Dictator Hitler saw fit to receive that subject, it is obvious that the unfortunate soul would be kept in jail the rest of his natural life at the expense of the taxpayers of this country, to say nothing of the infringement and encroachment of his rights. And again the detention prison to which I have referred is but a concentration camp in this country, which I hope never to see. It not only is un-American, brutal, and beastly, but the very thought of it emulates the dictatorial thought and thereby condones it, and surely Mr. Hitler and other dictators would like to see that condition come about in this country because it is in keeping with their principles, and God forbid its visitation here.

I cannot see what right this Congress has, surely without some substantial reason, to strip the Federal courts of their authority and delegate that authority and power to the Department of Labor.

It appears to me that this bill should have been the creature and the brain child of the Immigration Committee

rather than the Judiciary Committee.

The right to deport does not carry with it the right to imprison, pending deportation, as has often been held by the courts. And further it would appear that if Congress provides for imprisonment for deportable persons, it would seem to follow that the deportee would be entitled to counsel, a jury trial, compulsory process, and other rights secured to persons accused of crime under the fifth and sixth amendments to the Constitution, since the courts have held that these amendments apply to prosecution of aliens as well as citizens Wong Wing v. United States, (163 U. S. 238). And again the bill provides by amendment that the subject so incarcerated or confined shall not be subjected to hard labor. That, in my opinion, is an admission and a suggestion of unconstitutionality and a weak effort to come within the Constitution. It is difficult to see how the Constitution can be discounted by referring to indefinite imprisonment as "detention" or "confinement without hard labor": nor does the provision for release upon the order of the Secretary of Labor cure the unconstitutional defects in the bill, since there is no definition whatsoever for the phrase "good cause." Obviously what might seem "good cause" to one Secretary of Labor might not seem good cause to another and might not seem good cause to any person other than the Department of Labor. Under this reasoning, it is my sincere opinion that he who heads the Department of Labor would therefore be a dictator. The provision for judicial review of the Secretary's order in these detention cases is meaningless and without effect, since the courts would have no legislative standard with which to review the validity of the Secretary's action. Indeed, therefore, such a phraseology would indicate that the bill not only conflicts with the specific language of the fifth and sixth amendments, but is unconstitutional on the ground of unlawful delegation of

There are many cases of statelessness which are brought about by the operation of foreign laws and many cases of statelessness in foreign countries which are brought about by operation of the United States laws. This bill does not attempt in any wise to touch or cure those cases, and makes no mention of the thousands of American citizens living in foreign countries. This bill, in my opinion, extends an invitation to the foreign powers to throw American citizens into camps or detention prisons.

In my opinion the operation of this act constitutes double jeopardy, the existence of which, as agreed by all legal students, is a direct and effective, as well as an intolerable, infraction of the spirit and letter of all State constitutions and of the United States Constitution.

Federal Expenditures

EXTENSION OF REMARKS

HON. J. WILL TAYLOR

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

ARTICLE BY HON. EUGENE TALMADGE, FORMER GOVERNOR OF GEORGIA

Mr. TAYLOR of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Eugene Talmadge, former Governor of the State of Georgia:

TALMADGE DISCUSSES RACKETEERING AT THE EXPENSE OF HUMANITY—
RESTATES HIS PROGRAM THAT WOULD PUT END TO PROFESSIONAL CHARITY BROKERS

The following is a quotation from the editorial of Collier's Weekly of April 8, 1939:

"In fiscal 1938 the Government spent \$7,766,000,000 and some cents. These expenditures came under 10 main heads, which were: Recovery and relief, \$2,260,000,000; national defense, \$975,000,000; debt service, \$926,000,000; veterans' pensions, \$581,000,000; A. A. A. farm program, \$361,000,000; C. C. C., \$326,000,000; social security, \$291,000,000; revolving funds, \$169,000,000; transfers to trust accounts, etc., \$606,000,000.

"If that isn't a thought for today, how about this one? It's a remark attributed to an ex-brain truster': The United States Government has spent more money seeking recovery and has less recovery to show for that money than any other nation on earth. The National Government has spent \$25,000,000,000 of borrowed money and 10 years of borrowed time without finding the answer to a single major economic problem. That record cannot be matched in the world today.'"

What are we going to do about it? How has all of this \$25,000,-

matched in the world today."

What are we going to do about it? How has all of this \$25,000,-000,000 been spent? For relief?

I will tell you something that happened in Monroe County, Ga. Just 2 weeks ago an old Negro man, either a bachelor or widower, living over in Proctor's district, was being furnished a house for nothing, a well for nothing, plenty of wood for nothing.

This Negro was enjoying good health, and, on top of all of the above being furnished to him free by the landowner, he owned and possessed one cow.

But he was on relief. He received his notice to meet the truck on a certain day and bring a sack for his groceries from the relief office. What was one of the articles that the relief office gave to this Negro who was living in a house furnished to him free, having water and wood furnished free, and owning a cow?

In addition to the grapefruit, prunes, and evaporated milk, they gave this one Negro 12 pounds of butter.

That old Negro man told his neighbors about it when he got back home, and said that he was going to put all of the butter in a

home, and said that he was going to put all of the butter in a bucket and let it down in the well to keep fresh.

Do you think that the Government should hire people to feed a cow, milk a cow, churn the milk, and then haul butter and give it to a healthy Negro who already owned a cow?

I have heard of instances similar to the above down in Telfair County and all over the State.

County and all over the State.
What do they mean in Washington anyway?

If this \$25,000,000,000 had been spent to homestead people on the land, every grown man and woman in America today would have a piece of land and the pride of a home.

Labor conditions would not be so bad in the cities. There would be no labor troubles, no strikes, no relief necessary.

What we need in America is to stop the racketeers who are profiteering in the name of "humanitarianism and charity."

These charity brokers always wanting an epidemic of smallpox, or storms, floods, are the greatest enemies to humanity on the face of the earth. the earth.

America is composed of strong men and women—brave, courageous

men and women!
Washington might as well listen. The American people in the end will control this Government, and we are going to stop this plunderbund.

Another thing for you:

Do the American people think that they are against Germany and Hitler? The propaganda from Washington, and especially the President, would lead you to think so.
What about this?

Two weeks ago the German ship Donau sailed out of the port at Portland, Oreg., loaded down with American wheat for Germans

that was bought here in the United States for $38\frac{1}{2}$ cents per bushel f. o. b. Portland.

bushel f. o. b. Portland.

That same day the American people were paying 70 cents per bushel for the same wheat f. o. b. Chicago, III.

This wheat was not even ground into flour. America gave to the German people the difference between 70 and 38½ cents per bushel on this wheat. This means that the people of this country gave the Germans 31½ cents per bushel.

Besides giving them 31½ cents on the wheat per bushel, our country also gave the German people the jobs of grinding this wheat into flour, shorts, bran, and sacking same.

Who paid this 31½ cents difference in the wheat? The American people paid it!

people paid it!

Who is the American Government? The people who work and

sweat and pay taxes!

This is your subsidy that you have heard so much about.

Listen at this one: The F. S. C. C. (Federal Surplus Commodities Corporation) has sold several cargoes of wheat recently to Shanghai

Listen at this one: The F. S. C. C. (Federal Surplus Commodities Corporation) has sold several cargoes of wheat recently to Shanghai (now controlled by Japan) at prices from 39 to 40 cents f. o. b. Portland, and the F. S. C. C. purchased this wheat f. o. b. the steamer at Portland at 72½ cents.

This is a subsidy of 33½ cents per bushel on wheat to a foreign buyer paid by the United States Government by taxes.

They had quite a row about whether they could do cotton that way, but finally we noticed in yesterday's paper that they are going to give the foreigner \$10 per bale to buy American cotton cheaper than the people here in American can buy it. They are giving foreigners the jobs to manufacture this cotton into cloth, dresses, tablecloths, etc., and ship it back here to sell to the American people who are at work at prices twice the amount that the foreigner is buying the raw product.

What are they going to do with some of the rest of the cotton that they are paying those foreigners to buy? They are going to bring it back here and make the American taxpayer pay for the cloth to be given to people who sit down and do nothing except to vote the way that Washington wants them to vote and go under the dignified name of the "great humanitarian."

Who was it said, "Know the truth, and it will make you free"? Eugene Talmadge.

EUGENE TALMADGE

APRIL 24, 1939.

The Businessman's Duty

EXTENSION OF REMARKS

We receive many expressions of opinion on public quesions from we receive many expressions of opinion on public questons from all classes of citizens and all types of organizations and we are always anxious to receive the expressions of opinion from your organizations representing, as they do, businessmen and women who have faced and solved intricate problems of manufacture, marketing, transportation, and finance, and whose views are based upon the personal experience of the members.

Mactings such as the chamber is presently holding in the Can

Meetings such as the chamber is presently holding in the Capital City accomplish much good.

It has always impressed me that the work of all organizations of

businessmen should be augmented with the personal activities of the individual businessman.

As government necessarily expands it is increasingly important that businessmen, as individuals, wield increasing influence in the body politic. No longer should we, as individuals, conducting busi-

ness, or practicing our professions closely allied with business, plead "we are too busy." We cannot be too busy actively, to be interested in the form of government under which we continue our

personal pursuits.

I have frequently sought to bring businessmen into local political parties, anxious to have them counsel on the formation policies of the parties, locally; anxious to have them exercise their proper influence in the selection and election of candidates—with little or no succes

The "independent voter" has no place in American communities, for by his divided allegiance he neither serves himself nor his

locality and displays either his naivete or knavery.

Every American businessman, especially, owes it to himself and his community to give the same degree of efficient, intelligent, and successful application to the management of public affairs as he

successful application to the management of public affairs as he does to his private duties.

I should be happy, indeed, to discuss with any of your members or friends the methods by which this might be done, as, I am certain, would all of my New York colleagues.

John Taylor Arms, the great American artist, has described the Woolworth Building in New York City as "an American cathedral." It is that—a cathedral of business. Just as today that building looks out upon a new and broader vists, so, with the increased public activity of individual American business men and women, will there be opened a new and broader horizon for American government and politics. government and politics.

Survey of the Everglades Drainage District,

EXTENSION OF REMARKS

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF THE STATE OF FLORIDA

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following memorial recently adopted by the Legislature of the State of

House Joint Memorial 7

To the Honorable Franklin D. Roosevelt, President of the United States, and the Honorable Senate and House of Representatives of

States, and the honorable senate and house of Representatives of the United States, in Congress assembled:

We, your memorialists, the Senate and House of Representatives of the State of Florida, in legislative session assembled, do most respectfully memorialize and petition your honorable bodies as

Whereas there is situated within the Everglades drainage district in the State of Florida, a large body of fertile lands; and Whereas a good portion of these lands are of peat and muck formation, which, when the same become dry, are more or less inflammable, and when fires once start in such area it is practically impossible to artically the same print of the same provider than the same impossible to extinguish the same with the equipment and methods now in use for such purpose; and Whereas the Legislature of the State of Florida has created an

Whereas the Legislature of the State of Florida has created an Everglades fire-control district, but the officers of such district are operating under a great handicap by reason of the lack of information with reference to the best method to pursue in adopting a permanent plan of fire protection in the enormous territory embraced in said Everglades drainage district, by reason of the lack of information as to the best methods to pursue in extinguishing fires when started in said district; and Whereas these immensely rich muck lands and the preservation thereof are of national interest and the destruction thereof by fire is and will be a Nation-wide loss; and Whereas there are thousands of acres of these fertile lands that are being destroyed yearly by fires; and Whereas there is imminent danger of all the uncultivated portions of this tremendous area of muck lands being destroyed in the future by fire; and

the future by fire; and

Whereas it is the belief of the Legislature of the State of Florida Whereas it is the belief of the Legislature of the State of Florida that if a survey was made by the United States Government of the entire Everglades drainage district for the purpose of determining and suggesting a permanent plan for the prevention of fires in said district, and further for the purpose of determining the best method of fighting such fires when the same once start, that such a survey would be of untold benefit in the preservation of such land and therefore would be helpful to the entire Nation: Now,

therefore, be it

Resolved, That your memorialists, the Senate and House of Representatives of the State of Florida, do respectfully memorialize and petition the Congress of the United States of America to cause

a survey to be made of the Everglades drainage district for the purpose of supplying information as to the best method or plans to be adopted for the permanent protection of the lands within said district, from destruction by fire, and for the further purpose of obtaining information for formulating plans as to the best method to fight fires in such district when the same are once started, and that such survey be made by such governmental agency and in such manner as the Congress may direct, and that

the Congress appropriate such sum of money as may be necessary to carry into effect such survey; and be it further

Resolved. That copies of this memorial be immediately transmitted to the President of the United States and the Senate and House of Representatives of the United States and to each Senator

and Representative in Congress from the State of Florida.

Exemption of Small Telephone Exchanges From the Fair Labor Standards Act

EXTENSION OF REMARKS

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

Mr. CHIPERFIELD. Mr. Speaker, in the course of the past few weeks I have received numerous protests from farmers and residents of Farmington, Osco, Canton, Atkinson, Ipava, Fowler, Clayton, Bishop Hill, Victoria, Cambridge, Payson, Kewanee, Maquon, Galva, Fairview, Alpha, Mendon, Liberty, Birmingham, La Prairie, Woodhull, Oneida, Williamsfield, Rio, Galesburg, Orion, and Wataga, all in my district, urging me to oppose that part of the Fair Labor Standards Act of 1938, which makes it obligatory for small independent telephone companies to comply with the wage and hour law. I am advised that most Congressmen from the argicultural areas have been similarly besieged.

At the outset I want to state that I believe the theory of setting up fair labor standards is good and that some legislation along such lines is exceedingly desirable. However, it is my recollection that the present act was rushed through Congress under emergency conditions and no doubt many of its reverse results could not be anticipated by its framers. Let me say that I am not numbered among those who would repeal the act in its entirety, nor do I want to emasculate it to the point where it will lose all of its effectiveness.

However, as the act relates to independent and small telephone companies it is obviously unfair. As most of my colleagues from rural districts know, a large percentage of such companies are mutuals. They are operated solely for the convenience of their member stockholders and are financed by them alone. It is a rare case where nonuser capital is sought. In other words, the profit motive is definitely subordinate. Therefore such concerns obviously are in a much different classification than purely commercial institutions.

The Wage and Hour Administrator argues that a telephone company having connections permitting it to make out-of-State calls is in interstate commerce. Technically he is right. But actually it is drawing a pretty long bow to use that as an argument for bringing these companies under jurisdiction of the act. Not one in my district could survive on long-distance toll revenue alone. I believe the same condition exists all through the agricultural States.

Most of us want to keep the wage and hour law on the statute books, but I can assure you the quickest way to get rid of it, if that is what you want to do, is to take an unbending attitude in cases like this.

Personally, I would like to vote for an amendment that would set the elimination break-off point at a much higher level than the one suggested by the Wage and Hour Administrator-at 350 stations per exchange. I think the 500 limit is much too small and would prefer to see the limit placed at 1,000. The latter figure would take care of most of the residents of small towns and farmers in my district. reliably informed it would do the same in most other districts in the Middle West.

However, the committee has recommended 500, which will aid the large majority of exchanges and I will support that

figure if we cannot secure a better one.

I would like to point out several developments that can be expected to take place when higher operating costs occasioned by observance of the Wage and Hour Act will go into effect. Take a typical example of how the wage and hour law affects these small telephone exchanges. An exchange of 450 subscribers before the law went into effect was paying, according to information received from its officers, \$1,620 a year to operate its switchboard. Under the present law it is paying \$2,190 for the same service, and this will be increased in October 1939 to \$2,628 and in 1940 to \$3,504, or more than double the cost before the enactment of the wage and hour law. This would be a total increase of \$1,884. They maintain this additional cost to operate would more than double the existing rates.

Those companies that will have to observe the provisions of the wage-and-hour law have just two alternatives. One is to augment their revenue by increasing switching-fee charges so as to pay the higher wage scales and the shorter hours of work of employees; the other is to go out of business. No

other course is open.

It is unthinkable to plan for the breaking up of many hundreds of small telephone exchanges and the subsequent loss of jobs by those who are now getting along and staying off relief rolls. I can assure you that such action on our part

would have many and varied repercussions.

The common party-line telephone used by farmers has come to be almost a necessity. It is as much a part of the farm equipment as the plow. It is a form of insurance. It saves thousands of lives annually by making emergency medical aid quickly available. And it is all done cheaply and within the means of most rural residents.

The small-town merchant finds the farmer-owned telephone line a constant outlet for his goods. The farmer frequently steps to the telephone and orders goods from the village store over the phone. And Uncle Sam gets some revenue out of that, for in a vast number of cases the goods so ordered are sent out by parcel post.

In a single transaction like that at least three profits have been made. The farmer saved a trip to town. The merchant sold some of his goods, and the Government sold some stamps

in payment for delivery of the goods.

There is a further thought I would like to call to your attention, and that is in my opinion this is a mighty poor time for Congress to do anything that will reduce the farmers' income by boosting their operating costs. The farmers of this country are having hard enough time making both ends meet as it is without this body hanging another millstone around their necks.

Lynch Law for Aliens

EXTENSION OF REMARKS

HON. FRANCK R. HAVENNER OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1939

Mr. HAVENNER. Mr. Speaker, in an outburst of indignation against the conduct of certain types of aliens-types which are abhorred by every decent human being-the House of Representatives has allowed itself to be swept into writing lynch law for the statute books of the United States. I am confident that saner judgment will eventually prevail and that the so-called Hobbs resolution will never actually become a statute of our free government, but the fact remains that when the House passed that resolution it did in effect approve a species of lynch law for deportable aliens who cannot be deported. To be sure the resolution does not provide for the death penalty-indeed its sponsors have ascended the heights of absurdity in their contentions that it does not provide any punishment at all-but it permits a penalty which every humane prison warden will testify is worse than death, and that is imprisonment for life. And this most terrible of all penalties can be imposed by an administrative official without due process of law! This is clearly legalized lynching.

To those of us who hold the due-process provisions of the Bill of Rights in the Constitution of the United States among our most precious institutions of liberty, it is incomprehensible that a majority of the Members of Congress should be willing to suspend those provisions in order to punish a small group of undesirables. These undesirables can be punished, whenever they commit offenses, under existing law without violating our Bill of Rights.

Eternal vigilance is the price of liberty. Let us be vigilant to prosecute alien lawbreakers relentlessly, but, above all, let us be eternally vigilant to protect the American Bill of Rights against all assaults, whether of alien or domestic

origin.

New Deal Steps Up Pressure on Hostile Papers

EXTENSION OF REMARKS

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

ARTICLE BY ARTHUR SEARS HENNING

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Sears Henning:

New Deal Steps Up Pressure on Hostile Papers—Hands Out Favors to Friendly Press (By Arthur Sears Henning)

Washington, D. C., April 22.—Recent developments illuminate the steady enlargement by the Roosevelt administration of the Federal Government's power to control the press. Never before has it been possible for the political party in control of the Central Government to subject newspapers to so many insidious influences to still criticism and procure editorial support.

There are now 11 Government agencies possessing the power to aid, punish, or otherwise regulate the press. Theoretically there is no censorship of the press and cannot be under the first article of the Bill of Rights, but practically a potent influence upon newspaper utterances is exerted by the power of the Government to grant or withhold favors, to mete out or withhold prepalities

penalties.

NEWSPAPERS HIT BY DEPRESSION

Newspapers most amenable to such influences are those in financial straits, of which there is a large and steadily increasing number as a result of the ravages of the depression. The news-

number as a result of the ravages of the depression. The newspaper owner who seeks a loan from the Government learns, like other businessmen, that he has a better chance of getting it if he stands well politically in Washington. The general rule under the current Democratic regime with regard to the dispensation of Government favors is that "antinew dealers need not apply." Hence, those seeking loans or other favors are careful to present a record devoid of offense to the New Deal.

The loans made to newspapers are elaborately concealed in the mazes of red tape, for publicity would destroy the influence of the press in favor of the administration in the case of newspapers whose independence had been destroyed by the exigencies of Government financial aid. Thus, the Reconstruction Finance Corporation is able to say that no loans have been made to newspapers, but that loans to 68 borrowers in the paper-manufacturing and wood-pulp industry aggregating \$23,236,850 have been authorized. Of this total, \$2,687,134 was canceled and \$9,857,537 has been disbursed up to date.

has been disbursed up to date.

NEED CONGRESSIONAL INQUIRY

So skillfully is the trail covered up that nothing short of a congressional investigation could disclose how many newspapers are in hock to the New Deal. An illustration of the manner in which loans to newspapers are concealed is afforded by the case of David Stern, an ardent new dealer, who owns the New York Post and the Philadelphia Record.

It was known for months that Stern had obtained a large loan, reported to be a million dollars, from some Government agency.

It was known that the President himself had used his influence

It was known that the President himself had used his influence to get the huge loan for his friend and supporter. The Reconstruction Finance Corporation insisted, however, that no loan had been made to Stern or even applied for. Likewise the Federal Reserve Board professed ignorance of any Stern loan.

It required literally weeks of digging by a Tribune reporter to unearth that loan to Stern. It was finally discovered in the Federal Reserve Bank of Philadelphia, despite the efforts of that institution to keep the facts from the public. The Philadelphia Reserve Bank furnished directly \$400,000 of the million-dollar loan and the remaining \$600,000 was derived from the rediscount at the Reserve bank of Stern notes by the Camden Trust Co., of Camden, N. J., and the Philadelphia National Bank.

STERN LOAN IS UNSECURED

Stern's million-dollar loan was unsecured. Part of it was procured under that provision of the law that "in exceptional circumstances, when it appears to the satisfaction of a Federal Reserve bank that an established industrial or commercial business located in its district is unable to obtain requisite financial assistance on a reasonable basis from the usual sources," the Reserve bank may

make direct loans.

In 1935 the R. F. C. was under fire as the result of the action it had taken to keep two Tennessee newspapers from passing into anti New Deal control. The R. F. C. had come into possession of \$250,000 bonds of the Tennessee Publishing Co., publisher of the Nashville Tennesseean and the Evening Tennesseean. The bonds had been put up with the R. F. C. as collateral for a Government loan to the Canal Bank & Trust Co., of New Orleans. The Canal Bank suspended and the R. F. C. became the technical owner of

The receiver of the Canal Bank proposed to sell the bonds for \$200,000 to James Hammond, publisher of the Memphis Commercial Appeal, who had been critical of the New Deal. The R. F. C. promptly intervened by asking Paul Davis, president of the American National Bank, whether he thought a better price might be obtained. Davis is a brother of Norman Davis, who is now chairman of the Red Cross, but at that time was Mr. Roosevelt's roving ambassador. The Davis bank already held \$210,000 of the Tennessee bonds.

OUTBID ANTINEW DEALERS

Pro-New Dealer Davis offered \$250,000 for the R. F. C. collateral-\$50,000 more than Anti-New Dealer Hammond had offered. R. F. C. accepted the Davis offer without inquiring of Hammond if he would top it. Thus the two papers were kept from falling into the hands of a critic of the administration.

Many newspapers are in hock to manufacturers of newsprint for Many newspapers are in hock to manufacturers of newsprint for their supply of paper, and some of the newsprint manufacturers are in hock to the New Deal. The newsprint concerns in numerous instances control the policies of their newspaper debtors. Being under obligations to the New Deal for loans, such newsprint borrowers exercise a virtual censorship in favor of the administration over the newspapers they control. The R. F. C. declined to disclose the names of the 68 borrowers in the paper and pulp industry.

In numerous other ways is the press subjected to influence by the administration. Even the news of the activities of the Government.

administration. Even the news of the activities of the Government is treated by the administration as a private commodity.

Job Benefits Through P. W. A.

EXTENSION OF REMARKS

HON. EDWARD W. CURLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

Mr. CURLEY. Mr. Speaker, the job benefits of P. W. A. extend to many industries, and aside from the thousands of jobs provided at the construction site many thousands more are made available through this program in the production of the various industrial items used in construction work.

Building-trades workers who are given employment at the site of construction are paid directly by the contractors, which means that this is entirely private employment. The same applies to the indirect employment provided through orders for materials and in supplying consumer goods and services. All workers are employed in private industry at their own rates of pay and under normal employment conditions.

It is believed that this is the most desirable way of helping industry. In this manner we can provide ways and means to enable private employers to add to their pay rolls and put men to work in their own trades.

P. W. A. reports that approximately \$20,000,000 a week is being released for construction of projects through their pro-

gram, with millions of dollars worth of orders being filled by industry, transported, and distributed. This means that pay checks are made available by private employers for architects, draftsmen, clerks, engineers, office employees, laborers, carpenters, marble cutters, bricklayers, painters, plasterers, and other skilled labor.

I think the benefits derived from public works as a stimulant to recovery are, therefore, obvious. I think it is well to point out, too, that the ramifications of the construction industry are so numerous that they affect many other industries and trades. The value of P. W. A. cannot be gaged entirely, therefore, by the employment furnished in the con-

struction industry alone.

To illustrate this, we find that the raw materials used in construction must be processed and transported before they are actually available for use in a building project. The handling and processing of these materials furnishes employment before they are ready for actual use in construction.

In following through on the raw materials used on P. W. A. projects we might start at the mines with the iron ore to be converted into structural and reinforcing steel. Or at the quarries where limestone and gypsum is obtained to be made into cement and plaster. Or at the cotton fields where this important product is grown, ginned, and later woven into fabric for belts, tires, and containers used in construction: We might also take a look at the railroads, which transport these products and related consumer goods to the manufacturer and later to the site of construction.

In any construction project the indirect labor provided affects industries relating to transportation, plant and equipment, iron and steel products, coal and coke, petroleum products, metallic-ore mining, forestry, rubber, brick, piping, and various other industries too numerous to mention here.

The Bureau of Labor Statistics of the Department of Labor reports that in the 51/2 years in which P. W. A. has been operating orders for over \$300,000,000 in miscellaneous industrial products have been filled. This represents industrial products only. The Bureau further reports that P. W. A. had originated orders for \$2,121,892,444 worth of materials, equipment, and supplies. This includes materials going into the construction of schools, hospitals, and other municipal improvements, as well as supplies and equipment for the finished buildings.

I am told that at present there are 5.016 non-Federal P. W. A. projects under construction in the 1938 program, in addition to approximately 1,700 Federal projects. It is estimated that this program embraces approximately \$1,500,-000,000 worth of construction work. This is a very worthy program and should help materially in bringing economic recovery in the construction and "heavy goods" industries. I firmly believe that by fall the full effects of the program will be evident. The thousands of workers who are now engaged in work on these projects and in consumer goods directly benefited will be enabled to support themselves and families and add materially to the purchasing power of the Nation as a whole.

I hope the Congress will support proposals to create a public-works agency of permanent nature to permit long-range planning of public works for use in periods of depression.

An Appeal for Peace by the Duke of Windsor

EXTENSION OF REMARKS OF

HON. JOHN E. RANKIN OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

Mr. RANKIN. Mr. Speaker, on yesterday one of the greatest appeals for peace, since the Sermon on the Mount, was broadcast from the battlefield of Verdun by his Royal Highness, the Duke of Windsor, one of the outstanding private citizens of the world.

He neither holds nor aspires to any public office; he seeks no pecuniary aggrandizement. He resigned the highest official position to which any citizen of his nation could aspire; and, if he were desirous of pecuniary gains, he could sell his services for a major fortune.

He is perhaps the best loved of all Englishmen. He is today the uncrowned prince of an invisible empire of loyal and loving hearts. His speech of yesterday will endear him to the civilized peoples of all lands. And even beyond the confines of civilization, out yonder where the bushman bends his bow or the savage wields the sling, his praises will be sung wherever his words are repeated, even among the remotest nomads of the desert.

He is simply striving to serve the human race.

He asks no greater boon, he craves no grander privilege, he desires no loftier honor than that of being permitted, as a private citizen, to promote the peace and happiness of mankind.

Under permission granted to me to extend my remarks in the RECORD, I insert below his famous address delivered on yesterday above the graves of the heroic dead at Verdun.

The matter referred to follows:

TEXT OF DUKE OF WINDSOR'S PEACE TALK

Text of Duke of Windson's Peace Talk

I am speaking tonight from Verdun, where I have been spending a few days visiting one of the greatest battlefields of the last war. Upon this and other battlefields throughout the world millions of men suffered and died, and as I talk to you from this historic place I am deeply conscious of the presence of the great company of the dead. And I am convinced that could they make their voices heard they would be with me in what I am about to say.

For two and a half years I have deliberately kept outside of public affairs and I still propose to do so. I speak for no one but myself.

For two and a half years I have deliberately kept outside of public affairs and I still propose to do so. I speak for no one but myself, without the previous knowledge of any government.

I speak simply as a soldier of the last war, whose most earnest prayer it is that such cruel and destructive madness shall never again overtake mankind. I break my self-imposed silence now only because of the manifest danger that we may all be drawing nearer to a repetition of the grim events that happened a quarter of a century and

The grave anxieties of the time in which we live compel me to raise my voice in expression of the universal longing to be delivered from the fears that beset us and to return to normal con-

ditions.

NO PEOPLE SEEKING CONFLICT

You and I know that peace is a matter far too vital for our happiness to be treated as a political question. We also know that in modern warfare victory will lie only with the powers of evil. Anarchy and chaos are the inevitable results, with consequent misery for us all.

misery for us all.

I cannot claim for myself the expert knowledge of a statesman, but I have at least had the good fortune to travel the world and therefore to study human nature. This valuable experience has left me with the profound conviction that there is no land whose people want war. This I believe to be as true of the German nation as of the British nation to which I belong, as it is of you in America and of the French nation, on whose friendly soil I now reside.

International understanding does not always spring up simul-International understanding does not always spring up simultaneously of itself. There are times when it has to be deliberately sought and negotiated, and political tension is apt to weaken that spirit of mutual concession in which conflicting claims can best be adjusted. The problems that concern us at this moment are only the reproductions on a larger scale of the jealousies and suspicions of everyday life. In our personal contacts we all strive to live in harmony with our fellow men. Otherwise modern civilization could never have come into existence.

DEPLORES PROPAGANDA SLOGANS

Are we now going to destroy that civilization by failing to do internationally what we have learned to do individually? In their public utterances the heads of all governments are as one in declaring that war would be disastrous to the well-being of their people. Whatever political disagreements may have arisen in the past, the supreme importance of averting war will, I feel confident, impel all those in power to renew their endeavors to bring about a peaceful settlement.

Among measures that I feel might well be adopted to this end is the discouragement of all that harmful propaganda which, from whatever source, tends to poison the minds of the peoples of the world. I personally deplore, for example, the use of such terms as "encirclement" and "aggression." They can only arouse just those dangerous political passions that it should be the aim of us all to

No; it is in a larger spirit than that of personal or purely national terest that peace should be pursued. The statesmen who set interest that peace should be pursued. The statesmen who set themselves to restore international security and confidence must act as good citizens of the world and not only as good Frenchmen, Italians, Germans, Americans, or Britons. The benefit of their own nation must be sought through the benefit of the wider community of which we are all members.

APPEALS IN NAME OF WAR DEAD

In the name of those who fell in the last war I urge all political leaders to be resolute in the discharge of this mission. I appeal to them in the name of the living, whose existence and happiness are in their hands. And I appeal to them especially in the name of the youth of the present day, with all its incalculable potentialities of future service to the human race.

potentialities of future service to the human race.

The world has not yet recovered from the effects of the last carnage, which in each and every country decimated my generation. The greatest success that any government could achieve for its own national policy would be nothing in comparison with the triumph of having contributed to save humanity from the terrible fate that threatens it today.

Somehow, I feel that my words tonight will find a sincere echo in the hearts of all who hear them. It is not for me to put forward concrete proposals. That must be left to those who have the power to guide their nations toward closer understanding.

God grant that they may accomplish that great task before it is too late.

it is too late.

A. A. A. for Dairying

EXTENSION OF REMARKS OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

EDITORIAL BY A. J. GLOVER, OF WISCONSIN

Mr. BOLLES. Mr. Speaker, I ask unanimous consent that I be allowed to extend my remarks by including therein an editorial by one of the leading agricultural writers of this country, Mr. A. J. Glover, of Wisconsin, in Hoard's Dairyman. It is a clear discussion of the present dairy situation, looking at it also from a new viewpoint. The editorial follows:

A. A. A. FOR DAIRYING

Since the enactment of the Federal law creating the Farm Board, agriculture has been in politics. Attempt has been made in numerous ways to place agriculture on a proper relationship with other industries by the enactment of Federal and State laws. The results of all efforts to help agriculture through crop control and price fixing have been disappointing. Let us briefly enumerate some of the steps to increase prices of farm products and to control production.

some of the steps to increase prices of farm products and to control production.

When the Farm Board started to buy wheat, it was selling for \$1.18 a bushel. Wheat continued to decline in price until it reached 35 cents a bushel. The Farm Board spent several hundred millions of dollars, and it is generally admitted that it contributed little or nothing toward increasing the farmer's returns.

This was followed by the A. A. A., which was voluntary the first year, but the second year it was necessary to make the law compulsory for the control of cotton production. When cotton land was released from growing cotton, it was planted to peanuts. Soon the peanut growers asked for control, and the land was planted to some other crop. The upshot of this attempted control of cotton production and other crops has created a situation for cotton ton production and other crops has created a situation for cotton and corn which is even worse than when the Federal Government started to control the production of these crops.

started to control the production of these crops.

The Federal Government now owns 11,000,000 bales of cotton and the world is devoting 12,000,000 more acres to growing cotton, which has cut our cotton exports. Undoubtedly the increased production of cotton in other countries was stimulated by the fear that cotton prices would become too high if cotton control was successful in this country. It was therefore reasoned that it was only wise for them to increase their cotton acreage. There is at the present time under consideration in Congress a plan to sell the the present time under consideration in Congress a plan to sell the 11,000,000 bales of cotton to the cotton growers at 5 cents a pound or to barter it with some other nation for other products. The price of cotton, when we take into consideration the change in value of the dollar, is even less than it was when the crop-control program began.

What happened to make crops of corn and cotton larger on fewer What happened to make crops of corn and cotton larger on lewer acres? Surveys that have been made in counties where attempt was made to reduce the acreage of corn show that the poorer land was taken out of cultivation, fertilizer was used, and hybrid corn purchased. The result was more corn was raised in these counties than before any attempt was made to reduce its production. Essentially the same thing took place with cotton.

In other words, the Federal Government, with the assistance of the States, has been unable to solve the farm problem by its

attempt to control production and raise prices of farm products. It is generally agreed that raising the price of farm products, thereby increasing the purchasing power of the farmer, would do more to solve the ills of the Nation than anything that could be done. Still, with all this control and with the expenditure of billions, the purchasing power of the farmer has not been materially improved, especially with certain crops.

There is a group of dairy representatives attempting to get the Federal Government to do something definite for improving the prices of dairy products. They are too low in price. Increased taxation and all other operating expenses of the farm make it necessary to sell dairy products at higher prices than they are at present if a majority of the farmers are to succeed. But what can the Government do to help improve the prices of dairy products when, for example, they have not been able to improve the prices of cotton and corn, much simpler and easier products to handle than the dairy industry with its many products and wider distribution? Is it to be hoped by bringing the Federal Government to the assistance of the dairy industry that it can be wiser in handling this industry than it was in handling a simpler one?

Even with the low prices of dairy products the purchasing power of butter, not to say anything of fluid milk, is much higher than cotton. The cotton index is about 53, while the butter index is 70 or a little better.

We wish it were possible through Federal assistance to bring

cotton. The cotton 70 or a little better.

We wish it were possible through Federal assistance to bring about adjustments that would place all industry and labor on a fair basis of relationship, but we cannot grow enthusiastic over asking the Federal Government to assist in the control and the fixing of prices of dairy products. We can't expect the Federal Government to stop with our industry, for if it is to fix the prices of dairy products and control their production, it means the ultimate control of all farm products. mate control of all farm products. There are already 16 farm products now under control of the A A. A. and Soil Conservation Act, and the results lend no encouragement for bringing more agricultural products under control.

Pegging the price of butter for six or more months and fixing the

prices of milk, in many cases relatively higher than butter and cheese, helped to stimulate production, for the dairy farmer could cheese, helped to stimulate production, for the dairy farmer could sell his feed to the dairy cow and receive more for it than he could at the elevator. Prices of butter and milk established in this way helped to decrease consumption. We mention this to indicate that when we attempt to regulate prices there is danger of stimulating production and curtailing consumption. This in the end leads to burdensome surplus and ridiculously low prices.

If we could start a movement to sell 1,000,000 cows that are not paying for feed consumed, there would be no troublesome surplus. Granting that these cows produce an average of but 150 pounds of

paying for feed consumed, there would be no troublesome surplus. Granting that these cows produce an average of but 150 pounds of fat a year, their disposal would reduce production 150,000,000 pounds butterfat, or better than 175,000,000 pounds butter. If the price reached a level which made dairying more profitable the dairy farmer would soon feed the cows he had left enough to increase the production to equal that of the 1,000,000 cows. This out clearly that price is perhaps the best regulator of production.

We wish there were a better way of regulating production; but after reviewing what the Federal Government, in cooperation with the various States, have accomplished in controlling production and the various states, have accomplished in controlling production and prices of other crops, we cannot hold out much encouragement to the dairy industry to seek Federal assistance. The longer we keep the farm problem in politics the more we will prolong our depression. Why not direct ourselves to reducing the number of unprofitable cows now being milked rather than attempt to control production by allotment and price fixing?

Peace in Ireland

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, ladies, and gentlemen, once again Eamon de Valera is to be congratulated. That man of destiny, in his calm, cool, and collected manner, has once more defeated that little coterie of diehards to be found in the north of Ireland.

The Province of Ulster once contained nine counties. There are presently but six counties in the Province. They comprise the northeast corner of Ireland and constitute Northern Ireland. The land occupied is somewhat larger than the State of Connecticut. A separate parliamentary and executive government for Northern Ireland was established in 1920 and contracted out of the newly established Irish Free State in December 1932.

Southern Ireland, or Eire, is about equal in size to the States of New Hampshire, Vermont, and Massachusetts. When the Government of Great Britain voted conscription, a situation was presented which Mr. de Valera summed up very succinctly in the following words:

We claim the whole of Ireland as national territory, and conscription of Irishmen in that portion of the country (Northern Ireland) we will regard as an act of aggression.

After centuries of oppression by the English, the Irish of the 26 counties which we now know as Eire, have won what amounts to complete freedom. The English Government has indicated that the draft will not be enforced in any portion of Ireland. Ulster newspapers, published in Belfast and Londonderry admit defeat at the hands of the scholarly statesman who was born in our own State. Any fair-thinking person must admit that Mr. de Valera's position is a correct one. Any Irishman who sees fit to enlist in the English service can do so by enlisting in the regular Army or in the Territorials, the Territorials being the counterpart of our National Guard. There is no necessity for the draft in Ireland. An Irishman always knows when to fight and how to fight. Ireland has sent her sons as soldiers to the defense of almost every nation in the world, France, Spain, Austria, Canada, and our own United States. The rallying force of the Irish has been felt in every war. And more, Washington himself in our own Continental Army felt the rallying force of Irish manpower, for fully one-half of the Continental Army was Irish.

"Army without banners" is the description sometimes given to the group of Irishmen who won the age-old fight. An army without banners indeed it was. An army without adequate arms and equipment, an army poor in everything, material with which wars are won. But an army rich in courage, rich in the justice of its cause, rich in the spirit of its patriots, wrested from a proud empire the liberty which was theirs by right. In a country such as that conscription by an alien people is unthinkable.

Our hats are off to you, Mr. de Valera, for your valiant fight, well won. You may be content in your Black Rock home in Dublin, knowing that your plea for peace in Ireland has been heard throughout the world with the greatest respect.

Three Percent Interest on Federal Land Bank and Commissioner Loans

EXTENSION OF REMARKS OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

Mr. PATMAN. Mr. Speaker, I have today introduced a bill, H. R. 6240, which provides for a 3 percent interest rate on certain land-bank and commissioner loans until June 30, 1941, and after that date the rate of interest shall not exceed one-half of 1 percent above the lowest rate of interest payable on direct obligations of the United States outstanding on the date the loan is made.

The commissioner's loans should be rewritten wherever possible and have the same maturity dates as the Federal land-bank loans. Under the act of 1937 this can be done, and it is my information that such loans are reamortized on a case basis; in other words, in those specific cases where the officials of the Farm Credit Administration believe it is justified according to the facts in those particular cases.

The Government is now borrowing money for 21/2-percent interest on long-term obligations. Under this proposal, if enacted, after June 30, 1941, these borrowers will pay 3-percent interest if the Government's borrowing rate is 21/2

percent. It will be 21/2 percent if the Government's borrowing rate is 2 percent, and will be raised or lowered according to the Government's borrowing rate. The text of the bill is

A bill (H. R. 6240) to provide for a 3-percent interest rate on certain land-bank and commissioner loans and a rate of one-half of 1 percent above the Government borrowing rate on certain other

such loans

Be it enacted, etc., That (a) effective July 1, 1939, the first sentence of paragraph "Twelfth" of section 12 of the Federal Farm Loan Act, as amended (relating to reduction in interest rates on certain land-bank loans), is amended by striking out "shall not exceed 3½ percent per annum for all interest payable on installment dates occurring within a period of 5 years, commencing July 1, 1935," and inserting in lieu thereof "shall not exceed 3½ percent per annum for all interest payable on installment dates occurring before July 1, 1939, and shall not exceed 3 percent for all interest payable on installment dates occurring after June 30, 1939, and, in the case of loans made after June 30, 1941, shall not exceed by more than one-half of 1 percent. the lowest rate of interest payable on direct obligations of the United States outstanding on the date the loan is made." is made.'

(b) Such paragraph "Twelfth" is amended by striking out the following: "No payments shall be made to a bank with respect to any period after June 30, 1940."

SEC. 2. The last paragraph of section 32 of the Emergency Farm Mortgage Act, as amended (relating to reduction in the interest rate on loans made by the land bank commissioner) is amended

rate on loans made by the task to read as follows:

"Notwithstanding the foregoing provisions of this section, the rate of interest on loans made under this section shall not exceed—

"(1) In the case of loans made before July 1, 1939, 4 percent for all interest payable on installment dates occurring before

July 1, 1939;

"(2) In the case of loans made before July 1, 1941, 3 percent for all interest payable on installment dates occurring after June

30, 1939; and
"(3) In the case of loans made after June 30, 1941, not more than one-half of 1 percent in excess of the lowest rate of interest payable on direct obligations of the United States outstanding on the date the loan is made."

The Money Question

EXTENSION OF REMARKS

HON, USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

LETTER FROM M. L. PRUITT

Mr. BURDICK. Mr. Speaker, it is said that no one but experts can understand the money question. Some Members of this Congress have gone so far as to intimate that no one but experts should be consulted on the money question. I have always regarded that as a complete fallacy. Instead of being complicated, I believe the essentials of the money question are as simple as any subject that can be discussed in Congress. It ought not to take a Benjamin Franklin to discover that if we permit private interests to use our own credit for nothing and with that credit, which costs nothing, buy up our Government bonds and collect the interest for generations to come, that such a program is wrong.

Mr. Speaker, in order to convince this Congress and the country at large that the money question is not complicated. I desire to submit herewith a letter received from just a plain, ordinary citizen of North Dakota, and his letter, you will perceive, strikes at the root of the evils of the monetary system that we are now employing:

PETTIBONE, N. DAK., May 5, 1939.

Mr. USHER L. BURDICK,

Congressman, Washington, D. C.
DEAR FRIEND USHER: It has been some time since I got those books, and I have never acknowledged them. Thanks ever so

much, Usher.

I am going to write you as if you were here by me and I was talking to you. Of course, I am getting the Record, and I tell

you it is really amusing to see how many Congressmen and Senators are shedding crocodile tears for the poor farmer. But they are willing to do most anything so he can get a decent price for his commodities. It is real interesting to hear them talk. They would give him \$1.50 for wheat, 15 to 20 cents per pound for cotton, and at the same time gloat over what a good dollar we have.

Don't they know that to give prices like that would cheapen the dollar? There is no man that is against a cheap dollar if he is for the producer. The most of the men there seem to gloat over the value of the dollar. Usher, you know the crisis in '73 that knocked silver as one of our bases of currency. That was all done under a Republican administration. The dollar kept getting more valuable and we still kept under the gold standard until 1933. Then the Democrats concluded that the money was not worth enough. So they stuck the dollar up to \$1.35. Every nation that had any gold could come here and buy any of our products and get one-third more products than any citizen of the United States could do. In other words, it cost us \$1.35 to get what we used to get for \$1. get for \$1.

Gold and silver are metals and when not used for money are Gold and silver are metals and when not used for money are good for nothing except when used in the arts. When we use them for money it puts on a mystical value which there are mighty few men who understand, and more especially the common man. And as I read the Record, I begin to think that there are but few men in Congress that understand it.

We read and bemoan about what Hitler has done to the Jews. What I cannot understand is that he only takes 20 percent of what the Jew has. Usher, that is nothing to what the producer

what the Jew has. Usher, that is nothing to what the producer has lost in the revaluation of the gold.

My first vote was for Jim Weaver on the old Populist ticket, a combination of the greenbacks and the free coinage of silver. But the Democrats stole our platform and I have been a Democrat ever since. There has never been such a good chance as now for them to make good, but they will never do it.

When I study past history, the condition and fall of all nations has been caused by money. In your Bible, turn to I Kings, chapter 12, verses 10 and 11. Taxation will kill any country and dear money fixes things so it is sure to come. One dollar and fifty-cent wheat and 15- to 20-cent cotton is cheap money. If this country is going to prosper it must have cheap money.

wheat and 15- to 20-cent cotton is cheap money. If this country is going to prosper it must have cheap money.

Now, Usher, in speaking of the mystic value of money, I will have to tell you a little story about a young salesman who got a job with a large mercantile company, at a good salesman. In the fall of the year as the weather got cooler he made up his mind that he would have to have a new overcoat. So he got it and put it down as expenses. Of course, the company did not like this, so about Christmas time they called their men to headquarters to have a talk with them have a talk with them.

have a talk with them.

When this man's time came to give an account of his doings, they took him to task about putting an overcoat in as expenses. They gave him to understand that they would not stand for this kind of work, but that they would give him another chance to make good. The other salesmen gave him thunder about the green way he had put in his expenses. It went along till the next Christmas and the men were called in again. They were all complimented on their work, and when this young man's time came they were nighly pleased. They said, "We don't see any overcoat on the expense account this year." "No," he said, "but it's there just the same."

So, you see as we study money, and I

So, you see, as we study money—and I see so many Congressmen referring to the depreciation of currency citing Germany and Russia; say, Usher, did you ever see a country that was not overthrows but what their money was good? Is it not the case that any country that gets into war, and there is any chance of losing, but the try that gets into war, and there is any chance of losing, but the gold and silver leaves the country and their paper money is no good? The money of every organized country is good, if this country will quit selling bends and issue their own money. Make it payable for all debts, public and private, and duties on imports. We started in the rebellion with about \$300,000,000, and we have this today.

Usher, Nature has given us gold and silver. We use it as money but in limited amount. And if we as His children do not know how to handle it we are bound to retrograde. There is not enough of it to keep up with the progress of present times, so we must substitute other material. It takes five times as much money in circulation to meet the times of progress in this age.

Usher, I do not believe there is a man in Congress who can dispute the contents of this letter.

I do not believe in putting out money and then tying it up in

I do not believe in putting out money and then tying it up in banks that do not circulate it. When the financier gets ready to put out more money he will not call it depreciation of the currency, but will call it expansion of the currency. But they will be a long time getting ready, as they have everything mortgaged. Of course, when the expansion of money does come they will be sitting pretty

when the expansion of money does come they will be sitting pretty as prices are bound to go up.

So, Usher, I will close as I think this is enough at this time. The only thing that will relieve us at the present time is the Townsend recovery plan. With this in operation the capitalist would have quite a time bringing on another depreciation. About 90 years ago the capitalists told Congress they could make all the laws they wanted to if they could tend to the money. This is all. Ever remembering that we are traveling upon the highway of time to the undiscovered country from which no traveler returns.

M. L. PRUTT.

APPENDIX TO THE CONGRESSIONAL RECORD

William Randolph Hearst

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein a statement and editorial of Mr. William Griffin, editor and publisher of the New York Enquirer conveying felicitations to Mr. William Randolph Hearst, upon the occasion of his seventy-sixth birthday. Mr. Griffin states:

I dined on several occasions with Mr. Hearst on my visit to I dined on several occasions with Mr. Hearst on my visit to Baltimore, and in the many years I have had the privilege of knowing him I have never seen him in better health. In my opinion, he will go down in history as the greatest American of the twentieth century. Washington, in the eighteenth century, made the United States possible by his leadership during and after the Revolution. In the nineteenth century Andrew Jackson saved America from again falling under the domination of England by his victory at the Battle of New Orleans, and Lincoln saved the Union from destruction during the Civil War. In the twentieth century William Randolph Hearst saved America from being ensnared in the League of Nations and the World Court, membership in which would have involved us in every war over real estate and boundary lines in Europe, and would have led to the loss of freedom we won under Washington. the loss of freedom we won under Washington.

Mr. Griffin's editorial follows:

WILLIAM RANDOLPH HEARST HAS RENDERED TRANSCENDENT SERVICE TO AMERICA

[By William Griffin, editor and publisher, New York Enquirer]

The spirit of '76 ought to be very much in evidence in this fate-ful year of 1939. Not alone are we celebrating the sesquicentennial of the inauguration of the Federal Government (itself one of the greatest fruits of the spirit of '76) by holding a gigantic world's fair and in other ways, but we also find our country in world's fair and in other ways, but we also find our country in imminent danger of being involved in war by agencies antagonistic to all that the spirit of "76 signifies. This Republic had the unique good fortune, when the Constitution came into operation in 1789, to have at the head of the new experiment in popular rule no less a personage than President George Washington. Washington was the living embodiment of the spirit of "76, and it was, thanks to his statesmanship, patriotism, and prestige, that the new system of government set in motion in the city of New York exactly 150 years are became an unprecedented success. Washington is 150 years ago became an unprecedented success. Washington is no longer with us in the flesh. America, however, has today a man who because of his devotion to the Father of his Country man who because of his devotion to the Father of his Country and his services to this Republic by his never-ceasing and potent efforts in behalf of the ideals and principles of the Father of his Country, merits an especial honor as one who, in our time, is the living embodiment of the spirit of "76. That citizen is William Randolph Hearst, the greatest of all American publishers.

I have had the privilege of knowing Mr. Hearst intimately for many years. During the past week I enjoyed a memorable visit with him at Baltimore, on the eve of his seventy-sixth birthday, which occurred on April 29. I found him in excellent health and spirits, and still animated by the unyielding faith in America which has so strongly characterized him since he entered the publishing field more than 50 years ago.

lishing field more than 50 years ago.

This Republic can never hope to requite the many vital services rendered it in its domestic life and foreign relationships by William Randolph Hearst during his long career as publisher of American newspapers and magazines. Even his enemies—and he has enemies—admit that his influence upon American public

has enemies—admit that his influence upon American public opinion has been and still is enormous. It is he, more than anyone else, who has kept alive the spirit of "76, the spirit of Washington and the Americans of his generation who gave us our precious freedom from the chains that bound us to the throne of a European despotism, and our precious Constitution to preserve that hard-won liberty for all future generations of Americans.

The friends and admirers of William Randolph Hearst through this broad land are numbered by the million. But, as I have said, he has his enemies. Although they are few, they are both bitter and vociferous. The reasons for their enmity are not hard to determine. If Mr. Hearst turned his back on George Washington and espoused the cause of communism, the hard-working "red" scribblers and demagogs who never tire of denouncing him, would be found lauding him as the greatest asset possessed by our country.

If Mr. Hearst turned his back on George Washington and espoused the cause of nazi-ism and fascism, he would be extolled as an American without peer by those who are so brazenly propagandizing in behalf of these progeny of communism. Another reason for the hostility of the foes of Mr. Hearst lies in the acute jealousy which his marvelous success has aroused in some of his competitors in the

his marvelous success has aroused in some of his competitors in the publishing field. But let his opponents do and say what they will, their enmity does not in the least worry William Randolph Hearst. Like his great exemplar, George Washington, who had his militant and unscrupulous enemies, Mr. Hearst treats them with the all-powerful antidote of ignoring them completely.

In the alarming war crisis now besetting our country, a crisis that could have readily been avoided were it not for the disloyalty to the tenets of the Father of his Country so painfully manifest on the banks of the Potomac, we Americans should render heartfelt thanks to Almighty God that William Randolph Hearst is with us, to expose with all the wonted fullness of his gifted and powerful intellect the treacherous forces, native and alien, that are trying to lure us into a war in which we have no concern whatever.

And the people of this land are thrice happy in the assurance that everything points to the fact that this vigorous American will be with them for a long time to come, to watch over the destiny of the United States of America.

the United States of America.

Democracy in Cuba

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER OF MAY 8, 1939

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the New York Enquirer on the subject "Democracy in Cuba," in the issue of May 8, 1939:

[From the New York Enquirer of May 8, 1939] DEMOCRACY IN CUBA

Some months ago Col. Fulgencio Batista, of Cuba, visited the Some months ago Col. Fulgencio Batista, of Cuba, visited the United States and was accorded a thunderous welcome by the administration at Washington, at whose desire he made his visit. Batista is the head of the Cuban Army and dictator of the Cuban Republic. In spite of this, our Government went to great extremes in lavishing honor and hospitality upon him, for the purpose of impressing upon European strong men the solidarity of the United States, Cuba, and the other lands of Latin America against fascism and nazi-ism and their unity of purpose in pursuit of the good-neighbor policy. So eager was the administration to court the good will of Batista that it agreed, while he was in America, to grant Cuba valuable trade concessions at the expense of this Republic. pense of this Republic.

Shortly after his return to his homeland, and as if to complete the farce begun by his triumphal trip to this country, Batista paid an official visit to Mexico, where he was given a conqueror's

reception.

Both Hitler and Mussolini must have laughed themselves to exhaustion on witnessing this performance on the part of the Government of the United States, the Cuban dictator, and the Cardenas regime in Mexico. It certainly was a funny way of giving a demonstration of New World democratic unity against Old World dictatorial solidarity. Two weeks ago three Cuban political parties publicly expressed their disagreement with Dictator Batista's desire to before a bourt or alteration in the Cuban placetorial and which would bring about an alteration in the Cuban electoral code which would postpone the general elections due to take place on February 15, 1940. As the man behind the throne, Batista has had President Frederico Laredo Bru address a message to the Cuban Congress requesting this change.

The condition of affairs in the island republic which owes its independence to Uncle Sam and for the upholding of whose dictator our Government is so solicitous is anything but a credit to

democracy.

Of course, every well-informed person is aware that democracy is unknown in Latin America, and that when the spokesmen of our Government express themselves in lofty terms regarding the happy state of human existence in Latin America, thanks to the devo-tion of the Latin-American republics to liberty, they are simply speechifying about a condition of things that does not exist. It is too much to expect that the administration will do anything

to stoo much to expect that the administration will do anything toward changing its policy with regard to the Batista dictatorship in Cuba, in view of the manner in which it has supported that dictatorship and the dictatorship of Lazaro Cardenas in Mexico, and in view of the benediction given by it the other day to the dictatorship of President German Busch, of Bolivia. Like Mexico, Bolivia to physical particular American Expensive. Bolivia is plundering American property.

The administration's whole Latin American policy has, however,

but a comparatively short lease of life, as a fact for which all who

cherish American self-respect and uphold the cause of liberty and of international honesty have only too much reason to be thankful. In January 1941 a new administration will take over the reins in our National Capital. The American people will insure beforehand that that administration will be one which will uphold the rights and dignity of this Republic in its dealings with Cuba, Mexico, and every other nation under the sun, thus putting an end to a foreign policy that has humiliated the United States in the eyes of the world and inflicted upon us incalculable material losses.

Tributes to American Automobile Association School Safety Patrols

EXTENSION OF REMARKS OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, May 9 (legislative day of Monday, May 8), 1939

EXCERPTS FROM COMMENDATION BY GOVERNORS AND SENATORS ON THE SCHOOL-PATROL MOVEMENT SPONSORED BY THE AMERICAN AUTOMOBILE ASSOCIATION, ITS AFFIL-IATED MOTOR CLUBS, SCHOOLS, AND POLICE

Mr. REYNOLDS. Mr. President, Washington has been host to many national gatherings. Our National Capital has become, and properly so, a center for focusing attention on many worth-while activities. But few if any of these are more patriotic in character or deserve greater attention than the great spectacle of youth to be staged here Saturday, May 13.

On this occasion, more than 13,000 boys and girls-members of school safety patrols-will come from 20 States for their annual parade. They will represent some 275,000 youngsters who serve in school patrols in more than 3,000 communities. These boys and girls are not only engaged in an effort to safeguard their schoolmates from the hazards of traffic but are also receiving fine training in civic responsibility and a background of training for citizenship.

We hear much of the "world of tomorrow." We need have no fear when our youth is being properly trained in such great work as the school safety patrols. And it is most significant that while youngsters abroad live in dread of war and are receiving training in wearing gas masks, our children are following the peacetime pursuit of real service. It is the American way and we should be proud of it. I have long contended that our first obligation as a people is to our citizens of tomorrow. We should think of them before we undertake to solve world problems. This national gathering of school safety patrols here next week-this great demonstration of youth serving youth-offers a splendid opportunity for all of us to pause and consider where we are going, what we are doing for our own citizens of tomorrow.

It has been pleasant to know that 35 Governors and more than half the Members of the United States Senate have taken time to commend the work of the school safety patrols and what they have done to safeguard our future citizens against the present hazards of traffic.

The school safety patrols are sponsored by the American Automobile Association, its affiliated motor clubs, schools, and police. As a tribute to the sponsors of this great work, as a tribute to the vast army of 275,000 boy and girl patrol members, as a tribute to the Governors and Senators who have commended this organized safety effort, and as a fresh reminder of the obligation we owe to the youth of America. I ask unanimous consent that the tributes paid to the school patrol movement be inserted in the Congressional Record.

It is a merited tribute to youth everywhere.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Gov. Frank M. Dixon, of Alabama:
"I am happy to acknowledge the contributions that the schools of our State have made to traffic safety.

* * * These patrols are not only a safeguard for school children but a valuable training

in leadership and responsibility for the boys and girls who participate in them."

Gov. R. T. Jones, of Arizona:

"It is impossible for us to estimate the number of lives that have been saved since the inception of the school safety patrols. The educational value of the programs of these patrols and their actual life-saving value could never be purchased with all the coin of the realm."

of the realm."

Gov. Carl E. Bailey, of Arkansas:

"I feel that it is impossible to place too much emphasis on the part that school safety patrols play in endeavoring to make it possible for our children to be conducted safely to and from school. In addition to the service rendered by the members of these patrols, I consider it fine training, as it imbues them with the spirit of self-sacrifice and protection for their fellow men."

Gov. Culbert L. Olson, of California:

"School safety patrols save lives, lives of school children, our most precious national asset. Further, this activity arouses a consciousness of the value of safety in the minds of the automobile drivers of the present and of the future. But more than that, such direct participation in an important community activity creates that spirit of self-discipline which gives life to our democracy." democracy.

democracy."

Gov. Ralph L. Carr, of Colorado:

"The work which has been done by the American Automobile Association in furthering the safety on the highways is something which should be recognized by all of the people of the country and given their undivided support.

* * * Colorado joins with you and these boys and girls in saying that we must and will cut down the number of accidents on the highways when the entire Nation teaches safety as the American Automobile Association is trying to do."

Gov. Raymond E. Baldwin, of Connecticut:

Gov. Raymond E. Baldwin, of Connecticut:
"I regard the school safety patrol movement, sponsored by the American Automobile Association and its affiliated motor clubs, as one of the most constructive undertakings in America today.

* * No man ever will know the number of lives saved, nor

* * No man ever will know the number of lives saved, nor the number of serious accidents prevented, through the work of school safety patrols."

Gov. Richard C. McMullen, of Delaware:

"I am thoroughly in sympathy with the youth-service movement along these lines, as it is only by training our young people to the ideas of safety that we will, in part, eliminate automobile fatalities. It is not only an important step in this direction, but teaches them civic responsibility as well."

Gov. Fred P. Cone, of Florida:

"I am in full accord with the training of our youth in civic responsibility and the effective work the safety patrols have accomplished."

plished.'

Gov. E. D. Rivers, of Georgia:

"Safety of our citizenry today and, most especially, of our youth is the mark at which these young patrolmen aim, but it is far from being the only thing accomplished through their program. It is inspiring our younger boys to a new ideal in citizenship, a new pride in themselves as part and parcel of the New America"

Gov. C. A. Bottolfsen, of Idaho:

"I believe that the work certainly impresses these patrol members with a fine sense of what traffic safety really means and I feel that the highest commendation is due your association for supporting the school-patrol movement."

porting the school-patrol movement."

Gov. Henry Horner, of Illinois:
Governor Horner through Milburn P. Akers, superintendent of the department of finance, asks the American Automobile Association to accept his congratulations for the excellent work being done by the patrols under their sponsorship and expresses his best wishes for the continuing success of the movement.

Gov. M. Clifford Townsend, of Indiana:

"Thousands of boys and girls in Indiana are receiving fine training in this field under the sponsorship of the American Automobile Association and its many branches. As an educator and a public official, I can combine the sentiment of both groups in bestowing the highest praise upon the school safety patrol movement." ment."

ment."

Gov. George A. Wilson, of Iowa:

"This is a program worthy of praise in view of the fact that it has proved very effective in saving our children from accidental death and injury. It should also be remembered by our schoolboy patrolmen and schoolgirl patrol members that they are not only serving their fellow students, but they are obtaining valuable experience which will be useful to them in any walk of life when they become adults."

Gov. Payne Rather of Kansas:

they become adults."

Gov. Payne Ratner, of Kansas:

"I want to congratulate you on the splendid safety-patrol work in which you are interested. I do not believe we can put too much stress on the safety of our youth. I heartily commend this movement and feel it has done a tremendous lot of good."

Gov. Albert Benjamin Chandler, of Kentucky:

"The American Automobile Association deserves the commendation of every patriotic citizen for its efforts to promote traffic safety through the school safety patrols. The youngsters actively engaged in the patrol are obtaining worth-while training and are rendering a valuable service to the several million school children they serve."

Gov. R. W. Leche, of Louisiana:

"The future of our Government, the preservation of American ideals, and the continuance of democratic principles rest today

with the young men and women of our Nation. For this reason, movements like the school safety patrols, which is sponsored by the American Automobile Association, deserve the unselfish support of every American citizen worthy of the name."

Gov. Lewis O. Barrows, of Maine:

"The State of Maine thoroughly believes that the formation of school-boy patrols has been of inestimable value in promoting highways settly and in establishing a morre continus attitude among

way safety and in establishing a more cautious attitude among the school children. We have supported this project wholeheartedly and are deeply grateful to the American Automobile Association for their untiring efforts. I trust that the same cooperative relations may continue to exist for a long time."

relations may continue to exist for a long time."

Gov. Herbert R. O'Conor, of Maryland:

"It is indeed commendable that the American Automobile Association and its affiliated motor clubs, in cooperation with schools and the police, have conceived this splendid idea which unquestionably has a tendency to engender alertness on the part of the participants, mainly boys and girls, as well as to develop the due regard for safety so far as it affects the citizens of Maryland. For their civic response and constructive work in this connection the various organizations are to be congratulated, and you have my various organizations are to be congratulated, and you have my sincere wishes for continued success." Gov. Leverett Saltonstall, of Massachusetts:

Gov. Leverett Saltonstall, of Massachusetts:

"The annual parade of school safety patrols is a striking reminder of the splendid work in protecting lives upon the streets and highways. Adults can learn much from children who have led the way in reducing deaths caused by automobiles. The American Automobile Association has performed a great civic service in sponsoring the movement for school safety patrols."

Gov. Luren D. Dickenson, of Michigan:

"The approaching eighth annual parade of school safety patrols makes it timely for us to appreciate the great value of the work done by the school children of this country in making our high-

done by the school children of this country in making our high-ways safer. I want you to know that we in Michigan are anxious to do everything we can to cooperate to the fullest extent in this worth-while program."

Gov. Hugh White, of Mississippi:

Gov. Hugh White, of Mississippi:

"I believe that the greatness of this student-service movement depends not only upon its value from the standpoint of safety, but also from the training it gives the students in citizenship. It causes the child to realize that he must think not only of safety for himself, but also for others, and helps him to understand that his individual conduct and action will affect the welfare of his community. I wish for the American Automobile Association, its affiliated members, and all the school safety patrols of the Nation the greatest success in the years to come." of the Nation the greatest success in the years to come."

Gov. Lloyd Stark, of Missouri:
"I have long been aware of the valuable services performed by "I have long been aware of the valuable services performed by your organization in the establishment of school safety patrols. I think it is a splendid thing that you should hold a national demonstration of this work such as is scheduled in Washington on Saturday, May 13. It seems to me the individual benefits received by the boys who participate in the patrol work should not be overlooked. Many youngsters who in former years would have diverted their natural instincts for leadership into such objectionable channels as becoming playground bullies now exercise that same instinct in this constructive service. Again permit objectionable channels as becoming playground bullies now exercise that same instinct in this constructive service. Again permit me to congratulate you upon the fine job the American Automobile Association has done in bringing the benefits of the school safety patrols to every section of the country."

Gov. Roy E. Ayers, of Montana:

"Many times in my travels throughout the State I have noticed the groups of how and girls serving as school patrols for the safety.

the groups of boys and girls serving as school patrols for the safety of their fellow schoolmates, and I believe that it is one of the most effective means that we have of avoiding accidents in our cities."

Gov. R. L Cochran, of Nebraska:
"I have had occasion to observe the work of the school safety patrols, and it is my conviction that the boys and girls serving on these patrols are performing a splendid public service in protecting the lives of their schoolmates. This observation is substantiated by the observations of others and accident statistics which demonstrate forcefully the effective work of the patrols."

Gov. Francis P. Murphy, of New Hampshire:

"The fine record of safety accomplishment to the credit of the school safety patrols demonstrates the possibilities that lie in systematic and interested organization for the protection of human lives. I seriously doubt that most people throughout the country fully realize what the 275,000 boys and girls now serving in school patrols have done toward protecting their schoolmates. The record is impressive. If adults would do anywhere near as well, there would be no safety problem in this country."

is impressive. If adults would do anywhere near as well, there would be no safety problem in this country."

Gov. A. H. Moore, of New Jersey:

"If I could, I would certainly like to see the patrol army of 12,000 children marching up Constitution Avenue. While children are being marshaled for future soldiers in many lands, we are marshaling them for the protection of their fellows. The lessons boys and girls learn in traffic work will stand them in good stead in years to come. * * We are attacking the problem through the right channels when we begin with the education of youth, to avoid in the future the mistakes of the past."

Gov. John E. Miles, of New Mexico:

"I cannot praise too highly the idea of the school patrol. I believe that the patrols have been effective agencies not only in results obtained through traffic safety, but in instilling a greater regard for care and caution among all school children * * *."

Gov. Herbert H. Lehman, of New York:

Governor Lehman extends best wishes for the success of the patrols and expresses keen interest in all efforts to promote traffic

Gov. Clyde R. Hoey, of North Carolina:

"I wish to congratulate your association (the A. A. A.) for the splendid work it has been doing in the teaching of safety in the schools throughout the land. I think this has been of inestimable benefit in inculcating the thought and teachings of safety in the minds of the young people who will be driving automobiles tomorrow, and this should result in a decided decrease in fatalities and accidents on our highways."

Gov. John W. Bricker, of Ohio:

"The reduction of traffic accidents by any means is highly commendable, but the work of the safety patrols is especially valuable since the boys and girls of the Nation are themselves thinking and striving toward the goal of accident prevention, and in the process of handling their own problems are preparing themselves to be better citizens, capable of dealing with serious responsibilities. The American Automobile Association and the police of the various communities are also deserving of congratulations for the

ties. The American Automobile Association and the police of the various communities are also deserving of congratulations for the leadership they are giving to the promotion and functioning of the school safety patrols."

Gov. Charles O. Sprague, of Oregon:

"I believe that the school patrols have done very effective work in safety. They have not only offered protection in the vicinity of schools, but they have made motorists conscious of the need for protection of children and so have helped promote safety all along the highways." the highways.

Gov. William H. Vanderbilt, of Rhode Island:

Gov. William H. Vanderbilt, of Rhode Island:

"Governor Vanderbilt, through George R. Beane, registrar of motor vehicles, congratulates the school patrols and declares their work is certainly bearing fruit and cannot be commended too highly."

Gov. Harlan J. Bushfield, of South Dakota:
Governor Bushfield commends the school patrols for their worth-while service and expresses the belief that theirs is one of the most valuable services we can promote in the interest of safety.

Gov. Henry H. Blood, of Utah:

"I have watched with keen interest the development in Utah of the school safety patrol idea. The thought is highly commendable, and the efforts of all who have joined in carrying out this plan are most praiseworthy."

Gov. George D. Aiken, of Vermont:

"I am glad to add my name to the long list of Americans who

Gov. George D. Alken, of Vermont:

"I am glad to add my name to the long list of Americans who heartily approve of the work of the school safety patrols. I firmly believe that making our youth safety conscious is a vital factor in reducing our accident rates."

Gov. George D. Alken, of Vermont:

"It is interesting to note the valuable work which has been done by a large number of boys and girls in the school patrols in widely scattered communities throughout the United States. They deserve great credit for the results achieved, and the organization serve great credit for the results achieved, and the organization which has promoted this work is entitled to the commendation of all good citizens."

SENATORS COMMENDING THE SCHOOL PATROL MOVEMENT

Senator Charles O. Andrews, of Florida:

Senator CHARLES O. ANDREWS, of Florida:

"On many occasions I have expressed my deep appreciation and admiration for those who have this work in charge, and more particularly the young American school boys and girls who take part in it. The parade last year was an inspiration and would be to any man who must know that this new generation must take up where we of today ultimately must leave off."

Senator Warren R. Austin, of Vermont:

"I have observed with appreciation the service of school safety patrols in my own State of Vermont and here in Washington.

patrols in my own State of Vermont and here in Washington. Good work! Keep it up!"

Senator Josiah William Bailey, of North Carolina:

"The school safety patrols represent a fine undertaking, both from the standpoint of child protection and the training of American youth. I cannot commend too highly this valuable program for moulding citizens for the future. The sponsors of this movement are to be congratulated."

Senator W. WARREN BARBOUR, of New Jersey:

"May I take this opportunity to express my appreciation for the effective work which the school safety patrols are doing, not only in the District of Columbia, but throughout the entire United States. I have observed the young people on many occasions per-forming their duties with confidence and in an effective manner, and I am sure that their contribution to safety is very material. My best wishes for the continued success of this youth service movement."

Senator Homer T. Bone, of Washington:

"The American Automobile Association is doing fine work in cooperation with school and police through the school safety patrols. The low accident record established by the youngsters makes the school safety patrols of much value to the communities in which they operate."

Constant H. Styling Bungers of New Hampshire:

Senator H. STYLES BRIDGES, of New Hampshire:

"There can be no doubt that the school safety patrol movement is one of the most far-reaching and effective methods yet conceived to lessen the number of fatalities and injuries suffered yearly by the school children of America. It is therefore with the greatest pleasure that I unreservedly commend and thank the

thousands of school children throughout the United States whose

thousands of school children throughout the United States whose efforts have obtained such happy results."

Senator Harry Floop Byrn, of Virginia:

"On the occasion of the eighth annual parade of school safety patrols, I should like to extend to the thousands of youngsters who participate, and to the American Automobile Association for its guidance, my sincere congratulations upon the admirable service its guidance, my sincere congratulations upon the admirable service which is being rendered. The safety patrols command my personal respect as a driver and as a citizen. They are making an immeasurable contribution to the safety of our children, and to the realization of the responsibilities which are citizenship. Promotion of the safety patrol program is an undertaking of merit which is being meritoriously fulfilled both by the sponsors and the youngsters who are competently doing the job."

Senator Arthur Capper, of Kansas:
"It is largely due to the discipline and devotion of these youngsters that the accident record among children of school age in the United States is almost a model for traffic safety. The American Automobile Association, the safety councils, the school authorities, and the police authorities over the Nation are to be congratulated upon the great work of these boys and girls. Hats off to the safety patrols."

Senator D. Worth Clark, of Idaho:

Senator D. Worth Clark, of Idaho:

"In my opinion, the program of the school safety patrols is one of the most sensible and valuable projects that I know. Rich dividends in the form of saved human lives are being paid the United States each year through the operation of the program, and the American Automobile Association is to be commended for its sponsorship of the movement."

American Automobile Association is to be commended for its sponsorship of the movement."

Senator Tom Connally, of Texas:

"On the occasion of the eighth annual parade of school safety patrols to be held in Washington on May 13, may I give expression to my appreciation and admiration for the splendid work which the patrols have accomplished looking to the safety of the public from traffic accidents. The value of this youth-service movement can hardly be overestimated. It not only is a very useful and valuable service in the direct matter of promoting safety but in its instilling into the young a desire to serve others and to dedicate one's ability to civic and public improvement it is making a very fine contribution to the cultural and spiritual development of our youth."

Senator John A. Danaher, of Connecticut:

"Who has not noticed the youngster, himself possessed of qualities of leadership, guiding the safe passage of his little charges across our streets? Who has failed to accord him his due measure of appreciation? It is especially fitting that you give tangible recognition to the splendid work being done by the school safety patrols. It is a pleasure to record my approval of and encouragement to this splendid objective."

Senator James J. Davis, of Pennsylvania:

ment to this splendid objective."

Senator James J. Davis, of Pennsylvania:

"The safety movement in America has its greatest hope of success through the concerted activities of our boys and girls. I am very glad to learn that approximately 275,000 boys and girls now serve in the school patrols in 3,000 American communities. I wish to congratulate the schools on the cooperation they are giving in the safety movement and to pledge my own continued support for this effective work."

Senator Sheridan Downey, of California:

"I wish to congratulate you (the A. A. A.) upon the splendid

"I wish to congratulate you (the A. A. A.) upon the splendid work being accomplished by the school safety patrols which you have sponsored. At the same time I wish to commend most highly the patrols and the work which they are doing. As a result of this work the whole Nation is being benefited."

Senator Allen J. ELIENDER, of Louisiana:

Senator Allen J. Ellender, of Louisiana.

"It is with pleasure that I add my endorsement of the fine work that is being done by the school safety patrols in protecting the lives of our youngsters. I desire to state that in my humble opinion, this is a truly great movement, and I sincerely hope that it will soon reach out and embrace all 48 of our States."

Senator Walter F. George, of Georgia:

Senator Walter F. George, of Georgia:

"I wish to take this opportunity to commend the excellent work being done by the school patrol movement sponsored by your organization. This program, with its stabilizing influence, is not only character building but is a protection to our school children."

Senator Peter G. Gerry, of Rhode Island:

"With the figures for motor vehicular accidents so high, the success of the patrols is to be applauded. School children, whom we would regard as most vulnerable to such accidents, are setting an example which their elders might well follow. It is good to have children trained to meet the problems of the world in which they live, and the work of the safety patrols, bearing the results that it does, deserves commendation."

Senator Ernest W. Gieson, of Vermont:

"I consider the work of the school patrols to be one of the most

"I consider the work of the school patrols to be one of the most valuable aids for the protection of the lives of the school boys and girls in America. These children are deeply interested in their work, and without question as a result of their activities thousands

work, and without question as a result of their activities thousands of lives have been saved. I am indeed glad to lend my aid to their organization at any time."

Senator Guy M. Gillette, of Iowa:

"I have often observed the work of the school patrols here in Washington. These youngsters are doing fine work and unquestionably are preventing many automobile accidents and injuries. I am hopeful that this splendid effort will continue and even enlarge its present activity. These youngsters are certainly con-

tributing to their community welfare and the safety of our

Senator Theodore F. Green, of Rhode Island:
"The American Automobile Association is to be congratulated on its sponsorship of this worth-while movement in public safety and the members of the youth patrol at large deserve all our appreciation for their outstanding contribution to the community

well-being."
Senator Joseph F. Guffer, of Pennsylvania:
"It is with much pleasure that I on the occasion of the eighth annual parade of school safety patrols in Washington, commend the American Automobile Association, its affiliated motor clubs, public schools, and the police for sponsoring and building up the school patrols. The creation of these patrols was and is a splendid work. The children who are members of the patrol are benefited in that they are given at an early age real responsibility and self-reliance."

Senator Pat Harrison, of Mississippi:
"I commend the American Automobile Association on the fine movement it has undertaken in connection with the school safety patrols.

Senator Rufus C. Holman, of Oregon:

"I have noted with much gratification the very effective work which has been done by the school patrols in reducing accidents among children. The members of the school patrols and those who have sponsored this movement are entitled to the highest commendation and the full support of our citizens. I wish to take this occasion to particularly commend and congratulate the American Automobile Association for their constructive work in this field."

American Automobile Association for their constructive work in this field "
Senator Rush D. Holt, of West Virginia:
"The boys' patrol work is an excellent project. It should have the support of all the citizens."
Senator Edwin C. Johnson, of Colorado:
"It will be a grand sight to see 12,000 youngsters from 18 States in the school safety patrols parade in Washington on May 13. Traffic safety is and will continue to be a very serious problem in America; and it is reassuring, to say the least, to have young America manifesting a constructive interest in it."
Senator William H. King, of Utah:
"That their work has been of great importance in protecting the lives not only of school children but of pedestrians generally I think is universally recognized. The school children who are a part of this patrol system gain valuable lessons in regard to civic duties and civic responsibilities and thus are better prepared for the responsibilities of life. I shall be glad if this fine organization increases in numbers and in opportunities for public service."

Senator Robert M. La Follette, Jr., of Wisconsin:
"On the occasion of the annual parade of school safety patrols, I extend my warmest greetings to the 275,000 boys and girls who are rendering a mature service to their country in preventing accidents. Countless children have been saved from death and crippled lives by the splendid achievement of these reliable traffic policemen. Young in years, they have demonstrated their ability to assume an adult responsibility. These youthful citizens deserve hearty congratulations from every father and mother whose children are protected by the school safety patrols."

Senator Henry Cabor Lodge, Jr., of Massachusetts:

"I have often noted the work of the schoolboy patrols. I believe they are rendering a splendid service and ought in every way to be encouraged."

Senator M. M. Logan, of Kentucky:

"The school patrol movement sponsored by the American Auto-

Senator M. M. Logan, of Kentucky:

"The school patrol movement sponsored by the American Automobile Association is a most valuable public service. Not only do they protect life, but they receive training in a civic responsibility. Your sponsorship of this organization is much to your credit."
Senator Scorr W. Lucas, of Illinois:
"No movement in recent years, in my opinion, is so utterly worthy

No movement in recent years, in my opinion, is so utterly worthy of commendation as the creation of school safety patrols and the development of this idea throughout the United States under the sponsorship of the American Automobile Association. Not only is the effect of these patrols evidenced in the reduction of fatalities among school children at institutions where the patrols are located but the training given the young people who participate in the program should serve to awaken their civic consciousness at an early age.

an early age * * *."

Senator Francis T. Maloney, of Connecticut:

"I am grateful to you for giving me the opportunity to comment upon the splendid work of the school safety patrols. It is difficult to estimate the number of accidents prevented by the

difficult to estimate the number of accidents prevented by the school children who undertake this work. I am among the many people who are appreciative of your accomplishment."

Senator Kenneth McKellar, of Tennessee:

"I heartily endorse the splendid work the school safety patrols are doing to protect school children. I am sure many lives have been saved by these little soldiers of safety."

Senator James M. Mead, of New York:

"The success of the school safety patrols has been outstanding. In addition to the moral, educational, and civic training that the program affords, it has been really effective in preventing accidents and impressing motorists and pedestrians alike of their responsibility for the protection of our children. You inform me that 275,000 children now participate in these patrols. That is a splendid representation, and its benefits are incalculable. Place me on record as endorsing this activity 100 percent. It is wholesome, helpful, and instructive in every respect."

Senator Sherman Minton, of Indiana:

"The fine work done by these safety patrols in reducing the traffic toll, especially among their schoolmates, is worthy of commendation by all. In common with millions of our citizens, I have observed many mornings their faithful and tireless work in rain and snow, heat and cold. In addition to safeguarding lives, the patrols are very instrumental in inculcating in their schoolmates standards of observance for law and safety that will stand them in good stead for the future."

Senator James E. Murray, of Montana:

"I have on several occasions observed the work of these school patrols, and I cannot too highly praise them for their efficiency in preventing accidents and in the safe conduct of school children to and from the schools of the District. The A. A. A. is to be congratulated on sponsoring this fine organization which has contributed so much to the safety of our school children."

Senator Gerald P. Nye, of North Dakota:

"I have seen many splendid accomplishments resulting from the

"I have seen many splendid accomplishments resulting from the great effort put into the school patrol work, and upon the occasion of this annual parade I want to give this word of appreciation and encouragement to the American Automobile Association which has so well sponsored the fine work."

Senator John H. Overton, of Louisiana:

"I am proud of the good work the boys and girls who are members of the patrols have done and are doing. " * The acceptance of the patrols have done and are doing.

The acceptance of this responsibility to save lives and prevent accidents inculcates into the members of the safety patrols a high regard for civic obligation and genuine American citizenship. At this time I want to express my appreciation for the good work accomplished in so many communities throughout the United States by the boys and girls who serve as members of these patrols."

Senator Chauge Pepper of Florida:

Senator CLAUDE PEPPER, of Florida:

"It will be a happy privilege for me to make proper comment upon the fine work that these young people are doing when the opportunity presents."

Senator KEY PITTMAN, of Nevada:

"I am of the opinion that the school patrols are probably the best organizations for safety in the matter of traffic dangers. In addition to the services rendered by the patrols, the service in itself teaches children caution."

Senator George L. Radcliffe, of Maryland:
"The cooperative movement among the children in matters of
this kind can be and has been of incalculable benefit. I am completely in accord with the movement and I heartily congratulate those in charge for the stimulating and instructive work which has been done.

Senator Robert R. Reynolds, of North Carolina:
"Every effort should be made to promote good Americanism. The
very basis of such a program is to instill a sense of responsibility for American ideals and institutions into the citizens of tomorrow. This is being done through the school safety patrols, a movement in which boys and girls are learning to shoulder responsibility and learning respect for authority. It is one of the finest movements in existence today. It is a source of pride to me that I am the vice president of the organization which has sponsored the patrols, the American Automobile Association."

Senator Richard B. Russell, of Georgia:

Senator RICHARD B. RUSSELL, of Georgia:

"I have observed the members of these patrols on duty here in Washington, as well as in other cities of the Nation. I consider this work not only a great help in protecting the lives of thousands of youngsters who are exposed to constant danger on our streets but also splendid training in the responsibilities of citizenship. Every American citizen, I am sure, commends this movement and the splendid work which has been accomplished."

Senator Morris Shiepparp, of Texas:

"In my judgment, the work being done by the school patrols is of outstanding importance, both from the standpoint of safeguard-ing the lives of children attending school and the standpoint of teaching responsibility to those who serve on such patrols. I congratulate the American Automobile Association on the splendid congratulate the American automobile Association on the splendid progress being made in this field of their activity and wish them and the members of the patrols continued success."

Senator Tom Stewart, of Tennessee:

"You are beginning at the right place with the youngsters. This is a great work, and I heartily endorse it."

Senator Elegar Thomas, of Utah:

"* * I am pleased to add a word of commendation for
the effective work which the youth-service movement is doing. * * *" ing.

Senator HARRY S. TRUMAN, of Missouri:

"I think the school safety patrols are to be complimented highly on the good work they do toward saving the lives of chil-dren. It is one of the best organizations in the whole country for safety. I am very much interested in safety as it affects automobiles and drivers. Pedestrians, of course, must do their part. School safety patrols are teaching children to do their part

Senator Millard E. Typings, of Maryland:
"I know of the school patrol movement sponsored by the Amer"I know of the school patrol movement sponsored by the members on ican Automobile Association and have observed the members on duty on several occasions. This is a splendid work and I believe serves every encouragement."
Senator Burron K. Wheeler, of Montana:
"I think that this youth-service movement is a splendid thing.

It is fine training for the youngsters, and in addition to that, from a practical standpoint, it is of great benefit to the public." Senator Alexander Wiley, of Wisconsin:

'I cannot too strongly commend this youth-training movement. These youngsters are performing a civic job in cutting down traffic accidents and protecting the lives of their younger brothers and sisters. They are performing an even greater civic job in banding together in the American way—not to train for war and destruction—but to train for peace and the prevention of destruction.'

Is the Government That Rotten?

EXTENSION OF REMARKS

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 9, 1939

ARTICLE FROM DYNAMIC AMERICA FOR DECEMBER 1938

Mr. GEYER of California. Mr. Speaker, so much has been said on the floor of this House about the blessings of big business and the inefficiency of Government that I believe it is high time something is said on the other side of the question. Under leave to extend my remarks I desire to produce an article from Dynamic America, written by T. Swann Harding, in answer to an article by James Truslow Adams, in Barron's for October 3, 1938. The article follows:

> [From Dynamic America for December 1938] IS THE GOVERNMENT THAT ROTTEN? (By T. Swann Harding)

(By T. Swann Harding)

Authors never tire of preparing and editors never cease accepting articles designed to show that whatever our Government does is wrong and whatever so-called "private industry" does is right. This does not mean that authors and editors are venal or corrupt. It quite probably means that editors properly assay public opinion.

Such articles appear constantly because the public in majority believes that anything done by Government is done wrong, just because the Government does it, and that anything done by business or private industry is right because the Government did not do it. Typical of such articles is Our Debt to Big Business, by James Truslow Adams. in Barron's for October 3, 1938.

do it. Typical of such articles is Our Debt to Big Business, by James Truslow Adams, in Barron's for October 3, 1938.

The journal is an outstanding financial publication. The author is a historian of considerable financial and business experience, who writes widely and interestingly. He feels that we underestimate what big business has done for us. We incline to give Government entirely too much credit, to smear business, and to ignore the "social asset" value of large corporations.

He cites for us as public benefactors United States Steel, Du Pont, the Bell System, General Motors, Standard Oil. He says: "It is appalling to think what would happen if Government undertook to handle all this vast complexity instead of leaving it, with proper regulation. to the initiative, ambition, and technical skill of individual corporations."

vidual corporations.' He declares that the very existence of these corporations provides many social assets. They render profitable investment possible. They have multitudes of stockholders. They, not the W. P. A., create jobs by promoting research. The rise of the motor industry is cited as an extraordinary story of spectacular private initiative. We are told that private industry alone, not Government, creates goods, wealth, and jobs.

Mr. Adams writes: "One of the earliest efforts by Government to help and control was made in the establishment of the Depart.

help and control was made in the establishment of the Department of Agriculture as far back as 1881, yet Government itself complains that agriculture is one of our sickest industries today."

Private corporations also pay huge sums in taxes. In 1937 General Motors alone offered up \$105,000,000 in this form. This is wonderful. We should study and understand the social balance sheets of our great corporations and give them credit. Government bureaucracy is only to be deplored.

A person of small learning in such esoteric matters scarcely knows where to start in analyzing such an article. The writer of the article just abstracted is a distinguished expert, presumably well-learned in his subject. The journal is one of our outstanding business and financial publications. Yet so much has been recollected or transactions.

ing business and financial publications. Yet so much has been overlooked or ignored.

One's mind naturally reverts to an article that appeared in Barron's for February 27, 1933. This article reported upon the testimony given before a Senate committee by Chairman Charles E. Mitchell, of National City Bank. Mr. Mitchell told how his bank had dealt in its own stock to the extent of nearly 2,000,000 shares. He explained how he had lost millions in Anaconda Copper, saying: "On the back look it appears to me unfortunate—and I wouldn't do it again."

Mr. Mitchell explained how his bank's stock had a peak bull value of \$3,200,000,000 against a paltry book value of \$385,000,000. He told how the bank lost heavily in insecure sugar loans but how he had drawn \$1,200,000 as compensation in 1928 and 1929 each. He told of loans made by his bank to its officers (100 of them) in the amount of \$2,366,000 to cover their stock losses and of which not more than 5 percent (non-interest-bearing, mind you)

which not more than 5 percent (non-interest-bearing, mind you)

which not more than 5 percent (non-interest-bearing, mind you) was ever repaid.

People borrow from Government, also, but 80 percent or more of the poorer risks repay. Yet that is bad. But a bank protects its own officials with unsecured non-interest-bearing loans and the while sells out outsiders—and that is good. Just then Senator Couzens asked Mr. Mitchell his advice about Government finance. Mr. Mitchell looked serious and told the Government what it must do to redeem itself, how to balance its Budget, and how to operate successfully from a financial standpoint.

operate successfully from a financial standpoint.

Is there unconscious humor here or not? Has Mr. Adams heard about these things? Has he, perchance, read the Folklore of Capitalism, wherein Thurman Arnold demonstrates that which the writer of these present lines demonstrated earlier in his These Wattoned Towards it is that there is no beste distinction between

writer of these present lines demonstrated earlier in his These National Taxeaters, i. e., that there is no basic distinction between governmental and private bureaucracy?

Private corporations, especially insofar as they are monopolles, also collect what are essentially taxes for goods or services with which we cannot dispense. They are also organized bureaucratically; they also propagandize the public. But they are not alone in handling the "vast complexities" of which Mr. Adams speaks so feelingly

feelingly.

The Post Office Department, the Department of Justice, the Department of Commerce, the Department of Agriculture, not to mention such Federal commissions as Interstate Commerce, Trade, mention such Federal commissions as Interstate Commerce, Trade, mention such Federal commissions and so on also handle vast complexities.

mention such Federal commissions as Interstate Commerce, Trade, Tariff, Communications, and so on also handle vast complexities. They also display technical skill.

True, Mr. Adams feels that only Government is capable properly of regulating the huge private corporations. He himself therefore admits that the Government has superior efficiency and perhaps better ethics. But Government organizations also perform business on a huge scale. Government-financed research and its varied activities also create wealth and jobs. One huge corporation is very like another whether it be the telephone company or an executive department of the Federal Government.

SEDUCTIVE INVESTMENTS

Again, is not Mr. Adams informed regarding such facts as John T. Flynn brought out in his article The Wall Street Debt Machine, in Harpers Magazine for July 1933? Herein he would find much about the seductive profitable investments offered by private corporations. Let him read of the rise of the United States & Foreign Securities Co. and of how the public paid \$80,000,000 for securities of a concern into which only \$30,000,000 of cash ever went at any

He will also find that millions of dollars paid by the public for securities of United States Steel never reached that corporation at securities of United States Steel never reached that corporation at all. In 30 years the public contributed the huge sum of \$3,680,729,700 to this corporation which amounted to 14 percent per annum on the original cash capital stock investment. The corporation succeeded by its own efforts as an industrial enterprise and nothing was produced for it by the stockholders. At no time was there ever a flow from the stockholders to the corporation.

The industry contributed capital to the stockholders in the

The industry contributed capital to the stockholders in the amount of nearly \$2,000,000,000. Flynn writes: "This huge toll has been abstracted from the national income as a tax levied on a single

been abstracted from the national income as a tax levied on a single enterprise by this vicious system of issuing and distributing stocks. It is perfectly obvious that if it were not exacted as the cut of the common-stock holder it would be available for wages of labor or for division between labor and the public which bought the steel."

We turn now to the "social assets" of the telephone company examined by the writer of these lines in Presenting a "Good" Corporation in Common Sense for October 1938. The Federal Trade Commission announced as long ago as December 1936 that the total revenues collected on handset (so-called French) telephones between 1927 and 1936 was \$53,240,933. Yet the actual cost of the sets installed was only \$23,600,381, while the installed was only \$23,600,381, while the installed cost of the sets installed was only \$23,600,381, while the installed cost of the sets. sets installed was only \$23,600,381, while the installation of the sets

so improved the quality of service, increased business, and decreased expenses as to save the company \$85,391,000.

April 1, 1938, the Federal Communications Commission released

information with regard to a proposed report to Congress on the telephone investigation. Herein it was shown that the Bell System was essentially a monopoly that collected taxes and which had deliberately eliminated competition by buying up patents and utilizing research not to improve service but to aid in obtaining control of related industries.

The system made costly mistakes in judgment and operated at a deliberately low level of efficiency. Its subsidiary, Western Electric Co., did not know the cost of any item it manufactured but sold these items to the system at exorbitant prices. The system set aside huge reserves against so-called depreciation and used this need of somitonest heaving control to fine new construction. this pool of non-interest-bearing capital to finance new construc-

The Bell System monopolized certain related industries but did not credit royalties from such activities to subscribers or rate-payers; it regarded them as its own windfall profit. Its extensive public-relations policy enabled it to indoctrinate professors, employees, and the press and to put pressure on legislators and regulatory commissions. It evaded strict regulation with skill, and its rates were at least 25 percent in excess of those which would have given it a reasonable profit had it been efficiently managed.

Years ago the Bell System credited its contributions to charity to its operating expresses and thus made its stockholders and rate.

to its operating expenses and thus made its stockholders and rate-payers finance its "gifts." It still lacks a long-range nationally planned policy. It still operates so as to attain unnecessarily low efficiency with a high cost of operation. So much for the "social assets" of this big business.

The fundamental dependence of Du Pont upon war preparations is well known. We have here merely a so-called private corporation which would, in a rationally planned system, be purely non-

profit and governmental.2

The citing of the oil and motor industries as examples of what private industry can accomplish unaided is signally inept when we stop to consider the millions upon millions poured by Government into research on and construction of our highways through the Bureau of Public Roads.

GOVERNMENT AID TO BUSINESS

Where would these industries be without our magnificent tax built and supported highways? Our governmental investment (State and Federal) in highways is about \$25,000,000,000. Where would they be without the tremendous expenditures cities, counties, States, and the Federal Government have to make upon traffic officers, regulations, and research in traffic control? When you add to this the fact that private corporations by the use of wage cuts and lay-offs periodically throw their employees upon private or Government charity, thus making the public pay a large part of their operating expenses, the success of these industries is seen attributable very largely to government.

Government aid and assistance and public money alone make

seen attributable very largely to government.

Government aid and assistance and public money alone make so-called private industries successful. Relief enables corporations to operate with a large labor pool which in turn becomes society's economic liability. In the New Republic for December 31, 1930, you will find the distinguished economist, Sumner H. Slichter, explaining all this under the title "Doles for Employers." Those days much was being said about "the American way of independence and self-reliance." Yet employers were even then constantly docking those still employed to compel them to aid the jobless. Baltimore & Ohio employees were working 5 days a week in lieu of 6 to spread jobs, which meant a forced contribution of one-sixth of their salaries to industrial operating expenses—i. e., as doles to the unemployed labor pool. How many big-salaried men did as much at that time?

Insull had had his employees and officers contribute a day's

big-salaried men did as much at that time?

Insull had had his employees and officers contribute a day's pay for 6 months to the unemployment fund. This was the "spirit of voluntary service"—though more realistically it was public aid to private industry. For "the real recipients are the great industries of America," as Slichter wrote. "They are extracting a percentage of the meager pay of tens of thousands of their employees, obtaining myriads of contributions from churches, charitable organizations, the Salvation Army, city employees, commission merchants, hotels, coal dealers, and thousands of business and professional men in order to pay their labor overhead." labor overhead."

If anybody was being pauperized by the dole, it was so-called private industry. Industry paid dividends on idle capital. But in order to do so, the corporations reduced wage payments 39 percent below those of 1920. Yet they found it necessary to reduce common-stock dividends only 12 percent. Why did not industry itself build reserves to tide labor over, if it is so self-sufficient,

¹Gustavus Myers in his History of the Great American Fortunes beginning on p. 595 also gives the facts about the Steel Trust and how it rooked investors. He notes, too, that in 1894 the Carnegies Steel Co. was making armor plate at a cost of less than \$200 a ton, selling it to the Russian Government at \$249 a ton, but patriotically charging the United States Government from \$520 to \$700 a ton for the same product identically. for the same product identically.

²Gustavus Myers notes (p. 709 op. cit.) that a special investigating committee of the United States Senate found that E. I. gating committee of the United States Senate found that E. I. du Pont de Nemours & Co. took in a gross of \$1,245,000,000 for supplying material to the warring governments between 1915 and 1918 and during that period paid dividends of 458 percent on a par value of its stocks. These profits were in large part utilized to expand the company in other fields after the great war. All that Du Pont is today it owes to war profits. The clear profit of the company on war sales was huge. Dividends and extra dividends followed one another prolifically in the war years and the heads of the company emerged multimillionaires.

instead of depending on private charity and ultimately on Government aid?

ernment aid?

In his report on monopoly A. A. Berle, Jr., merely brought this aspect of private enterprise up to date in the summer of 1938. He showed that a plant might be highly efficient technically, yet perform little social service, and throw its employees on relief periodically. The most successful plant may merely be the one that "has succeeded in unloading the maximum possible amount of obligation on the community, to be handled socially. Perhaps it has passed on some of the advantages of this escape from obligation to the consumer in the form of price, leaving the State to collect the rest in the form of taxes."

tion to the consumer in the form of price, leaving the State to collect the rest in the form of taxes."

Thus, said Berle, General Motors pays an average wage of only \$1,100, which will barely keep the worker at a subsistence level. When plants are shut down and lay-offs occur said worker seeks relief. "If this were classified as a cost of General Motors, there might be a different picture of the extent to which General Motors depended on the Government for its profits." Add to this direct loans made to industry through the Reconstruction Finance Corporation, patents, licenses, monopoly grants, special subsidies, Government orders, tariffs, public roads—and what have you left of private industry here?

The motor and oil, like other industries, push off many of their legitimate costs of operation upon government and the general

legitimate costs of operation upon government and the general public. Just where their social assets lie when all factors are considered perhaps Mr. Adams can tell us. His assumptions that governmental research does not pay while privately financed research does pay is of the same logical order as his theory that private

enterprise succeeds through its own exclusive efforts.

In February 1935 Chemical Industries reported that one large chemical company had more than 130 new products ready to place on the market. But the results of its research could not be given to the public because, at the moment, there was no profit in it. However, the results of governmental research are given freely to the public at all times, regardless of profit, and research of the Department of Agriculture pays 500 percent dividends on the money

The Oregon Farmer for March 21, 1935, reported that the State's small investment of \$88,000 in agricultural research—to be compared with the \$120,000,000 average cash income of Oregon farmers—paid the handsome dividend of \$10,000,000, or 10,000 percent. Only 26 percent of this money invested in research came from State funds; most of the rest was Federal Government contribution. That looks like good return on investment.

Great corporations also spend on research. Science Service, in April 1938, declared that industry spent 1.7 percent of its gross annual income, some \$250,000,000, on research; agriculture spent only thirty-seven one-hundredths of 1 percent of its gross annual income on research, or about \$35,600,000. In terms of population, the total for research expended in these two fields is about \$2 per percent per year. Industry plays back a cent per color grossed. person per year. Industry plows back a cent per dollar grossed.

RETARDING SCIENTIFIC PROGRESS

But whereas private industry uses research very largely to suppress the results, to obtain control over rivals, or to perfect some quasi-fraudulent product or device with which to mulct the public, governmental research is on the level, and its results are available to the general public at all times. Read Bernhard J. Stern's contribution to the National Resources Committee report issued in June 1937

You will find that great corporations regularly suppress inventive and research genius rather than encouraging it for the public welfare. The Bell System alone suppressed 3,400 patents unused in order to forestall competition, making public convenience secondary. Only 12 out of 75 most important inventions between 1889 and 1929 resulted from corporation research. Louis D. Brandeis showed in 1912 that huge corporations are essentially nonprogressive. Kettering, of General Motors, said in 1927 that bankers regarded research

Monopoly stays the hand of scientific and technical progress despite all its lovely research laboratories. Government research can afford to be free from such restraint. This brings us naturally to the greatest research institution ever financed by any Government, the United States Department of Agriculture. Yet, instead of taking

the United states Department of Agriculture. Yet, instead of taking patriotic pride in it, perhaps a majority of our citizens, like Mr. Adams, prefer to malign and ridicule it.

Very slight understanding of our agricultural problem indicates that Mr. Adams has no conception whatever of the relation of this Department to the industry it serves. He completely misunderstands and distorts its function.

Agriculture was long a region of rampant private initiative and agretation of a legisla of call and an interest and pure private enterprise. Land was cleared, the soil was mined, the forests were destroyed, and the individual farmer moved on. He conserved neither the riches of the earth nor the water supply. Seeking increased profits he disregarded the conservation of national resources altogether; he cleared and cultivated acreage that should have been reserved for forests and grass.

Naturally flood and rain followed; wind and water erosion followed. The Great War led to speculation in agricultural land values and to clearing and cultivating of yet new acreage for the foreign market. Loans helped extend this foreign market for a while after the war. Then came the collapse. The export market disappeared but overproduction of agricultural products continued. Land values were deflated. Farmers—many of whom were speculators and many of whom were depending upon land which could

under no normal circumstances provide them a living-were ruined, of course

But what this long rein of private industry had done, the ruin that accomplished, must now slowly but surely be remedied by a nationally planned agency which moved along well-thought-out scientific lines. It could not always do what was best. It had often to do what farmers or their Congressmen demanded against its own better judgment. It had to perform research, educate the people, and try to apply scientific knowledge all at one and the same time.

people, and try to apply scientific knowledge all at one and the same time.

Already Washington and Jefferson were complaining of erosion in their day. Even then rampant individualistic farmers were mining the soil and passing on, leaving a ruined countryside. Agricultural individualism produced this catastrophe after many generations. The ruin cannot quickly be remedied by the planned, erations. The ruin cannot quickly be remedied by the planned, scientific stratagems devised—often with much political interference—by a Government department organized for long-time

operation.

BUSINESS EXPLOITS PUBLIC

We come finally to the ultimate boon Mr. ADAMS depicts that We come finally to the ultimate boon Mr. Adams depicts that private corporations shower upon us. They provide safe investment and corporations pay taxes. Has he read such books as John T. Flynn's Graft in Business or Louis D. Brandeis' Other People's Money? If he has, how can he ignore the fact that private People's Money? If he has, how can he ignore the fact that private corporations steal from the public far more than they can ever repay in taxes? How can he disregard the fact that such corporations themselves operate on a very wide tax base and do not hesitate to despoil educational and religious institutions as well as widows and orphans in their exploitations? For they will sell "securities" of no value to anyone who can buy.

Brandeis proved that while bankers levy what are essentially huge taxes on the general public they do little or nothing in return. They do not provide funds for industry till industry finds itself a gold mine; then they step in, combine and reorganize, take enormous fees, and walk out—often owning all. No one escaped taxes on loans and bonds. Bankers are never initiators according

taxes on loans and bonds. Bankers are never initiators according

Brandeis tells how in 14 years ending June 30, 1912, the Union Pacific issued "securities" amounting to nearly \$400,000,000, yet none of this money was needed and all construction work and improvement could easily have been financed out of current income. Nearly the entire sum was used simply to buy the bonds and stocks of other railroads. This sort of manipulation was generally followed in private enterprise.

Flynn shows that what Government would regard as gross malescent in office on the part of the provider of the provider of the results.

resance in office on the part of an official is simply the regular, ordinary, everyday, supposedly decent conduct of men in private enterprise. There trusted officials are expected to control enterprises they do not own in such manner as to pour into their own pockets money that rightfully belongs to stockholders or to the

public.

They will form dummy companies with dummy directors and offi-cers. They will add enormous sums to their salaries in the form of surreptitious bonuses about which stockholders go uninformed. They will make deals with banks whereby large profits are made inside by buying and selling of the stock of parent companies. As directors of corporations they will throw business from one to another in a way no government would tolerate in its higher officials.

cificials.

Employees of companies shamelessly pare off their graft. Factory engineers are bribed to defeat successful tests of a competitor's machines. Deals are made in the buying of raw materials that pay certain company officials well but always defraud the public. The whole of private business takes place in an environment where perfectly respectable, upright, Christian gentlemen can with impunity and even dignity carry on deals that enrich themselves at the expense of their companies and the stockholders. Government the expense of their companies and the stockholders. Government

the expense of their companies and the stockholders. Government graft is trivial by comparison.

Are the professional detractors of our Government and all its works actually ignorant of these things? Surely Mr. Adams cannot be. Obviously no government is perfect. None ever can be so long as fallible human beings operate it. But it is generally less costly and more efficient than private enterprise. It serves more needs well. It provides far greater "social assets," to use Mr. Adams' phrase. More than that, it is only ourselves, for we can change and mold our government as we will.

Moreover all business and industry whether called public or

our government as we will.

Moreover, all business and industry, whether called public or private, is supported in last analysis by the people as a whole. Just so surely as some of us pay taxes, all cf us pay a sales tax on goods consumed to finance research, processing, packaging, advertising, labor costs, and profits for private enterprise. We contribute just as surely and just as involuntarily to the gas, electric, and telephone companies as to the Department of Labor. The Government is not more but far less likely to waste our money utterly than some private enterprise.

Large-scale enterprise always tends to outrun the moral and mental stature of the men who direct it. This tendency is as apparent in government as in private enterprise, only the government is always under more rigid scrutiny and supervision than private enterprise. The public both expects and demands it to live up to standards it does not expect from private enterprise. Its operations are so much more liable to be made public quickly then these of privately managed corporations.

than those of privately managed corporations.

The only question to be answered is this: Is the organization, public or private, efficient in meeting needs and quick to sense and

meet new needs as they arise? Every great organization should meet the actual needs of the people, not so much the needs certain thinkers believe the people ought to have. Does this organization, whatever it is, efficiently fill that function?

Business asks to be let alone. It deplores Government interference. That is all ironic when we remember it is business and industry who always initially demand governmental interference or this would not occur. Government continuously subsidizes business and private industry, sometimes directly as in the case of loans, sometimes indirectly as in the case of building highways for automobile manufacturers' wares.

We have long directly subsidized air lines and the merchant ma-

We have long directly subsidized air lines and the merchant marine. We subsidize publishers by giving them a low second-class mail rate. Government subsidizes by granting licenses, patents, trade-marks, and certificates of public convenience and necessity, the last really establishing monopolies. Tariffs and price-protective measures operate as subsidies. The Government housing program subsidized the building industry. Governmentally financed relief subsidizes all industry.

The "income security" and "lev-off henceld" riverses the product of the process of the product o

The "income security" and "lay-off benefit" plans announced by General Motors in the press November 15, 1938, offer a first faint-hearted step on the road to the assumption of its social obligations by a great private bureaucracy. But note that the first-mentioned plan guarantees the worker only 60 percent of his standard weekly earnings the year around, while the second provides but 40 percent, and that only to the equivalent of 72 hours' work at the employee's last hourly wage.

Both advances are to be repaid later in work. During this time, as well as when the "benefit" is in effect, the employee's income is obviously reduced. In that that average income barely if at all enables him to sustain a reasonable standard of livelihood when paid in full, any reduction in it still amounts to a call upon the community for doles to the corporation which might as well be called taxes

called taxes

All is not good in government, but all is not bad, either. All is not bad in private enterprise, but much is. Both institutions often serve us poorly, but the latter much more frequently than often serve us poorly, but the latter much more frequency than the former. The sooner Americans learn to understand and appreciate their Government and the multitude of services it renders them, the better for them, and the more quickly government will improve. It is well enough to appreciate our "debt to big will improve. It is well enough to appreciate our "debt to big business," but to do so intelligently and in the full knowledge that private enterprise has already defrauded us of enough to pay the ederal debt and leave a big margin besides.

The Vanishing Farmer

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1939

LETTER FROM THEO. SAMPSON, OF MCVILLE, N. DAK.

Mr. BURDICK. Mr. Speaker, in order that the Congress and the country may have first-hand information about conditions on farms in North Dakota, I desire to present herewith a statement recently sent me by Mr. Theo. Sampson, of McVille, N. Dak.:

McVille, N. Dak., April 5, 1939.

To Hon. U. L. Burdick and to Other Friends of the Farmer,

Washington, D. C.

Messas: We, the farmers, are fast becoming a vanishing race. We are being apparently eliminated. Grain prices are impossible. We are just only hanging on, as it were, as we, in North Dakota anyway, are absolutely busted and broke. Unless something is done in the line of scaling down land debts to something like the worth of the land now and giving us a low interest and also a long time to pay, we will surely have to let the land go and quit farming in favor of the relief millions.

I will state, as an example, my own case. I have 180 acres of land. There was due the Federal Lank Bank \$1,951 last fall on a combined commissioner loan and land bank loan. I managed to pay \$100 covering interest; also paid taxes, as we had no crop last year. Find by comparison with the prices the Bank of North Dakota received for their land sales last year (a trifle over \$11 per acre) that I might as well let the Federal Land Bank have the land, as it is not worth more than I owe them. Also find that on account of a series of dry years without any income that buildings have become run down more than I owe them. Also find that on account of a series of dry years without any income that buildings have become run down and badly in need of paint, etc., so that the average farm will need at least an average of \$1,000 to put buildings back in shape, let alone replacement of all our now worn-out machinery. Suggest pressure be applied to the Federal loan systems that debts be cut in half and long-term loans and low interest also be allowed us so as to start the ball rolling on State and private land debts. If nothing is done, surely we farmers will become as the Indians, a vanishing

Another thing I wish to bring forward is seed loans. This is another dark, sinister shadow hanging over us. Why not let the seed loans be worked out on making feeder roads and other roads in each township and graveling roads in fall-winter period—some each year until paid? Twenty-five percent would likely have to be allowed out of earnings for feed and expenses in cash. This could be, say, half taken over by townships or county or State—the expense money, I mean. The farmer, I am certain, would be pleased to pay them this way.

Respectfully submitted.

THEO. SAMPSON.

Neutrality

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Monday, May 8), 1939

STATEMENT OF HON. BAINBRIDGE COLBY BEFORE THE COM-MITTEE ON FOREIGN RELATIONS

Mr. REYNOLDS. Mr. President, I respectfully ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD a most able, informative, and interesting statement made by the Honorable Bainbridge Colby before the Committee on Foreign Relations, of which I am a member. I was fortunate in being provided the opportunity of hearing Mr. Colby at the meeting of the committee on May 4 and so greatly was I impressed by his statement that I desire its publication in the RECORD. Mr. President, as you will recall, the Honorable Bainbridge Colby was a member of the Cabinet of Woodrow Wilson, where he served as Secretary

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

printed in the Record, as follows:

Mr. Chairman and Senators, let me say at the cutset of my remarks on the grave questions which the committee is considering, that I bring you no rounded thesis of my own as to how these questions should be answered. I am quite aware that I have not the certain or complete answers. I have some thoughts, however, which in your patient canvass of all points of view, I am perhaps justified in submitting to your consideration. I would do so, however, with the utmost respect for differing opinions.

I have had the opportunity of reading considerable portions of the testimony taken by your committee. One cannot fail to be impressed with your sincerity and open-mindedness.

In the statements submitted to you the new attitude of concern to the point of intervention in any conflict, however remote, which some well-meaning persons would like to see this country adopt, finds its reflection, despite the complete departure it would involve from our history and traditions. This viewpoint, when revealed, has been stated with caution and qualification, but it exists, and there are signs that among certain elements in our population it has made a dangerous degree of headway. It is in the fashion which became prevalent with us after the Great War to encourage grandiose schemes for the creation and preservation of peace. Modest proposals for relieving tensions in narrower fields have lost their attraction. Various formulas have been advanced and earnestly argued. The hasty reliance placed in them has served to weaken respect and support for the gradual and unobtrusive improvement of international relations in practical ways. The present state of the world is the best exemplification of the folly of this easy type of approach.

The American people, having falsely been told that our effort to

cation of the folly of this easy type of approach.

The American people, having falsely been told that our effort to preserve our neutrality got us into the war, have been driven in their perplexity to measures which are designed to insulate the United States from all contact with belligerent powers, but which

are likely to have quite different effects.

without precisely knowing the identity of the combatants or the issues of the war we are informed that the United States has no choice but to participate. European nations are seeking to enlist us in the name of the higher morality in their perpetual feuds. It is even argued that as neutrality failed to keep us out of war in 1917, unneutrality must perforce become the national policy.

We seem to have forgotten that the only alternative to belligerency is neutrality—neutrality as understood in international law. If there is no such thing left as neutrality, it will be difficult, indeed,

to find a tenable footing for any policy of noninvolvement in a general war, and noninvolvement in such a war is the fixed resolve and

purpose of our people.

This is the avowed object of each of the resolutions and bills referred to your committee and the unquestioned purpose of their respective sponsors. We intend to keep out of war. How shall it be done? With the proposals before you, which will you recommend as best calculated to achieve this objective?

As your chairman, Senator Pittman, put it, "The question before this committee is whether we are going to legislate at all, and if so, which one of the alternatives we are going to accept." Senator Pittman then proceeded to state these alternatives with

admirable clarity, namely:
(1) To add all materials directly used in war to our Embargo

that and maintain our Embargo Act.

(2) To place all such materials on the cash-and-carry plan.

(3) To give greater discretion to the President with regard to

these questions.

(4) To repeal the Neutrality Act and rely on international law.

It would be needless repetition with the ground so well covered in your previous hearings, to examine further the text of the bills and resolutions before you.

One would prohibit the exportation of all arms, munitions, and

implements of war in peacetimes as well as during hostilities. Another would give Congress, as well as the President, the right to decide whether a state of war exists. Another would enforce rigorous restrictions upon American citizens and shipping. Another would give the President the power to discriminate between belligerents in the placing of embargoes on war materials other than implements of war, and then there is the very important measure proposed by Senator PITTMAN, which seeks to eliminate the possibility of incidents occurring or situations arising that would bring us into conflict with belligerent powers, and to this end suspending rights of navigation and commerce which hitherto we have regarded with jealousy and supported to the point of war

The difficulty I see in these proposals is that it is impossible to forecast or determine their effect upon, or the construction they will receive from, other nations who are at war. It is a well-known principle of international law that the measure of a neutral's obligations is to be found in the rules of international law and nowhere

As a result of centuries of wars this group of principles was evolved by which belligerents and neutrals achieved some reasonably definite guides to the conduct of their reciprocal relations on land and sea. The adoption of these rules has been regarded throughout the civilized world as a victory for civilization over brute force, for law over anarchy. Belligerents had an incentive to observe them in order to hold down claims and to avoid the risk of adding to the list of their enemies; neutrals, in order not to expose themselves to legitimate criticism, damages, and attack, and not to risk plunging their people into wer.

and not to risk plunging their people into war.

The duties of neutrality by the law of nations cannot be either expanded or contracted by national legislation, and a nation seeking to avoid involvement as a belligerent cannot shelter itself under the plea that its own legislation either permits or enforces acts or omissions not recognized by international law as pertaining to the proper conduct of a neutral.

One of my misgivings as to the measures, with a single exception, before your committee is that they are strongly suggestive of a formed purpose to discriminate between belligerents. Their operaformed purpose to discriminate between belligerents. Their operation and effect will be favorable to one set of belligerents and unfavorable to the other. It will be difficult for us to shrug our shoulders and say that we are not answerable for such a result. Too much has been said by persons in official station and others defending the proposed legislation because of such result to make denial possible or explanation easy.

In this connection I venture to quote from an Executive order issued on March 10, 1904, when John Hay was Secretary of State:

"All officials, civil, military, and naval, are hereby directed not only to observe the President's proclamation of neutrality in the pending war between Russia and Japan, but also to abstain from either action or speech which can legitimately cause irritation to

either action or speech which can legitimately cause irritation to either of the combatants.

"A war inevitably increases and inflames the susceptibilities of the combatants to anything in the nature of an injury or slight by

outsiders.

"It is always unfortunate to bring Old World antipathies or jealousies into our life, or by speech or conduct to excite anger and resentment toward our Nation in friendly foreign lands; but in a government employee, whose official position makes him in some sense the representative of the people, the mischief of such actions is greatly increased."

The true concept of neutrality was expressed by one of our Federal courts in a famous case, often quoted: "The idea of a neutral nation implies two nations at war, and a third in friendship with both."

with both."

Or, as John Quincy Adams expressed it, when Secretary of State, in a set of formal instructions to United States ministers: "By the usual principles of international law, the state of neutrality recognizes the cause of both parties to the contest as just—that is, it avoids all consideration of the merits of the contest."

This may be abhorrent doctrine to the pure moralist or the agitated sentimentalist, but anything short of it points toward

intervention, a course of conduct which is tantamount to belligerency, and almost certain involvement in war.

It is said that many believe that we can keep out of war if we

It is said that many believe that we can keep out of war if we have the will to keep out of war. But we cannot keep out of war if we are intent upon intervention, albeit indirect or covert, and find ourselves unable to compress our actions within the impartiality of conduct and practice enjoined by international law.

This necessary impartiality is not, however, incompatible with sympathy with one and antipathy toward the other belligerent, so long as such sympathy and antipathy are not converted into action violative of impartial application of the rules of neutrality. Thus, public opinion and the press of a neutral state may show their

public opinion and the press of a neutral state may show their sympathy to one party or another without violating neutrality, but authorities differ as to such display by a government—the leading German authorities taking the position that a government is held

In connection

to a stricter rule.

with this all-important duty of maintaining In connection with this all-important duty of maintaining a sincere impartiality, I cannot but feel that the advocates of the cash-and-carry plan are placing entirely too much reliance upon the fact that the privilege of obtaining in our ports munitions or other goods useful in war does not constitute unneutral service because nominally at least the privilege is available to both belligerents or groups of belligerents, and that we are not responsible for the fact that one group of belligerents controls the sea and could profit under this plan, while the other group, lacking the means of transport or purchase, would be unable to benefit by our impartiality. For one thing, we have said too much in advocacy of this plan as being beneficial to one belligerent group to mainof this plan as being beneficial to one belligerent group to maintain with good face or conscience the neutral character of this course on our part.

Furthermore, in this connection I must call your attention to the principle stated by Dr. John Bassett Moore, whom I regard as the foremost contemporary authority on international law. The statement, contained in his Classic Digest (vol. VII, p. 860), is as

"The view that a neutral may permit unneutral acts to be committed within its territory, provided it extends permission to both belligerents, is now obsolete. It is obvious that, although such permission was impartially offered, it might be of immense use to one belligerent and of none to the other."

This principle should be viewed in connection with another to

the effect that a state, if it commits acts assistful to the military operations of one of the enemies as against the other, will be con-strued as intending the reasonable results of its acts and may be

treated as a belligerent.

It is my fear that the cash-and-carry plan will not prove prac-It presents difficulties of enforcement, and there is a widely shared feeling that it would grievously damage American trade. Besides, in the selection of commodities for the special list, an unneutral President might conceivably aid or injure one side, which could hardly fail to expose the United States to the charges and consequences of unneutrality.

I hear it said that there is no longer any international law, and

that if we are to avoid involvement in war we must have recourse to improvised and as yet untested formulas, which it is hoped will practically remove every exposed surface of our commercial life from the reach of belligerent resentment. But we may find that we have consigned our shipping to disuse, transferred the trade of our citizens to foreign competitors, and undermined our domestic economy, discovering too late that our new and ingenious formulas have not worked as expected.

The principles of international law, despite the opinion in some quarters that it is a thing of the past, may nevertheless be tellingly invoked to show the unneutrality of our new procedure. We may be reminded that the principles conceding neutral rights are based upon the neutral's strict abstention from the conflict and observance of genuine impartiality between beligerents. We may further he reminded that under international law each helligerent. further be reminded that under international law each belligerent is privileged to regard any departure from this duty of impartiality as unfriendly and exposing the offending neutral to legitimate attack.

If we reply that these new laws of ours were adopted prior to If we reply that these new laws of ours were adopted prior to the outbreak of hostilities and have suffered no change subsequently, it may be brought to our attention that the status of neutrality does not arise until the outbreak of war, and is unaffected by anything done prior to such outbreak.

If we assume the nonexistence of international law because of its unpunished violations during the last war, we may find ourselves confronted by it in all its rigor when our conduct is challenged under its ancient and established rules.

Dr. John Bassett Moore strongly controverts the idea that inter-

Dr. John Bassett Moore strongly controverts the idea that inter-

national law has ceased to exist merely because of some flagrant violations which it suffered in the late war.

"It has never heretofore been supposed that, when belligerents violate international law, they believe they are destroying it or depriving it of its obligatory force. It is a maxim of the common law that in the midst of arms the laws are silent; but this does not mean that the laws cease to exist. On the contrary, the maxim merely recognizes the fact that, in an armed struggle, the exertion of force is likely to be carried beyond ordinary legal bounds."

No authority on international law, he continues, has ever suggested that violations of international law will destroy it. Then

he adds, drawing from his 6 years' experience as a judge of the Permanent Court of International Justice, that he never once

heard the suggestion from any quarter that international law as it existed before the late war, had ceased to be in force, or that existing law was to be looked for in the violations of that law during

the war, whether the violations were committeed by the victors or by the vanquished.

"If our Government has at any time acted upon the contrary supposition, it has done a most unadvised and most unjustified thing, for which no support can be found in anything outside of

propagandist publications by persons who either do not know international law or who are incapable of stating it correctly."

In speaking of the law of neutrality he speaks of the post-war conference at The Hague in the winter of 1923, to make rules for the regulation of the activities of aircraft and radio in time of the regulation of the activities of aircraft and radio in time of war. Dr. Moore presided over this conference which was attended by representatives of the United States, France, Great Britain, Italy, Japan, and the Netherlands, whose delegates were acting under the instructions of their respective governments. The report of the conference shows that it was largely devoted to the definition of the rights and duties of belligerents and of neutrals in time of war, and that it treated as still exising the Land War Neutrality Convention, the Convention for the Adaptation of the Geneva Convention to Maritime Warfare, and the Convention Concerning Neutral Rights and Duties in Maritime Warfare, all made at The Hague in 1907, and important chapters in international law. The idea that the law of neutrality had become obsolete never The idea that the law of neutrality had become obsolete never was broached or suspected.

Indeed, international law is judicially administered in the courts

Indeed, international law is judicially administered in the courts of the United States throughout the country almost every day. Questions of allegiance and territorial jurisdiction, of the existence of war between foreign states or de facto governments, and the consequences thereof, such as blockade with its incidents, call for decision because they affect the right of suitors in municipal courts. The Courts of Admiralty in a true sense are courts of the law of nations, and of the law of nations only. The famous English Judge, Lord Stowell, in the Court of Admiralty, said in a well-known judgment:

"The seat of judicial authority is locally here according to the known law and practice of nations, but the law itself has no locality."

locality."

And an even more famous judge, Lord Mansfield, said:
"It never was imagined that the property of foreign subjects, taken as prize on the high seas, could be affected by laws peculiar to this country.

As for the opinion that nations are bound by the law of treaty only and that there is no other law of nations, Lord Stowell rejected it as fit only for Barbary pirates. I may add that American opinion, whether expressed in judicial decisions, in Presidential messages and other domestic acts of state, or in diplomatic intercourse, has been invariable in the same sense ever since we became a Nation.

It seems to me that this great body of custom and precedent, of treaties and conventions, of weighty opinions and authoritative court decisions, of arbitral awards and instructions issued by civilized nations for the guidance of their diplomatic and other organs, of historic state papers, and the texts of historians and jurists constitute the safest guide and surest foundation for national policy and legislation in so unsettled a time as the present. I have indicated only a few of the embarrassments which laws enacted in what I may call a temper of improvisation may encounter. Despite the shortcomings of international law, there is no other code of international conduct and procedure—none so embedded in the consciousness and practices of mankind, and which it is impossible to replace with anything better.

The states of the civilized world invariably endeavor to answer any reproach of a departure from good conduct by explanations showing that the act complained of is justified by the recognized rules of international law. Innumerable public acts, affirmations, declarations, and conventions prove this. On the other hand, never in any public official act of the present age, verbal or written, has a state dared to declare that it did not consider itself bound by the law of nations and its principles.

It remains to say a word about the third of the alternative pro-

It remains to say a word about the third of the alternative pro-

cedures as stated by Senator Pittman—"to give greater discretion to the President with regard to these questions."

It is my humble opinion that the discretion already vested in the President under the Neutrality Act is excessive and dangerous, and with this opinion I could hardly regard with approval any enlargement of discretion such as is sought in some of the pending measures. I say this with no implication that this discretion would be abused by the President, but it is too great a burden to put upon him and too great a trust to be reposed in any individual.

I am aware that the power of the President as the sole organ of the Government in the field of international relations has been described by the Supreme Court as pleasy and exclusive as power.

described by the Supreme Court as plenary and exclusive—a power which does not require as a basis for its exercise an act of Congress; but the Supreme Court, in declaring the breadth of this power, saw fit to add the following words: "But which, of course, like every other governmental power, must be exercised in subordination to the applicable provisions of the Constitution."

It seems to me that here is warrant at least for the investigation by Congress of the extent to which it can act in safeguarding and preserving the expressed grant to itself of the power to declare war. When the framers of the Constitution declared that Congress should have the exclusive power to declare war, I think it was their intention to confide the decision of this momentous issue to

the representatives of the people and to no individual. I doubt if any member of the Constitutional Convention envisioned the growth of the Presidential discretion or had the slightest realization that the determination of the question of peace or war for the Nation might grow out of Executive acts before Congress had an opportunity to debate the question or even to sense the danger of impending war. Many years after the adoption of the Constitution during the administration of President Polk, we had a paintion during the administration of President Polk, we had a painful illustration of the consequences of Executive improvidence in the preliminaries which led to the Mexican War. The President had directed our armed forces into regions neither claimed nor occupied by the State of Texas and clearly within the boundaries and jurisdiction of Mexico. The facts of the situation even at this point were not fully confided to Congress, but the cry went up that our soldiers were in a perilous situation and that there was no escape from war, indeed, that we were, to all intents and purposes, at war. It was in connection with this incident that John C. Calboun made his memorable stand for constitutional procedure. houn made his memorable stand for constitutional procedure, asserting that even if we were determined to wage war against Mexico, it was not necessary for us at the same time to make war against the Constitution.

It seems to me that the control of Congress over the question of war or peace was never intended to be qualified, and that there can be no discretion enjoyed by anyone or lodged anywhere, with power to impair this exclusive right and duty which resides in Congress.

Instead of enlarging the discretion of the President I think it.

Congress.

Instead of enlarging the discretion of the President, I think it would be a wise step toward preserving the constitutional distribution of power to reaffirm congressional control of this great issue of war and to devise legislation to safeguard it.

War today springs from provocations, illegal interventions, irregular and unsanctioned hostilities, punitive or irritating threats, by legislation, or otherwise. The unchecked discretion of a single man is not a sufficient guaranty of the Nation's peace amid a field strewn with the pitfalls of discretionary tariffs, embargoes, restric-tions, options, and permissions such as are contained in some of the measures proposed.

Before I conclude I would dwell for a moment upon our histori-

cal policy of abstention from European or other foreign wars.

In hours of confused counsel we should lift up our eyes to the great figures of our history, to their admonitions as to national conduct. Their words of warning have received unvarying confirmation from the course of world events and from our national

I suppose nations, as well as men, are prone to error. But if we must make mistakes we should try to make new ones and not

repeat old ones.

The interplay of motives, the ages old and unquenchable passing the habel of tongues, the tangle of tongues are the habel of tongues. sions, the conflict of interests, the babel of tongues, the tangle of origins, the flux of power, the waverings of boundaries in Europe constitute problems beyond our understanding. We cannot intervene in them with benefit to Europe or without inevitable disaster to ourselves.

I was reviewing the major wars which have been waged in Europe during the period since the foundation of our country. They number 24. This amounts to an average of one every 6 years.

number 24. This amounts to an average of one every 6 years. Allies in one war become enemies in the next. England in the Crimean War was the ally of France against Russia in the successful attempt to prolong Turkish oppression over the Balkans, its victims then being the very nations which England now is attempting to forge an alliance to protect.

The United States is, I think, the last nation in the world to act upon the promptings of altruism in international policy. Altruism ceased to be a motive in European policy, or even a pretense, with the conclusion of the Thirty Years' War. Every war since has been a struggle for power or territory, dictated exclusively by considerations of immediate national self-interest.

In placing embargees on implements of war and permitting the

In placing embargoes on implements of war and permitting the export of materials necessary in their manufacture we are certainly doing an illogical thing, and it may have the effect of strengthening the forces of aggression, as well as weakening the resistance of non-aggressor states with whom our sympathies may run, and who could derive legitimate help from us through the operation of an authentic

derive legitimate help from us through the operation of an authentic neutrality based upon the general acceptance of civilized states.

The provisions of international law may not prove in themselves, either through a dispute as to their application or through a defiance of them on the part of belligerent states, a source of complete protection. But we shall know what our rights are and we can determine in each instance what degree of self-restraint or forbearance we can afford to practice.

Keeping out of war is not a matter of sharpshooting legislation aimed at this or that specific danger point. It depends upon our will to keep out of war. And that in turn depends upon our willingness to pay the price in tolerance and patience, quickened by the realization that nothing is so costly, so engulfingly disastrous, so immeasurable a calamity as war; that nothing is so unpredictable as to its consequences, and that perhaps no conastrous, so immeasurable a calamity as war; that nothing is so unpredictable as to its consequences, and that perhaps no contribution we can make to the steadying of this unhappy world and to the recovery of sanity in the mutual dealings of peoples, is to be compared in importance with the preservation of our free institutions and the foundations of our domestic economy. Here, at least, a disillusioned and chastened world may find a new starting point for economic reconstruction and the rational ordering of its life, when the madness of the destroyers shall have passed. have passed.

Addresses on Occasion of Presentation of Gavel to Vice President

EXTENSION OF REMARKS

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, May 10 (legislative day of Monday, May 8), 1939

ADDRESSES BY HON. GEORGE W. NORRIS, OF NEBRASKA, AND HON. JOHN N. GARNER

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD an address by the senior Senator from Nebraska [Mr. Norris] on the occasion of the presentation to the Vice President of a gavel made from the timber of the house erected on the first homestead taken under the Homestead Act of 1863, and the address of the Vice-President in receiving the gavel.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. GEORGE W. NORRIS, OF NEBRASKA

My dear Mr. Vice President, I am charged by my people with a

My dear Mr. Vice President, I am charged by my people with a very pleasant and agreeable task. There lies within the limits of Nebraska the first homestead that was ever taken under the national homestead law, a law signed by Abraham Lincoln.

In 1936 Congress passed a law by which this quarter section of land, homesteaded by Daniel Freeman, of Nebraska, was set aside as the Homestead National Monument of America. The object of this law was that this tract of land now owned by the United States should be set aside as an appropriate monument to preserve for posterity a proper memorial emblematical of the hardships of the pioneer life through which the early settlers passed in the settlement, cultivation, and development of the great West. Under this law most of the great Mississippi Valley was settled. It is intended that this homestead shall become a museum in which the literature, the implements of agriculture, the means of transportation, and anything of historical value peculiar to the pioneer

intended that this nomestead shall become a museum in which the literature, the implements of agriculture, the means of transportation, and anything of historical value peculiar to the pioneer period, through which western settlers had to pass in winning the great West, shall be preserved for future generations.

Daniel Freeman, the man who made this original entry, was a soldier in the Union Army. He was in Nebraska on official business connected with his service. The homestead law went into effect on the 1st day of January 1863. Mr. Freeman was ordered back to his command in St. Louis. The land office at Brownville, Nebr., would not open until about 10 o'clock on the morning of the 1st. If Freeman waited until the land office opened, he feared it would be impossible for him to reach his command at the designated time. The night before the land office was to open there was a dance at Brownville attended by a great many people who had come from all parts of the district to file on homesteads as soon as the land office opened. The man who had charge of the land office attended this dance. Daniel Freeman was there. He knew that when the office opened in the morning there would be a long file of applicants, and it would probably be impossible for him to make his filing until late in the day. He told his companions at the dance of his difficulty. They had a little meeting among themselves and took the matter up with the official who had charge of the land office. They asked him to open the office at 12 midnight, so that Daniel Freeman might file on his homestead and start on his journey to St. Louis. This was agreed to. The land office was opened for a few man might file on his homestead and start on his journey to St. Louis. This was agreed to. The land office was opened for a few minutes at 12 midnight, and within a very few minutes Daniel Freeman had made his filing and was on his way to St. Louis. He served until the close of the Civil War. Then he came back to his

homestead in Nebraska.

There, he built a log house made from trees growing upon the premises. With his bride, he lived on this land for nearly 50 years. In due time, he made final proof, raised a family there, and lived to a ripe old age.

It is interesting to know, Mr. Vice President, that Representative Court of Pennsylvania author of the National Homestead.

Act, when he retired from Congress was given a reception by his people at his Pennsylvania home. Daniel Freeman, the first homesteader in America, was present at that reception and delivered an address.

I hold in my hand, Mr. Vice President, a beautiful walnut gavel made from timber growing upon the Daniel Freeman homestead. My people have directed me to present this gavel to you as an emblem of the honor and respect in which they hold you, and as the presiding officer of the Senate when the act known as the Homestead National Monument of America was passed. They are mindful too Mr. Vice President that in your own great State are mindful, too, Mr. Vice President, that in your own great State of Texas, a homestead law was provided by your constitution for the people of Texas long before the National Homestead Act became a law. And so it is with great pleasure that I carry out the most pleasant duty, in behalf of my people, in presenting this eblem of authority to you. REPLY BY VICE PRESIDENT JOHN N. GARNER

Senator Norris, allow me to express to you and to the State of Nebraska not alone my own personal thanks but also the thanks of the United States Senate and the Government of the United States for the presentation of this handsome walnut gavel made from timber grown upon the Daniel Freeman homestead—Freeman, the owner, being the first settler to obtain the benefits of the homestead law enacted on the 1st day of January 1863 and signed

by President Abraham Lincoln.

Your action has a significance far beyond the intrinsic or utilitarian value of the gavel. It is a reminder of the farseeing and establishing a homestead policy in order to enable the citizens of

policy adopted by the United States Government ordaining and establishing a homestead policy in order to enable the citizens of the United States to become owners of the land which they should till and of the roofs which sheltered them from the elements. This beneficent legislation had a great part in settling the West and in making that land a region of home owners and stimulating an independent citizenship.

You have made mention that the State of Texas provided a homestead law in its constitution long before the National Homestead Act was adopted. It is a matter of great pride to the citizens of Texas that as early as 1836, in the first constitution adopted by the Republic of Texas, it was provided: "All citizens now living in Texas, who have not received their portion of land in like manner as colonists, shall be entitled to their land in the following proportion and manner: Every head of a family shall be entitled to 1 league and labor of land; and every single man of the age of 17 and upward shall be entitled to the third part of 1 league of land." The people of Texas had just come through an armed revolution to establish their independence and to create a republic. They realized that the stability and strength of a state largely rested upon a home-owning citizenry, a citizenry attached to the soil, a citizenry willing to defend their homes and firesides.

Again in the Texas Constitution of December 3, 1869, it was provided, "To every head of a family who has not a homestead there shall be donated 160 acres of land out of the public domain, upon the condition that he will select, locate, and occupy the same for 3 years and pay the office fees on the same. To all single men 21 years of age there shall be donated 80 acres of land out of the public domain upon the same terms and conditions as are imposed upon the head of the family."

In the Constitution of the State of Texas adopted in 1876 and under which, with amendments, the government of the State of

In the Constitution of the State of Texas adopted in 1876 and under which, with amendments, the government of the State of Texas is now operating, it was further provided that "the homestead of a family shall be, and is hereby, protected from forced sale, for the payment of all debts except for the purchase money thereof or a part of such purchase money, the taxes due thereon, or for work and material used in constructing improvements thereon, and in this last case only when the work and material are contracted for in writing, with the consent of the wife given in the same manner as is required in making a sale and conveyance of the homestead; nor shall the owner, if a married man, sell the homestead without the consent of the wife, given in such manner as may be prescribed by law. No mortgage, trust deed, or other lien on the homestead shall ever be valid except for the purchase money therefor, or improvements made thereon, as hereinbefore provided, whether such mortgage, or trust deed, or other lien shall have been created by the husband alone or tegether with his wife; and all pretended sales of the homestead involving any condition of defeasance shall be void."

That is today the law of Texas. Our Commonwealth not alone granted to its settlers homesteads from the public domain but also provided that the homestead of a family, however acquired, may not In the Constitution of the State of Texas adopted in 1876 and

provided that the homestead of a family, however acquired, may not be sold for debt except for the limited provisos set forth in the

constitution.

These measures evinced a vision and wisdom in the early pioneers of Texas which were eloquent of their patrictism and fortitude in carving from the wilderness a commonwealth and dedicating to it a free government and constitutional liberty.

Your presentation of this gavel vividly brings to mind that this great conception found approval in the policies of the Federal Government—policies which have proven of great national benefit and which have made outstanding contributions to the general welfare. Allow me to again express my appreciation for the gavel and its great significance as related to national policy and national welfare.

The Monroe Doctrine

EXTENSION OF REMARKS

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Wednesday, May 10 (legislative day of Monday, May 8), 1939

ADDRESS BY STEPHEN F. CHADWICK

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Congressional Record a portion of an address delivered by the able and distinguished national

commander of the American Legion, Stephen F. Chadwick, before the executive committee of the Department of New York, the American Legion, on April 20, 1939, on the subject of the Monroe Doctrine.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We cannot too often recur to the fundamental principles, an observance of which has made this Nation great. Among the fundamental doctrines of this country is that doctrine known as the Monroe Doctrine, observance of which prevents us from being embroiled in the 1,000-year-old boundary disputes of Europe and relieves us from being the underwriter of the status quo of Europe

The Monroe Doctrine prevents us from being the victim of current phrases which may eleverly conceal the truth. It is a political shield adapted to America's economic and physical position in the world, and its strict observance can only bring us the respect and ultimate friendship of all nations.

The Monroe Doctrine is a bilateral doctrine. We asked Europe to keep its nose out of our business, and we told Europe that we would keep our nose out its business. It is a bilateral doctrine, and we should realize our responsibilities in both its implications. Let us examine the exact statement of President James Monroe's

policy, written after consultation with James Madison and Thomas Jefferson, two of the giant intellects of that day. President Monroe's statement follows

"It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are of necessity more immediately movements in this hemisphere we are of necessity more immediately connected and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. This difference proceeds from that which exists in their respective governments. And to the defense of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole Nation is devoted.

"We owe it therefore to candor and to the amicable relations

"We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere.

"But with the governments which have declared their independence."

European power we have not interfered and shall not interfere.

"But with the governments which have declared their independence and have maintained it, and whose independence we have on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by a European power in any other light than as the manifestation of an unfriendly disposition toward the United States.

"It is still the true policy of the United States to leave the parties to themselves in the hope that other powers will pursue the same course.

course

"Our policy in regard to Europe * * * which is not to interfere in the internal concerns of any of its powers; to consider the government de facto as the legitimate government for us; to cultivate friendly relations with it; and to preserve those relations by a frank, firm, and manly policy, meeting in all instances the just claims of every power, submitting to

"In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our

menaced that we resent injuries or make preparation for our defense."

The above passages apply today with just as much force and correctness as they applied 116 years ago. This doctrine so consistent with Washington's Farewell Address constitutes the sound guiding principles of our democracy. We should not be involved in the boundary and ideological quarrels of Europe. Our forefathers left the old countries to dedicate themselves to a new way of life, free and independent, and to get away from the futility of hundreds of years of quarreling and fighting in Europe.

Our people have never felt interested enough nor wise enough to pass judgment upon the disputes and crises of Europe.

Just 20 years ago, when we saw the detailed commitment that we were asked to give to boundary lines in Europe, our people emphatically rejected any such undertaking by either our lives or Treasury. We of this generation have no clairvoyance to predict what the map of Europe will look like a hundred years from now or even 20 years from now. Nor is it our business under the Monroe Doctrine. We sincerely hope that there will be peace in Europe, but we emphatically say that it is Europe's problem to find a way of quarreling peacefully in adjusting their disputes. The disillusionment experienced in this country after the conclusion of the first war when our men risked their lives to fight

The disillusionment experienced in this country after the conclusion of the first war when our men risked their lives to fight a war to make the "world safe for democracy" and a "war to end all wars," stands as a warning today to those who would have us participate in world quarrels. We should not do it again. Not only were we unable to impose upon Europe our preferred system of government but, in addition, we have seen the great growth of "isms," which are today receiving adherence from within our own country and threatening our own institutions. Finally, we have witnessed the execution of armament programs to the point that many countries in Europe today possess more instruments of

death than they did in 1914. These armament programs have been in full swing during the period when all Europe with one exception pleaded that they could not and would not pay their lawful debts to us.

debts to us.

Make no mistake, this is not an argument for the policy of the pacifist. What Monroe said and what we are repeating here is sound American doctrine, our guidance in the troubled times of Europe. Our experiences within this generation should prove to us that we cannot dictate political systems or peace to the old countries by our entry into their quarrels.

But as to the affairs that concern us, and that is the Western Hemisphere, President Monroe properly said that when our rights are invaded or seriously menaced we will resent such entries, making preparations for our defense. Our rights and our democracy are less apt to be threatened or interfered with if our defensive mechanisms are in first-class shape and kept strong. An adherence to the doctrine of Monroe, implemented by the strongest defense of which we are capable, will speak with firmness throughout the rest of the world as to America's desire to live in peace and have its peace respected. peace respected.

In connection with our defense against any threat and against any aggression, I want to come to what I regard as of equal importance in the strengthening of democracy. We must make our democratic system work in both a political and economic sense. our democratic system work in both a political and economic sense. We must address ourselves to the problem of embracing such sound economic policies that our unemployed will be able to find gainful and useful employment. Our wealth-producing industrial machine must be permitted to function. Our vast gold reserves, more than 50 percent of the world's stock, should be put to work. A country that is industriously at work and on the way to prosperity will have very little time and very little inclination to debate or listen to the debates on the meaningless distinctions between communism, nazi-ism, and fascism. In this democracy we do not want any part of them. And, I say to you that the we do not want any part of them. And, I say to you that the best way to attack these alien doctrines is to eliminate their breeding place, the swamp of continued depression.

I am utterly convinced that the greatest encouragement, the greatest contribution, the greatest force for the establishment of democratic principles abroad would be the demonstration by this democratic principles abroad would be the demonstration by this country that democracy works at home, by the demonstration here of a functioning democracy. No one in any other part of the world will be able to claim superior benefits for their various systems. Not only that, but I am utterly convinced that this country which so overwhelmingly desires peace can make its greatest contribution to the cause of world peace by a strict refusal to meddle in the affairs of other continents and countries and by our demonstration to the rest of the world of a strong, prosperous, and united country in every sense. and united country in every sense.

Labor Legislation

EXTENSION OF REMARKS

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES Wednesday, May 10 (legislative day of Monday, May 8), 1939

EDITORIAL BY DANIEL J. TOBIN

Mr. MINTON. Mr. President, one of the clearest minds and strongest arms now working in the field of the cause of labor is Daniel J. Tobin, president of the International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers of America.

I ask unanimous consent to have inserted in the Appendix of the Record part of a timely editorial by Mr. Tobin, which appeared in the official magazine of the teamsters for May 1939.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From Official Magazine, I. B. T., C., S. and H. of A. for May 1939] EDITORIAL

(By Daniel J. Tobin)

Down in Washington there seems to be a rebellion against the Down in Washington there seems to be a rebellion against the President even by members of his own party. The Democrats that were carried in the last general election in 1936 and in the previous one in 1932, those same boys, many of them that would never have been heard of, but were carried into office by Roosevelt, are now fighting the President pretty strongly. Certainly I personally have no reason to go into ecstasies over any consideration that I have received, but that is not the question. I still repeat, there never was an administration that had more sincerity in behalf of the working people of our country than the present Roosevelt administration. It is true that there have been some persons connected

with the administration that have not been all that we would desire them to be. It is true also that there were some individuals elected to the Congress and to the Senate on their pledges to serve labor, them to be. It is true also that there were some individuals elected to the Congress and to the Senate on their pledges to serve labor, and they have betrayed those pledges. But it is also true that more favorable legislation was enacted for labor as a whole in the last 6 years than had been enacted in the previous 50 years. Certainly men have the right to protest and rebel, but not the men of labor, who are supposed to speak for their people. Surely there have been decisions made against us, but the heads of the Government have not always been responsible for those decisions, but the men referred to above, by betraying their trust. Of course, many have been disappointed who were looking for jobs and positions or who had friends they were interested in, but a labor man is not supposed to be looking for personal jobs for himself or for his friends. The duty of a labor official is too look for legislation and benefits for the masses of those he represents. Some men in labor bring their political prejudices into the picture. Because we lived in a certain environment we perhaps cannot help being prejudiced, but no man should represent the masses of labor as an international official and allow his political prejudices to blind him to such an extent that he would vote directly for the enemies of labor because they belonged to his party. It is a pity that we cannot let our minds go back to a few years ago when there was no progressive legislation such as the Wagner Act, the social security law, or the many other laws that have been enacted within the last 6 years. Take the banking law, where the depositors are guaranteed their deposits up to \$5,000 by over 95 percent of the banks of the country. What a blessing that would have been if it had been in operation in 1932. I have known individual workers who had deposits in three different banks, their life savings, and all three banks were wiped out. Men quickly forget, and the more that some receive the more they

I have known individual workers who had deposits in three different banks, their life savings, and all three banks were wiped out. Men quickly forget, and the more that some receive the more they demand. "Man's ingratitude to man" still obtains.

If we want to be reminded of what may happen to labor from a national standpoint, just let our minds go back a few years to the days of Senator Penrose, of Pennsylvania, and Congressman Joe Cannon, who was Speaker of the House; or even to the days of Cleveland, 1892 to 1896, when anyone who raised his head in favor of labor in Congress was considered an outcast and a rebel. Colonel Lindbergh's father was a Congressman, and because of his progress-Lindbergh's father was a Congressman, and because of his progressive Scandinavian ideas in favor of the workers he was isolated as if he had the smallpox while he was in Washington as a Congressman. It is just the same with some of our union members. They do not appreciate the struggles that were made for them by the men who have gone before, who suffered and starved and fought and bled in order to make conditions better for those engaged now at our employment.

Today it is an honor to be a union man and to wear the emblem of trade-unionism, because the Federal Government, from the President of the United States down, has presented a wreath of approval and a stamp of graciousness and well-being on the organized-labor movement of our country. But there are some that remember the time when, like a rebel, you had to hide your unionism and you did not dare mention the labor union in the place where you were employed, and your neighbors looked with suspicion on the members of your family because you were heard to express yourself in favor of unions. of unions.

of unions.

I have repeatedly said that what has transpired in Europe, where unions have been destroyed, may happen to the labor movement in our country because of the blindness of our own leadership and their refusal to set aside their personal feelings. In the State of Oregon, labor is practically handcuffed as a result of the present labor-hating political leaders who have control of that State. Almost the same thing is liable to happen, before you read this journal, in the State of Wisconsin. Be assured that your union must be protected by clear thinking and conservative action, or else if you abuse your privileges you will find the State or the National Government telling you that it is the law that you must disband your union and accept the wages and working conditions that the Government doles out to you in State and Nation. It has happened elsewhere. It can happen here. happen here.

Foreign Affairs

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Monday, May 8), 1939

ARTICLE BY ROBERT W. WINSTON

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an article from the pen of Judge Robert W. Winston, of Chapel Hill, N. C., the seat of the State university. This article was clipped from the columns of the News and Observer, published at Raleigh, N. C., by the Honorable Josephus Daniels (owner), who is our Ambassador to Mexico.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

> [From the Raleigh (N. C.) News and Observer] HELL AIN'T GOT BUT FOUR (By Robert W. Winston)

(By Robert W. Winston)

About the middle of the last century Hungary was overrun by cruel foes, and dispatched General Kossuth to America to enlist our assistance. Great multitudes gathered to hear the General's appeal, and at one of the speakings this incident occurred. "Why should America fear to aid oppressed Hungary?" the General asked. "Are you afraid of war? Why, what is war? A little word, a very little word, spell it. W-a-r, 'war.' Only three letters." At this point a hard-headed fellow, in the crowd, shouted back, "Well, General, hell ain't got but four!"

Shall America get mixed up in another world war? Let us examine and arrive at a sane conclusion. First of all, whom, pray,

Shall America get mixed up in another world war? Let us examine and arrive at a sane conclusion. First of all, whom, pray, would we fight? Would it be Germany and Italy, would it be in Europe? Undoubtedly not. America would fight Japan, and Japan alone. You see, the three powerful dictator nations, Germany, Italy, and Japan have joined forces, so that Japan is to stay out of the fight unless America enters—in which event America and Japan will fight it out until one or the other shall be destroyed. At a conference on international relations, recently held at Chapel Hill, the conclusion above set out was the opinion of one of the greatest experts.

of one of the greatest experts.

At this conference the following question was asked: "How long would it take America to whip Japan?" "Four years" was the answer. "And it would cost the lives of hundreds of thousands of American boys and billions of dollars of property."

Then this question was put to the expert, "Must not America join with England and France to save despert, "Must not America join."

with England and France to save democracy, and thereby head off nazi-ism?

Then this question was put to the expert, "Must not America join with England and France to save democracy, and thereby head off nazi-ism?"

"Just the opposite," was the answer. "For just as soon as America goes into war she will become a dictator nation. Modern warfare cannot be fought without a dictator. All power would be centered in our President; civil government would be suspended; there would be no, jury trials. Drum-head court-marials would execute the despotic will of our war lords. It is a great mistake to suppose that dictators are made by means of propaganda. Stalin, Mussolini, and Hitler are the creatures of distress and poverty. These men cannot create a dictatorship in America. As soon as prosperity is restored in America all talk of a dictator will subs'de."

This question was then asked, "Is the New Deal boosting this war craze?" "Yes; to a certain extent. Extreme new dealers are so confident they are right that they are willing to throw America into the caldron in order, as they imagine, to save democracy. Do they not forget that we heard the same cry once before, and that we went to war to save democracy and to end war?"

Are we Americans going to be guilty of the same folly the second time? I once heard Will Rogers tell an enthusiastic audience what America got out of the World War. "Oh, yes," Will snickered, "England got her slice all right, and France got hers, and Japan got hers, and what did America get? The gold pen that signed the treaty!" Why should we fight the battles of England and France; is there any mutuality in so doing? Did they ever fight our battles? Why, in 1776 we had to fight England 7 long years to gain our independence; in 1812 we had to fight her again because she treated us as a servile race; in 1861 she did her level best to break up the American Union; and ever since the World War she has taken sides against America and in favor of Japan, actually refusing to join America to save Manchuria from Japanese rapacity. In truth, England never pralses America except when s

a bold despot. And so they are. But, under these circumstances, is

a bold despot. And so they are. But, under these circumstances, is the President qualified to act as a mediator in this war game?

Americans, awake! Silently but surely you are being dragged into war. Do you wish your sons to be swallowed up in the insatiable maw of hell and war? If not, speak out and speak quickly.

Tell your Senators and your Congressmen to keep us out of war. Tell them to play no favorites in this war game. Tell them to sell munitions to all nations alike or to no nations whatsoever; to take sides in this matter is to invite war and to paralyze America for years to come.

ROBERT W. WINSTON.

CHAPEL HILL

Gold Is Where They Lost It

EXTENSION OF REMARKS

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES Wednesday, May 10 (legislative day of Monday, May 8), 1939

ARTICLE BY JAMES CALHOUN

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the May 19, 1938, issue of the magazine called Ken. The article is entitled "Gold Is Where They Lost It," and is by James Calhoun.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOLD IS WHERE THEY LOST IT-GOLD STANDARDS TOPPLE, WORLD COM-DID IS WHERE THEY LOST IT—GOLD STANDARDS TOPPLE, WORLD COMMERCE STAGGERS, BECAUSE TWO-THIRDS OF THE GOLD UPON WHICH
WORLD MONEY STANDARDS ARE BASED IS MISSING—FORTY BILLION
DOLLARS' WORTH OF GOLD HAS BEEN PRODUCED—IF THIS WERE ALL
AVAILABLE TODAY, IT WOULD JUST ABOUT MAKE A SOUND GOLD BASIS
FOR THE \$400,000,000,000 WORTH OF WORLD TRADE DONE EVERY
YEAR—THE MISSING TWENTY-SEVEN BILLIONS HAS BEEN LOST AT SEX. BURIED BY KINGS, RUEBED AWAY IN COIN USE, AND SCATTERED THROUGH WARS

(By James Calhoun)

In 1933 the Director of the Mint reported that 23.5 billion dollars of gold had been dug from the earth during the preceding 440 years, but that only 12.6 billion were to be found in the world's money stocks. Nearly half of all the gold produced since 1493 was missing.
(All calculations in this article are based on gold at \$20.67 per ounce.)

During the following 2 years 57.3 million ounces were added to production, yet monetary stocks were enlarged by only 8.4 million ounces. In those 2 years seven of every eight ounces of new gold absconded.

absconded.

Gold had been produced for nearly 5,000 years before 1493. In the researches of the Egyptologist Petrie is found a means for measuring the missing production. From archeological explorations Petrie determined that in 2,000 B. C. the Egyptians were producing 5 tons of copper annually, and that they maintained that production for 300 years. We know that gold workings were about equal to copper during that period, so Petrie's figures, after allowing for a 40-percent idleness, give us \$7,400,000,000 worth of gold produced by ancient Egypt before the year A. D. 1. If Egypt produced half of the gold of the ancient world, gross world production would have been \$14,800,000,000. This hypothetical figure has many substantiations in fact, both in the writings of ancient historians and in the production estimates of such mines as Rio Tinto and Almaden whose history goes back 2,000 years.

Now, add gold production from A. D. 1 to 1493—only a trickle,

and Almaden whose history goes back 2,000 years.

Now, add gold production from A. D. 1 to 1493—only a trickle, yet approximately \$642,000,000. This sets the total world production of gold, up to 1936, at \$40,100,000,000.

Now the trade of the world aggregates about \$400,000,000,000 a year, necessitating, under the most liberal, sound reckoning, a gold base of forty billion. If, then, we could gather together all of the gold produced during the 4,900 years of history, and dump it into the money systems, it would be just enough to assure a constant, even flow of trade and, supposedly, a full measure of constant, even flow of trade and, supposedly, a full measure of human happiness.

But \$27,000,000,000 of the gold is missing. Nations topple from the gold standard, repudiate their debts, and debase their moneys. Where is that twenty-seven billion, and can any portion of it be recovered and restored to trade?

The first hiding place which suggests itself is industry and the arts. According to Kitchin, five billion of gold was diverted to these uses from 1835 to 1930. This constituted 27 percent of production. Let us assume the same ratio for all time. If a little over a fourth of man's gold always went into show pieces, then eleven billion more of the gross world production of forty billion is

accounted for.

Not all of this gold is lost to the money stocks. As in Italy recently, gold plate and wedding rings may be commandeered, melted, and returned to the public treasury. But that is but a mere drop in the historical gold bucket. In long-range figuring, the display gold is counted as a permanent loss. The dome of the ancient capitol at Rome was plated with \$27,000,000 of gold, furee images in the temple at Nineveh contained \$55,000,000 of gold, and the gold vessels and decorations of the Temple of the Sun in Peru had a value of \$185,000,000. Today, these immense masses of gold have disappeared as completely as if never taken from the earth. from the earth.

Each year we divert gold from money into trinkets to an amount which equals the greatest of these ancient follies. In the United States \$35,000,000 of gold yearly goes into articles of jewelry. Half of that goes into articles which contain such a negligible quantity of that goes into articles which contain such a negligible quantity of the metal that it is completely worn away in a few years, while the millions used for jewelry of the better grades is often so reduced by wear as to render recovery of the residue impracticable. Thirty million dollars more go into questionable industrial uses, such as plating father's safety razor, decorating mother's china, anti gliding baby's toys. Then business has a weakness for gold signs—just a few leaves of gold, so thin that 250,000 piled one on another would be only 1 inch thick. But signs, printing, and the decoration of books consume 100,000 ounces of gold per year and filch \$20,000,000 of money from the trade systems.

The world, however, does not expose all of its follies on its expansive bosom. Underground it hides immense masses of gold for safe-keeping. The custom originated in the ancient world when treasure could be saved from raiders only by burying. There much of it remains, for in countless instances the sword slew those who held the secret. Nor has the custom been wholly abandoned. The earth is the bank of India today.

is the bank of India today.

During the Sepoy mutiny, the British seized the castle of the Rajah of Scindia, and held it for 30 years, searching for the

Rajah of Scindia, and held it for 30 years, searching for the rajah's treasures.

Three hundred million dollars of gold, silver, and jewels lay buried beneath the castle, but the vault was so cunningly contrived that the British finally gave up the treasure-hunt and turned the castle back to the aged rajah, who otherwise would have died without revealing the hiding place.

Since 1493, one-sixth of the world's gold, or \$4,000,000,000, has been conveyed to India, there to be buried, perhaps, beside other millions accumulated through the centuries.

Every country has its legends of buried gold, some of which are based on fact. Near the ruins of ancient Ecbatana is buried a part of the gold accumulated by Persian monarchs through 200 years of unrestrained conquest and extortion. The last Darius carried all the transportable gold of the empire—possibly \$200,000,000—to Ecbatana when he fied from Alexander the Great.

He remained a year at Ecbatana, awaiting the approach of Alexander and employing the period of grace to bury his treasure. When Alexander arrived Darius and all who had assisted in the burial rite were dead, but the treasure existed—somewhere in the

When Alexander arrived Darius and all who had assisted in the burial rite were dead, but the treasure existed—somewhere in the hills near the town. Neither Alexander nor the Parthians, nor any of half a dozen Roman emperors who sent expeditions to Ecbatana, or any other man has as yet solved the Darius puzzle. If you would calculate the gold buried in the earth, begin with this hoard of Darius, add that of the lost tomb of Alaric, the grotto to which Genseric moved five shiploads of plunder, the Hungarian cave in which Attila hid his treasures, and the French cemetery employed by Clovis for a like purpose, the lost capital of Genghis Khan with its tons of gold, and the \$160,000,000 gold ransom of the Inca of Peru. None of these treasures have ever been found. been found.

been found.

Then, save a page for reckoning the gold ancient peoples sealed in the tombs of kings and buried with the bodies of the dead. In 1894, Gordon took \$354,000 of gold from the tomb of an unknown Egyptian princess, and 30 years later Carter, on opening the tomb of King Tut, discovered a treasure greater than the ransom of the Inca. Nearly 1,000,000 articles, many of pure gold, including the coffin, were found in the burial chambers of this boy king, who ruled only 6 years.

The value of the gold buried with the great kings of Egypt can be reckoned only from that found in the tomb of the unimportant Tut. Altogether, 50 monarchs were buried at Luxor but the tombs of only a few have been found, and of these only that of King Tut was intact. All of the others were pillaged and their gold scattered ages ago.

and their gold scattered ages ago.

and their gold scattered ages ago.

But wait! We are not yet ready to calculate graveyard gold. What of the gold we moderns bury with the dead? Right here in America, in the year 1937, upward of \$2,000,000 of gold was placed in graves. The gold is found in the handles and plates of caskets, in the teeth of the dead, and in the ring on the finger or ornament on the breast. Trifling amounts, it may seem, but, in fact, this drain on our monetary stocks already reaches into the millions.

In tracing the missing twenty-seven billions, don't overlook the gold filched by the thief Davy Jones in his 4,000 years of forays on the seas. Because the greater part of the gold produced enters water-borne commerce at some time, the old man of the sea has a first lien on production.

first lien on production.

first lien on production.

The greatest loss probably occurred when the Spaniards were transporting the gold of the New World to the homeland. The Dons had been in the Americas only 7 years when the first million dollars of gold was put on board ship for Spain. The ship was never heard of again. To hundred years later Davy Jones seized the greatest treasure in his thousands of years of looting—\$150,000,000 of gold and silver lost in the wrecks of 16 Spanish vessels sunk by an English-Dutch coalition at Vigo Bay.

Sandwiched between are other thefts of magnitude—the loss by hurricane of three plate fleets with \$130,000,000 of gold and silver, the destruction by the Dutch of a fourth fleet with twenty millions, the scuttling of the galleon Florenzia with seventy-five millions, and the destruction of a Turkish fleet with fifty millions seized in a raid on Greece. Scattered up and down the ocean's

seized in a raid on Greece. Scattered up and down the ocean's floor are the wrecks of 21 vessels carrying \$71,000,000 of gold from

the mines to the money makers, and the wrecks of 10 vessels carrying \$82,000,000 for the settlement of international balances.

Marine engineers figure that the number of vessels lost at sea in a 25-year period will equal the number plying the sea in any corresponding year. As practically every ship wrecked at sea carries some gold to the bottom, no one can estimate with any degree of accuracy the amount of gold in Davy Jones' locker. It may be \$2,000,000,000, as often estimated, or millions more. The depredations of Davy Jones have been exceeded only by the operations of two other thieves.

Recently, when our Government moved \$9,000,000,000 of gold

tions of Davy Jones have been exceeded only by the operations of two other thieves.

Recently, when our Government moved \$9,000,000,000,000 of gold to inland points for safekeeping, \$90,000 of the metal was stolen from the closely guarded treasure trains. The thief was wear.

The loss is calculated from a Treasury statement that each time a \$5,000 bag of gold is moved on and off a truck \$5 of the metal is lost. Between 1876 and 1936, \$20,000,000,000 of gold was moved into and out of the United States. Assuming a like movement within the States, we charge the thief wear with the abstraction of \$400,000 of our monetary gold.

But this is only pin money. Each year a dust so fine that it cannot be seen is worn from gold coins in circulation, to be lost forever to trade. Eighty years ago Jevon calculated the loss from abrasion at 1½ percent, the increase being due to the increase in the rapidity with which gold circulated.

From these and other data we can determine the portion of the missing twenty-seven billion due to the peculations of the thief abrasion. We charge the thief abrasion with the abstraction and utter waste of \$2,400,000,000 of our total world production of gold.

The withdrawal of gold from circulation and the substitution therefor of paper money is the only step taken in 2,000 years for the conservation of the precious metal. But, even though we look our gold in underground vaults of steel and stone, the thief wear still makes away with appreciable quantities of the metal. Periodically someone must look at the gold and weigh or court it to be

still makes away with appreciable quantities of the metal. Periodically, someone must look at the gold and weigh or count it to be sure it is all there, and each counting of the money stocks wears away \$128,000 of the metal. Then three billions still move in trade each year, and every billion moved results in a loss of \$10,000. No system which can be devised for the use of gold as money can wholk eliminate losses. wholly eliminate losses

But none of the drains upon gold thus far considered, nor all of them together, perhaps, can equal the losses occasioned by the depredations of the great thief—war. Through 4,000 years of history raiders have continuously swept the earth for gold, seizing it when found and scattering it with reckless abandon over land

and sea

The mother gold stocks of Egypt and Palestine were seized by the Assyrians, taken from the Assyrians by the Persians, from the Persians by the Greeks, and from the Greeks by the Romans. After 600 years of this loose handling, the gold stocks of Rome—the rem-600 years of this loose handling, the gold stocks of Rome—the remnant of the mother hoards supplemented by all the gold of the known world—approximated only \$1,500,000,000. At the end of another 500 years, when Attila and Alaric burst upon the Roman Empires of the east and west, this stock had been so depleted that the one obtained a ransom of only \$1,600,000,000 of gold and the other \$1,200,000,000. Both ransoms were raised by the confiscation of private wealth, the public treasuries being as bare as Mother Hubbard's cupboard.

Where had the gold gone?

Where had the gold gone?
Dropped by armies in flight, buried in the ruins of burned cities, scattered with the freedom which quick riches breed, buried by

scattered with the freedom which quick riches breed, buried by citizens to save it from marauders.

Xerxes invading Greece was accompanied by 1,200 camels bearing the gold and riches of the Persian Empire. Defeated at Salamis and in retreat, the gold of Persia was strewn through Asia Minor, but the only recorded recovery is the \$12,000,000 picked up by the Spartans. Alexander, defeating Darius, seized all the gold his 50,000 troops could carry—92,000,000—but left other millions in the ruins of temples and palaces. Four hundred years afterward Anticohum riths.

could carry—92,000,000—but left other millions in the ruins of temples and palaces. Four hundred years afterward Antiochus sifted \$13,000,000 from the ashes left by Alexander.

In 1195 the Moslems loaded 4,000 camels with gold and plunder from Delhi, advanced a 4 days' journey into the jungles, and buried it so successfully that none was ever recovered.

Genghis Kahn, in 1 day, divided 500 wagonloads of gold and silver among his followers, and on another occasion, his ammunition spent, caused a ton of gold to be cast into shot for his guns. Tamerlane carried off the entire metallic wealth of India, but today scarcely a piece of gold is to be found in the territory he ruled. Cortez, forced to flee the Aztec capital, lost \$1,100,000 of gold in the waters of the lake outside the gates. waters of the lake outside the gates.

waters of the lake outside the gates.

India, in the course of 1,900 years, was sacked successively by the Persians, Greeks, and Huns; the Moslems, Afghans, Mongols, and Tartans; the Portuguese, Spaniards, Persians, French, and British. Millions and millions of gold were carried away by the raiders, but the only trace of the plunder today is whatever portion of the \$1,000,000,000 of gold in the British monetary system one wishes to attribute to the conquest of India. Between 1500 and 1800 Spain and Portugal seized \$3,500,000,000 of gold by conquest and extortion. The combined stocks of the two countries today is less than one-seventh of their seizures.

Twenty-seven billions of gold missing. The increment of 54

Twenty-seven billions of gold missing. The increment of 54 centuries of toil, the product of millions of slaves, the yield of mine and labor has been frittered away on vanities, buried in the earth, sealed in the tomb, sunk in the sea, worn away by abrasion, and wasted by war. Can any part of it be recovered and restored to trade?

to trade?

Of the \$40,100,000,000 of gold which we estimate to have been extracted from the earth, our conclusion is that \$5,700,000,000 have been wasted in wars; \$2,500,000,000 have been worn away by abrasion; \$2,000,000,000 have been lost at sea; \$4,500,000,000 lie buried in the earth; \$12,500,000,000 have been diverted to industry and the arts, including the gold ornaments of India; \$12,900,000,000 are in the monetary systems.

Obviously, no part of the 2.5 billions worn away by abrasion can be recovered.

can be recovered.

Likewise, the two billions in Davy Jones' locker have been removed from the uses of trade. In the history of salvage only one instance is recorded of the recovery of an appreciable amount of gold from the sea. In January 1917 the S. S. Laurentic with \$25,000,000 of gold on board was sunk by a German submarine off the coast of Ireland; \$22,000,000 were subsequently recovered. In 1690 William Phips salvaged \$1,500,000 of gold and silver from the \$70,0000,000 lost by the destruction of a Spanish plate fleet in the Caribbean. The sea has yielded other small amounts of gold from time to time. But in general, gold lost at sea is subtracted from the money stocks as effectively as if worn away by abrasion.

tracted from the money stocks as effectively as if worn away by abrasion.

What of the gold buried in the earth?

Since 1930 India has restored to trade \$710,000,000 of the \$4,000,-000,000 of gold which it has absorbed since 1493—the only appreciable, sustained movement of gold out of India in 3,000 years. Whether the gold can be considered as a permanent addition to stocks is not yet apparent but hopes are entertained that India's sterile gold will eventually find its way into the streams of commerce. commerce.

commerce.

The only other possibility for retrieving any appreciable amount of the missing twenty-seven billions is found in the twelve and five-tenths billions which have been diverted to industry and arts. But here possibly four and five-tenths billions have been consumed in such ways as to render recovery impracticable. That leaves eight billions representing jewelry of the better grades.

If recovery should average 50 percent, the commandeering of plate and jewelry would add four billions to stocks.

No portion of the five and seven-tenths billions consumed by

No portion of the five and seven-tenths billions consumed by war is believed to be recoverable. It has disappeared from earth

Assuming that the maximum amounts estimated as recoverable could be recovered under some form of arbitrary action, a total of not more than \$7,500,000,000 would be added to the uses of trade, raising the whole to \$20,400,000,000—just a little more than one-half of the amount necessary to maintain a free, even, and full flow of commerce

Twenty-seven billions of gold missing; twenty billions never to e seen again. What a price to pay to vanity, fear, and war. be seen again.

The Real Farm Problem

EXTENSION OF REMARKS

HON, HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Wednesday, May 10 (legislative day of Monday, May 8), 1939

ARTICLE BY ERNEST D. MACDOUGALL

Mr. BONE. Mr. President, the able master of the Washington State Grange, Mr. Irvin King, has manifested great interest in an article by Ernest D. MacDougall, appearing in the Washington Grange News of May 6. Because of the interest of the leader of the Grange of my State, I ask unanimous consent to print the article in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Grange News of May 6, 1939]

THE REAL UNITED STATES FARM PROBLEM—NO AGRICULTURAL PROGRAM CAN WORK WHILE PERPETUATING CROP SPECULATION

(By Ernest D. MacDougall)

All farm plans fall into two classes. Some are calculated to hold prices of farm products, both at home and abroad, in line with world prices. Other farm plans are calculated to lift prices in the domestic market off of the world-price level. Plans of the former sort require the payment of a subsidy to the producers to compensate them for price deficiency due to lower production costs of competing products imported from foreign countries.

The United States Department of Agriculture, under its present Secretary, has consistently adhered to the theory of holding our agricultural prices in line with world prices and supplementing the low income of our farmers by relief (benefit) payments.

PROMISE UNKEPT

Secretary of Agriculture Wallace, when first appointed to the Cabinet, said much about parity prices. He soon changed the term to parity income. Secretary Wallace has been continually promising the farmers parity income—that is, low world prices plus benefit payments sufficient to bring up their income to a parity with domestic prices of American industrial goods in pur-

This promise has never been kept. The benefit payments have fallen far short of bringing the income of farmers to parity. These substitutes for parity prices have been tragically inadequate considering the fact that farmers must buy, under the Wallace type of farm plan, in a high, protected domestic market and sell in

a low, unprotected world market

Obviously, in order to rectify this gross injustice to agriculture, one of two things must be done. Either the protection our Government affords to industrial prices and wages must be withdrawn and industrial prices and wages forced down to the level of world prices and wages, or agricultural prices must be lifted up to and protected at the level of American industrial prices and wages.

ROOM FOR WONDERMENT

The Wallace program definitely repudiates the latter objective and falls far short of attaining the former. The policy of reciprocal-trade agreements is a sly but feeble effort to withdraw governmental protection from American prices and wages and to reduce our American standard of living to world-cost levels. It is unlikely, however, that American industry or labor will permit that sort of thing to go very far.

This situation causes wonder as to why Secretary Wallace refuses to permit our Government to afford to agriculture the same protection it affords to industry and to labor. There is but one possible answer, namely, the fixed determination to hold our agricultural prices in line with world prices.

But that does not explain the real purpose of that fixed determination. The real purpose is to protect and percentage the margination.

mination. The real purpose is to protect and perpetuate the mar-ket operations of the futures traders. Futures trading cannot be done on an American price level. There is no futures trading on American industrial prices. But there are no agricultural prices in the American market except world prices, as reflected on the futures market ticker tape. There is no such thing as American agricultural prices of crops of which we produce an exportable surplus.

THE REAL EXPLANATION

Futures trading is possible only in world trade with world prices.

Futures trading is possible only in world trade with world prices. Futures trading can be done only on a constantly fluctuating world-price basis. Futures trading cannot be done on a stabilized price level, either high or low. Futures trading requires (1) fluctuation of prices (2) on world-price levels. This is the explanation of the Wallace farm program.

Turning to the other type of farm plan, it should be noted that the protection offered by the Government to industry is protection of price. Industry fixes an American price for its products sold in the domestic market and the Government protects that price by means of tariffs or import duties. Unless and until an American price, as distinguished from a world price, is fixed for agricultural products there is no price for an American tariff to protect. Lack products there is no price for an American tariff to protect. Lack of protection for agriculture does not arise from lack of agricultural tariffs. It arises from lack of an American price for the

tural tariffs. It arises from lack of an American price for the tariff to protect. In agriculture, the only price we know is world price, and "futures quotations set the pace for cash prices."

Several plans have been suggested, but never seriously considered by Secretary Wallace, to lift our agricultural prices in the domestic market off of and away from world-price levels. One is the cost-of-production plan. Another is the parity-price plan. Another is the commodity-index plan. Another is the loan-value-above-world-price plan. None of these is acceptable to Secretary Wallace because they would destroy commodity speculation in the Wallace because they would destroy commodity speculation in the

futures markets.

rutures markets.

It may be assumed that it is not within the power of mortal man to devise any farm plan, or other plan, that will operate 100-percent perfectly. The choice is not between a perfect plan and an imperfect plan. The choice is between a plan that will, in a general way, hold our prices in the domestic market in line with world prices and a plan that will, in a general way, lift our prices off of and away from world-price levels.

It is, without a doubt, possible for the Congress to draft and enact legislation that will, in a general way, give to agriculture much the same protection that the Congress has afforded to industry. It has always been a difficult thing to adjust and regulate prices, freight rates, utility rates, minimum wages, protective tariffs, and the like. The difficulty of the task has never deterred the Congress from making the effort where industrial prosperity has been at stake. It is only in the field of agriculture that the task has been considered to be too difficult to be undertaken.

The secret of this whole dark, deep, difficult problem of agricul-

has been considered to be too difficult to be undertaken.

The secret of this whole dark, deep, difficult problem of agriculture is that the most powerful lobby in the land cleverly, effectively, but quietly, is determined that our prices of farm products, which are gambled in on boards of trade, shall be held in line with fluctuating world prices, so that the gambling game, for the great gain of the gamblers, may go merrily on. It is fairly obvious that no effective farm legislation ever can be enacted into law until and unless the deep, dark, mysterious game of the commodity gamblers is exposed to the light of day.

This situation clearly indicates the great need for an honest investigation of the fine art of commodity gambling and futures trading, and obviously explains why no such investigation has ever been made.

been made.

Rivers and Harbors and Flood-Control Projects-Amendments to Increase Appropriations—Merits of Projects-Large Employment of Labor

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

STATEMENT OF HON. MARTIN F. SMITH OF WASHINGTON, BEFORE THE COMMITTEE ON APPROPRIATIONS, APRIL 26,

Mr. SMITH of Washington. Mr. Speaker, I voted for the amendments to increase by \$25,000,000 the appropriation for rivers and harbors projects, and also to increase by \$25,000,-000 the sum appropriated for flood control, instead of having those sums deducted from funds to be appropriated for work relief for the unemployed. I much prefer to have the money provided out of the regular appropriations contained in the present War Department civil functions appropriation bill for 1940, which we have now done. My views in regard to this entire subject matter are fully set forth in the statement which I made before the Committee on Appropriations during the hearings on this bill held on April 25, 1939, in which I urged and advocated a substantial increase over and above the reduced Budget estimates.

My statement made before the Committee on Appropriations was as follows:

STATEMENT OF HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. SNYDER. We have with us this afternoon our colleague, Mr.

SMITH of Washington, and we will be glad to have from him at this time such statement as he may desire to make. Mr. SMITH. Mr. Chairman and gentlemen of the committee, I am deeply grateful to the committee for this privilege of appearing at this time to make a brief statement to you.

at this time to make a brief statement to you.

I am particularly interested in the appropriations to be made at this session of Congress for river and harbor improvements.

During the entire period of my service as a Member of the House I have served on the Committee on Rivers and Harbors, as you know, this being my seventh year of service and membership on that committee. There is no type of Federal projects which is more important to my district in southwest Washington than navigation projects for the improvement of rivers and harbors.

I have in my district Grays Harbor, Willapa Harbor, Clympia Harbor, Longview, Kelso, Kalama, Bakers Bay, Ilwaco, Vancouver, and Camas-Washougal.

There are also smaller projects at Cathlamet and Knappton.

There are also smaller projects at Cathlamet and Knappton. I have at least six very important waterways in my district—harbors of major importance.

I express the views of the people of my district, and particularly the industries and labor organizations, when I say we view with considerable apprehension and even alarm the proposed cut in the

considerable apprehension and even aiarm the proposed cut in the appropriation for rivers and harbors work.

I think there is undoubtedly a feeling in the country that we should curtail expenditures by the Federal Government, but I venture to say that if the people of the country could be consulted, especially in those parts of the country where they have observed the benefits derived from rivers and harbors improvements, they would take the position that that type of Federal project should be the very last to suffer in any curtailment of appropriations. appropriations.

There is no type of project for which money is appropriated by the Federal Government which results in as big returns on the

the Federal Government which results in as big returns on the amount of money invested.

I understand that General Schley, the Chief of Engineers of the Army and the Corps of Army Engineers, submitted an estimate to the Budget for new work amounting to approximately \$102,-975,800, and that was cut to \$39,000,000; that the estimate they submitted for maintenance was \$51,738,210, and that was reduced to \$41,135,000, or a cut of \$10,603,000. There was a cut of 62 persent the estimate for new presents. cent in the estimate for new projects.

That certainly will be a very drastic cut and, in my opinion, would seriously curtail the program of the Corps of Army Engineers. In fact, if they were to complete the projects which have already been authorized by Congress they would need about

\$225,000,000.

I have in my own district the project for reconstruction of the Grays Harbor Jetty which is under a continuing contract, and as I understand it, if this cut is made as drastically as has been proposed, which I certainly hope will not be done, the Corps of Army Engineers would be compelled to go ahead and spend most of the money on those continuing contracts, where they would have to proceed with the work in order to complete the project.

This project on the south jetty of Grays Harbor, which is under a continuing contract, had an estimate for this year of \$1,250,000, and the Corps of Army Engineers, also recommend in their estimate to start construction of the north jetty of Grays Harbor \$500,000, which they should be given.

If there is no increase made by the committee, they will probably

not be able to do that.

There are other items of \$180,000 for dredging Gray's Harbor;

There are other items of \$180,000 for dredging Gray's Harbor; \$58,000 for dredging the inner channel, which are also provided for in the estimates, as well as \$80,000 for dredging Willapa Harbor.

I also have a number of flood-control projects in my district, Skamokawa Creek, Wahkiakum County, \$135,000; Deep River, \$59,000, and Diking District No. 1, in Pacific County, \$28,000; and several other projects. It is my understanding that the estimate for flood control was cut very drastically from \$195,500,000 estimated by the Army engineers down to \$110,000,000. So our flood-control work is going to suffer as well as our river and harbor work.

I took occasion 2 years ago to ask Major General Markham, then the Chief of Engineers of the Army, to prepare a statement show-ing the percentage of direct and indirect labor costs on river and

ing the percentage of direct and indirect labor costs on river and harbor projects.

Mr. Snyder. We had that information this morning.

Mr. Snyder. We had that the labor costs ranged from 76.9 to 87.9 percent, demonstrating the soundness and desirability of river and harbor projects as labor-employment projects.

I would like to have the privilege of inserting as a part of my statement a résumé of the process through which a river and harbor project passes from its very inception down to the time the project is actually completed.

I will make the statement that there is no form of expenditure which the Federal Government makes which is subjected to as thorough-going scrutiny, investigation, and consideration as the money spent on river and harbor projects. I think that is borne out by the statement I will file with the committee. I hope that you will increase substantially the appropriations for both river and harbor and flood-control projects.

and harbor and flood-control projects.

Mr. Snyder. You have the privilege of extending your remarks.

Mr. Smith. Thank you, Mr. Chairman. I submit the following

"There is probably no type of Federal project, I care not what in ature may be, which receives the thorough, painstaking study and consideration to which a river and harbor project is subjected before it is authorized by Congress and the money is actually ap-

before it is authorized by Congress and the money is actually appropriated by Congress.

"The local community initiates the project for the dredging or improving of the river or harbor in question to serve the local community by providing low-cost water transportation, and to aid commerce and navigation at that point. The project is discussed in the community, the citizens themselves see the possibilities and advantages which would accrue, and therefore they agitate and advocate the project and local industries join with them in favoring it; then their Representative in Congress is called upon and introduces a bill for a survey which is essential in the case favoring it; then their Representative in Congress is called upon and introduces a bill for a survey which is essential in the case of every new project. He presents the matter to the Committee on Rivers and Harbors, which submits it to the United States Army engineers having jurisdiction of rivers and harbors, who determine whether a survey is necessary and desirable and recommend accordingly. This results in the bill either being passed separately or included in the omnibus river and harbor bill, such as the pending measure, which includes numerous surveys. If the project is one for the modification or change of an existing project, then a resolution for review of prior reports is sufficient and project, then a resolution for review of prior reports is sufficient and the Representative sponsors such a resolution, which is submitted to the Army engineers and later to the committee, which passes it and

the Army engineers and later to the committee, which passes it and refers it back to the Army engineers for the desired report.

"The project is then referred to the district engineer, of whom there are 42 in the United States, embracing every section of the country. He calls a hearing in the local community and all those who might be interested are notified and afforded an opportunity to be heard and present testimony and arguments showing the need for the improvement and evidence in support of the merits of the project. It is a public hearing, the public is invited and welcomed, and all those who indicate a desire to be heard either for or against the project are heard. It is in the nature of a quasijudicial hearing. The district engineer, after considering all the testimony, makes recommendations and refers the project to the division engineer, of whom there are 10, in all sections of the Nation, the last division engineer's office to be established being at Portland, Oreg., now in charge of Col. John C. H. Lee, largely on account of the large Bonneville Dam project on the Columbia River in Oregon and western Washington.

"The division engineer reviews the recommendations and report

"The division engineer reviews the recommendations and report of the district engineer. He then makes his report and recom-mendations and sends the project on to Washington, D. C., where mendations and sends the project on to Washington, D. C., where it is again reviewed and considered by the Board of United States Army Engineers, at which time the Representative in Congress is again heard in behalf of the project. The Board consists of seven members. They have served as district and division engineers in various parts of the Nation, and like them were honor students at West Point and took the special course at the engineering school at Fort Belvoir, Va., prior to serving as district and division engineers before being promoted to membership on the Board. The members of the Board have no local interest to serve whatsoever; they consider each project from a national viewpoint, how it will affect the navigation and commerce of the United States. They are far removed geographically from each project. These skilled engineers are absolutely divorced from politics. They

are nonpolitical and nonpartisan and consider and decide the project solely upon its merits and demerits.

"The final decision rests with the Chief of the United States

"The final decision rests with the Chief of the United States Army Engineers, who reviews the report and recommendations of the Board. After the project has run the gantlet of the district engineer, division engineer, Board of Engineers, and Chief of Engineers, these reports are submitted to the Committee on Rivers and Harbors, which hears the project de novo and listens to the presentation made by the local Congressman and representatives of the office of the United States Army Engineers and either approves or rejects the project, preparatory to its inclusion in an omnibus river and harbor bill. I repeat the assertion made at the outset that the scrutiny and searching investigation which I have described is probably not equaled or even approached by any other class of projects or expenditures of the Federal Government. "Mr. Chairman, not only are river and harbor projects based upon merit, but they also result in a greater proportionate expenditure for labor, direct and indirect, than almost any other class of public-works projects. To substantiate and prove this fact I call attention to the following statement prepared under the direction of Maj. Gen. E. M. Markham, Chief of Engineers, United States Army, furnished to me under date of June 25, 1937. The total percentage, direct and indirect, of labor costs ranges from 78.5 to 87.9 percent, demonstrating conclusively the soundness and desirability of rivers and harbors projects as labor-complexyment projects.

ness and desirability of rivers and harbors projects as laboremployment projects.

The statement of General Markham referred to is as follows:

Percentages of labor costs, direct and indirect, to total cost for work completed with Government plant and hired labor by the Corps of Engineers, U. S. Army, between September 1933 and June 30,

Reclamation States Honor Edward T. Taylor

EXTENSION OF REMARKS

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

STATEMENT OF O. S. WARDEN, PRESIDENT OF NATIONAL TATEMENT OF O. S. WARDEN, PRESIDENT OF NATIONAL RECLAMATION ASSOCIATION, AT AN INFORMAL CEREMONY AT WHICH A GAVEL AND BASE WERE PRESENTED TO THE HONORABLE EDWARD T. TAYLOR BY THE 15 RECLAMATION STATES OF THE ARID WEST

Mr. LEAVY. Mr. Speaker, it was my privilege to be present this morning in the office of Chairman EDWARD T. TAYLOR, of the Appropriations Committee of this House, in a little informal proceeding when there was presented to Chairman TAYLOR a beautiful wooden gavel as a token of esteem and appreciation for the years of useful and constructive service rendered by that truly great westerner, ED TAYLOR, of Colorado.

Present at this gathering were leaders of reclamation, including Hon. John C. Page, the able head of this great Federal agency; also the tireless and efficient clerks "Mark" Sheild and "Billy" Duval. There were also present members of the Interior Subcommittee on Appropriations, as well as President O. S. Warden and Floyd Hagie, secretary-manager of the National Reclamation Association.

Mr. Warden, in a beautiful and fitting manner, presented to our beloved colleague and true son of the great West the gavel I have mentioned, in the following words:

I am well along in my fourth year as president of the National I am well along in my fourth year as president of the National Reclamation Association. In these 4 years, and those just back of them, there has been notable accomplishment until reclamation has become a permanent national policy. We are making thousands of new western homes. This has come about largely by a continually growing legislative support. The Interior Department measure that has just come from the Congress merits the grateful appreciation of each Western State.

measure that has just come from the Congress merits the grateful appreciation of each Western State.

We have come this morning to a familiar office room for the most delightful privilege in all of my reclamation work. I wish that I could find the words that would fully measure and express the heart-to-heart gratitude and the personal admiration that the people of 15 great States of the West would like to have me use as I imperfectly convey to Congressman Edward T. Taylor thanks for great and consistent service. Through a long and earnest life he has been an unfaltering supporter of the cause of reclamation. He has been a foremost leader whom we have been delighted to follow—from the time when the Congress passed the Reclamation Act in the administration of Theodore Roosevelt—down to this year and day. Year after year—session after session—his counsel has always been wise, his effort has been tireless, his courage has never failed. After all of these years of faithful work any symbol that can be fashioned does but poorly reveal the accomplishment of half a century. The story begins with the simple diversion of water upon the land. At the end is the great Boulder Dam and other multiple-purpose enterprises.

The choicest gift of all that we can bring to you, Mr. Taylor, is the thanks that come from thousands of new homes your efforts

is the thanks that come from thousands of new homes your efforts

have helped to build.

Still those who have worked with you wish to give you something you can keep. This testimonial of friendship and esteem is made from wood that came from each of the 15 western reclamation States, gathered by the directors of this association. The handlwork of the maker of this gavel is interesting. Reading from the dark side of the handle, the different kinds of wood appear in the order here indicated. The history of many of the pieces is interesting.

interesting.
Idaho: Juniper. interesting.

Idaho: Juniper. This piece of wood came from the Fifield Basin juniper which is over 1,600 years old. This tree started to grow in the year 306 A. D. in the lava fields on the Snake River plains about 15 miles southwest from Idaho Falls and was still living when cut in 1928 by a dry farmer for fuel. As far as known, this is by far the oldest tree ever to have been found in Idaho. The thickness of its rings have been measured and used as an indicator of precipitation changes during the bygone centuries.

Wyoming: Red cedar. This wood comes from the Snowy Range area west of Laramie, Wyo.

Washington: Apple wood. This apple wood is a part of a limb of an apple tree of which the original stock was planted in 1879 on the old John F. McClure homestead, located about 5 miles west of Yakima, and now owned by Congdon Orchards, Inc. At the time Mr. McClure set out a few trees for a family orchard, the whole section in which it was planted was in sagebrush and principally inhabited by jackrabbits and rattlesnakes. This was prior to the advent of Mr. Chester A. Congdon who visualized the potential development of what he termed the second Garden of Eden. Mr. Congdon purchased the land and financed the Congdon Ditch Co. which is now known as the Yakima Valley Canal Co. It was one of the early private irrigation projects in the Yakima Valley and embraced the irrigation of 4,300 acres.

Texas: Mesquite from Harlingen, Tex.

Valley and embraced the irrigation of 4,300 acres.

Texas: Mesquite from Harlingen, Tex.

Arizona: Orangewood. The tree which this orangewood came from was planted on the Yuma Mesa, part of the old Blaisdell ranch, by Hiram W. Blaisdell, during the year 1892, and was a part of the first orange orchard of any size that was planted in Arizona. The land now is part of a subdivision of the city of Yuma and is owned by Mr. M. A. Holmes.

Colorado: Oak. This piece of wood came out of the original seal pieces which close the roller gates on the Grand River Diversion Dam.

South Dakota: Cedar. This piece of wood was obtained from the Black Hills of South Dakota, which is the watershed of the Belle Fourche reclamation project, and several small irrigated areas in western South Dakota and eastern Wyoming. This wood was obtained in the vicinity of Deadwood, S. Dak., and in the vicinity of the monument erected to President Theodore Roosevelt, the father of Bederal reclamation. of Federal reclamation.

Montana: Larch. This wood came from the banks of the Missouri River at Great Falls, Mont.

North Dakota: Cedar. This wood comes from the Little Missouri River Valley where Teddy Roosevelt came as a young man seeking to regain his health. His original log cabin was built from this very type of wood which he had floated upstream in the Little Missouri. The species of wood later propagated north in the valley until today it surrounds his old ranch site. It is unique that nowhere else in North Dakota does red cedar flourish.

Utah: Red pine. A piece of native red pine taken from one of the old floor joists of the "Lion House" home of Brigham Young in Salt Lake City. This edifice was located within the area which Brigham Young and his followers first irrigated, a small area of

Brigham Young and his followers first irrigated, a small area of land near the present temple and the center of Salt Lake City is located by turning the water through furrows made by use of oxen and crude plows from City Creek.

Nebraska: Cedar. This cedar came from the North Platte reclamation project in Nebraska.

Nebraska: Cedar. This cedar came from the North Platte reclamation project in Nebraska.

Nevada: Redwood. This piece of redwood was taken from a diversion structure built in the year 1868, long before the Reclamation Act, at which time there were several direct diversions from the Carson River. After the Reclamation Service, then under the Geological Survey, began investigations for the establishment of the Newlands project, then Truckee-Carson project, the water rights of these old irrigators were acquired by the United States and an irrigation system was constructed and these old diversion headworks were abandoned. This piece of redwood has been standing solid and firm since the day it was first erected.

California: Orange wood. Wood of an orange tree in the Central Valley which died from lack of water due to the receding water table, a condition which the completion of the Central Valley project will correct for all time.

New Mexico: Cedar. Old original cedar of Lebanon wood from the Arch Hurley conservancy district near Tucumcari, N. Mex.

Oregon: Juniper. The tree from which this wood came grew on the right-of-way now being cleared for the North Unit Canal. If you examine the ends of these pieces under the microscope, you will observe how tight the annular rings are, indicating the small annual precipitation in the area where the tree grew. It is because of this low precipitation that irrigation is needed in this country to produce farm crops. Given water, however, these lands produce abundantly.

The core in the head of the gavel is Texas mesquite. The handle is New Mexico cedar, and the block is New Mexico cedar.

Upon the block is this inscription:

"In appreciation of long and valuable service to the 15 reclamation States, this gavel and base made from significant woods of

"In appreciation of long and valuable service to the 15 reclama-tion States, this gavel and base made from significant woods of each State is presented to Hon. Edward T. Taylor by the National Reclamation Association."

To you, then, our friend, statesman, and patriot, in a great national service, we present this gavel with the wish that there may yet remain for you many, many years in that health and happiness you so richly deserve. Whenever you sound the gavel we will be ready to follow your leadership.

Mr. Speaker, I wish that every citizen of this great Nation could have seen this presentation and heard the response of our beloved colleague, ED TAYLOR, a man whose life has been one of outstanding public service. The substance of his unassuming response was simply that to him it is an indescribable pleasure to know that his efforts have aided to make happy homes for the great number of fine Americans who live on western reclamation projects and to feel that he had made some contribution for the permanent enrichment and betterment of his Nation.

The whole affair, brief and informal though it was, perfectly typified the fine character built into the lives of those whose good fortune it is to live in the West and ED TAYLOR exemplified that ideal that we all strive to attain. Truly he is a greate westerner-truly he is a great American.

Party Loyalty-Public Morals

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

BY HON. JOHN J. BENNETT, JR., ATTORNEY GENERAL OF THE STATE OF NEW YORK ADDRESS BY HON.

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks, I wish to include therein an address delivered by the distinguished Attorney General of the State of New York, the Honorable John J. Bennett, Jr., at the National Democratic Club dinner on April 22, 1939. This address clarifies many of the issues confronting the Democratic Party today, particularly in the State of New York, and I am glad therefore to incorporate it in the RECORD. The address follows:

It is a privilege to address tonight such a representative gathering of our city, State, and national democracy at this Jeffersonian dinner of the National Democratic Club. I am grateful for

This event, with so many leaders of the Democratic Party pres-ent, is an ideal occasion to discuss some matters of interest to our

ent, is an ideal occasion to discuss some matters of interest to our party in this State and city.

Down through the years the Democratic Party in New York and in the Nation has been responsible for more progressive and humane legislation than any other political group. Everyone here remembers how the factory laws, hospital-bond issues, State parkway system, and other acts of beneficent legislation were literally beaten through Republican legislatures by Governor Smith. Governor Lehman later had to do the same thing to carry through his program of labor legislation. Jefferson, whom we honor tonight, formed our party in the mold of liberal progressive democracy; equality of all men under God, the Author and Donor of our inalienable rights of life, liberty, and the pursuit of happiness. inalienable rights of life, liberty, and the pursuit of happiness. Despite great temptation to follow strange and alien ideologies, we

Despite great temptation to follow strange and alien ideologies, we have managed to keep fairly close to Jefferson's plan.

The Democratic Party has given to the Nation some of the greatest men in its history. We have given to the service of our own city and State Democrats revered for devoted service to the welfare of the people. We have given to the public life of this country countless thousands of competent, honorable men and women who have labored in comparative obscurity—for honesty and industry are rarely spectacular.

women who have labored in comparative obscurity—for honesty and industry are rarely spectacular.

Despite this splendid record, and sad to relate, our party here bows under the disgrace brought upon it by some greedy, unscrupulous, and dishonest members. Certain public officials, wearing the label of the Democratic Party, have brought it into disrepute by sacrificing their integrity and selling their souls for gold. Others have covered themselves with the slime of corruption by associating and conspiring with criminal characters. Fortunately, the penetrating light of prosecution has been turned on these individuals and will bring them the justice they so richly deserve. Corruption knows no party label. The rogue will take advantage of any medium, political or otherwise, for the achievement of his ends. There are crooked Republicans as well as crooked Democrats.

In my own home borough, Brooklyn—a community of nearly

In my own home borough, Brooklyn—a community of nearly 3,000,000 upright, decent men and women—we feel keenly the shame brought on our party and our borough. We who live there are proud of the reputation of Brooklyn. We detest, with all the are proud of the reputation of Brooklyn. We detest, with all the forthrightness of our civic pride, the abominable creatures responsible for the shame which they have temporarily placed on

our borough's good name.

It is unfortunate that our great party should be stigmatized by the acts of a few dishonest men. Men whose sole object in life is to line their pockets, no matter how, should not be permitted to remain members of our party. Let's get rid of them. In the ranks of our party we have thousands of men and women of education, culture, civic background, and training. They women of education, cutture, civit background, and raming. They will provide a continuous supply for public service of officials who, for ability, integrity, and honesty, cannot be challenged. With them, we can supply the best type of leadership—the best type of public officials—the best administration of government—if our leaders and their advisers will exercise the necessary discrimination. And if there are some leaders and their advisers who won't do this, let's throw them out and get new leaders and advisers who will.

The unclean and the criminal elements in our party must be

who will.

The unclean and the criminal elements in our party must be made to realize that we won't permit them to remain in our ranks. All must be made to understand that no sinister influence will be permitted to exercise any authority, direct or indirect, in the administration of Democratic Party affairs. We can have no half-way measures in this house-cleaning campaign. We must demonstrate to the citizens of this city and State, who have shown their faith and confidence in our party and in the men and women it has sponsored for public office, that we are worthy of their faith and confidence. For, after all, a party is directly responsible to the voters, a fact which some seem to have forgotten.

With a burning hate, the American people resent dishonesty in public office. But their sense of fair play is such that they are patient and long suffering in the face of mere rumor, however oft repeated, of official corruption. But when rumor gives way to proof, their patience turns to passionate demand for justice and punishment. If we don't remedy these conditions, the voters will. It is timely that these things be said on the night we honor Jefferson, because his name is synonymous with decency and progress in government. Many people are today losing faith in democratic government because some in high position have violated their oath of office and proven themselves false to the trust reposed in them. If we had not pussyfooted so long, this matter would not have to be discussed here tonight.

It is true, of course, that the vast majority of men and women in public life are honest and

It is true, of course, that the vast majority of men and women in public life are honest and upright. Nevertheless, we must realize that the acts of a few dishonest public officials invite a cynical, distrustful attitude toward our form of government. We must know that corruption in public office can crumble the very

foundations of democracy. No government can continue to exist if its citizens have good reason to hold it in contempt. Surely our citizens have a right to ask: What are your Democrats doing to remedy these conditions? The answer is this: In our party there is a militant honesty which will not be denied. The Democratic

a militant honesty which will not be denied. The Democratic Party is cleaning its own house.

In Kings and Albany Counties, cooperating with Governor Lehman, my office is proceeding with the task of bringing the guilty to justice regardless of party connection. In Kings County I have placed Assistant Attorney General John Harlan Amen, a Democrat, in charge and he is doing a splendid job. In Albany, I have placed Assistant Attorney General James McGough, a Democrat, in charge; he also is doing a splendid job. Right here let me say that, as these investigations uncover corrupt officeholders and the crooks they have been associated with, and protecting, they are being brought to the bar of justice irrespective of the position they hold in public or private life. Incidentally, in Orange County, my office, under Assistant Attorney General Raymond Whearty, a Democrat, is also conducting an investigation, though it must be remembered that Orange County is not a Democratic county.

With these thoughts fresh in your minds, I would like to bring to your attention the attitude of a few who call themselves Democrats who resent these investigations. They would stifle Democrats who resent these investigations. They would stifle them if they could. They regard the honesty of purpose of Democratic prosecutors and their devotion to duty as party treason. Eight years ago I first took my oath as attorney general to uphold the constitution and the laws of the State of New York. I repeated that oath in 1933, 1935, 1937, and again in 1939. Tonight I am glad to say to the Democrats assembled here that I have kept that oath. That may be treason to some. Well, if that be treason to the Democratic Party and to the people of the State, then I plead guilty to the charge. I am sure every man and woman present here tonight shares this thought with me: When the day comes that an elected public official must violate his oath of office in any way, especially by refraining from doing his job, as payment for support of his candidacy, our democratic form of government will cease to exist.

Unfortunately, no party long in power has been free from corruption either in local, State, or National Government. Teapot Dome is not so far removed, the most shameful of our national scandals in several decades. We have been afflicted with major scandals ourselves. But we were able to clean house and restore order. With the help of the vast majority of decent, honest men and women in our ranks, we shall again clean house and restore order.

I am proud to be a member of the party of Thomas Jefferson.

I am proud to be a member of the party of Thomas Jefferson. As a Democrat I am proud of the honorable leadership given in this State over the years by Governor Lehman, Governor Roosevelt, and Governor Smith. As Democrats, in the future we shall continue to give to our State and city this type of leadership—leadership in which the people can place their trust. In the front rank

ship in which the people can place their trust. In the front rank we shall carry on our fight for social justice for our people. And we shall make clean government the watchword of the fight.

Today we need no reminders that democracy is at the crossroads. On all sides, at home and abroad, we observe cynicism, distrust, and open contempt for the democratic ideal. Corruption or improper conduct, by public officials or party leaders, whether Democrats or Republicans, must not be condoned. To do so is to destroy the very foundations of our democratic institutions. These corruptionists, regardless of party labels, must be driven from publicans. corruptionists, regardless of party labels, must be driven from public life. As Democrats, let us drive from our ranks all who falsely wear our insignia. In the interest of democracy, of representative government, of the ideals of America as envisaged by Thomas Jefferson, the philosopher, patriot, and founder of our party, let us bend to the task without fear or hesitation. Jefferson wrote the ferson, the philosopher, patriot, and founder of our party, let us bend to the task without fear or hesitation. Jefferson wrote the great document which declared our independence of corrupt for-eign rule. It is appropriate that, in honoring him tonight, we declare our independence of corrupt members of our party, whether they be humble or great. Let us give to the people a leadership based on lofty ideals, a leadership above reproach and free from scandal. Therein lies the path of duty of the Democratic Party. Therein lies the hope of American democracy.

World War Veterans' Act Liberalized

EXTENSION OF REMARKS

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

EXPLANATION OF EXTENSION OF PROVISIONS TO INCLUDE ADDITIONAL WIDOWS AND CHILDREN, DEPENDENT FATHERS AND MOTHERS, AND TO INCREASE CERTAIN EXISTING PENSION RATES AND PROVIDE OTHER BENEFITS

Mr. LARRABEE. Mr. Speaker, under permission granted me to extend my remarks in the Record, I am inserting my

analysis and explanation of the Rankin bill, which passed the House on Monday, May 1, with practically no opposition.

The statement referred to follows:

The House has passed and sent to the Senate the bill, H. R. 5452, to amend the World War Veterans' Act, which bill, to a very material extent, increases the number of widows and children to receive aid, and liberalizes the amount of pensions payable to widows and dependents of deceased World War veterans, and, which, if the bill enacted by the House becomes law, will also provide benefits for dependent fathers and mothers, in certain needy classes, not now covered by any law.

Under provisions of this bill widows and children of all veterans who die or have died of non-service-connected disabilities, if the

who die or have died of non-service-connected disabilities, if the veteran had at the time of his death, any disability that actually resulted from war service, even though the disability may have been rated at less than 10 percent disabling at the time of the

veteran's death, will be pensioned.

veteran's death, will be pensioned.

In proving entitlement to pension under the terms of this bill, it will be required only that there be adequate showing that the veteran actually had some disability actually incurred in service. The extent of the disability is not a qualifying factor and need not be proven.

Widows and/or children qualifying for benefits under provisions of this feature of this bill, and those who qualified under provisions of the World War Veterans' Act as amended last year (greating pensions in those cases where it was shown that the

of this feature of this bill, and those who qualified under provisions of the World War Veterans' Act as amended last year (granting pensions in those cases where it was shown that the veteran had a service-connected disability of 10 percent or more at the time of his death), will be paid in the following amounts: Widow with no child, \$30 monthly; widow with one child, \$38 monthly; with present rates of \$4 for each additional child remaining unchanged.

The House bill establishes for dependent mother or father a pension of \$45 monthly (if the deceased son had any service-connected disability) or if both are living, the sum of \$25 per month for each.

This bill also changes the present total sum of benefits payable This bill also changes the present total sum of benefits payable by reason of the death of any individual veteran from \$56 to \$66 monthly, such limitation applying to widows with children, but exempting the parents from these limits.

The bill defines the term "mother" or "father" to mean natural mother or father or, mother or father of a veteran through legal

adoption.

Provisions of this bill extend to liberalizing benefits paid to the dependents of deceased veterans who died of service-connected disabilities, so that a widow, under 50 years of age, would be increased from \$30 to \$37.50 per month; the widow, 50 years or over, from \$37.50 to \$45 per month, and extends the total for widows with children to \$82.50 per month. The maximum now is \$75.

Provision is made that for the anatomical loss of one hand or one foot or one eye the rate (including the \$25 increased award under existing law) shall not be less than \$100 per month. These benefits are limited to veterans and do not apply to any survivor of a deceased veteran.

Veterans, to a large extent, will benefit by the provisions of the Veterans, to a large extent, will benefit by the provisions of the clause of the bill extending payment of compensation on a basis of permanent partial 10 percent for wounds incurred in active service during the World War, even though the disability resulting from such wound may be rated, medically, to an extent of less than 10 percent under existing rating schedules.

Reduction of interest charges on any loan on Government insurance from 6 to 5 percent, effective the date of enactment of the proposed law, is also provided.

Veterans' Administration statisticians estimate that about 150 000

Veterans' Administration statisticians estimate that about 150,000 veterans and their dependents will be benefited to the extent of \$19,000,000 if the bill is passed by the Senate and approved by the

It has been my pleasure to support and vote for this bill, as I have all other reasonable legislation for the benefit of veterans and their dependents.

Millions of Taxpayers' Dollars Distributed Freely to Foreigners

EXTENSION OF REMARKS

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF MAY 5, 1939

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call your attention and the attention of the Members of this House to the fact that ample sums of the taxpayers' money apparently are floating to foreign countries through various avenues. It seems to me that the present farm prices justify my asking why we cannot begin to think of our people at home. These farm prices are in many cases less than one-half of the cost of production and the result is that thousands and thousands of farmers are being driven from their farms through foreclosure.

It appears that as soon as the farmers ask for any help, an immediate cry is heard. There also is evidently a lack of funds to adequately take care of the elderly people.

There is no one in this House who has tried to vote more consistently in reducing the expenses of this Government than I have in the short time I have been here.

I would like to see some of this money that is being voted out to the rest of the world, be used at home for our people who are so keenly deserving of it.

I am including an editorial from the May 5 issue of the Washington Star, by Herbert Maximilian Bratter, which gives some indication as to how this money is going to foreigners without "rhyme or reason."

The editorial is as follows:

[From the Washington Evening Star of May 5, 1939]

MILLIONS OF TAXPAYERS' DOLLARS DISTRIBUTED FREELY TO FOREIGNERS—BENEFITS ARE BESTOWED BY TRADE AND OTHER POLICIES WITH NOT EVEN A REQUEST FROM AMERICAN SOURCES FOR RECIPROCATION

(By Herbert Maximilian Bratter)

The United States is the world's rich uncle. And Uncle Sam is generous to his "nephews" and "nieces." When there is a disastrous earthquake in Japan or Chile, when there are starving thousands in war-racked Europe, America is there to lend a helping

But this country's charity to the outside world is not confined to times of disaster. Much of it is dispensed incidentally or carelessly, for supposedly domestic motives. Each year we give away millions without realizing it. By our trade and other policies, we bestow on others benefits which they do not reciprocate. We do not even ask them to do so.

not even ask them to do so.

Foreign countries are not so careless. When they want to adopt a policy, an incidental result of which will be to benefit others, they are inclined first to seek some concession from those foreigners who will benefit. Not so America. When Congress wants to help the agricultural or the silver bloc, the fact that the bulk of the benefit will go to foreigners is no deterrent. Merely to call something "an increase in foreign purchasing power" is often explanation enough.

During the present fiscal year for example millions of bushels.

During the present fiscal year, for example, millions of bushels of American wheat have been exported with the aid of a subsidy taken from the customs revenues. The idea was to help our wheat But the incidental effect has been to make a present to the United Kingdom, France, Belgium, the Netherlands, Mexico, Italy, and various other countries. On a small scale, similar subsidies have been given to foreign buyers of our prunes, pecans, walnuts, tobacco, pears, and long-staple cotton.

GIFT TO THE GERMANS

In view of the unpleasant state of German-American relations In view of the unpleasant state of German-American relations it is interesting to learn that in the guise of aid for our farmers, taxpayers' money is used by the American Government to make a gift to the Germans. The Federal Surplus Commodities Corporation recently sold for German use, at 38½ cents, wheat worth about 70 cents a bushel. To date, between 400,000 and 500,000 bushels of American wheat have been sold through American grants of the Germans. agents of the Germans.

The United States will shortly embark upon another cotton export subsidy. The plan is to help move some of the surplus abroad. The effect will be another gift to foreigners. They will be able to buy American cotton at less than the American price, the difference being paid not by the cotton growers, but by American taypagers. American taxpayers.

American taxpayers.

As a result, foreign textile manufacturers competing with American cotton textiles will be receiving the assistance of the American people—and this, of course, without any quid pro quo. This cotton scheme constitutes the same kind of export dumping as that for which we have officially berated Germany time and again. Its serious consideration by Congress at this time is ironical.

WOULD BENEFIT AMERICANS

If there were not this subsidy, the farmers would receive less If there were not this subsidy, the farmers would receive less for their products, and the buyers of the products would pay less for them. But the reduction in prices would benefit American rather than foreign buyers. As it is, the subsidy holds prices up for domestic consumers and depresses them for foreign consumers. It amounts to a gift by the American public to foreigners. Mexico, it will be recalled, raised its import duties on American merchandise in 1937 and again in 1938. We "retaliated" by buying from Mexico in a lump and at about 25 percent above its Mexican book value, all the silver which the Government of Mexico

had accumulated during 4 years as its undertaking under the London silver agreement. Meanwhile, our Treasury just keeps on buying Mexican silver refined in this country. Thereby it finances Mexico in its purchase of subsidized export wheat and flour, or of any other commodities it desires to buy here. We make Mexico a double gift.

Consider the purchases made by tourists. This country allows each of its returning tourists to bring in duty-free \$100 worth of foreign merchandise. Not a single European country does this for its citizens who visit the United States. Canada is about the culy large country doing so, although this practice dates only from our trade agreement with Ottawa in 1936.

With a few minor exceptions, no other countries offer an exemption corresponding to ours. Thus, Mexicans who have visited here may take home to Mexico not a dollar's worth of American goods duty-free. Even if Mexico extended reciprocity on this matter, it

duty-free. Even if Mexico extended reciprocity on this matter, it would still have a great advantage, because many more Americans visit Mexico than Mexican tourists visit us,

Americans are permitted by their Government to travel freely abroad (outside of war zones) and to take with them all the funds they may possess, if they choose. Not so, foreigners. Where there is exchange control abroad, as in Japan, Europe, or Latin America, travel money is restricted. German tourists, for example, are permitted to bring here only enough funds for a 12-day stay. And they must come and go on German vessels.

Other foreign nationals have pressure put on them to use vessels flying their own flag. Similarly, foreign governments foster campaigns and slogans like "Buy British," the effect of which amounts to a partial boycott of our vessels and merchandise. Recently an American exporter of automobile parts was cautioned to use only a certain British steamship line for his shipments. This sort of thing is very frequently encountered by American

exporters.

We are very generous to foreigners doing business here. We do not discriminate against them. But how about American businessmen trading abroad? Ask some of them.

In some countries American concerns actually must pay for the privilege of doing business by subsidizing their foreign competi-tors. An example is the motion picture business. In some coun-tries American movie companies must pay a huge license fee, the proceeds of which are turned over to the local motion picture industries. This system, which originated in Germany, is found

today in Poland, the Baltic states, Italy, and so forth.

The requirement that exhibitors display a certain proportion of locally produced pictures is quite common abroad. Here foreign films may be shown without legal limitation.

TRADE CONTROLS COMMON

American merchandise trade comes and goes on vessels of all nationalities. This is not so everywhere. Nations with a merchant marine of their own often prescribe that their imports be carried in their own national vessels. This is not always a matter of law, but it is a practice sometimes enforced where trade and exchange are controlled officially.

Here foreign trade is entirely free of quotas, compensation agreements, licensing, etc. Few foreign countries are in this category, trade controls being very common abroad. American textile exporters, for example, could do perhaps 10 times as much business as they do, but for quotas and similar restrictions.

In France foreign nitrate companies, as well as oil companies, must keep large stocks on hand to aid French national defense. No such burdensome system prevails in the United States

In this country when a person dies he knows his will will be carried out. But the bequeathing of money internationally is no longer unimpeded abroad. Our Government does not interfere with the outflow of funds. Foreign governments, however, are on the lookout for any such easy money.

On a grand scale is our silver subsidy. Four-fifths of the 2,000,000,000 ounces of silver acquired under the 1933–34 programs to date has come from abroad. Hundreds of millions of dollars have been poured, "no questions asked," in the pockets of foreign sellers of silver, and because we pay dearly for that useless silver with our merchandise exports and the like, some Americans fool-

ishly think that we've managed a great bargain.

Our gold program is even vaster in its wastefulness. Since the revaluation of the dollar and of our gold stock in 1934, this country's stock of gold has more than doubled. We have bought, at \$35 per ounce, over \$7,000,000,000 of the yellow metal. We have paid for it in goods and services, or in American securities. Meanwhile in South Africa several hundred thousand persons are, in effect, on our gold dole, feverishly digging up some more of the metal we have too much of have too much of.

have too much of.

It might be well for Congress to set up a watchdog "committee on benefits to foreigners," and to have all prospective special-interest legislation examined with a view to determining whether or not an incidental gift to foreigners is involved; and if so, whether such gift to foreigners is in the national interest.

National Defense

EXTENSION OF REMARKS

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

ARTICLE BY COL. HENRY J. STITES

Mr. O'NEAL. Mr. Speaker, under permission to extend my remarks, I am placing in the Congressional Record an article on peace insurance, by Col. Henry J. Stites, of Louisville, Ky. Colonel Stites is an outstanding attorney at the Louisville bar, a 20-year Legionnaire, a colonel in the National Guard, and an active student of and worker for national defense for 32 years. His opinions, as follows, are worthy of serious consideration:

Personally I travel with the American Legion and advocate universal and compulsory military training of each American boy as he reaches the age of 18 years. I also advocate other unattainable schemes and plans, which I compromise by accepting the best result possible, everything considered. Perhaps legislation will ultimately be passed requiring compulsory military training, but right now it must be realized that the most that can be expected is a sufficient volunteer army to reasonably insure national defense at a minimum cost. The formula for this result is a part-time army supplemented by a small professional laboratory (Regular Army) with adequate full-time instructors.

One hundred thousand Reserve officers, each receiving 15 days'

One hundred thousand Reserve officers, each receiving 15 days' annual field training with pay; a small Regular Army, well balanced and well trained; approximately 10,000 civilian aviators; plus a strictly federalized National Guard of about 600,000 officers and men, will give our Nation a reasonable policy coverage of peace insurance at a cost which the people can pay and still stay

The military history of the United States is interesting. Our wars have been fought by civilian armies. Due to our standard of living and a national unwillingness to require compulsory work of living and a national unwillingness to require compulsory work or service without fair compensation, our cost of preparedness is greatly in excess of the armament cost of other nations. To maintain a Regular Army capable of defense would entail a cost in excess of practical conditions, but without regard for cost we must have a Navy strong enough to protect our coast cities, Though still designated sailors, members of the Navy are actually highly trained technical experts and mechanics, who cannot be trained quickly. On the other hand, the components of the Army, viz, the Regular Army, the National Guard, and the Organized Reserve can be maintained at a cost comparable to the armies of other nations, considering the difference in standards of living.

After our Civil War the energies of this Nation were devoted to internal expansion. Except for a comparatively small Regular Army necessary for conquering Indian tribes (if I may use that term), and a small Navy, we were without any organized armed forces. The several States maintained militia units, which were neither equipped nor trained. We went into the Spanish War with an Army of volunteers. Our greatest losses were due to epidemics of typhoid fever and other preventable diseases. Due epidemics of typhoid fever and other preventable diseases. Due to the Philippines, and other over-seas interests, our Navy was improved, the Regular Army was increased and a makeshift National Guard under the Dick bill was maintained. After the World War had continued for nearly 2 years the Wilson administration mobilized the major part of our armed forces, including the National Guard on the Mexican border in June 1916. Our National Defense Act was passed promptly, providing for the National Guard to be paid on a part-time basis and given adequate training. Before that law had an opportunity to demonstrate its usefulness we went into the World War on April 6, 1917, and in 1920 it was amended to provide for an Army of the United States, viz, the Regular Army, the National Guard, and the Organized Reserve.

We know that untrained National Guard men were mobilized on the border during the summer of 1916 and that after some 6 months of intensive training they were qualified as infantymen. American artillery and aviation were not on a parity with enemy artillery and aviation because of inadequate equipment and training until the Argonne fight, which was nearly a year and one-half after we had entered the war.

after we had entered the war.

War is not a game for amateurs, but, given expert advice, the people of our country, who are amateurs, will reach a proper decision. I would like to see a regular army in excess of 600,000 men in

sion. I would like to see a regular army in excess of 600,000 men in war-strength units and ready to fight, but that would be too expensive and we are a representative democracy and prefer citizen soldiers to professional soldiers in principle. A substantial group wants compulsory military service, but that may smack of militarism. What Mr. Average American seems to want is a sufficient national defense at a minimum cost or, in other words, the most results for the least money, which is an American characteristic. As previously indicated, our Navy is an entirely separate problem, but practically every Legionnaire is an expert on the army to a more or less degree, depending on whether or not he has maintained contact with national-defense problems. Of course, times and conditions have changed since November 11, 1918. Auxiliary equipment is different, though the private with the bayonet is pretty much the same, except for a rolling lapel instead of a stiff collar. Artillery is motorized. Tanks have become mechanized cavalry, which, with horse cavalry, are used for reconnaissance and mobility. Antiaircraft and antitank arms developed rapidly. Because of which, with horse cavalry, are used for reconnaissance and mobility. Antiaircraft and antitank arms developed rapidly. Because of civilian training, many hundred Americans are competent aviators and practically every American boy can drive a truck. Thousands of American civilians are familiar with radios so as to send and receive messages. Infantry, horse cavalry, and auxiliary troops can be loaded into trucks and moved on modern roads at a pace in excess of 30 miles per hour, so long as an enemy does not destroy modern highways. Motorized artillery and mechanized cavalry can also maintain the 30 miles per hour schedule of movement. Manufacturing plants have been classified for utility in the making of war necessities.

facturing plants have been classified for utility in the making of war necessities.

Generally speaking, we have an extremely efficient Regular Army of about 150,000 officers and men. We have an Organized Reserve consisting of approximately 100,000 officers of various grades, all of whom have received field training and many of whom have recently handled C. C. C. units. During the World War the major portion of our Regular Army officers were used for staff work and, with temporary officers from the officers training schools, were used for commanding units in the draft army. Many sergeants in the Regular Army reached the temporary commissioned grade of captain or major during the World War. Most of the 1916 class at West Point became temporary majors, though they were hardly "dry behind the ears." Under existing conditions I would guess that at least nine-tenths of the Reserve officers have sufficient training and ability to function in their present grades would guess that at least nine-tenths of the Reserve officers have sufficient training and ability to function in their present grades and supplemented by available Regular officers and some 15,000 or 20,000 Regular Army enlisted men as officers and using the remainder of the Regular Army qualified enlisted men as non-commissioned officers, we would be able to organize and train a draft army within a year that would have a total strength of around two and one-half million men. However, none of this draft army would be useful in much less than a year.

Between the date that war was declared or if the Italian-

army would be useful in much less than a year.

Between the date that war was declared, or if the ItalianEthiopian or Japanese-Chinese method of undeclared war was followed, when an enemy attacked, we would have to rely upon our
Navy to prevent the debarkation of any enemy and our National
Guard to defeat any enemy that landed on our shores. The
National Guard consists of approximately 200,000 officers and men.

National Guard consists of approximately 200,000 officers and men, all of whom reside in their home communities and follow civilian pursuits, except that they receive military training once each week and spend 15 days in field training each summer. Most of the field officers, and some of the captains, are veterans of the World War. Many of the officers and men are graduates of service schools. It would take longer to train artillery, aviation, and some auxiliary units and about the same time to train infantry. However, close to a year is estimated as the time necessary for training units of the draft army, since the officers would have to take refresher courses and the men would have to be conditioned, including vaccination and inoculation. Neither a "white collar" clerk nor even a laborer can be thrown into a military command without hardening and conditioning.

Two hundred thousand National Guard men would be available immediately upon the commencement of hostilities. Unfortu-

immediately upon the commencement of hostilities. Unfortunately 200,000 men are not enough. It would take between 600,000 and 750,000 men who could mobilize immediately with the necessary equipment. Reference to the cost per capita of the National Guard illustrates the fact that comparatively speaking its cost is small. Six hundred thousand national guardsmen can be maintained in a satisfactory state of efficiency and training at be maintained in a satisfactory state of efficiency and training at the annual maximum cost of \$100,000,000. Roughly, 450,000 should be infantrymen, the balance being mechanized cavalry, artillery,

horse cavalry, and auxiliary arms.

Instead of 63 men and 3 officers, each National Guard unit should contain a minimum of 125 men and 4 officers. It has been my observation that units of that size could be easily maintained and in that event the National Guard would be increased from 200,000 to 400,000 men. The additional 200,000 could be relief raised by installing additional units. Louisville and most other comparable cities could maintain as many more units as are at present assigned and many of our best Kentucky towns, including Paducah, Owensboro, and Middlesboro have not been able to secure National Guard units since the World War, since other towns were prior applicants. To maintain 600,000 National Guard troops would take close supervision and in some instances internal troops would take close supervision and in some instances intensive organization. Probably 5,000 additional Regular Army officers

would be needed for training, instruction, and inspection, but if the above plan is made effective, the Nation's peace-insurance coverage would be reasonably comprehensive.

If and when the United States pulls out of the Philippines, Regular Army garrisons will be needed only in Hawaii. The remainder of the Regular Army troops should be used for military laboratory work. There should be a complete infantry division, a complete horse cavalry division, and complete coast and field artillery personnel, which should be stationed at the respective schools, viz, Fort Benning, Fort Riley, Fort Knox, etc. An increased regular commissioned and noncommissioned personnel would be needed to coordinate and assist in National Guard training.

training.

There should be not less than 10,000 civilian military aviators. There should be not less than 10,000 civilian military aviators. Our Army has adopted a policy that all pilots should be commissioned officers. As a matter of fact, any high-school graduate with the proper physical qualifications can make a pilot after flying the requisite hours. With small pay and proper organization over 150 men in Louisville could be maintained on a flying status as civilians. There are 200 cities that could easily maintain civilian aviation groups that would range between 25 and 250 each. It would probably take about 1,500 planes to keep these men trained with necessary mechanical personnel as an added men trained, with necessary mechanical personnel as an added expense. These groups would be a training ground for aviators and would greatly increase the use of private planes. There is no

expense. These groups would be a training ground for aviators and would greatly increase the use of private planes. There is no necessity for pilots, as such, to be given pay or status higher than noncommissioned officers. Doubtless they should be relieved of strictly military duties, which should be left to ground troops. The largest portion of these fiyers would be Reserve and the ground troops could be on a part-time maintenance basis.

An extremely high disciplinary standard has been built up in the Regular Army. Young men probably averaging around 20 years of age are given appointments to West Point. They spend 4 years in most rigorous training, both academic and military. It is my opinion from observing and talking to Regular Army officers that most of them regard the rigorous West Point discipline as unnecessary. Many youths get a false value of discipline because of their West Point experiences. Instead of each Congressman and Senator making West Point appointments, possibly 10 men should be appointed by each Congressman and Senator for a year's academic and field training at some location like Hattiesburg, Miss. (Camp Shelby), where the weather permits continuous outdoor work. From this group should be selected the men who would attend West Point and become Regular Army officers. This field training under competent officers and noncommissioned officers, with refresher academic work, would give the future Regular Army officers a proper and practical background and perspective.

The present national defense law, as applicable to the National Guard, is an outgrowth of the States' rights theory. The National Guard in each State is under the command of the respective Governor until and unless called into the Federal service, but continuous Federal inspection and instruction is provided for. It seems to me that the several States are little interested in national

tinuous Federal inspection and instruction is provided for. It seems to me that the several States are little interested in national seems to me that the several states are little interested in national defense as such. That is a function for the Federal Government. Strikes and other disorders should be handled by and through State, county, and city police, unless disorder or emergencies should require troops. In several States, National Guard troops have been used for political purposes and in many instances Governors have appointed adjutant generals with little, if any, military quilifections.

the public is now national defense minded. We realize that moral legislation has not outlawed war. Instead of listening to partisan and blind advice Congress should call in a cross section of experts and after analyzing testimony install a plan of peace insurance which will meet present and future needs.

Manganese Industry Needs Development

EXTENSION OF REMARKS

HON. FRANCIS H. CASE

OF SOUTH DAKOTA IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

ARTICLE FROM THE MUNCIE (IND.) PRESS OF MAY 4, 1939

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Muncie, Ind., Press of May 4, 1939:

[From the Muncie (Ind.) Press of May 4, 1939]

MANGANESE INDUSTRY NEEDS DEVELOPMENT—FAILURE TO PRODUCE MINERAL, ALTHOUGH PLENTY IS AVAILABLE, MIGHT BE BIG HANDI-CAP FOR UNITED STATES

Washington, May 4.—As Cordell Hull lectures aggressor nations sharply, Congress learns, to its dismay, that the United States lacks

many essential raw materials, and that our deficiency in at least one vital need is the deliberate result of Government policies favorable to the American steel industry by the Departments of Messrs. Hull and Ickes.

Senate bill 572, already passed by the House, calls bravely for \$25,000,000 annually for 4 years for Government purchase, wherever available, of imperative reserves of our basic needs. But, in informed circles, this well-meant gesture is considered lamentably belated and highly inadequate. Supporting this criticism, it is pointed out that an emergency cutting off present foreign sources of supply may occur tomorrow instead of 1943, and that there are at least 30 costly items requiring unlimited instead of limited reserves. For a single one—manganese—it is estimated that a mere 2 years' supply would cost over \$50,000,000.

As to manganese, better known today as United States strategic mineral No. 1, impressive testimony before House and Senate committees flays the Departments of State and the Interior, together with the American steel industry, for having willfully caused our confessed unpreparedness. Adding great force to the record is the recent statement by Tom Girdler, of Republic Steel, and the American Iron and Steel Institute, that we might some day gladly give all of our gold for a pile of this sorely needed mineral without which steel, for peace or war, cannot be made.

EXPLOITATION URGED

EXPLOITATION URGED

The specific charge against the Government and the steel makers is that they have prevented the development of a basic national industry capable of supplying the country's requirements in manganese. And it stresses that in 1919, based on bitter World War experience, the War Industries Board chairman urged strongly upon President Wilson that domestic exploitation of known resources for this metal be supported by all available means.

sources for this metal be supported by all available means.

In 1922, as a national defense measure, a tariff rate of 1 cent a pound was adopted. The State Department made this ineffective by negotiating in 1935 a reciprocal-trade pact with Brazil, where United States Steel is said to have large holdings, cutting this rate 50 percent. This reduction, automatically extended to many other countries, was also applied by special agreement to Russia which years earlier had greatly injured American production by dumping manganese here at less than cost.

Another harmful factor contributing heavily to the present national predicament is alleged to be the hostile attitude assumed by the powerful National Resources Committee of the United States, of which Secretary of the Interior Ickes is Chairman. Through its

the powerful National Resources Committee of the United States, of which Secretary of the Interior Ickes is Chairman. Through its mineral policy planning unit the Committee advocates that international mineral producers regulate world production and consumption. Moreover, it asserts that to combat "exaggerated economic nationalism," such international action should be encouraged rather than hindered by Government. And, despite expert contrary evidence, it maintains that the United States has only enough manganese ore to meet national needs for 5 years.

The interpretionalism practiced by the State Department in its

ganese ore to meet national needs for 5 years.

The internationalism practiced by the State Department in its reciprocal-trade pacts is patently that preached by the National Resources Committee. That it is likewise the goal of the American steel industry and its foreign connections is intimated by one significant bit of testimony. This shows that in 1929 Mr. C. K. Leith, head of the mineral policy-planning unit of the National Resources Committee since 1934, was employed by, and then advocated, the policies of the American Iron and Steel Institute.

CONDEMN DOMESTIC DEPOSITS

The record contains striking evidence of the steel makers' bitter opposition to domestic manganese production. For 20 years, while opposition to domestic manganese production. For 20 years, while bringing in from abroad low-priced ore produced by cheap Russian, African, and Brazilian labor, they have inaccurately condemned domestic deposits as inadequate in quantity and quality, have fought tariff protection of the vitally needed American manganese industry, and, on occasion, have refused to buy American ore of acceptable grade at any price whatever.

In reality the basic claim by Government departments and concurring private interests that our internal resources of strategic mineral No. 1 are meager seems dictated by questionable policies rather than by fact. Actually there are manganese deposits in 34 States and it has been testified that these, adequate for the next hundred years, are sufficient to convert all of the country's known

States and it has been testified that these, adequate for the next hundred years, are sufficient to convert all of the country's known iron-ore reserves into steel.

In Minnesota, Arizona, and South Dakota alone there are reported to be almost 300,000,000 tons of low-grade ore which can be concentrated to requisite standards. In Montana ore of so high a grade is found in quantity that embarrassed steel makers, seemingly anxious to buy inferior ore abroad and willing to pay premiums for quality, are said to have rejected the Montana products on the fantastic ground that it is too good. And, contradicting the policies and conclusions of the National Resources Committee, the United States Bureau of Mines, although also headed by Mr. Ickes, states definitely that the Nation has a large supply of low-grade one which can be

Bureau of Mines, although also headed by Mr. Ickes, states definitely that the Nation has a large supply of low-grade ore which can be concentrated to desired high grade.

That the past actions of the State Department, the National Resources Committee headed by Mr. Ickes, and the American steel industry are repudiated by Senate bill 572 as directly opposed to furtherance of national defense is unmistakable. It does this by demanding further development of domestic manganese and other natural resources and appropriating funds for this purpose.

Unfortunately, in restating in a moment of crisis a doctrine of economic self-dependence, the bill entrusts future development unreservedly to an executive department quite openly committed to the completely contrary policy of the National Resources Com-

mittee. And there is no indication that any future development of mineral resources that may result will be protected by Congress against foreign invasion sanctioned by the State Department under

against foreign invasion sanctioned by the State Department under reciprocal trade pacts, or in other guises.

Senate bill 572 seems likely to be passed. If so, the United States may yet be adequately equipped as to essential needs for the next emergency, providing that crisis is obligingly remote. Even then, however, the record appears to indicate that, so far as "United States strategic mineral No. 1" is concerned, it depends entirely upon whether Hr. Hull, Mr. Ickes, and the steel industry are open to a complete and permament change of heart.

Exportation of Scrap Iron and Other War Materials

EXTENSION OF REMARKS

HON. LEX GREEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

MEMORIAL OF THE LEGISLATURE OF THE STATE OF FLORIDA

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following memorial of the Legislature of the State of Florida:

House Memorial 5

Requesting the Congress to enact appropriate legislation to prohibit the exportation of scrap iron and other materials designed for armaments to aggressor nations who are dominated by dictators and militaristic leaders

Whereas in Europe and Asia certain nations are dominated by dictators and militaristic factions, who are heavily arming and preparing for war and aggression against peace-loving and democratic nations; and

Whereas this Nation is permitting large shipments of scrap iron and other war materials to be exported to such aggressor nations;

whereas the present profits realized from such exports fall to take into account the misery and human suffering that is resulting and will result from such exportations: Be it

Resolved by the house of representatives (the senate concurring),
SECTION 1. That your memorialists, the members of the Florida
Legislature, petition and memorialize the Congress to enact legislation to prohibit the shipping of scrap iron and other material designed for armaments to aggressor petitions dominated by distances. designed for armaments to aggressor nations dominated by dictators

and militaristic factions.

SEC. 2. That a copy of this memorial, bearing the great seal of this State, be transmitted to the President of the United States, to the President of the United States Senate, to the Speaker of the House of Representatives of Congress, and each member of the Florida delegation in Congress.

Investigation of Michigan State College

EXTENSION OF REMARKS

HON, FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

LETTERS RELATIVE TO INVESTIGATION OF MICHIGAN STATE COLLEGE

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

> MICHIGAN STATE COLLEGE OF AGRICULTURE AND APPLIED SCIENCE, East Lansing, April 5, 1939.

Mr. Joseph F. Cox,

Box 68, Forest Glen, Md.

DEAR MR. Cox: Your letter of March 20 is acknowledged. reread the news item to which you object and find nothing libelous in it. The reported remarks of mine were in reply to various questions asked over the telephone by a reporter for one of the Detroit papers. I had no previous knowledge of Representative Hook's speech, and truthfully stated that the charges made were for the most part repetitions of those that had been made and investigated by both the grand jury investigation by Judge Carr in 1932 and by the State senate committee in 1933.

the State senate committee in 1933.

As you know, I became secretary of the State board of agriculture on January 1, 1935. I have intimate personal knowledge of the business affairs of Michigan State College since that date, and assure you that there is nothing in its operation that will not bear the closest scrutiny. All accounts and records are audited annually by recognized reputable, disinterested, auditing firms. The auditors of the United States Department of Agriculture make regular examinations. All proper safeguards surround the handling of funds and the handlers of funds for the protection of the public and the institution. and the institution.

I have read Mr. Hook's speech of March 9 and the Congressional RECORD of March 22, containing a reprint of your letter to me of

Last spring a letter from Mr. Hook to Governor Murphy, containing most of the same charges as contained in his speech of the 9th and your letter of the 20th, was referred to me for a reply. I made a search for the facts in reference to each charge and covered all of the facts insofar as I could ascertain them in a letter to Mr. Hook dated May 11, 1938. A copy of this letter is attached.

1. In your letter of March 20 you state that the State board of agriculture paid to the War Department \$8,600 reimbursing the War Department for certain defaications. The true facts are covered in my letter to Mr. Hook of May 11. The War Department was not in any way involved in these transactions. They lost no money and were never reimbursed by the State board of agriculture, as you allege

Please refer to item 2 on pages 2 and 3 of my letter to Mr. Hook. 2. You indicate in your letter that the State board of agriculture in 1932 authorized an expenditure of \$25,000 for a farm to isolate experimental work in undulant fever. I have diligently searched the records of the State board of agriculture for 1932 and several previous years and can find no record of such action.

The recent epidemic of undulant fever among our students was all of the melitensis or goat type of the disease and could not be traced to any infection in cattle on the college farm or elsewhere. The State department of health has traced the trouble to faulty plumbing in the bacteriology building. In this building are kept a world-famous collection of the various types of covering angles unsulged the forer used by Dr. Huddlest plan. of organisms causing undulant fever used by Dr. Huddleson in his research work. It is unfortunate that the bacteriology building is pathetically inadequate to properly accommodate the greatly increased enrollment in courses in bacteriology and the research projects also carried on in it without some risk to the students. We have repeatedly requested the State legislature for an appropriation to work possible the construction of a pay building to priation to make possible the construction of a new building to provide adequate facilities for animal disease research and for teaching the various courses in this important field. We are hopeful that the present legislature will make available funds for this purpose.

The research barns previously used for the work on Bangs dis-case were razed last August to make way for the new auditorium. The future work will be conducted on the farm near the corner

of Mount Hope and Hagadorn Roads, about a mile from the

campus proper.
3. Your letter makes certain allegations relative to the business of the State farm bureau. This charge is completely covered in item 4 of my letter to Mr. Hook, to which I refer you.

4. In Mr. Hook's speech of March 9 certain charges are made relative to a so-called hush fund. Since January 1, 1935, I know that no such fund has existed or any other fund that is not fully that no such fund has existed or any other fund that is not fully and completely accounted for in the annual audits that are reported to the Governor of the State and available to the public. I can find no record of any such funds prior to 1935, and so do not believe that such a fund ever existed. Mr. Hook cites a specific case of an alleged payment of \$3,200 from this fund to the United States Department of Agriculture covering salary payment to Dr. Robert Snyder from Federal experiment station funds. The records do not show that any such payment was ever made or requested. A further charge is made relative to payments made to Fred Woodworth and certain unnamed politicians. No payments have been made to any persons for political purposes since 1935, and I have found no record of such payments prior to 1935.

5. Since January 1, 1935, the college has not rented or purchased any lands from any employee or former employee with the exception of 46 acres on Harrison Road owned by John MacAllan, the college blacksmith. This land is leased with a purchase option and the lease is still in effect.

the lease is still in effect.

The purpose of Michigan State College is to teach the truth. The function of the experiment station is to find the true facts, and of the extension division to disseminate the known facts to

the farmers and the general public.

The State board of agriculture will not condone nor tolerate any practices not for the best interests of Michigan State College and the people it serves. The great growth in enrollment and the high esteem in which the college is held by the people of the State gives fair indication that it is serving the public in a manner generally satisfactory to them.

If at any time you are in Michigan I hope you will feel free to

call upon me.

Sincerely yours,

JOHN A. HANNAH, Secretary.

APRIL 12, 1939.

Mr. JOHN A. HANNAH,
Secretary, Michigan State College,
East Lansing, Mich. DEAR MR. HANNAH: In the interest of integrity in the administra-tion of educational institutions receiving public support, and par-ticularly because of my interest in the Michigan State College, I am answering in detail your letter of April 5.

In paragraph 1 you say among other things, that the War Depart-

ment was not involved in certain defalcations from military supply funds, that they lost no money, and were never reimbursed by the

State board of agriculture.

The Michigan State senate committee investigating the Michigan State College, in its official report of June 14, 1933, stated the

following in this regard:

following in this regard:

"1. The committee determined that there was a cash shortage of \$8,087.65 in the uniform deposit and advance military account as carried on the books of the treasurer of the college at June 30, 1932; that this shortage had accumulated over a period of years; that officials of the college and members of the State board of agriculture knew that this shortage existed at the time a grand jury investigated the affairs of the college in 1932; that the report of the grand jury indicates that the evidence given before it was incorrect and misleading, inasmuch as the grand jury's report states that the shortage was \$400; that the State board of agriculture appropriated \$8,087.65 to make good the shortage without determining the person or persons responsible for same."

Are not certain board members and officials charged with presenting "incorrect" and "misleading" evidence before the grand jury still directing the policies of Michigan State College?

2. You state you have diligently searched the records of the State

still directing the policies of Michigan State College?

2. You state you have diligently searched the records of the State board of agriculture for 1932 and several previous years and can find no record of the authorized expenditure of \$25,000 for a farm on which to isolate experimental work in undulant fever. You can very readily get the details in regard to this authorization from President R. S. Shaw, who at the time notified me that my request as dean of agriculture for funds with which to buy an experimental farm to isolate undulant-fever experiments had been granted. He will remember that I called to his attention that the dean of veterinary was then renting his own farm to the Michigan State College for animal disease research purposes at 25 cents per head per day for all cattle pastured there, and drove diseased cattle back and forth across the farm lane, thus exposing the college herds and flocks. Director Gardner will undoubtedly remember a meeting held in his office when he and Dean Giltner recommended the purchase of the Nickerson farm, just previously taken over by certain faculty

office when he and Dean Giltner recommended the purchase of the Nickerson farm, just previously taken over by certain faculty members, for the purpose of isolating undulant fever.

The senate committee report of June 14, 1933, states the following in regard to rental and ownership of the Nickerson farm which was illegally offered for sale to the college:

"College cattle were pastured for payment on a farm known as the Nickerson farm, in which the following persons connected with the college had a proprietary interest: Jacob Schepers, treasurer of the college. Ward Giltner, dean of division of veterinary science; I. F. Huddleston, research associate in bacteriology; W. L. Mallman, associate professor and research assistant in bacteriology; L. C. Emmons, professor of mathematics.

"The cattle were under the jurisdiction of the veterinary division

The cattle were under the jurisdiction of the veterinary division

at the time they were pastured on the farm."

at the time they were pastured on the farm."

I am glad to note that you have made progress in isolating the experimental work with animals during the past year and trust that the same can be accomplished in isolating all laboratory experimental work with this dangerous disease. In addition to the 45 student cases of undulant fever resulting recently in the death of one student from what you state is the "goat" type of the disease, you undoubtedly are aware that there have been almost as many cases during the past 6 years among the students and faculty, and in the town, resulting from the "cow" type.

Whether the high frequency of cases of this disease is due to faulty laboratory technique or to failure to isolate animal experiments in the field, proper isolation to protect students and others is imperative. This was attempted in 1932, but was frustrated by the avarice of certain members of the faculty still on the pay rolls, protected by apparent misrepresentation before Judge Leland Carr's

protected by apparent misrepresentation before Judge Leland Carr's grand jury, and by the erroneous report of Joseph Baldwin, special assistant attorney general of Michigan.

As typical of Mr. Baldwin's misrepresentations, the report of the Michigan State Senate committee states the following:

"The college has carried an average balance in its creamery operating fund ranging from \$5,000 to \$46,000 on deposit in the East Lansing State Bank, East Lansing, Mich., from 1925 to 1932.
"No interest has ever been received on this deposit.
"The report of the special assistant attorney general who held an investigation at the college in 1932 stated that the interest on this deposit, had been adjusted. The effectment was incorrect."

deposit had been adjusted. The statement was incorrect."

deposit had been adjusted. The statement was incorrect."

The report of Mr. Baldwin and of the grand jury investigation indicated no irregularities in the handling of college funds in the faculty-controlled bank based on the testimony of State board members and college officials. However, the Lansing State Journal, under date of August 22, 1936, under heading "'Ag' Board Sues on Scheper's Bond," states the following: The declaration sets forth that "Schepers, during his term of office, was said to have collected \$77,505.82. The board charges that Schepers did not faithfully perform the duties of his office and failed to pay over and account

for all funds coming into his hands as treasurer. On the contrary, the plaintiff's declaration sets forth, he was said to have refused to furnish a full accounting and continues in his refusal," and further, that "Schepers is now employed at Michigan State College as cashier."

In paragraph 4 you state that in Congressman Hook's speech of March 9 certain charges are made relative to a so-called hush fund, and that since January 1, 1935, no such fund has existed, or any other fund, that is not fully and completely accounted for in the annual audits that are reported to the Governor of the State and

available to the public.

No answer has been made to the direct question as to how much was paid from such funds to certain politicians for lobbying in the Michigan State Legislature to protect guilty officials; also, how much was paid attorneys to protect board members and officials who failed

was paid attorneys to protect board members and olicials who failed in their public duty. No answer has been made as to the funds used in paying for the military-account thefts.

As to the work with proprietary feeds, including Manamar, and the suppression of results of these experiments that would have saved Michigan farmers many thousands of dollars during the past 10 years, I was informed by an official of the Office of Experiment Stations, United States Department of Agriculture, that no reports have been published by the Michigan experiment station concerning these experiments and that they were not conducted on Federal ing these experiments, and that they were not conducted on Federal funds. Hence these experiments were paid for from funds from other sources.

State board member Clark L. Brody, who has long had the State agency for this type of feed, may well remember my unsuccessful efforts of 1932 to give the facts to Michigan farmers that the poultry experiments at Michigan State College showed that these feeds were ineffective and misrepresented, and that the chickens were "going down" through weakness in the legs, resulting from feeding these rations. Though experimental work has continued, no publications have as yet been issued.

In January 1933 President R. S. Shaw, under authority of the State board of agriculture, published a report on investigations of the Michigan State College sent to experiment stations, agricultural colleges, farmers, alumni, and others. The official investigation of the Michigan State Senate showed that incorrect and misleading information had been presented by college officials to Judge Leland W. Carr, and that the report of the special assistant attorney general, Joseph Baldwin, was largely false and incorrect. President Shaw and the State board of agriculture, though requested to do so, have not issued a statement presenting the facts brought out by the senate investigation, and subsequent action of the State board of agriculture pertaining to thefts and malfeasances previously denied before the grand jury to all those receiving the misleading and false report on investigations of the Michigan State College.

The political chicanery that perverted justice in Michigan during the regime of Governor Brucker, leading to the protection of male-factors, was fully disclosed before Congress by Congressman Frank E. Hook on April 24, 1936, and again in connection with the hush fund on March 9, 1939. These official documents pertain to the Michigan State College and are available to you in the Congressional Record and in the official records of the Michigan State

The growth of the Michigan State College and the service of the institution has been uppermost in my mind for the past 27 years, during 20 of which I served on the staff of that institution. years, during 20 of which I served on the staff of that institution. It is because of this interest, and as a citizen of Michigan, that I will continue to publicly object to official untruth and the political or financial exploitation of the experimental, extension, and educational work of the Michigan State College under the influence of and protection of political and financial exploiters who previously failed in public trust and continue in positions of influence at the Michigan State College.

Very sincerely,

JOSEPH F. Cox.

Box 68, Forest Glen, Md.

JOSEPH F. COX.

Conditions of Labor in Puerto Rico

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1939

Mr. IGLESIAS. Mr. Speaker, in view of the statements that have been made on the floor about conditions of labor in Puerto Rico, regarding the Wage and Hour Act, I considered it my duty to request the insertion in the RECORD of my remarks, including therein the information given by the honorable Governor of Puerto Rico, Blanton Winship, and some others, in connection with the same subject matter.

As soon as the island of Puerto Rico became a part of the United States, in 1898, and particularly since the Puerto Rican people became citizens of the United States, unprecedented progress has been made along almost every conceivable line. To realize and believe that statement one must have lived on the island in the old days. Humble as their circumstances may seem today, the working classes now are immeasurably better off in every way.

Puerto Rico has a population of about 1,800,000 according to last increases of population, and has over 500 inhabitants to the square mile, as compared with an average of 40 per

square mile on the mainland.

With the great part of the working population dependent directly or indirectly on agriculture for livelihood, the problem of steady employment is a complicated one. When the major crops-sugar, tobacco, coffee, and fruits-are being harvested, a large percentage of the working population finds employment. But when the crop seasons end employment in most of the rural districts ends also, and there are very few other industries to which the workers can look for employment.

Certainly one of our pressing and perplexing problems in Puerto Rico is unemployment. The increase of our population was more than twice in the last 38 years. The margin of subsistence is already dangerously narrow for the vast majority of the people. We want to intensify and diversify agriculture, promoting means of work and providing more practical education. We are, in the words of a distinguished American educator, "instilling the craving for better things and better days" in the people there.

That is why startling reports printed in the New York Times as coming from San Juan, P. R., are informing us that Puerto Rico plans crops to feed the idle are absolutely needed,

adding that-

With more than 750,000 laborers and dependents now workless and without means of subsistence, Gov. Blanton Winship has received promises of more than 25,000 acres of land for quick food crops from large landowners. Much of this land has gone out of sugar cultivation to comply with the law.

Commissioner of Agriculture Lopez Dominguez, heading a committee to facilitate food plantings, said today that more land would be available and work would commence at once so as to have the first food crops ready, if possible, after the close of the sugar season at the end of May.

Because of the sugar surplus and crop limitation, 125,000 sugar workers this year will have 3 months' work instead of 6, and the unemployment situation is expected to be worse by summer, from all reports obtained by the Government.

Governor Winship said today that Puerto Rico's case for mod-

ification of the sugar quota and wage-hour law to meet Puerto Rican conditions has been thoroughly presented to Washington, and the island goal remained the payment of the highest possible

and the island goal remained the payment of the highest possible wages without destroying industries.

Four years ago labor trouble was averted, Governor Winship said, by the passage of a law for minimum wages and an 8-hour day, applicable to agriculture as well as industry, and the Governor said he had assured William Green, president of the American Federation of Labor, that Puerto Rico had done more for labor in the way of enlightened legislation than any of the States.

"We cannot look 750,000 hungry people in the face without making every effort to appease their hunger," he said. "We will require further relief, but we will not ask for more except as a last resort and after our own resources are exhausted."

The explanation of this situation was also quite simple when the introduction of modern machinery in the large centrals or sugar mills in manufacturing enterprises and wherever hand labor was used, such introduction of machinery, I should say, has thrown and maintains quite a number of working people out of employment in Puerto Rico. Also, many of the articles that should be manufactured in the island are imported by millions from the mainland.

A statement of the Governor of Puerto Rico at the public hearing before the Wage and Hour Division, Department of Labor, on January 4, 1939, with respect to hand-work home

industry had this to say:

At its peak in 1936 Puerto Rico's needlework industry had become the second greatest industry in the island in point of shipments to the United States mainland. Its shipments in that year amounted to around \$21,000,000. It has declined sharply since that time, due chiefly to the competition of China and Japan, which has been growing up under the protection of the application of the "most-favored-nation clause" to the trade agreement of 1935 with Switzerland, whereby the tariff on certain types of hand-ornamented handkerchiefs and other needlework products was sharply reduced.

Women of the Orient are said to receive in many cases as little as 5 or 6 cents a day for their work. We cannot compete with them without adequate tariff protection. Very grave injury has resulted to our hand-needlework industry in Puerto Rico. It has already been substantially cut in half in the 2 years since 1936.

With their families these 90,000 women may represent as many as 400,000 to 500,000 mouths to feed. Taking that together with our present unemployment situation, caused largely by the undue restrictions imposed on our sugar quota, and other trade-agreement restrictions on our industries, there may easily be as many as 750,000

or 800,000 people in the island left without means of support

Now, to be frank and sincere to the great masses of producers of the island, especially to the organized labor, I have to remind you that in the year 1934 the difficulties exposed by the industrialists against the code of fair competition for the needlework industry in Puerto Rico were almost of the same character.

At that time the wages at home were from \$2 to \$2.10 and \$3 per week, showing an increase of 46.3 percent; the machine workers in the factories received \$3.32 as an average a week of 48 hours, and they have been increased to a minimum of \$5 per 40 hours a week. The Administrator, Hugh S. Johnson, in authorizing the code of fair competition for the needlework industry in Puerto Rico, stated:

Much of the home work is done under conditions closely parallel to those of subsistence homestead.

Hand home work in Puerto Rico represents a much greater portion of the total volume of production than it does in the United States.

The code does not propose the elimination of home work but rather its control and regulation, with a view to bringing the hours and wages and working conditions of home workers up to a standard which will provide both fair competition with factory production and enable the home workers to enjoy a better standard of living. It is anticipated that a certain percentage of the work now done in homes may, within a reasonable time, be transferred to community workrooms. The approval of this code will make possible a beginning of work toward this end.

I think it is my duty at this time, in view of the situation that is being described as existing in Puerto Rico, to discover what was in the mind of a very intelligent and influential lady who was working for the social welfare of the people of Puerto Rico.

Labor in Puerto Rico is willing to get by education and organization the best standards of living conditions that are possible under the law.

Many of the reports that came from interested persons from the island are not fair to the workers. They have the intention of keeping the laborers down.

This lady wrote a confidential memorandum on needlework in Puerto Rico, and it was sent to Washington at the time when the workers were engaged in an effort to obtain better conditions. This memorandum reads as follows:

We mainlanders residing in Puerto Rico-

The lady says-

are constantly appealed to for information about the needlework there; hence this memorandum.

The labor leaders say, "Increase efficiency; stimulate the workers." The labor leaders say, 'Increase efficiency; stimulate the workers.' The needlewomen, consisting of more or less 70,000 home workers and between four and seven thousand factory workers, have been receiving wages approximating \$12,000,000 a year. The individual earnings were always low (about 2 cents per hour at home, and 5 or 8 cents per hour in the factories, except the foremen). When times were good on the mainland, wages were better in Puerto Rico; but when our country tobogganed downward during the last depression, the wages of the island needleworker went down the same way. same way.

The Puerto Rican home workers may be very badly off, according to the opinions of the casual mainland labor leaders, who visit the

to the opinions of the casual mainland labor leaders, who visit the island for short stays of 10 days or 2 weeks; but to those of us who have lived here and realize the tremendous improvement in conditions of the home worker during the last 10 years, it is difficult to adopt the critical attitude which some of the labor leaders do.

We do not feel competent to decide whether the Puerto Rican who does hand sewing, hand embroidery, and drawn work is to be judged on a commercial basis of the work produced or on a humanitarian basis. If the former, then all or most of this work might properly go to countries where the workers have greater skill—China, Madeira, the Philippines, Belgium, Ireland, and other countries—the countries where this type of fancy work originated, where the worker has had more experience but where incidentally this type of product has always been compensated at what seems to us type of product has always been compensated at what seems to us from a mainland viewpoint as ridiculously low wages.

The local contractor who has grown up in the business complains that no work comes from the United States during the last 90 days.

The home workers—hundreds upon hundreds of them—trudge from their mountain homes into the towns, begging work at any price.

STATEMENT OF THE GOVERNOR OF PUERTO RICO AT THE PUBLIC HEARING BEFORE THE WAGE AND HOUR DIVISION, DEPARTMENT OF LABOR, JANUARY 4, 1939, WITH RESPECT TO HANDWORK HOME INDUSTRY

The notice of this hearing on proposed amendments to part 516 of regulations with respect to the keeping of special or additional records by employers of industrial home workers, says, in its closing paragraph:

"Interested persons will also be heard on all aspects of the application of the Fair Labor Standards Act to employers of industrial home workers and to the employees employed by them."

Hence it seems fitting at this time to make a brief statement of the general situation in Puerto Rico with relation to home industry and particularly the hand-made needlework in the homes.

and particularly the hand-made needlework in the homes.

At its peak in 1936 Puerto Rico's needlework industry had become the second greatest industry in the island in point of shipments to the United States mainland. Its shipments in that year amounted to around \$21,000,000. It has declined sharply since that time, due chiefly to the competition of China and Japan, which has been growing up under the protection of the application of the most-favored-nation clause to the trade agreement of 1935 with Switzerland, whereby the tariff on certain types of hand-ornamented handkerchiefs and other needlework products was sharply reduced. The trade agreement is understood to have been intended to reduce the tariff only on machine-ornamented work for the ento reduce the tariff only on machine-ornamented work, for the encouragement of general trade with Switzerland. Switzerland is not much interested in the hand ornamentation, but the phraseology of the trade agreement was made broad enough to cover, as I have said, a number of great types of hand-ornamented work, and thus to let in under the most-favored-nation clause the incredibly cheap labor of China and Japan and other shockingly low-wage countries. Women of the Orient are said to receive, in many cases, as little as 5 or 6 cents a day for their work. We cannot compete with them without adequate tariff protection. Very craye in turn has resulted to our hand-needlework industry in grave injury has resulted to our hand-needlework industry in Puerto Rico. It has already been substantially cut in half in the

Puerto Rico. It has already been substantially cut in half in the 2 years since 1936.

It can survive only in two forms: One the making of very high-priced luxury work, and the other for lower-priced goods through the hand industry maintained by the women in their homes, chiefly up in the hills away from the larger towns. For this work the materials and the patterns are distributed to women by contractors. A woman undertakes to do a certain piece of work for a certain amount of money. She takes the work home, or where she pleases. She is not bound to get it finished within any certain time nor to work upon it any certain number of hours or at any fixed times, nor to do it all herself. She may have her daughter or other members of her family, or neighbors, help her with it. She may pick it up between meals or between times while she is doing her housework; or she may, of course, on the other hand, devote most of her time to it. She is wholly free from control as to how and when she works at it. She may even have work on hand at the same time from a number of different manufacturers, and the same time from a number of different manufacturers, and may work on them exactly as she pleases in whatever order she sees fit. When she gets a piece of work done she can take it back to the contractor and receive the stipulated amount of money for it. Or she may return it and not do the work.

Or she may return it and not do the work.

Our local district court of San Juan, P. R.—an insular court—has held, in a case that arose under our insular minimum-wage law for women, passed back in 1919, that this hand-work industry carried on in this manner is not working for "wages." That was the case of Rafael Julio Irizarry against the Commissioner of Labor of Puerto Rico. The decision, a year ago this last summer, August 18, 1937, was by three district judges sitting en banc, one of whom has recently become a justice of the Supreme Court of Puerto Rico, appointed by the President with the confirmation of the United States Senate. It has none of the earmarks of "wages" in any ordinary sense. There is no "employer" buying the time of an "employee" for any stipulated hours or period of time or for attendance at any particular place of work or for any control of the way ance at any particular place of work or for any control of the way in which the industry shall be carried on. There is nothing indicative of the sweatshop in any way; nothing of the transforming of a home into a factory; nothing of the insanitary conditions; no control by anyone of the women's time or method of working.

I see no practical way in which this free home industry can be regimented into fixed hours of labor for fixed wages. If it could be, then under the wage and hour law it would perish instantly. It could not, under any conditions, compete with the 5- or 6-cents-aday cheap labor of China or Japan, or even with the low wages of the independent countries of the West Indies, close neighbors to Puerte Bio.

Puerto Rico.

For this home industry to perish would be a disaster of the first magnitude for Puerto Rico. As I have said, the needlework industry magnitude for Puerto Rico. Ås I have said, the needlework industry at its peak in 1936 shipped some \$21,000,000 worth of goods from the island to the mainland of the United States, but the simple statement of that large figure does not begin to tell the story of the real value of this industry to the island. It gave the means of earning a cash income to some 90,000 women scattered throughout the island, chiefly in their little homes up in the hills, and very largely during the period of the seasonal unemployment of the men of their families in the months when the work in the sugarcane fields and centrals, and in the tobacco and coffee plantations, is almost at a standstill every year. The tobacco crop, especially, gives substantial employment for only about 4 months of the year. The needlework industry thus supplies, in many cases, the only cash income of the family during that agricultural off-season. If this home industry is finally to be completely destroyed by the operation of the wage and hour law, then the gravest results will follow in the island. With their families these 90,000 women may represent as many as 400,000 to 500,000 mouths to feed. Taking that together with our present grave unemployment situation, caused largely by the undue restrictions imposed on our sugar quota, and other tradeagreement restrictions on our industries, there may easily be as many as 750,000 or 800,000 people in the island left without

means of support.

You will say that this is a matter for the consideration of the Congress; that the Administrator can only administer the law as it is. But this is a matter of the interpretation of the law and of it is. But this is a matter of the interpretation of the law and of the intent of the Congress in enacting it. It is the duty of the Administrator to endeavor to interpret the law fairly and in the light of the great purposes of the Congress, even before proceeding to administer it. This may be in the nature of a judicial, or a quasi judicial, duty, but I submit to you in all seriousness that it is none the less a duty which is cast upon the Administrator to discharge, just as carefully and seriously as though he were sitting as a court. Indeed, it may fairly be said that where the welfare, the very means of livelihood, even the lives of so large a section of the population are dependent upon his decision and upon the method population are dependent upon his decision and upon the method in which he determines to administer the law, and where his determination to interpret it in a particular way might involve a determination to face driving this great industry from this community and creating such a desperate relief problem of such tremendous proportions among this large body of American citizens, there the Administrator ought not, and let me say that I feel sure that he will not, attempt to cast this burden of decision from him, or to shift the decision to the slow processes of the courts which could very probably not act decisively until too late to save this industry. I am advised that, because of the requirements of the trade, the

contractors are compelled to make their market commitments and their contracts some 6 months or more in advance; that these commitments are customarily made in the early winter season, January or early February; that if they once start making their contracts more largely with foreign countries—China, Japan, the Madeira Islands, or elsewhere—the trade will be lost to Puerto Rico, and that it would be the work of long years ever to bring it back. And, furthermore, that along with that would go the loss of at least an equal amount of industrial and farm work here in the mainland. The needlework in Puerto Rico is largely done upon cotton goods shipped from the mainland, spun and woven from cotton grown here in the continental United States. If the contracts for the needlework should be awarded to foreign countries—as for example, to the Madeira Islands—then the cotton (or, percontractors are compelled to make their market commitments and as for example, to the Madeira Islands—then the cotton (or, perhaps, linen substituted for it) would likewise come, correspondingly, from foreign countries where it could usually be purchased for supply at those points more cheaply than it could be purchased in the United States and sent there. And that thus both branches of the industry would be wholly lost to the United States, both of the industry would be wholly lost to the United States, both the growing of the cotton and the making of the cloth made from it here in the mainland, and the needlework done upon it in Puerto Rico. Nothing would be left to us except the merchandising by the contractors in New York City.

As I have already indicated, I am fully convinced that the Congress never intended that the "wages," with which the Fair Labor Standards Act of 1938 deals, should ever be construed as covering, or attempting to regiment, a free hand-craft industry such as this, and never intended that the act should be used as the means to

and never intended that the act should be used as the means to destroy such a great industry, nor to deprive such a large section of a community of American citizens of their means of livelihood. The Congress expressly declares the policy of the act to be to aid labor and industry "without substantially curtailing employment or earning power."

and the same rule should be applied here by the Administrator, in the interpretation of this act, that would be applied by a court in interpreting it. That rule is that where, on the bare face of the language of the act, there may appear to be two possible interpretations, one of which appears to be in accord with the probable actual intention of the lawmakers, and the other will do violence to that actual intention, then, in any such case, the interpretation is to be preferred which appears to be in accord with the actual intention of the legislators, and which will best carry that actual intention of the legislators, and which will best carry that actual intention into effect. That rule should be applied here.

When I have appeared on several occasions hitherto before the Administrator and before different committees of your Wage and Hour Division and have attempted to present to you the position of Puerto Rico with reference to this wage and hour law, I believe I have made it evident to you always that I am strongly

lieve I have made it evident to you always that I am strongly disposed to the payment to labor of all that can be paid in every case and still preserve an industry. It is my desire, as it always has been, to help labor in every way possible and to increase wages as fast as practicable. I have not only had this theory but I have as last as practicable. I have not only had this theory but I have actively practiced it, as is shown by my record during the nearly 5 years past as Governor of Puerto Rico. During that time there have been four general increases in the rates of wages in the island by agreement between employers and employees. A general 8-hour day has been introduced, and is effective for agricultural workers, both men and women, as well as others. Child labor has been prohibited, as well as any unhealthful home work; and an efficient workmen's compensation law has been effectively put into contra workmen's compensation law has been effectively put into opera-tion, likewise covering agricultural workers as well as others.

But an attempt now to regiment this free-hand industry by trying to bind it by this hard-and-fast statutory rule, as though

it were a case of working for wages, would be disastrous. I do not want even to appear to indulge in overstatement, but I do want to say to you that I have lain awake nights thinking of the plight in which these poor people up there in the mountains might find themselves; and if the Administrator should determine that ti is his duty to interpret this act as requiring him to undertake to destroy this free-hand craft, then I must ask him or the Works Progress Administrator, or someone else, to find some way to provide food for these 400,000 or 500,000 mouths that will have to be fed during the agricultural off season, in addition to the requirements of our present unemployment situation down there in the stand. It is a problem that must be faced. island. It is a problem that must be faced.

I have even heard it suggested in high quarters that relief on

a grand scale may be the true solution to this problem. But I am sure you will not agree with that. We do not desire to reduce Puerto Rico to a permanent poorhouse. We do not want to deprive its people of their opportunity to work and their normal means of support in order that we may feed them afterward on the dole. That was never the intention of the Congress. Puerto Rico's position in this respect is not essentially different from that of many areas of the mainland. Its hand-craft needlework is but very little in competition with anything in the mainland. Its competitors, as I have indicated, are the same as those of the

competitors, as I have indicated, are the same as those of the continental areas generally—China and Japan, the Madeira Islands, and other low-wage foreign countries.

In the consideration of Puerto Rico's problems it is, in the last analysis, not so much what one department of this Government or another department does, but it is a broad question of the general content of the c or another department does, but It is a broad question of the general policy of the administration—what course will all the departments take for solving the difficult problems of Puerto Rico, with its dense population of around 1,800,000 people, compelled to seek their sustenance on only about 1,500,000 acres of cultivable land. The total area of Puerto Rico amounts to only about 2,200,000 acres in all, including mountaintops and forests and rivers and marshes and other propultivable areas. marshes and other noncultivable areas. That leaves considerably less than an acre of cultivable land for each one of the 1,800,000 American citizens in the island—one of the very dense populations of the world, with all of the problems of government and society accentuated, as is always necessarily the case with such a dense population. If Texas had Puerto Rico's density of population, then Texas would have some 115,000,000 people within her borders. I appeared yesterday before the Committee on Reciprocity Information, in corporation, with hearings upon the State Dengartment's

I appeared yesterday before the Committee on Reciprocity Information in connection with hearings upon the State Department's negotiations for a supplemental-trade agreement with Cuba, and I there estimated the situation as to what would be the assets and liabilities to be considered, so far as the United States is concerned, with reference to the Cuban question there under consideration. No proper estimate of that situation, as I told that committee, could be made unless the State Department took into consideration not only the tariff questions there immediately under discussion, but also what was being done for labor. And, likewise, no labor problems can be properly solved unless there be taken into consideration what the State Department is doing by way of trade agreements with other countries for the purpose of creating trade and building up our commerce. These things are interrelated and cannot properly be studied or determined without giving consideration to that interrelation. ation to that interrelation.

ation to that interrelation.

We cannot properly determine what should be paid for labor in Puerto Rico until we know whether or not the rate of pay under consideration will destroy the industry. We know that, unless the situation is properly protected on the tariff side of the case, the industry cannot survive and pay 25 cents an hour or more—which I should always like to see paid, if possible—if it must come into competition with the products of cheaper labor in other countries that pay only a few cents a day.

I want to call your attention to the statement that I made to the Committee for Reciprocity Information vesterday speaking of the

Committee for Reciprocity Information yesterday, speaking of the interrelation of these two subjects. It turns out that in the State Department's dealings with Cuba, for the purpose of fixing tariff rates in the trade agreements, the very things that are the very blood and life of Puerto Rico have been selected as the articles to be sacrificed in the endeavor to build up these trade relations with that foreign country. This is, of course, because Puerto Rico's chief products lie within a somewhat limited range and happen to be the products most available for trading purposes. Consideration should be given to that, however, just as considera-tion should be given to the proposition of what is paid for labor in other countries. And in placing proper emphasis on Puerto Rico's needs, and what Puerto Rico has received from the Federal Government as compared to other parts of our country, I want also especially to invite your attention to what I said at that hearing yesterday on the Cuban tariff before that committee. I said, and

want to repeat now:

"The tendency is to sacrifice Puerto Rico to foreign interests, particularly Cuba, thinking that to be for the best commercial interests of the country at large; whereas, as a matter of fact, the records show that this reasoning is wholly mistaken. This mistaken tendence show that this reasoning is wholly mistaken. This mistaken tendency has been shown markedly in a number of ways: In the sugar quotas, actually cutting Puerto Rico's quota far below her normal prior production (and to only about half her present potential production with improved methods), throwing thousands of her citizens out of work, principally in favor of Cuba; in failing to give tariff protection to her native products and in admitting them free of duty or unduly lowering the tariffs on them, to the destruction or great damage to her industry; her coffee left wholly unprotected; her coconuts left largely unprotected by the recent lowering of the duties in the trade agreement just concluded with Great Britain; her pineapple industry sacrificed to Cuba by the trade agreement of 1934 with that country, cutting the tariff in two [and the sole intended benefit of which, of the right of purchasing pineapple 'slips,' for propagation, freely from Cuba, has not been enforced]; her \$21,000,000 needlework industry sacrificed to China and Japan by the trade agreement with Switzerland without even benefiting Switzerland at all—and subject to still greater sacrifice to other low-wage countries coming in under this trade agreement, by virtue of the 'most favored nation' provision; the output of her manganese (although a vital wartime need of the United States) sacrificed; her budding canning industry, and the entire output of her farms, her vegetables and fruits generally, checked and well-nigh strangled by this lack of tariff protection emphasized further by the application of the coastwise shipping laws and the ensuing unduly high steamship freight rates protected from foreign-flag competition (although of the coastwise shipping laws and the ensuing unduly high steamship freight rates protected from foreign-flag competition (although it should be said that we are even willing, in order to help American coastwise shipping, to endure our portion of the sacrifices entailed by the coastwise shipping laws, but we ought not to be asked to bear more than our fair share of the burden); and finally, by the unduly small allotments to Puerto Rico during all the depression years from

small allotments to Puerto Rico during all the depression years from all of the Federal agencies of relief and rehabilitation.

"My letter of June 26, 1938, to the President, with its enclosures, showed that over the nearly 5-year period from March 4, 1933, to December 31, 1937, Puerto Rico received in the aggregate, out of all Federal funds expended from new and emergency appropriations, only \$57.41 per capita, whereas the States on the mainland received during the same period an average of \$222.99 per capita, and all the other Territories received far in excess of Puerto Rico—Hawaii, \$141.50 per capita; Alaska, \$211.40 per capita; and the Virgin Islands, \$282.28 per capita. This is believed to have been largely due to a wholly mistaken impression that Puerto Rico had, because of the allotment of a lump sum to the Puerto Rico Reconstants. because of the allotment of a lump sum to the Puerto Rico Reconstruction Administration, and because of the allowances given her of the customs duties collected in her ports, the internal-revenue excise taxes on Puerto Rican products, and her own income taxes which she is permitted to retain, already received benefits in excess of her fair share, so as even to be said to be a 'drain on the Traceury'.

Treasury.'

"But the foregoing figures include everything given to the Puerto Rico Reconstruction Administration, which in the end proved to be not anything like as much as had been originally contemplated; and the statistics further show that all of the aforementioned and the statistics further show that all of the aforementioned taxes allowed to Puerto Rico taken together amounted only to around \$5,000,000 per annum for that 5-year period, or to a total of only about \$14 per capita in the aggregate. If you will add that \$14 to Puerto Rico's total aggregate per capita receipts of \$57.41, above stated, from all Federal appropriations during that 5-year period, including, as above noted, all of those actually given to the Puerto Rico Reconstruction Administration, from all Federal appropriations of every kind, you will then have a total of only something less than \$72 per capita for that period for Puerto Rico, as against the average per capita for the mainland States of \$222.99, as above stated. as above stated.

"In other words, counting in everything possible, including the Puerto Rico Reconstruction Administration, Puerto Rico received

less than one-third of her fair share per capita.

"It must further be taken into consideration that, notwithstanding this difference in the allotments, Puerto Rico will be compelled for this difference in the allotments, Puerto Rico will be compelled for many years to come to bear, chiefly by the increased prices of goods that it will have to pay in common with the rest of the country because of the necessary taxation until the indebtedness is repaid, its full proportionate share of the Federal indebtedness created for the purpose of furnishing the relief and rehabilitation funds during this period."

And for clarification of the situation as we go along with what we ought to do, I will restate some of these things at this time. It is my very strong and earnest opinion that the Wage and Hour Administrator, or the representative of the Administrator, should appear at the State Department's hearing before the Committee on Reciprocity Information, to make a presentation of the situation in Puerto Rico from the labor standpoint. As I have already said, it has been evergested by an outstanding representative of leber that has been suggested by an outstanding representative of labor that the handcraft needlework in the homes there should be abandoned, and that the ninety-thousand-odd people who procure their living from that, together with the perhaps 400,000 or 500,000 members of their families dependent on them at least during the agricultural their families dependent on them at least during the agricultural off season, should be placed on relief at the expense of the United States Government. Of course, this is entirely out of the question. It does indicate, however, a general agreement of opinion that Puerto Rico cannot get along without this character of handcraft industry in the homes, unless it be replaced by relief.

There are many different questions involved in this hearing, to which expects consideration must be given and about which I have

which earnest consideration must be given, and about which I have conferred with you and with the Administrator in our previous conferences; but the outstanding question, to which very deep consideration must be given, is this one, as to whether or not this handcraft in the homes in the island can possibly survive if the wage and hour law be interpreted as requiring the Administrator wages and not law be interpreted as requiring the varieties at the strength of the strength of

strive in this country.

America's Insurance Against World Anarchy

EXTENSION OF REMARKS

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES Thursday, May 11 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. CLYDE L. HERRING, OF IOWA, ON MAY 2, 1939

Mr. HARRISON. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting and able address on the subject America's Insurance Against World Anarchy, delivered by the junior Senator from Iowa [Mr. HERRING] at the annual dinner, Association of Casualty and Surety Executives, Hotel Plaza, New York, Tuesday evening, May 2, 1939.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

Were I to consult my pleasure, as well as yours, I would merely visit with you about a number of interesting and amusing experiences at the Nation's Capital, but appreciating the unusual audience which compliments me with an invitation to appear before it, and realizing, as do you, that we are living in a troubled world, I feel I should place before you some impressions which I hold as to conditions at home and abroad.

This great country of ours has in the 150 years of its existence withstood many vicious assaults. The splendid manner in which it has triumphed over all gives us confidence with which to meet the threats of today, threats that are as challenging as any of the past.

From the political angle, we see abroad those fundamental principles which we hold sacred, being ridiculed and discarded. From an economic standpoint, we find ourselves here at home still struggling to overcome conditions which have lasted years too long. From the social standpoint alone, we find that satisfactory progress is being made in this country, and in this country only,

with few rare exceptions.

with few rare exceptions.

In spite of heroic efforts by our Government, millions are still unemployed. In spite of equally heroic efforts on the part of industry, prosperous conditions have not been generally achieved. In spite of vast millions appropriated to benefit agriculture, we find agriculture still unrecovered. I applaud and approve most of the efforts which have been made by the Government and by individuals during the past 9 depression years, and one hesitates to attempt to envisage what conditions today might have been had we not, through trial and error, made an effort to bring back prosperous times.

prosperous times.

We are attempting to feed more of the hungry by raising less foodstuffs. In Industry we are trying to increase production, the greatest source of all national wealth, by working fewer hours. Such methods, properly applied, may be the answer. They, at least, give some indication of the strenuous efforts being made to find a way out. However, one cannot but pause and reflect to find a way out. However, one cannot but pause and reflect upon the fact that for the first time we are almost praying for

to find a way out. However, one cannot but pause and renect upon the fact that for the first time we are almost praying for drought instead of rainfall.

The United States of America has been required to take cognizance of the changing world conditions of the past few years. She has been made to realize that in the family of nations, being the most enlightened, the most powerful, and the most fortunately situated, a triple obligation devolves upon her to maintain her free social, economic, and political institutions, not only for the safety and well-being of her citizens, but as a source of inspiration and direction to the other peoples of the earth. In many parts of the world anarchy, violence, and brutality have superseded constitutional government, orderly process, and the maintenance of human safety and freedom. Great nations have been made to bow down before these antisocial forces in the vague hope that by so doing they may be held in check. Recent experiences reveal with certainty the fallacy of such a belief.

America's guarantee against world anarchy lies in the maintenance of our free institutions of Government, a solidarity among our people, and the restoration and continuance of prosperous industry and agriculture. There is no point at which political, economic, or social freedom can be imperiled or denied with safety to those institutions.

those institutions.

those institutions.

The spiritual values underlying the American system of government, become increasingly important, as efforts are made in other nations, to destroy that faith in the hearts and minds of men which makes them aware of their kinship with God, and their obligation to maintain the principles upon which that faith is founded.

Even those American statesmen in Revolutionary times, who professed no allegiance to a porticular denomination pevertheless possessed.

fessed no allegiance to a particular denomination, nevertheless possessed within their hearts, and revealed in their public utterances and acts their profound belief in the spiritual values which are an essential part of Democracy and Christian teaching. The Founding Fathers were inspired by a profound faith in spiritual achical standards, which charged their consciences with a sense of grave responsibility to establish upon these shores a system of governments. ernment consonant with those high ideals. That such a govern-ment was founded and has been maintained consistently down to the present hour, attests both the wisdom of the Founding Fathers and the fidelity of those Americans who have followed after them.

The environment of liberty, which has been created through the functioning of American Democracy under the Constitution, has been so much taken for granted, by many of those who are its beneficiaries, that it is somewhat difficult for us to realize that freedom of conscience, liberty of movement, and personal discrimination as to what one will and will not do, are no longer to be found in many other nations of the world.

found in many other nations of the world.

Possibly there are a few among us who are willing to sacrifice the liberty which is ours to the experiment of dictatorship, but fortunately for America, that number is and will remain few so long as we are able to maintain the safety, independence, and liberty of our people. Those advocating un-American doctrines cannot at this moment be regarded as a real threat to our free institutions. However, we cannot afford to disregard the fact that small and troublesome minorities in other countries have been able to keep alive an agitation for unsocial changes which has able to keep alive an agitation for unsocial changes which has resulted in the growth of great majorities. Men have thus been elevated to high position whose arbitrary power exceeds that of any other ruler living or dead, and who place their reliance upon force and violence as their means of continuing to dominate the

The American Bill of Rights is as much concerned with the citizen's sovereign right to own property and to be safe in his person, house and personal effects "against unwarranted searches and seizures," as it is emphatic in protecting him in his right of

free speech, free press, and peaceable assembly.

The history of anarchy down to the present day is the chronicle in blood of the disregard and violation of these fundamental rights. If we would safeguard our country against the ravages of anarchy we will support, with renewed vigor and patriotism, the American Bill of Rights and the Constitution of which it is a part, and repulse any and all efforts to break down that bulwark of our common liberty.

Tolerance is an outstanding quality of the American character, but we must, nevertheless, consider the consequences of fostering within this country representatives of various political doctrines which are the antitheses of the principles underlying our Ameriwhich are the antitheses of the principles underlying our American system of government. No one has ever put this thought better than the Honorable William B. Bankhean, Speaker of the House of Representatives, before a joint session commemorating the one hundred and fittleth anniversary of the First Congress of the United States under the Constitution. Speaker Bankhean said: "There are evidences of certain sinister influences and minorities now seeking to sap and mine the pillars of this temple of freedom. We may have been too generous in our hospitality to them. We may have been too tolerant of some of their recent of freedom. We may have been too generous in our hospitality to them. We may have been too tolerant of some of their recent manifestations of subversive treachery. We have sought with rather grim patience to respect the guaranty of freedom of speech; but it may be only fair to admonish all such groups that they take counsel of their prudence, lest by going one step too far, it will be too late to escape the wrath and indignation of all real Americans."

Communism is as old as the Story of Mankind. Fascism and nazi-ism are but new names, symbols indicating a distinction without a difference. In primitive times the communal plan of existence was not uncommon in the lives of tribes and nations. The amwas not interement in the rives of these and nations. The ambitious did the work. The drones lived upon the industry of those willing to do the work. Observation complemented ambition and the workers banded together and originated the theory of private ownership, and established private property. The rights of men in the ownership of things have since been recognized as fundamental.

The entire system of Anglo-Saxon jurisprudence, after which ours is patterned, is built upon the recognition of the sovereign right the individual to own private property and to be safeguarded in

its possession.

The Constitution of the United States was framed and ultimately adopted, expressly to protect the future generations of Americans from the capricious deeds and wilful acts of those who might subsequently be elected or appointed to represent them.

The Framers of the Constitution were wise and deliberate men who understood very well the fundamental characteristics of all mankind, and who recognized the frailty of human nature.

They did not strain to create a "perfect state" composed of "flawless individuals," but rather, they sought to establish a Charter of Human Rights and Liberties which would protect all citizens of this Republic, regardless of individual virtue and aptitude, and this Republic, regardless of individual virtue and apittude, and whose provisions would be administered by men of ordinary as well as extraordinary ability, recognizing that the former were much more numerous and, by the law of averages, were, therefore, likely to be chosen more frequently than men of rare ability and

Under the American system of government the citizen is sovereign.

Under the communistic ideology the individual counts for nothing. The state is supreme. He who voices any opposition is subjected to surveillance, seizure of his person and goods, and confinement in a concentration camp, or worse.

Just as territory is seized in the name of a nation, private prop-

erty under anarchy is seized in the name of the people within a sovereign state. Always such arbitrary and inhumane action is buttressed by the argument that it is done in the interest of all concerned, including the subjugated and despoiled, and always, its avowed purpose is to end oppression, administer justice and relieve the distraced. the distressed.

the distressed.

Practically, the result has been to destroy orderly society, to deny justice, to subvert the functions of the police and the military, to destroy the hope of all citizens, who aspire to liberty and financial independence, and to seize power, goods and services in the name of the common man whilst actually taking possession on behalf of him, who believes himself to be a superman.

Let us beware of those self-appointed Messiahs, who recognize their superiority over their fellows, and whose imaginations are filled with delusions of grandeur and distorted visions as to their earthly missions.

earthly missions.

earthly missions.

What has Proletarian Dictatorship to offer as a future? Hopeless of fulfillment, it promises a highly industrialized and mechanized society ultimately, wherein the needs and wants of all of the people will one day be gratified.

Its advocates do not say to the people that the things which they are promising as possible of achievement, some time in the future, are already commonplaces in the lives of the people of the United States of America. All of these things have been accomplished in this great country without proletarian revolt, in the absence of anarchistic bloodshed, and without the subjugation and regimentation of our citizenry under a program of state or national socialism. Private property has not been confiscated nor the rights of citizens disregarded, but through the orderly functioning of the American system of government, these conditions are a reality.

conditions are a reality.

The advocates of change do not state these facts. Nor is it enough that we assert them. Our obligation is to demonstrate that the future of America is as safe and certain as her past his-

tory is worthy and illustrious.

In the comparatively brief period of her existence, this Nation has achieved economic independence for a majority of our citi-

rans achieved economic independence for a majority of our citizens based on equality of opportunity.

Panics or depressions, lasting from 5 to 7 years, have punctuated intervals of approximately 20 years of prosperity. In the experience of nations, these periods appear to be almost inespending

capable.

The late depression and the recent recession have occupied nearly 9 years, breaking the usual cycle, and prolonging both far beyond what the American people can be expected to accept without efforts at self-protection.

Agriculture and Industry have suffered enormous material losses, while the morale of our people at certain times has been at very low ebb. We are face to face with grave problems that command our best thought and require sober consideration and courageous treatment, but they are not without rational and reasonably speedy solution. These problems are local, national, and international. They are concerned with economic and social phases of existence, not only in our country but throughout other parts Agriculture and Industry have suffered enormous material losses, of the world.

of the world.

The same problems occur and recur in the lives and experiences of people and nations. It cannot be successfully contended that any problem once met and overcome is settled for all time and that the American people will then be freed from the necessity of coping with it in the future. It is well that that is true because it is an inexorable law of nature and of life that we survive through struggle. We learn our strength and ability through having them constantly tested. The heavier the obligation, the more determined the effort will be to fulfill its terms. Real thought, clear discernment, sound judgment, and wise action are bestowed under the sharp heel of necessity.

We are a Nation of early risers because of necessity. We are highly developed industrially and agriculturally because a growing population and an expanding Nation placed upon us the obligation to improve our methods of doing all things.

If success and financial independence can be achieved on a

If success and financial independence can be achieved on a 6-hour day and a 4-day week, biography is lax in having failed to reveal the methods and triumphs in the lives of those so accomplished.

Ease and comfort are environments which the able-bodied and alert earn through industry and self-sacrifice. Surpluses are built

alert earn through industry and seir-sacrince. Surpluses are built up through thrift, not profligacy. Improvements and additions are possible only after industry and thrift have created the substance with which to pay for them.

Interest on loans, earnings on investment, and insurance on life and property can be maintained only so long as current expenditures can be met out of current receipts. If the source of penditures can be met out of current receipts. If the source of individual income is permitted to dry up, or is choked off, through whatever cause, the national income suffers. Taxes are increased in the face of national emergency. Deficits of both industry and Government mount in the face of such an exigency. If there is no interruption in the process of dissolution, bankruptcy is an inextigable consequence. inevitable consequence.

Such is the history of ancient and medieval civilizations.

Such is the appalling chronicle in the lives of contemporary nations, whose economic and political institutions have collapsed under the strain, thereby giving rise to new experiments in com-

If we would protect ourselves from like misfortune and insure a continuance of our national progress, we must necessarily pre-serve and develop a vital and expanding national economy.

American industry has been prosperous and successful because it has been founded upon freedom of enterprise and voluntary

service. Numerous and varied fortunes have been made in di-verse lines of production, manufacture, and commerce because of verse lines of production, manufacture, and commerce because of unrestricted social and economic opportunity, and while, unquestionably, there have been examples of injustice inflicted upon labor by industry during the process, these are the exception rather than the rule as was disclosed in recent profit-sharing in industry hearings in Washington. American business is a vital and living force capable of enormous natural growth and expansion.

We have patiently endured curtailed national income, decreased purchasing power, demoralization of commodity prices, and the enforced idleness of millions of workers, who have been required to turn to local, State or Federal agencies for work or relief.

consequent lowering of domestic consumption and loss of foreign trade due to disturbed conditions throughout the world have served to destroy the source of income of many of our people.

America's program of safety is the restoration of normal income and the reabsorption into private employment of these idle workers.

Unemployment and all of the misery it entails can be cured only

Unemployment and all of the misery it entails can be cured only through the revival of private business.

The labor difficulties encountered during recent years are primarily due to misunderstandings between employers and employees based upon the misconception that each has primary interests which oppose the other. Business is suspected of making inordinate profits through the exploitation of workers. It is therefore believed that arbitrary regulation of hours of labor and hourly wages will serve to create more employment and insure a higher living standard. living standard.

Careful examination of industrial experience and charts reveals that arbitrary regulation does not produce the favorable results sought. Only increased volume provides increased revenue to be divided and determines the reward both to capital and to labor.

High hourly wages in the coal, railroad, and automotive industries have not resulted in greater, but lesser, employment and annual income per worker frequently has been lowered. More than 19,000 strikes have occurred in industry during the past 12 years, (15,000 of which have been since 1933) involving nearly 9,000,000 workers (considerably more than one-fifth of all gainfully employed) and losing to those workers 168,000,000 man-days. The ployed) and losing to those workers 168,000,000 man-days. The average daily wage in the United States being \$3.30, an average loss of \$555,000,000 in wages due to strikes, and approximately \$3,000,000,000 of product value, if all strikes had been in the manufacturing industry alone, is indicated for the period.

Statistics disclose that employment increases or decreases in exact proportion to the number of going concerns and new enterprises. Actual wages, as distinguished from wage rates, rise or fall in exact ratio to the volume of goods produced per worker.

What appears to be but a coincidence may prove to be the result of a hidden law of economics, for over a long period of years the total annual income of our farmers has been substantially the same as the total annual in a mount paid in wages to workers in industry.

total annual income of our farmers has been substantially the same as the total amount paid in wages to workers in industry.

Practically, the interests of agriculture and industry are identical, for sound recovery and renewed prosperity nationally will be possible only if farmers and city dwellers alike receive a just and proportionate share of the national income.

A balanced economy may be dependent upon a natural law as fundamental as the laws of gravitation and inertia, a law which may explain the parity already existing between farm income and workers' wages, attributed now to mere chance.

Owing to uncertainties in world affairs and our failure to overcome all of the problems of depression and recovery, industry has been greatly handicapped by lack of adequate capital for new and expanding enterprise. Whereas for the 7-year period prior to 1929, over \$5,000,000,000 annually were available as capital investment, we have had an average of but \$750,000,000 a year throughout the depression.

depression.

Viewed in the light of that fact, business has made remarkable headway under grave handicap. While it has persevered, billions of dollars remain idle in the savings banks and insurance companies, fearful of being lost should they venture forth in investment channels.

All in our power should be done to bring these nervous dollars out from hiding to be put back to work so that the millions of idle men and women may in turn be returned to productive private enterprise, that both may earn and profit thereby.

Every worker should be made to understand the close relationship between capital investment and his successful reemployment

on a permanent basis.

In our eagerness to consider the public welfare we have under-In our eagerness to consider the public welfare we have undertaken a number of well-intentioned steps to discipline industry and to protect those striving to earn a livelihood. No one can quarrel with the motives behind this legislation. It is to be regretted, however, that more careful consideration has not been given to ascertaining pertinent facts, and predetermining, insofar as might be possible, the effect of such legislation on the lives of the very persons whom it was designed to help, as well as its influence on business and agricultural recovery. I shall not attempt an analysis of such well-meaning measures as the Social Security Act, the Fair Labor Standards Act, the National Labor Relations Act, and other measures relating to taxation, and the regulation of business.

A careful examination of the record in many of the leading industries of the country (particularly those companies employing a profit-sharing plan and other social-benefit programs), has indicate a necessity for amending some of these measures because brought to my personal attention important facts which strongly of the consequences visited upon employer and employee which are adverse to the interests of both, and from which they are entitled to relief.

are adverse to the interests of both, and from which they are entitled to relief.

If industry and worker would have freedom from governmental regulation, however, they must be willing to assume a judicial attitude, and so conduct their affairs that public, producer, and consumer are fairly treated and their rights respected.

Some employers and workers believe that there is a definite antagonism between capital and labor. There is, in fact, a mutuality of interest, the disregard of which, produces negative results injurious to both parties, and costly to the Nation.

The increasing number of strikes and labor difficulties over the past 12 years reveals the unwisdom of strife between management and worker and the growing need for a better comprehension on the part of both of the needs and rights of each, and the mutual benefits to be derived from peaceful cooperation.

Seeking to be helpful, the United States Senate at the last session of Congress, authorized a survey of all profit-sharing and extracompensation plans in industry. A report of the results of that study will be made available to all employers and employees who are interested in improving employer-employee relations.

The fortunate experience of those companies, which have pioneered in the profit-sharing field indicates that the principle of profit-sharing has considerable merit, and might be applied to a much larger number of companies and industries with definite advantage to both management and worker. Even in these difficult times, those having profit-sharing plans appear to be singularly free from labor difficulties, even in sections where social unrest, and strikes have been conspicuously in evidence.

It may be that a wide application of the profit-sharing principle might result in industry so regulating itself, that certain measures set up by Government to protect the interests of capital and labor might be repealed.

In other words, cooperation between employer and employee is

might be repealed.

In other words, cooperation between employer and employee is likely to produce far more desirable results than coercion, whether

applied by Government, management, or labor.

The "soak the rich" taxation theory seeks to control the distribution of wealth by taking it away from those, who have made it, or who have come into its possession legally, thus supporting National and State governmental agencies and services for all of the people at the expense of a fraction of the population.

The profit-sharing theory provides a rational method for dividing the fruits of industry at the source where wealth is created. The division is voluntary, and mutually acceptable. The participants are rewarded in proportion to their contribution. By such device numerous persons are invested with economic independence, which numerous persons are invested with economic independence, which not only encourages them in their work, but enables them in turn to become employers, thus creating new community values and providing multiples of opportunity for others, particularly the young, to apply themselves and duplicate in turn the performance of their elders.

The progress which the individual makes from day to day is made clear to him in the certain terms of his profit-sharing dividends. He has an added incentive to do his best, certain that he will receive a just reward. "Hoeing one's own row" is the certain way to insure a good crop, whether that be in the factory, on the farm, or in the salesroom.

Despite sincere efforts to secure adequate wages through the raising of the hourly wage rate, experience reveals that annual income is often lessened and the number employed are fewer because of the inability of employers to meet increased wage demands

Not without merit is the system now in effect in some companies, which guarantees every worker a job and an annual wage sufficient to support himself and family, regardless of seasonal variations and changing market conditions.

Some employers have adopted with mutual advantage to them-selves and their employees a plan which guarantees to the workers a definite percentage of the volume dollar, paid in 52 weekly install-ments throughout the year, and carrying the certainty of permanent employment.

These various methods of establishing and maintaining satis factory relations between employers and employees deserve especial emphasis and should be explored by those who desire freedom from governmental regulation or interference from outside agencies.

We have every factor necessary for the building of a greater economic future than our Nation's illustrious past.

I cannot believe that the present generation of Americans are unable to meet the present-day challenge. Blessed with the richest expanse of territory upon the globe, peopled by the most enlightened and ingenious peoples of any time, isolated by great occans from the troubled centers of the earth, we can and will solve this problem of turning the immense products of nature and labor into a return to the contentment and plenty which is the heritage the Founding Fathers bequeathed to us.

APPENDIX TO THE CONGRESSIONAL RECORD

Labor and Taxes

EXTENSION OF REMARKS

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Wednesday, May 10 (legislative day of Monday, May 8), 1939

ADDRESS BY MATHEW WOLL AT CHAMBER OF COMMERCE OF THE UNITED STATES, WASHINGTON, D. C., MAY 2, 1939

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a speech made by Matthew Woll, vice president of the American Federation of Labor and president of the Union Labor Life Insurance Co., at the Chamber of Commerce of the United States, Washington, D. C., on May 2, 1939.

There being no objection, the speech was ordered to be printed in the Record, as follows:

Taxes have played an important part in the history of America. The United States was born in a revolt on taxes. The stamp and other taxes that were imposed by the mother country upon the The United States was born in a revolt on taxes. The stamp and other taxes that were imposed by the mother country upon the American Colonies issued forth in a series of manifestoes and finally in the Declaration of Independence. Into the Constitution was written important provisions with reference to the taxing power; how it was to be laid and how they were to be collected. Again and again in our history taxes have been the occasion for citizens' protest. City officials have been recalled, and governments and Presidents voted out of office because of excessive or unreasonable taxes. He who deals little with the tax matter in America knows little about our history.

The economic as well as the political history of America has been marked by questions of taxes. Indeed, the decision of the Supreme Court in one of the earliest cases before that august tribunal laid down the proposition that the "power to tax is the power to destroy." That proposition still is sound. Taxes may become confiscatory; they may deprive a man of his property virtually without due process of law. If they do not actually do that, they may have the effect of drying up the source of initiative by punitive taxes.

It is for that reason that every American today is more concerned than ever before about taxes and the tax structure in America. It is an old saying that we cannot avoid either death or taxes. But it is also true to say that taxes are many and varied, but death comes but once. Taxes are today both higher and more numerous than ever before.

numerous than ever before.

TAXATION TAKES ONE-FIFTH OUR ANNUAL INCOME

Whatever may be the purposes of government, whether from the standpoint of the interests of labor or capital, its operations must be paid for, and they must be paid for out of the product of industry. The more the Government exacts in taxes, the less there is left to be spent by private persons at their discretion. In this country, more than one-fifth of the annual income is now

taken by the various governments.

Over considerable periods the Government is able to determine expenditures and then appropriate enough income to meet them. However, in the long run, no government can persist in incurring expenses that unduly drain the resources of the economic sys-

expenses that unduly drain the resources of the economic system. Its exactions are, therefore, of special significance to the various elements in the business and industrial world.

In a sovereign state there can be no legal limit to the taxing power. Even our conservative courts will hold, in general, that provided the money to be raised is intended for public purposes and provided the levy is made without discrimination between persons in the same class, the législative body is unlimited in its taxing powers. This attitude is based on the theory that there is no such thing as an absolute right to private property, but that the final title to everything is, in the last analysis, the perquisite of the State.

of the State.

This doctrine is sometimes thought of as broadly communal, and is held to imply that the claims of society take precedence over the claims of the individual. The real meaning, however, is that the state, as representing the general interests of property may prevail over the special interests of a particular property holder. The theory is at most tinctured with state capitalism, but cannot be regarded as a communistic relic or a socialistic premonition. It is, however, true that excessive taxation leads inevitably to some form of state capitalism. There are those who believe that is the economic and political order to which we are surely but unconsciously headed in our present temper of finding ever more and more untapped sources of taxation and of declining to give heed to the fact that there is a limit to the resources of our present to the fact that there is a limit to the resources of our present economic order.

LABOR'S INTEREST IN TAX QUESTION

What then is the present situation, and to where are we heading?

The Government of and by itself does not create wealth. It depends for funds necessary to operate the many services in which it engages on taxes levied upon American industry and the American people. Due to increasing activities of government, the cost of government has increased enormously during the past 10 years. After the war years Federal Government costs declined somewhat until 1927, although State and local governments were rapidly increasing. Since 1927 Federal Government activities have expanded so that total Government expenditures 10 years later were

more than 11 times those of 1900.

But why should labor be interested or be concerned regarding these trends and tendencies? The theory is that those who have and those who earn and are most able to pay should be taxed. Reformers and social workers can take comfort in this situation and formers and social workers can take comfort in this situation and conservative Socialists may hall it as socialization. So long, however, as we have a capitalist state, it must be assumed that the only legitimate exercises of the taxing power and the power of public expenditure are those that serve the purpose of maintaining the general interests of capitalism as against special interests of particular accuracy.

Excessive taxes hit every individual in the country, whether wage earner, salaried worker, professional man, or housewife. They are all affected in a lessening of the opportunities for profitable ployment, acting as a barrier to increased wages or salaries, shorter hours, and improved conditions of employment. The result is an increased cost of living and a reduction in the purchasing power. By lessening profits of industry they prevent the accumulation of a reserve necessary and essential to a progressive industrial order. And finally, excessive taxes jeopardize the security of the whole of our economic structure.

There are those who argue to the effect that taxation is to the worker a matter of no consequence inasmuch as wages become adjusted in any case to the expenses of living. It is said that if a tax adds to the cost of living it will have to be met by an increased wage from the employer. This, of course, allows that "labor pays all taxes," in the sense that they come out of the product of labor. The more practical question is whether they come out of that part of the product of labor which would otherwise go to labor or out of the part that would otherwise go to property income. To say that it makes no difference to labor what the tax system is, or to the extent or purpose to which it is being used, is to say that it does not matter whether the capitalist system is efficiently administered or not; for some forms are very burdensome and others may be seriously questioned regarding the ultimate objective intended. Unquestionably if net productivity is reduced, the inescapable effect will be to reduce and to keep labor down to a very low wage level.

TAXES AVERAGE 43 CENTS OF PAY-ROLL DOLLAR There are those who argue to the effect that taxation is to the

TAXES AVERAGE 43 CENTS OF PAY-ROLL DOLLAR

The individual or company employer who has to pay taxes has to get the money somewhere to pay taxes. Taxes must be paid. If the money comes from the consumer, that is, if prices are If the money comes from the consumer, that is, if prices are raised, every worker, every person employed, must pay more for the day-to-day essentials of life and will buy less of them. If he buys less, production will fall off and salaries and wages become lower and jobs fewer. If, however, competition and the threat of reduced production prevent business concerns from passing the taxes on to consumers then the employees shoulder the burden by a reduction in wages or by loss of jobs and the investors shoulder the burden by a reduced realization of income from their investment. For every dollar spent on pay rolls another 43 cents is spent on taxes. Taxes average about \$486 a year per employee. It is, therefore, not difficult to understand why industry hesitates to employ additional workmen and enlarge upon present pay rolls. With a tax average of nearly \$500 per year per employee imposed, industry quite naturally hesitates to assume this additional cost or pass on this additional cost to the consumer. consumer.

ELIMINATE WASTE AND INEFFICIENCY

That excessive taxes promote insecurity is evidenced by the

That excessive taxes promote insecurity is evidenced by the fact that the percentage of national income which goes to pay taxes has doubled in 10 years. The result of all this is evidenced in foreclosures of mortgages, increased tax liens, tax sales, losses of homes, and business bankruptcies. These conditions also increased unemployment, prevented reemployment, and made imperative the need for relief and unemployment expenditures.

All in all, the vicious cycle of taxes leaves us wondering what is the solution. The answer to that is the elimination of waste and inefficiency. No one wants to lighten the tax load at the expense of necessary duties of government, provided those duties are essential and justified and are efficiently performed. But, to face realities, that portion of public expenditures which represents duplication, inefficiency, undue competition, or interference with private enterprise must be amputated at the roots. Government spending is what makes taxes. Cut needless, unfruitful, wasteful, and destructive expenditures and we reduce taxes.

In general it might be said that labor favors direct taxes, such as

tive expenditures and we reduce taxes.

In general it might be said that labor favors direct taxes, such as land, property, income, and inheritance taxes, rather than indirect taxes. Moreover, labor favors progressively higher rates of taxation on the larger incomes, not with any thought that Utopia may be won by the taxation route but because those of means are better able to pay and for the further reason that the greater gains realized by any individual most often are traceable to opportunities and values made possible by organized society. It can be validly argued that society is a partner in producing incomes; that government furnishes the institutional framework which makes great incomes and enormous accumulations of wealth possible. It follows that and enormous accumulations of wealth possible. It follows that

society, being a very real partner in the creation of income and wealth, should also share in that income and wealth by the process of taxation

HIDDEN TAXES REPRESENT 70 PERCENT OF GOVERNMENT INCOME

Emergency needs following the World War called for more revenue than could be supplied through the ordinary and direct channels. It became necessary to reach the low-income groups. This was accomplished through the indirect tax. Where formerly the direct taxes supplied all the revenue, the income from the indirect tax has risen to such a portion of importance that in 1934 the indirect tax supplied 59 percent of all revenue to the Government. This had risen to 65 percent by 1937, and approached 70 percent by 1938. The revenue was expended on relief, Government buildings and projects, expenditures which could not be covered through ordinary tax colexpenditures which could not be covered through ordinary tax collections. Nevertheless, upon examination, what is known as the high cost of living is often unmasked as the high cost of indirect taxes, which today accounts for 70 percent of all tax revenue. The tax collector exacts pennies, nickels, and dimes from the consumer at the rate of \$24,723 a minute night and day.

On an income of \$2,500 per annum \$600 goes for taxes; \$400 of the \$600 is for indirect or "hidden" taxes. This is in excess of \$1 per day.

per day.

In today's economy it may well be that properly placed indirect In today's economy it may well be that properly placed indirect taxation will be found to be at least a semipermanent institution. Evidently we have reached a period where, in addition to direct taxes on homes, pay-roll taxes, license taxes on automobiles, and the like, wage earners and other employees in common with other consumers will be required to contribute to the maintenance and operation of governmental functions through large amounts of indirect or "hidden" taxes. In many instances, particularly persons in lower income groups, the burden of indirect or "hidden"

taxes is now substantially in excess of direct taxes paid.

It is essential, therefore, to guard against the evils of indirect or "hidden" taxes growing from the ease with which they may be levied by politicians more concerned with political expediency than with the ability of the ultimate taxpayer to absorb more

Another evil is the unfortunate, but practical ease of diversion of indirect tax revenues to purposes other than those for which they were originally intended. Still another weakness in this form of governmental revenue is that the annual yield is uncertain. The yearly cash return to the taxing unit is directly and swiftly affected by changes in the spending ability and buying disposition of the majority of the Nation's population.

Among the most fruitful forms of indirect taxes may be listed sales taxes. Those may take two ways: according to the basis of

Among the most rather thoms of indirect taxes may be listed sales taxes. Those may take two ways; according to the basis of the tax, that is whether the tax is imposed directly on sales or is measured by sales, and according to the items to be taxed. The general sales tax lifts the tax levies into pyramids of duplicated charges. These are not always confined to retail sales. Sometimes both wholesale and retail merchants must pay taxes on their groces sales for the right to energy in the business of on their gross sales for the right to engage in the business of selling personal property. Then, too, prominent among sales taxes, but with certain peculiarities of their own, should be listed selective sales taxes, luxury taxes, cosmetic taxes, tobacco taxes, admission taxes, and the like.

LABOR OPPOSES SALES TAXES

Another comparatively new form of indirect or "hidden" tax-ation that adds still further to the size and weight of pyramid taxes is the "use" or "compensation" tax, designed to supplement the sales tax. Lately some taxing units even smaller than States have found themselves in a maze of the new tax problems. Their efforts to impose special localized sales taxes have developed surprising results by inspiring the purchase of taxed items outside the

area bearing the local tax.

More and more are we heading toward State and community barriers. Necessarily our national life is ever more dependent upon a free and unrestricted interstate basis of industry and commerce. Short-sighted regulatory or barrier taxation in one area can frequently cause serious disruption of the most efficient functioning of large production industries which depend essentially upon mass distribution for their very existence.

opon mass distribution for their very existence.

On the other hand, we are faced with the dangerous drift toward an all-powerful National Government offering cash benefits to smaller communities, to be granted only if certain legislation is passed. Then, too, reform programs concerned primarily with the interests of one group or another frequently create results entirely unexpected although not entirely unpredictable.

Labor has long been fully aware of the inherent flaws in salestax financing and in the dangers underlying so many of our "hidden" taxes. The trend toward indirect taxation has reached the point where the buying power of wages is seriously affected. The effort to raise living standards for working people by insisting upon higher wages is nullified by the pyramiding burden of so-called painless taxes imposed upon the lower-income groups, including the unemployed as well as the employed, those on relief as well as those dependent upon private sources.

LABOR STUDYING TAX QUESTION

Opposition to the sales tax has always been one of the strongest principles of organized labor. It has been fought wherever the proposal has arisen. Labor's opposition to the sales tax is based on the firm belief and reasoned conviction that it places a burden on the worker all out of proportion to his ability to pay. It takes a disproportionate share out of the income of the wage earner and

requires him to pay many times his share of the cost of government. The wage earner needs practically all of his income for ment. The wage earner needs practically all of his income for food, rent, clothing, and medicine. No one can dispute that a tax on these items strikes deeply, far too deeply, into the wage earner's pocketbook. Nevertheless, by slow degrees, our legislatures have extended the tax bases and tapped an ever-increasing number of tax sources to such an extent that today these indirect or "hidden" taxes, pyramided to almost fantastic proportions, constitute a menace to the wage earner even greater than that of the sales tax.

There are many evidences that labor is awakening to the dangers.

There are many evidences that labor is awakening to the dangers There are many evidences that labor is awakening to the dangers of the tax situation. During 1938 the conventions of the 31 State federations of labor passed resolutions calling attention to the growing seriousness of the whole tax structure. Twelve of the State bodies have approved resolutions condemning punitive taxes that inequitably burden the workingman and his family. Executive committees were urged to be on the alert against such taxrevision plans as might seriously impair living standards and endanger social legislation already secured. Likewise, the appointment of tax-study committees were advanced. Already the officers ment of tax-study committees were advanced. Already the officers of 17 of these State federations have formed a volunteer council for the exchange of information. In addition, the American Federation of Labor itself, at its last convention, authorized the appointment of a national committee to make a most thorough and exhaustive inquiry into our entire tax structure, and from every point of view, and for the purpose of future guidance to labor on this all-important phase of our national life.

REPEAL CAPITAL-GAINS TAX

To many it may seem rather strange that in these days when attacks on business and industry find such a ready response leaders of nearly 4,000,000 wage earners should call upon the Government to of nearly 4,000,000 wage earners should call upon the Government to repeal or modify a tax on capital gains and on undivided profits. Yet that is exactly the position of organized labor as represented by the American Federation of Labor. If a corporation has earned what are apparently excessive profits—profits which it does not have to pass on to its stockholders to keep them satisfied—why should organized labor object if the Federal Government takes a large portion of them away in the form of taxes to be used for, say, relief?

To find the answer to this question two guiding principles which have always been at the foundation of the American labor movement must be thoroughly understood. The first is a firm belief in our present system, the system of individual initiative and private enterprise, with its profit motive, always, however, with the understanding that labor must receive its fair share of the profits of production and distribution and that the consumer shall benefit likewise in the form of reduced prices.

LABOR SEEKS WORK, NOT RELIEF OR CHARITY

The second is that the American worker does not want to be supor the second is that the American worker does not want to be supported by governmental relief payments any more than he desires to be supported by his neighbors, organized charity, or by standing in the bread line. What he wants is an honest job in private industry with wages, hours, and working conditions which will give him and his family the standard of living to which he is entitled. To obtain these he knows that industry must be encouraged by Government and not penalized simply because it happens to be successful. He knows that it must continue to grow and expand if he is to be secure in his job and grow with it.

While it is unsound for business to retain earnings not needed, in an economic sense, the difficulty of providing for all the varied conditions that arise suggests the elimination or modification of the tax on undistributed earnings. Certainly some reasonable per-centage should be definitely allowed to provide for future needs, without penalty. While the burden on smaller units of business may at the moment be more generally recognized, the burden on the larger units will be recognized in a far more spectacular and dis-

astrous degree as industry passes into the next period of adversity.

Labor agrees fully with Senator PAT HARRISON, chairman of the
Senate Finance Committee, when speaking on this subject, he said:
"For each corporation which has been justly penalized by this tax
there are probably a hundred which have been unjustly penalized,
because for legal or moral reasons they could not distribute their because for legal or moral reasons they could not distribute their earnings in dividends. The result has added confusion to the economic life of the country and to many fine American citizens. It is a harsh and unwise policy for the Government to compel a corporation that may be giving employment to hundreds of thousands of men to declare its earnings in this form of dividends to its stockholders when it needs such earnings to perpetuate the employment of those people."

RESERVES MADE JOBS POSSIBLE

Then, again, many business concerns today in effect are being operated largely for the benefit of its employees and the Government; that is, after current costs, including pay rolls and taxes, are met, frequently little, if anything, remains in the way of earnings to go to the owners of the business who have risked their money upon the success of the enterprise. Recent studies indicate money upon the success of the enterprise. Recent studies indicate that industries that had saved or set up reserves for the period of 1919 to 1929, totaling some \$34,000,000,000, during the years of 1930 to 1935 had paid out thirty-four and one-half billions of dollars more than they had received. It must be apparent that a situation which discourages or does not permit the setting up of reserves is neither helpful to the wage earners nor of benefit to the public generally. In the long run the continuation and extension of such a situation spells disaster to all, including the Government. Then, too, where the Government imposes a tax that tends to freeze the natural flow of capital from one place to another, resulting in too high values in some cases and too low values in others,

ing in too high values in some cases and too low values in others, paralyzing to an important degree what ought to be a free and unrestricted flow of capital, both into and within the security markets, we will have set at work influences adversely affecting industry's ability to perform and certainly render it unable to expand. There is abroad the general belief and conviction that the tax policy of the Government, coupled with its apparent attitude toward industry, is preventing the normal expansion of American industry. It is the common belief that undue and unjust taxes are keeping millions of dollars of idle capital lying in the banks of the country and in Government tax-exempt securities because capital is afraid to take excursions into new enterprises or to assist in the expansion to take excursions into new enterprises or to assist in the expansion of old ones.

EXPANSION NEEDED IN CONSTRUCTION INDUSTRIES

There is a general consensus of opinion that the bulk of unemployment today is to be found in the construction industry and the heavy manufacturing industries which furnish materials for construction and factory equipment, such as machine tools and the like. The durable industries normally employ approximately one-third of all persons engaged in producing commodities. The depression unemployment in the durable-goods industries was nearly six times as severe as in the consumer-goods industries. To stimustries are rederation of pression unemployment in the durable-goods industries was nearly six times as severe as in the consumer-goods industries. To stimulate revival in the construction field, the American Federation of Labor has urged again and again that the Government building programs alone cannot revive employment and that a way must be found to encourage private capital to invest in home building and renovating work. Indeed, in order to stimulate employment in the construction and heavy-industry group a revival of the flow of investment capital to business is necessary.

It is said that there is need, indeed, for new capital today in virtually all lines of business and industry, due to the shortages in capital investment accumulated during the depression. These shortages, it is said, result from inadequate outlays for maintenance, lack of replacement of capital facilities due to obsolescence of existing equipment, and fallure to develop new industries and install new equipment in the same proportion as during the decade immediately prior to the depression.

Our studies indicate that the percentage of employment over a

immediately prior to the depression.

Our studies indicate that the percentage of employment over a period of years runs fairly comparable with new capital investment in industry. During the years 1925 to 1929, inclusive, we find the factory index around 100, with new investments in America's industries approximating \$3,750,000,000 yearly. Figures for 1930 to 1935, inclusive, evidence that with the factory employment index rising from a low of 60 to 80, new investments in America's industries approximated \$700,000,000 annually. The country cannot long continue indefinitely to satisfy its needs for consumers' goods unless operations are undertaken to expand production and maintenance and the national standard of living.

Taken as a whole, industry is only partially dependent upon the issuance of new securities to finance new plants and equipment. To some extent the capital requirements may be filled from current earnings, but in a number of industries new borrowings are absolutely essential. Plentiful investment funds are now available at comparatively low interest rates but, unfortunately, there is not a sufficient confidence in the prospects for profit. Still more unfortunate, our entire governmental policy, including our present tax structure, do not hold forth the encouragement and incentive essential to establish that essential and required confidence.

Recently there has come to our attention statistics showing the emount of money which must be invested to furnish employment.

Recently there has come to our attention statistics showing the amount of money which must be invested to furnish employment to one worker. The estimate of Lammont du Pont that on the average the manufacturing industry throughout the country requires an investment of \$8,000 per employee, that in the steel industry about \$11,000 in capital is required for each employee, and in the electric-utility industry an investment of approximately \$45,000 is required per employee, is of more than passing concern. His statement that an expenditure of \$25,000,000,000 upon new plant and equipment would put an additional 3,000,000 to work in the manufacturing industry and would furnish employment in service industries of some 7,500,000 ought not to be disregarded but should receive serious attention. Certainly it is by far better that capital investments be encouraged to bring about reemployment than that

we should center foremost attention on providing relief and in finding new, excessive, and burdensome forms of taxation.

Labor is concerned with all of these problems just as you are. A recent study of employee attitude toward business indicated that information on taxes affecting business was wanted by 52.9 percent of the workers polled. When such a majority of employee about taxes affecting business, this fact has a great and almost

startling significance.

LABOR-INDUSTRY COOPERATION HIGHLY NECESSARY

We all recognize the right of Government to exact payments from its citizens who enjoy its protection and its many benefits. Labor has always believed good citizenship requires willing and prompt payment of all just taxes, not only by its members but by every other group or normal source of tax payment. It is when we approach the problem of Federal, State, and local taxation that we need a "steady hand," and this also is the time when business and labor can well put into action their stated recognition of a common problem.

We are facing a critical time in the Nation's history. Upon the fairness of taxing plans worked out will rest the success of today's recovery spending program. If that fails, what shall follow—debt repudiation, inflation, or political and financial collapse?

There should be a complete revision of our tax laws. There should be a complete revision of our tax laws. Taxes provide the greatest single contribution to the cost of living today. It makes no difference whether these taxes are paid in the first instance by big business, industry, the public utilities, the railroads, the banks, or the insurance companies, it is the ultimate consumer who pays them in the end. Whether taxes can be reduced immediately or not, they can and should be distributed more equitably and so as not to stifle business or to tax incentive which is the source of new industry and new employment.

and so as not to stifle business or to tax incentive which is the source of new industry and new employment.

Is this not the time when representatives of labor and of capital, of employers and employees might well meet in conference to discuss this entire subject, and if possible formulate plans for the definition of problems involved, to undertake such further research as may be required and finally determine a program of education and action that will result in concrete steps toward a Nation-wide analysis and correction of governmental costs and a corresponding lessening of excessive and burdensome taxes. The responsibilities of such a joint national guiding committee unquestionably would lead to the development of a public understanding of some universally approved program which would embrace not only a restoration of public confidence in private industry, a readjustment of cost and operation of government, but at the same time would create that much-needed and essential spirit of cooperation and understanding between those who own and manage industry, labor, and the Government. the Government.

Changing social, political, and economic conditions call for teamwork in our industrial life. This new day demands broad and sympathetic understanding and cooperation. Either our system of free enterprise and of democratic rule shall survive or perish. The

answer rests largely with ourselves. What shall be our answer?

Our National Farm Problem

EXTENSION OF REMARKS

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Thursday, May 11 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. GUY M. GILLETTE, OF IOWA, ON MAY 9, 1939

Mr. NORRIS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a radio address delivered by the Senator from Iowa [Mr. GILLETTE] on May 9, on the subject Our National Farm Problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am quite aware of the difficulty of discussing in a limited radio period the constantly continuing problem of our agricultural industry, and the constantly recurring acute economic situation pertaining to many of those engaged in that industry. This evening, as I discuss this matter, there is pending before the Congress an appropriation bill for the Agriculture Department of our Government and for the administration of existing legislation amounting to a sum of around one and one-quarter billions of dollars. Because I believe the solution of our present national situation of widespread industrial and economic depression is inextricably bound up with the sane solution of our agricultural difficulties, I hope to discuss the question this evening with particular thought that a large percentage of my hearers are engaged in other lines of work and occupation.

Recently I received a letter from a constituent of my home State of Iowa, from which I now quote:

"I received 12 cents a dozen for eggs today. What do you pay in Washington?"

That night inquiry of my good wife brought the information that she had paid for a dozen fresh eggs that day 42 cents. Now, the price the Senator's wife in Washington, the iron worker's wife in Pittsburgh, the miner's wife in West Virginia, the factory worker's wife in New Jersey, the taxi driver's wife in New York pay for eggs, milk, pork chops, beefsteak, bread, fruit, or vegetables has a very definite effect on the farmers of my State of Iowa, as well as the farmers of every State in the Union. At the same time, having in mind that some 22 percent of the average worker's wages must go for exactly food emphasizes must go for essential food emphasizes most strongly the importance of the problem to the industrial citizens of our Nation, the problem of the farmer in the West and the South, the North and the East is their direct concern. It represents their bread and butter and determines their standard of living costs for the content of the content of the costs of the costs. direct concern. It represents their bread and butter and determines their standard of living each day of the year. Every ear of corn raised in Iowa, bushel of wheat in Kansas, pound of beef or butter in Wisconsin, New York, or Minnesota is sold to the wage earners of America. The entire economic life of the farmer and his family depends on the sale of his harvest. Whether or not the farm family buys any clothes, shoes, machinery, radio, automobile, insurance or professional services depends on the amount of income E SANS TANDERS IN LA SANS TANDERS

they receive from the sale of their harvest. Speaking directly to you people in the cities, I may say that whether your husband is employed to help make the market for the products of the millions of farm families or is forced on relief rolls depends, in large degree, on the purchasing power of some 30,000,000 people directly engaged in agriculture. Now, it is difficult for many people to understand or believe that our farmers have been growing, harvesting, and marketing their crops for a number of years and losing money each year on their work and transactions.

on their work and transactions.

each year on their work and transactions.

To understand more clearly our present condition, I am going to trespass on your patience to make a brief historical review of farming and farm legislation. First, we must have in mind the tremendous change that has taken place in our farm production and consumption during the period of our national existence. In the early days of the Nation's history, it has been estimated that some 80 percent of the people were directly engaged in agriculture. Because of the simplicity of life in this period and the limitation of needs under standards of living then existing, most of these farmers raised their products for home consumption on the farm. The wheat and corn were raised for flour and meal; the calves and hogs for butchering and meat storage. There were two or The wheat and corn were raised for flour and meal; the calves and hogs for butchering and meat storage. There were two or three cows from which came milk, cream and butter and cheese for the family. The poultry went largely to the family table. The cotton, flax, wool, and leather for textiles and wearing material for family use all were in great measure produced for consumption at home. Small were the needs, outside of these things, and small, indeed, was the surplus produced for sale to the other 20 percent of the Nation. When, however, American inventive genius rapidly developed new methods of processing raw materials, there followed more rapidly the development of new standards of living, hundreds of new uses and hundreds of new needs. The astoundhundreds of new uses and hundreds of new needs. The astounding development of means of transportation and contact with distant regions opened many markets at home and abroad. More and more our people became engaged in the processing and distribution fields, as distinguished from the raw material production fields. Methods of production to meet these new needs for raw fields. Methods of production to meet these new needs for raw products of the farms stepped up our agricultural production to a point where two-thirds of our people and the needs of these two-thirds were to be served by the production of the other third. To meet this situation and to enable our farmers to live with the same standard of living as their fellow citizens, it became necessary for a large percentage of our raw material production on the farm to be sold in the general market, rather than to be consumed at home. Because of this wide field of home and foreign marketing, and because of the dependence of the farmer on so many conditions of production over which he had no control, such as climatic conditions and destruction of crops by the elements and insect enemies, an attractive field was opened for the speculator to operate in anticipation of crop production. From this came a situation which made our farmers absolutely dependent on both domestic and foreign markets, in large measure speculaon both domestic and foreign markets, in large measure specula-tive, for what they had to sell and in determining the price they

tive, for what they had to sell and in determining the price they were to receive.

It has been well and often stated that our farmers do not sell a nickel's worth of their products. We, as farmers, pay what we are asked to pay, if we can, for the industrial things we need, and we take what the purchasers are pleased to offer us for the products we sell. The farmer cannot be expected to meet all the hazards of his arduous work and then be compelled to look for his market under conditions and contingencies over which he has no control whatever. To meet a depressed market he tries to raise increased amounts and further depresses his own market. Thousands give up in despair and leave the farm-production field. Until, then, we have definitely solved this particular problem, our agricultural difficulties will and must be of a perennial nature. We cannot expect any part or portion of our people to continue in the work of producing the raw materials of food and fiber absolutely essential to our industry and life itself unless they can be assured of doing so at a reasonable profit that will enable them to live as American citizens are entitled to live, and with the same standards as pertain to their neighbors engaged in other lines of enterprise.

Now, may I briefly refer to some comparatively recent history relative to attempts to solve these difficulties. The agricultural problem has been a major political national issue since 1920. It is this disparity that has existed since 1920 between the price which he had to pay for the products he sold and the price which he had to pay for the products he bought that has continually forced the matter to the attention of our lawmaking bodies, and particularly the Congress of the United States. This disparity has been greatly increased and the difficulty much enhanced by three definite elements:

1. The expansion of agricultural acres during and immediately following the World War because of the war needs. This

1. The expansion of agricultural acres during and immediately following the World War because of the war needs. This expansion brought into cultivation more than 45,000,000 agricultural acres.

2. Since the World War approximately one-half of our export trade in agricultural products has been lost and, many believe,

rretrievably lost.

3. While substitutes for agricultural products have been and are constantly being developed, little progress has been made in developing and finding new markets and uses for agricultural raw materials.

One of the first attempts to raise the price of farm products and thus remedy the disparity was the enactment of the emergency tariff law of 1921, followed by similar attempts in 1922 and 1930. Each of these tariffs raised the duty on imports of farm products with the hope that the home price of such products would be

correspondingly increased. Raising the tariff, however, did not solve the problem, for the very definite reason that many of our leading agricultural commodities, such as cotton, wheat, and hog leading agricultural commodities, such as cotton, wheat, and hog products, were on an export basis. It is almost self-evident that a tariff cannot raise the price of a product which is on an export basis, since the tariff change only becomes effective when the products to which it applied are imported. The net result of these attempts was largely to increase the price of the products the farmers had to buy, thus increasing the disparity between what the farmer paid for what he bought and what he received for what he sold. But the most deplorable effect of these tariff raises was in the fact that foreign pations to meet the changes raised their in the fact that foreign nations, to meet the changes, raised their own tariffs and instituted embargoes and quota provisions, further restricting our agricultural exports to them, and at the same time attempted by every means to increase their own production to meet their necessities.

their necessities.

From 1922 to 1928 we heard a great deal about the McNary-Haugen plan. Those advocating this plan reasoned that agriculture was put at a disadvantage because of these tariff rates, and proposed a plan which they hoped would make the tariff effective for agriculture. This plan contemplated the subsidizing of the export of agricultural products. They argued that if we could export our surplus wheat, cotton, and other products, the price of the products on the home market would then be on an import basis and the tariff become effective. The export-debenture plan was based on this reasoning also, with the difference that the bounty on exports was to be paid from the Federal Treasury rather than by the imposition of an equalization fee to be collected in than by the imposition of an equalization fee to be collected in trade channels. The McNary-Haugen bill passed Congress twice, and each time was vetoed by the President for the stated reason

that increased prices would increase production, and the dumping of surpluses abroad would create international resentment and further restrictions of markets against us.

In the Presidential campaign of 1928 the agricultural problem was a leading issue. The Federal Farm Board was set up very soon after the inauguration of President Hoover. It again stated the fact that a farmer sold on an unorganized market and bought on a controlled and organized market. The Federal Farm Board proposed to organize the farmers into Nation-wide cooperative groups for commodity marketing, and thus insure the flow of these prod-ucts into their respective markets in accordance with the market needs. Many things contributed to the failure of the plan. First,

needs. Many things contributed to the failure of the plan. First, it began its attempts in a period of falling prices. Trying to hold up these prices, it began to purchase and store certain farm staple products as they came onto the market. Prices continued to fall, however, and the Farm Board found that the \$500,000,000 given to it was tied up in loans to the marketing organizations and in the stored products which it had purchased to take them off the market. As an example of the result, when the Farm Board began operations wheat was selling at a dollar per bushel; by 1932 it was selling at considerably less than half that figure.

Again, in the campaign of 1932, with agricultural prices at almost an all-time ruinous level, with farmers in many sections picketing the roads in a desperate attempt to prevent any of their products reaching a market and thus to starve the Nation into realization of their desperate plight, the question again became an outstanding issue at the polls. Soon after the convening of the Congress in a special session in 1933, it passed the Agricultural Adjustment Act of 1933. This plan called for control of agricultural production by adjustments. The thought was to profit by the failure of the Farm Board and control marketing of raw materials by controlling the amount produced, and, again, by this the failure of the Farm Board and control marketing of raw materials by controlling the amount produced, and, again, by this method, to make the tariffs effective as to these farm products. It is difficult fully to realize the significance of this policy as adopted for farming. From the beginning of organized society, the raising of large volumes of food supplies and the holding of the price for these products at low level was a major effort of all governments. In almost every State of the Union there were, and still are, on the statute books criminal statutes punishing attempts to raise artificially the price of food and other necessities for human life. In addition, our farmers had always bitterly fought monopoly practices and control of the price of the things, they bought. The force of farm opinion has been potent in securing the passage of much Federal legislation along these lines, such as the Clayton Antitrust Act, the Sherman Antitrust Act, curing the passage of much Federal legislation along these lines, such as the Clayton Antitrust Act, the Sherman Antitrust Act, the creation of the Federal Trade Commission, and the Interstate Commerce Commission. But, with this special session, the farmer embarked on a course of controlling his own prices—fighting fire with fire—meeting control with control. The plan caused, and is still causing, violent debate and argument. Opponents call it the doctrine of scarcity, and hold that we cannot consume to the limits of our needs unless we produce, and they further point to the apparent contradiction of legislative effort to decrease acreage and, at the same time, to appropriate large sums for irrigation and acreage expansion. The proponents point out that the policy contemplates enabling the producer of raw materials to do what industry has been doing for generations—adjusting production to maintain price. They particularly called attention to the fact that the output of our leading industries in 1932 was reduced to maintain price, and again, in the winter of 1937–33, industry reduced its output by 30 percent in another desperate attempt to check falling prices. check falling prices.

Check failing prices.

Whatever one may think of the production control method (and I am one who has opposed it), we must admit, in fairness, that industry and agriculture must be on the same policy basis, whatever it may be, and as long as agriculture follows a policy of

producing to the limit and accepting low prices, while industry can curtail production and raise its prices, the disparity from which the farmer suffers must increase, rather than diminish.

The Supreme Court, in 1936, declared the original Agricultural Adjustment Act unconstitutional and held that the Congress had no right to levy a processing tax for the definite purpose of controling production. To meet this new situation, a plan of production control through a soil-conservation policy was enacted into law. It was universally recognized that in many sections our soil-fertility resources were being rapidly exhausted through erosion and also through heavy cropping. The new plan contemplated the taking out of production of large acreage by encouraging the use of these acres in raising certain erosion-preventing or soil-building crops rather than the soil-depleting crops which were produced in large surplus amounts. In this way the Nation would take needed steps to save its soil resources, the farmer could receive certain benefit payments to reimburse him in part, and thus the production of the particular crops would be automatically reduced.

The Agricultural Adjustment Act of 1937 retained the principal features of the Soil Conservation Act of 1937, but introduced a number of new features. I cannot discuss them here for lack of time, but will briefly refer to the marketing-quota provision. While

time, but will briefly refer to the marketing-quota provision. While the act contemplates the allotting of acreage to the individual farmer to produce the amounts for normal needs, if production is

the act contemplates the allotting of acreage to the individual farmer to produce the amounts for normal needs, if production is particularly abundant, two-thirds of the cooperating farmers may impose marketing quotas. These quotas provide for storage on the farm of certain percentages for years of unusual shortage, and this is popularly known as the ever-normal granary.

It will be noted that in the discussion I have here given of the attempts made during the past few years to help the farmer, all plans were aimed at raising the price level for the farmer's production. Another approach to the solution of the problem often discussed is to attempt to lower for the farmer the price he has to pay for his needs. As I have stated, it has been the practice of industry, in time of limited demand for its production, to curtail production, maintain prices, and turn off labor. This, of course, results in decreased output, decreased national income, and decreased purchasing power for the consumers of farm products, as well as accentuating the farmers' difficulty. One keen student of the question has suggested that three things might be done from the standpoint of industry.

1. Industry could accept a lower rate of profit and keep their plants operating at full time.

2. Labor could accept a lower rate of wage but have nearer a full year's work.

3. The processed goods could be sold at a price that the farmer and other consumers would pay, within their income.

With the farmer deprived of a large portion of his purchasing power through ridiculous prices, other industry finds itself with the loss of more than one-third of the markets for its processed goods. Careful studies have shown that during the years between 1929 and 1936 the annual income of the nonagricultural portion of our population has varied from seventy-one billions in 1929 to forty-two billions in 1933. Twenty-two percent of this income was and is spent for food. Only 40 percent of this, however, or 8.8 percent of the nonagricultural income, reached the farme

I have suggested three things that might well be considered as remedies from the standpoint of the nonagricultural sections. We have done and are continuing to do many things of a helpful,

remedies from the standpoint of the nonagricultural sections. We have done and are continuing to do many things of a helpful, although, of necessity, palliative, nature, from the standpoint of the farmers. We have aided greatly in the refinancing of farm indebtedness at lowered rates of interest. We have spent large sums in aiding the farmers to fight insect and plant pests. We have spent huge sums in enabling the farmers to conserve fertility. We have urged and helped with money from the National Treasury the building up of soil resources. We have spent large sums in rehabilitating farmers who have reached the end of their resources and enabled others to establish homes. We have made credit available to carry surpluses and to provide working necessities. We have made a start on crop insurance. We have tried by negotiation to recapture some of our lost foreign markets. These and many other legislative proposals have been of real assistance to our farming population.

But representatives of the farmers have differed greatly as to the long-range solution of the basic problem. One group strongly advocates production control along the lines of the statutes to which I have referred, with the attendant compensation of the farmer for reduction of acreage by benefit payments from the Federal Treasury. Another large group believes that the matter can be solved best by securing for the farmer full use of the domestic market at a cost of production plus profit price, and through a system of surplus control and removal enable him to sell the balance in this domestic market at a price which will secure for him a fair return. A third school of thought proposes, by increased credit and low interest rates, by efforts to recapture foreign markets and develop new domestic uses, to build up additional markets and develop new domestic uses, to build up additional markets and develop new domestic uses, to build up additional markets and develop new domestic uses, to build up additional markets and at the same time, cut down to prop

I am personally convinced that the solution of this basic prob-lem as a permanent rather than a temporary matter is more a problem of distribution than one of production. When distribu-tion charges, largely due to monopolistic control, take, on the

average, three-fifths of the consumer's dollar in our Nation, I am convinced that the field is an essential one for legislative exam convinced that the field is an essential one for legislative exploration and correction. The Secretary of Agriculture, Mr. Wallace, has, in my opinion, a much clearer understanding of the whole problem than most of our people in public life. While I have not always agreed with his conclusions, yet I am convinced that he and those working with him have the fullest comprehension of the entire agricultural situation, and I am convinced that within another year we shall have taken long strides toward the goal of economic security for our producers of raw material, keeping at all times in mind the American standards of living, not only for this agricultural portion of our people, but with the maintenance of these standards for our laborers and workers in other fields.

the maintenance of these standards for our laborers and workers in other fields.

To admit that we cannot solve the problem is to admit failure of democratic processes of government, and, also, to admit our inability to maintain, in a country of unparalleled resources, the standard of living which we believe essential to prosperous and happy American life, and permit all sections and lines of activity to have full opportunity to participate.

School Safety Patrols

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Thursday, May 11 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, ON MAY 7, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that a radio address delivered by me on Sunday, May 7, through the courtesy of the National Broadcasting Co., be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Washington is annually host to many national meetings. Our National Capital has become the center for focusing attention on many worth-while activities. But few, if any, of these are more

patrictic in character or deserve greater attention than the annual spectacle of youth staged by the School Safety Patrols.

On Saturday next, May 13, more than 13,000 members of these patrols from 20 States and the National Capital will participate in a great parade. They will represent some 275,000 youngsters who serve in school patrols in more than 3,000 communities. These boys and girls are engaged in an effort to safeguard their school-mates from the hazards of traffic. They are also receiving fine training in civic responsibility and a background of training for

citizenship. We hear much of the "world of tomorrow." We need have no fear when our youth is being trained in such a great work as the school patrols. And it is most significant that while youngsters abroad live in dread of war and are learning to wear gas masks our children are following the peacetime pursuits of real service. It is the American way. We should be proud of it. I have long contended that our first obligation as a people is to our citizens of tomorrow. We should think of them before we undertake to solve world problems. This great national gathering of School

of tomorrow. We should think of them before we undertake to solve world problems. This great national gathering of School Safety Patrols here next week—this demonstration of how youth serves youth—offers a splendid opportunity for all of us to pause and consider what we are doing for our citizens of tomorrow.

Each year when I see these young patrol members come to Washington, I inhale a new breath of faith in the future of our country. Certainly we should have no qualms nor fears for the future when our boys and girls are voluntarily assuming responsibilities that fit them for citizenship.

It has been antly said that "The youth of a nation are the

bilities that fit them for citizenship.

It has been aptly said that "The youth of a nation are the trustees of posterity." The school safety patrols sponsored by the American Automobile Association, its affiliated motor clubs, schools, and police, are truly fulfilling all obligations of this trusteeship, and I am very happy to be able to say that I am national vice president of the American Automobile Association. I am told that the traffic death rate for children in the 5-to-14 age group has decreased 13 percent during the past 15 years, while the rate for all other age groups has been soaring upward. Thus it seems most fitting that this interesting radio program—the Sunday Drivers—should be dedicated to the school safety patrols everywhere as a means of encouraging public cooperation.

Radio has become one of the greatest influences in modern life.

Radio has become one of the greatest influences in modern life. It is to the credit of those who control this channel of communication by air that they are alert to their public responsibilities. The sponsorship by the National Broadcasting Co. of this program entitled the "Sunday Drivers" is only one evidence of what radio is doing to further the traffic-safety movement. This very effective

The transfer of the second of

and interesting program comes on the air each Sunday as millions and interesting program comes on the air each sunday as millions of our people are preparing to turn to the outdoors for motor trips, and when millions of children are nearing the close of a week end and getting ready to trudge back to their classrooms. Obviously it is an ideal time to urge care and caution on the part of a great unseen audience and impress it with the vital need for individual responsibility in traffic

responsibility in traffic.

I want to commend the National Broadcasting Co. and the Sunday Drivers program for the very fine and constructive entertainment and service they are rendering through this week-to-week

ment and service they are rendering through this week-to-week broadcast.

The school patrols were started about 18 years ago when child fatalities presented one of the most serious aspects of the traffic safety problem. At that time the traffic death rate for youngsters in the 5-to-14 age group was one of the highest, with the exception only of the age group of 65 years and over. Since 1922 the number of motor vehicles in operation has increased almost threefold. The gain in car use has been far greater. In fact, the problem of a more safe movement of motor vehicles has become one of the most challenging of our time. Yet in the face of these conditions the traffic death rate for youngsters in the 5-to-14 age group is now one of the lowest. No other facts are needed in support of the great humanitarian work of the school safety patrols and the results of safety education in the schools.

tarian work of the school safety patrols and the results of safety education in the schools.

Many mothers and fathers of America are grateful for the protection offered by the school safety patrols. It is to the credit of motor clubs that they had the vision 18 years ago to work with schools and police in the inauguration of the patrol movement.

I want to take this opportunity to commend the American Automobile Association and its affiliated motor clubs for inaugurating and sponsoring the school safety patrols in cooperation with schools and police. The movement has now become national in scope. It is one of the proud chapters in the history of youth training and wouth service.

The school patrol program has already left, and will more and more leave, a direct and beneficial influence on our citizens in the

W. P. A. Bosses Favored

EXTENSION OF REMARKS

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Thursday, May 11 (legislative day of Monday, May 8), 1939

LETTER FROM HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter I recently addressed to the people of Lincoln County, W. Va. My reason for asking its insertion in the RECORD is to point to a situation I believe to be a general practice, not only in this one county but throughout the entire Nation. I am sure this practice does exist elsewhere.

If one were to multiply the \$73,080 shown in this one county by the total counties in the United States, it would show the wholesale waste of money to provide jobs for po-

litical favorites.

The disgusting thing is to hear some of these who profit from such types of W. P. A. expenditure talk about their great love and interest in the W. P. A. workers who are being fired. They were fired because money that should go to them has gone to the political worker.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Dear Friend: Where does the W. P. A. money go?

If one were to believe the statistics of the W. P. A. staff (who are paid out of the Public Treasury to sell the W. P. A. to the people), you would think that only a few cents out of a dollar went to the bosses. The facts disprove their statement. One of the ways they get around this high administrative cost is to charge to the projects much of the expense. They claim there are only a few more than 500 administrative employees in West Virginia, but they do not include the hundreds and hundreds of high-paid employees do not include the hundreds and hundreds of high-paid employees whose salaries and expenses are charged to the projects. At that they admit the annual State administrative cost is \$966,217.

I shall give you the story of Lincoln County as portrayed by the pay-roll survey.

In Lincoln County I found 47 individuals on the W. P. A. who draw more than \$1,000 a year whose salaries are charged to the projects, not to administration. I may find even more after a thorough check-up is made. These 47 draw \$68,580 a year. Forty-seven W. P. A. workers in Lincoln County would draw only \$19,740

a year; that is, if they would work every week of the year without a single lay-off for any cause. The difference between the bosses and the workers amounts to \$48,840 a year, or more than a thousand dollars' average difference for each boss. It pays to be a boss. Then, besides the 47, I find others whose salaries amount to \$4,500 a year. The total cost of the higher paid amounts to \$73,080

The difference between the amount paid the same number of workers and the amount paid the bosses would be enough to employ approximately 275 persons for 5 months. Why fire the workers

ploy approximately 275 persons for 5 months. Why fire the workers and keep the high-salaried overhead?

One individual in Lincoln County is paid approximately \$1.65 per hour for every hour he is employed. He is a W. P. A. official. Yet I know hundreds and hundreds of men who are trying to get that much a day to keep their families.

Using the Government statistics as to the number of families in Lincoln County, the W. P. A. overhead mentioned above would mean approximately \$18 for every family in Lincoln County. Think of that—\$1.50 a month per family to pay the salaries of the bosses in Lincoln County. Now, that is just the salaries of those charged to projects. projects.

They are giving the needy workers 403's. They claim it is necessary to reduce expenses. Why do they start the reduction with the needy rather than with the favorite bosses?

I want to make it clear that the above figures do not include the

I want to make it clear that the above figures do not include the salaries of those in the district or State offices. Add this to the above and you will see where the W.P.A. money goes.

I have been saying more money should go to the workers and less to the high-paid bosses. The politicians don't like that.

It is to the advantage of the W.P.A. worker to cooperate in helping to clean up W.P.A.

Some time ago I showed where more than 200 office employees of the W.P.A. in West Virginia had their salaries raised by more than \$78,000 a year. If you want a copy of that record, just send me a postal card or letter to Washington and I shall be glad to send it to you. I want the people to know the facts.

I am sending this letter to those who do and do not work for the

I am sending this letter to those who do and do not work for the W. P. A., because everyone is interested in finding out the story.

Sincerely,

RUSH D. HOLT.

A Fair Break for Labor

EXTENSION OF REMARKS

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES Thursday, May 11 (legislative day of Monday, May 8), 1939

ADDRESS BY EDWARD CORNEABY

Mr. JOHNSON of Colorado. Mr. President, several interested listeners to an able address recently made by Edward Corneaby before a civil-service group here in Washington on the subject of A Fair Break for Labor have asked that it be printed in the Appendix of the RECORD for the benefit of Congress and the country. I therefore ask unanimous consent that that be done.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

There is no more poignant saga in the pageant of American history than the struggle of working men and women to secure for themselves the inalienable economic rights of free citizens to a

themselves the inalienable economic rights of free citizens to a better and more abundant life.

Contrary to popular belief, this effort of the laboring classes is not a new movement; it is as old and democratic as our most fundamental institutions; it is a truly great American heritage. Long before the adoption of the Constitution the voice of the farmer and the industrial laborer was raised against the economic exploitation which had been carried to these shores on the afterswell of the eighteenth century Old World industrial revolution.

For a time American was express were content to believe that

For a time American wage earners were content to believe that the rights of free men, as written into the Declaration of Independence and later as guaranteed by the Constitution, would be ample to garner for them the right to earn a decent living, to improve their lot, and to rise to a more comfortable rank in the economic strata, to be on a par with all men.

They were taught, however, by the lessons of bitter experience that the goal of economic "life, liberty, and the pursuit of happiness" was not to be reached by such passive philosophy. As a consequence, workers began to band together to bargain for economic improvements by collective group action where the individual was powerless to fight singly for a place in the sun against the rapidly expanding, and many times ruthless, American industrial system.

system.

Today the organized labor movement, after more than a century of continuous struggle, stands recognized as a cornerstone of the American democratic society. Through it the otherwise unheard voices of literally millions of citizens have been raised in effective protest against unfairnesses in the national economic machine. Through it these injustices have been steadily whittled away, bringing better wages, better working conditions, better labor standards, better and healthing lives and more abundant beautiful. better and healthier lives, and more abundant happiness to those who have actually produced the tangible evidences of this country's

greatness.

For nearly a quarter of a century as an actively functioning part of the organized labor movement, and of its ardent champion, the Farmer-Labor Party, I have watched the benefits brought home to those who toil through the organization of labor. Twenty-four years ago the Brotherhood of Railroad Trainmen included my name on its roll of membership. I know the advantages to both rail labor and the carriers themselves which the organization of rail employees has brought. The railway brotherhoods represent the American labor union at its best, with a continued history of better labor standards for its members and at the same time a genuinely cooperative interest in the well-being of its employers, the Nation's railroads.

Study the record of the growth of the railway brotherhoods from their early birth in mutual-insurance programs before the Civil War to their present position as one of the most efficient labor organizations in the world and you will read the history of the rail transportation industry.

Examine the record of industrial relations between the railroad unions and the carriers under the Railway Labor Act and you will find a model picture of employer-employee relationships which is the goal of all organized labor.

What the brotherhoods have done for the railroad industry the remainder of the organized labor movement will do for the rest.

What the brotherhoods have done for the railroad industry the remainder of the organized-labor movement will do for the rest of American industry. I stand four-square on the extension of the rights of self-organization and collective bargaining as enunciated in the National Labor Relations Act to the workers in all American industry. At the same time I oppose with all the vigor at my command the efforts of reactionary industrial interests, who have not yet learned the democratic process of dealing with employees, to repeal or emasculate the fundamental rights of labor guaranteed in the Wagner Act.

It is my belief, further, that the Federal Government has the duty of extending further guarantees of improved economic conditions to workers organized and unorganized both in industrial

ditions to workers organized and unorganized both in industrial pursuits through such enactments as the Fair Labor Standards pursuits through such enactments as the Fair Labor Standards Act. The days when a worker was forced to take scraps from the table of industrial profits without a reasonable share in the fruits of his own toil have passed and to which there can be no return. Long hours and low wages, with all their attendant results of health-broken workers with nothing ahead for their old age but the public dole are a part of our system which must be abolished and never again permitted to raise its ghoulish specter over free Americans. Employers who refuse to accept this democratic philosophy must be taught by the strength of organized labor backed by a friendly Federal Government.

The efforts of the Government to alleviate the racking effects of unemployment, to give assurance of an independent old age, to afford help from the ravages of occupational diseases, through such enactments as the Social Security Act are aims with which I am in complete accord. It is my sincere belief, however, that this

am in complete accord. It is my sincere belief, however, that this particular statute, as is the case with much new Federal social legislation, does not go far enough. I favor, therefore, the extension of the benefits of the Social Security Act in greater and greater measure so that ultimately all workers who earn by the

toil of their hands will gain the economic security and happiness

toil of their hands will gain the economic security and happiness which is the free-born right of every citizen.

A major proposal of the current Congress which must be enacted for the protection of labor groups against that small fringe of American industry which has not yet emerged from the Dark Ages of industrial relations is the Thomas-La Follette oppressive labor practices bill. This legislation, resulting from the long hearings of the Senate committee which investigated violations of civil liberties and the rights of labor, aims at the heart of the blackest and most reprehensible program of the antilabor forces operative in the country today. The employment of labor spies, the purchase of and the inhuman use of industrial munitions against workers in labor disputes, the employment of strike-breakers, and the inexcusable operations of private detective agen-

against workers in labor disputes, the employment of strike-breakers, and the inexcusable operations of private detective agencies which supply companies with strike-breakers, must be wiped clean from the rule book of American industrial practice. No police power of the Government should be spared to see that these practices are completely and finally eliminated.

As do all other sincere friends of labor, I deplore exceedingly the regrettable division which has come about in the ranks of organized labor, but I am not one of those who condemn or support the position of either of the dissident groups in entirety. What I do realize is that there are sincerely fundamental differences which do exist between the American Federation of Labor and the Congress for Industrial Organizations, but which I am convinced will be resolved in due time by the able leaders of both groups.

Even as the progress of industrial technique in this country has brought forth new and increasingly difficult problems of production, so has the growth of the labor movement given rise to new problems which are vital and which cannot be settled by a snap of the fingers or the unfair criticisms which have been leveled at labor leaders by antilabor forces seeking to make capital of the situation.

All reversements be they industrial political or of a labor nature. situation.

All movements, be they industrial, political, or of a labor nature, must be allowed to settle their internal differences without the interference of any self-constituted "authorities" or by any Government agency not fully cognizant of the problems at issue. I am not in favor of Government pressure to effect compromises which may be distasteful to labor. In keeping with the best democratic principles upon which this country was founded, the problem is one which can be settled permanently only by the labor movement itself

Farmers Cooperate in Illinois

EXTENSION OF REMARKS

HON. CLAUDE V. PARSONS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

Mr. PARSONS. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith list the counties of my congressional district with the number of farms showing the percentage of cooperation of the farmers of my district with the 1939 agriculture conservation program.

The increase in the number of farmers cooperating shows conclusively that the farmers of my district and my State are in favor of this program, whether they be Democrats or Republicans. From the whole State of Illinois, 179,607 farmers, operating 77 percent of the total cropland in Illinois, have signified their intention of participating in the 1939 farm program. The counties in my congressional district, showing the percentage of cooperation, follow:

County	Number of farms	Percent
Clay Wayne Edwards Hamilton White Saline Gallatin Johnson Pope Hardin Massac	1, 979 2, 894 1, 083 2, 500 1, 517 2, 280 955 1, 422 908 650 928	8 77 81 77 8 7 9 7 8 8 8 8 8

Tennessee-Tombigbee Inland Waterway

EXTENSION OF REMARKS

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 10, 1939

Mr. RANKIN. Mr. Speaker, the Rivers and Harbors Committee of the House has approved the Tennessee-Tombigbee Inland Waterway, as recommended by the Army engineers to connect the Tennessee River with the Gulf of Mexico, and thereby shorten the water distance between all points on the Tennessee River above Pickwick Dam to the Gulf of Mexico by anywhere from 600 to 1,000 miles, and to shorten the distance between all points on the Ohio River and the Gulf by more than 200 miles, and to shorten the distance between all points on the Mississippi River north of Cairo and the Gulf by 108 miles.

It will also furnish a slack-water route for ascending traffic. Traffic moving northward, instead of having to fight the swift current on the Mississippi to Cairo, a distance of about 975 miles, could move in slack water up the Tombigbee to the Tennessee and then downstream to the mouth of the Ohio.

It will be a far better route for ascending traffic. It will also be of great benefit to the people in the area along the Tombigbee River by affording them not only navigation but also protection from the disastrous floods from which they have suffered immeasurably in recent years.

It provides a channel 170 feet wide and a minimum depth for transportation of at least 9 feet. This will not only take care of the traffic but it will take care of the floodwaters of the Tombigbee and its tributaries for all time to come.

In that area lies the world's supply of hardwood timber; in that area there are millions of tons of Kentucky asphalt that cannot be moved under present conditions and that are needed for road and street construction throughout the entire

In that area are the greatest undeveloped deposits of iron ore in the world. In that area are millions and millions of tons of limestone, as well as millions of tons of coal, that cannot be moved except by the cheapest possible method of transportation.

In that area are millions of tons of ceramic clays, out of which pottery and china are made. These clays are now being imported from other countries. These deposits have been discovered in the last 5 years.

In that area are bauxite fields, the material from which aluminum is made. In that area is produced a large portion of the cotton and cottonseed of the South, which must move by cheap transportation, under present prices, in order to reach the markets of the world.

In that area are hundreds of thousands of tons of cottonseed, cottonseed hulls, cottonseed meal, and cottonseed oil that need this new outlet to the sea.

In that area are untold millions of acres of what they call slash pine, out of which paper pulp is manufactured, which must be moved by some cheap method of transportation to reach the markets of the world.

In that area lies the greatest dairy section of the South. whose products are in need of this new avenue of transportation.

In that area lies the cornucopia of the South, which was referred to during the Civil War as the granary of the Confederacy, whose grain and livestock are shipped to every section of the world.

This great inland waterway, which the Army engineers have shown to be economically sound and feasible, will not only furnish transportation for all these commodities but it will also provide a link in our great system of water transportation from Pittsburgh, Pa.; Youngstown, Ohio; Chicago, Ill.; St. Paul and Minneapolis, Minn., to the Gulf of Mexico; and, as I have said, it will furnish a highway for the ascending traffic to avoid the terrific onrushing currents of the Mississippi River.

From the standpoint of national defense, it is absolutely necessary. It will not only furnish us an additional outlet to the sea but it will also furnish an inside passage that may ultimately be opened into Lake Erie and from there extended through the St. Lawrence or Erie Canal to the Atlantic Ocean-a route that will be safe from attack from the sea, where planes might be released from airplane carriers by an enemy fleet in case of war.

It will also give us an additional route of ingress and egress to Muscle Shoals, the source of our nitrate supply in case

In addition to all that, the people of western Alabama and eastern Mississippi are entitled to this development to furnish them adequate transportation facilities and protect them from the disastrous floods along the Tombigbee and its tributaries.

If there ever was a river and harbor project justified by all the facts, certainly this is one of them.

I cannot see how any man who has the welfare of the Nation at heart, and who is willing to do justice to all the people of all sections of the country, can oppose this great project, which has been approved by the special board of Army engineers that spent 5 years investigating it, and which has been recommended by the general Board of Army Engineers, and whose recommendations have been approved by the President of the United States.

This project has also been overwhelmingly approved by the Committee on Rivers and Harbors of the House after a

thorough hearing.

About the only discordant note that has been heard is that of Governor Dixon, of Alabama, who has sent telegrams of protest to certain Members of the House, and certain railroad interests that fight all waterways. It is generally understood that Governor Dixon, who knows practically nothing about this proposition-and who never seemed to be interested until it was too late for him to do it either harm or good—is merely using this proposition as a sounding board to promote his future campaign for the United States Senate.

The only effect his agitation could possibly have would be to embarrass a few Members of the Alabama delegation in Congress, or to help defeat this project and thereby deprive the people of that great area extending from the Lakes to the Gulf of one of the greatest waterway developments ever proposed on this hemisphere.

In addition to the benefits which I have pointed out, it will immeasurably aid the people of that section by reducing transportation rates to the people of that entire section and in that way be worth untold millions of dollars to them in the years to come.

If Governor Dixon had succeeded in blocking this great project, he would have rendered his section of the country the greatest injury of which he was capable.

Birmingham, where Governor Dixon lives, is already served by a barge line, which connects with this great waterway and thereby gains a new outlet to the North.

It comes with poor grace from Governor Dixon or anyone else in Birmingham to thus play the dog in the manger and fight this great development merely because it does not come directly to his own door, or because it benefits the people of Alabama and Mississippi outside the city of Birmingham.

I repeat, Mr. Speaker, that this is not only one of the most feasible but one of the most necessary inland-waterway developments in the world. It is the only place to be found in America where the traffic of one major watershed can be transferred to another with so much ease and so little expense, and with such enormous savings in transportation mileage and in transportation costs.

As I said, this project has been recommended by the special board of Army engineers, who spent 5 years in the most searching survey and investigation of it that was ever made on any project proposed to the Congress of the United States.

In addition to that, it has been recommended by the Board of Army Engineers here in Washington that scrutinized that report from every angle, declared it to be sound, feasible, necessary, and economically justified from every

In addition to that, this report has been approved by the President of the United States after the most careful study and review.

This project was adopted by an overwhelming vote of the Committee on Rivers and Harbors of the House of Representatives, after a full and complete hearing, and the bill containing it was reported to the House by a unanimous vote.

Therefore I submit that if there is any justification for spending money on any river and harbor project, this one should be approved by unanimous vote of both House and the Senate.

United States National Forest Lands and Other Lands Acquired by the Government Should Stand Their Fair Share of the Expenses of Municipalities Where Such Lands Are Located

EXTENSION OF REMARKS

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

Mr. PITTENGER. Mr. Speaker, I again call the attention of the Members of the House to H. R. 4833, introduced by Representative Colmer. The companion bill in the Senate is S. 1717. The purpose of this legislation is to have the United States Government assume its share of the burdens of local municipal government where lands are acquired for use of the United States Forest Service and for other governmental purposes. Under our present law, Government-owned lands are exempt from taxation. So, for example, when the United States Forest Service acquires 160 acres of land for forest purposes, that land is withdrawn from the tax rolls of the counties and school districts of the territory where the land is located.

The purpose of the Colmer-Harrison bills is to have the Government contribute something to the municipalities to help them out in the expenses of their local government. The bills would require a contribution from the Federal Government to the municipalities of an annual payment equal to 3 percent of the purchase price of the land acquired. In this way some revenue annually would be coming from the Federal Government to the counties and governmental subdivisions, which now face decreasing revenue and high tax rates because of the fact that the United States Government has acquired lands but contributes nothing to the expenses of the local governments.

Almost every section of the United States is concerned in this legislation; 31 States and 100 congressional districts are interested, according to figures that have been compiled from reports of the National Forest Reservation Commission.

I submit herewith, Mr. Speaker, summary of lands acquired and approved for purchase up to June 30, 1938, under act of March 1, 1911, as amended by act of June 7, 1924. This is made up from figures taken from Senate Document No. 7, Seventy-sixth Congress, first session. This summary gives the gross acreage of the forest, the acres required or approved for purchase, the consideration therefor, the congressional districts, and the States affected.

The summary is as follows:

	Congressional districts	Gross acres	Land purchased	Total price
Alabama	7	2, 293, 813	458, 051	\$1, 674, 772, 52
Arkansas		3, 365, 367	1, 053, 034	2, 856, 301, 55
California	4	978, 529	115, 529	627, 200. 26
Florida		1, 282, 949	707, 576	2, 159, 560, 72
	3 2	1, 558, 000	561, 555	2, 747, 273, 28
Georgia		465, 673	12, 122	28, 000. 33
Idaho				
Illinois	3	786, 601	161, 631	949, 229, 41

National Unity-The American Way

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

RADIO ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address delivered by me over the blue network of the National Broadcasting Co., originating from station WMAL, Washington, on night before last:

Today we are talking a great deal about national unity. As the world crisis deepens, we begin to inquire seriously whether we possess that unity needed to defend our democratic institutions against the attacks of proselyting foreign "isms." We inspect our ramparts and take measures to strengthen them. But let us remember that we are defending a way of life and not merely a national sovereignty. We cannot defend that way of life successfully by arms unless we are constantly defending it by living it.

ramparts and take measures to strengthen them. But let us remember that we are defending a way of life and not merely a national sovereignty. We cannot defend that way of life successfully by arms unless we are constantly defending it by living it.

As I see it, there are three crucial points in our defenses which require national attention. All three of these are concerned with national unity. The first is national illiteracy. The second is understanding and appreciation of our institutions by foreign-born people now living in the United States, all of whom should be naturalized citizens. The third is a more widespread understanding of the domestic as well as international issues we confront as a people. These matters cannot be left entirely to the initiative of the States and local communities any more than our military defenses. The Nation as a whole has a stake in good citizenship in all sections.

The bill introduced by Senator Lee, of Oklahoma, and myself, attempts to buttress these ramparts in our defenses by encouraging the States and local communities, first, to reduce and eradicate elliteracy; second, to prepare the foreign-born for naturalization; and, third, to promote more intelligent public opinion through public forums. Senator Lee and I believe that our measure, calling for the matching of State and local educational funds by Federal grants-in-aid, ought to be studied as a fundamental part of our national-defense program.

rational-defense program.

In a democracy unity of action in peace or war grows out of popular understanding of national objectives and ideals. Loyalty is the product of confidence in the workings of democratic processes and not the result of fear of reprisals and concentration camps. Therefore, the road to national unity is in a very real sense paved by education.

MUST BE ABLE TO READ

We cannot have good citizenship and reliable support for the democratic way of life unless our people can read and write. No, our rate of illiteracy is not alarming. It is 4.89 percent. And we have been making strides in removing this blemish on our national honor. Over a million people have been taught to read and write by unemployed teachers in the program of the Works Progress Administration during the past few years. But this work must be given more permanent support for a period of years. This is a time to commit ourselves to eradicating illiteracy once and for all.

While the estimated percentage of illiterates is not high in this country when compared with some others where the rate approaches 50 percent, it is nevertheless higher than some other countries where the rate is less than 1 percent. We cannot much longer lag behind Germany and even Japan in this matter of illiteracy. We who have always claimed that democracy calls for literate and educated people cannot afford to have a higher rate of illiteracy than a dictatorship which scoffs at popular self-government.

But these percentages are deceiving. Actually our degree of illiteracy is much higher than the statistics show. In addition to the 4,283,753 who were counted as illiterate in 1930, we have additional millions who are "functional" illiterates. These other millions can read sufficiently well to escape being counted as

illiterates but not well enough to understand the contents of the daily press or materials which ought to be understood by citizens generally. These people are not free citizens of a democracy. They are not prepared to make free choices because they cannot discover for themselves what the issues before them mean. These are the millions who are easily manipulated by machine politicians—the local dictators who have from time to time controlled

cians—the local dictators who have from time to time controlled our cities. They are easy prey to the most blatant type of propaganda by word of mouth, and appealed to most successfully by mass demonstrations and symbols.

As the leader of one of our great veteran organizations has written in support of my proposed measure, "The need for such legislation can readily be seen, if we pause to think of the several million persons in this country who can neither read nor write, and the hundreds of thousands of so-called 'functional illiterates' who can read but who do not understand what they read. These large groups of illiterates constitute a fertile field for subversive propagandists within our boundaries and for propaganda emanating from foreign sources destructive of our American ideals and principles." These millions who cannot even read the daily press and popular publications with understanding are citizens with all and popular publications with understanding are citizens with all the rights of citizenship. Their votes count just as heavily as an equal number of votes from reading people who carefully weigh the

ILLITERACY IS BAD

Moreover, there is a correlation between unemployment and illiteracy. We live in a technological era which demands literacy from the economic point of view. I dare say that thousands of people are today being supported by public funds who would be able to find jobs if they could read and write with a reasonable degree of proficiency. We are penny wise and dollar foolish to continue to support people in idleness when with the investment of a small fraction of the money required to do this, we could make them employable. I say that we cannot afford to carry this burden of illiteracy with all of its obvious evil consequences. We cannot afford to put up any longer with illiteracy, but we can and must afford to blot out illiteracy.

National unity—the American way requires a certain minimum degree of proficiency in reading and writing on the part of all the people. In our bill, Senator Lee and I have defined that minimum in terms of reading with understanding current newspapers and periodicals. The Nation as a whole has a responsibility for promoting this degree of literacy. It is a safeguard of democracy itself.

promoting this degree of literacy. It is a safeguard of democracy itself.

The next need for strengthening our national defenses to which I wish to draw attention is the naturalization of foreign-born people. We had in this country in 1930, 3,787,086 aliens who have not yet been naturalized. Of this number 1,267,803 come from the totalitarian States. Recently, we in Congress have required that unnaturalized aliens be dropped from W. P. A. rolls. But this does not solve the problem. The fact still remains that millions of people living in our national community are not part of it in the important sense of citizenship. Millions do not understand what American democracy means, what free Government entails, what our national objectives and ideals are. By depriving a few of these millions of the opportunities afforded to citizens, we do not get at the heart of the problem.

National unity requires common understanding of national objectives and ideals. Naturalization or Americanization is our way of introducing peoples of foreign birth into our national community. They must not be left outside of it. They must be brought to understand its purposes and processes, else we cannot depend upon them in our defense program for our way of life. Some of us hope to send undesirable aliens back to their former countries. Allens are here. Let us be practical and take effective steps to help the worthy ones become loyal Americans. My bill would enable the local educational agencies to provide classes in civics and American history for the rapid preparation of these people for citizenship. This is a practical way of fighting the growth of agitation in behalf of anti-American creeds of race hate and dictatorship. Help the aliens to understand American democracy, to become citizens in good standing, and you will re-

hate and dictatorship. Help the aliens to understand American democracy, to become citizens in good standing, and you will re-duce the power of the bund and similar organizations. Most of these organizations appeal to foreign-born people who have not yet found their place in the national community. They are a danger to us if they have the feeling of being on the outside looking in, and are finding their social contacts among organizations promoting national conflict and disunity.

PUBLIC DISCUSSION NEEDED

The third step toward greater national unity which can be taken within the provisions of my bill concerns civic literacy. During the past 3 years, 15,000 public forums have been conducted in over 500 American communities in 38 States by local agencies

of public education with the help of emergency funds from the Federal Government administered by the Office of Education. The

Federal Government administered by the Office of Education. The demonstrations of locally managed systems of public forums have pointed a way toward a more enlightened democracy. We have now but to follow the light and to encourage and aid the States in the planning of more thousands of programs based on these demonstrations. The people in the communities where these forums have operated have demonstrated an eagerness for the opportunity to study and discuss under impartial and nonpartisan auspices the important issues they face as citizens.

National unity—the American way calls for the understanding of common problems by the masses of people. The answer to crackpot and ill-conceived schemes which lure the citizens away from solid solutions is the increased study and discussion of our problems under educational auspices. We cannot prevent people from following attractive will-o'-the-wisp panaceas by forceful means without losing the very democracy we seek to protect. Yet we know that if enough people can be gained to subscribe to unsound programs the Republic will be swamped in a sea of chaos. We have no alternative but to promote public enlightenment on public affairs through the thoroughly American method of free discussion.

no alternative but to promote public enlightenment on public affairs through the thoroughly American method of free discussion. Any other methods (i. e., indoctrination, censorship, persecution of unpopular expression, etc.) of securing the acceptance of political common sense and sound values threaten democracy itself.

One hundred years ago this month the American Lyceum held a meeting of its delegates in New York City to plan a national education conference signalizing the success of that great discussion movement in helping America talk out the public-school issue. The work of the lyceum as a teacher-training institution and a forum for the discussion of practical plans for a public-school system had for the discussion of practical plans for a public-school system had been successful. Within a little more than a decade this organization had established over 3,000 town lyceums. As a result of this discussion movement public understanding of the needs of the common schools was developed, State departments of education took form, and teacher-training institutions were multiplied.

In this year of 1939 we may well reflect upon the role of this earlier American institution in promoting national unity—the American way. In this year, 100 years later, what greater tribute may we pay to those who organized public support for free schools through the lyceum than to buttress that public-school system with Federal aid? The roll call of the lecturers who spoke from the lyceum platforms both before 1839 and for decades thereafter includes the names of the great leaders of our national life—Henry Ward Beecher. Wendell Phillips. William Lloyd Garrison. Oliver ward Beecher, Wendell Phillips, William Lloyd Garrison, Oliver Wendell Holmes, Susan B. Anthony, Mark Twain, and a host of others. Some of us in the Congress today have stood on the lyceum platform and found a place for the free discussion of public questions in the twilight of this voluntary adult education movement. It is one of the happy experiences of my public career to have participated in this movement, having its roots back in our early history.

I am convinced that national unity today must be sought by the same basic means as it was in the lyceum. But now we have a great local public educational system which is organized to accomplish the task. That public-school system needs to be buttressed by the Nation as a whole, particularly in the promotion of those kinds of education which are required for the national unity and safety.

STATES TO PARTICIPATE

The bill I have introduced proposes that the Congress make available to the States \$19,000,000 each year for 3 years to reduce illiteracy, provide classes for Americanization, and to organize community-wide public-forum programs. The local and State agencies of education must match these funds with State or local funds. Each State makes its own plan, and the local agencies of public education manage their own programs. In some States where illiteracy is negligible and where few aliens reside the authorities may elect to use all or more of their funds for public-affairs forums. In States having a high degree of illiteracy, a larger portion of the funds would be devoted to reducing illiteracy and less to public forums. The same applies to States having a high proportion of foreign-born people. The public forum can be most successful as an agency of public enlightenment in those communities having a high degree of literacy and general understanding of American principles of citizenship. Thus, our bill enables each State to give support to that phase of adult education which most needs it.

Whatever other provisions are made now or in the future for The bill I have introduced proposes that the Congress make avail-

support to that phase of adult education which most needs it.

Whatever other provisions are made now or in the future for Federal aid to education, we feel that we cannot delay any longer in taking this modest step in these three important directions. The objectives to be gained are clearly of national concern, and the methods of local administration and impartial discussion are clearly in harmony with the American way. National unity calls for practical educational action. This is a program of national defense.

One Hundred and Fiftieth Anniversary of the Inauguration of George Washington

EXTENSION OF REMARKS

HON, SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

ADDRESSES DELIVERED AT THE ONE HUNDRED AND FIFTIETH ANNIVERSARY OF THE INAUGURATION OF GEORGE WASH-INGTON AS FIRST PRESIDENT OF THE UNITED STATES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the Record. I include therein the following speeches made at the celebration of the one hundred and fiftieth anniversary of the inauguration of George Washington as first President of the United States under the Constitution, also the speech made at the dedication at the monument to George Washington, April 30, 1939, at the opening of the New York World's Fair 1939, together with a report of the ceremonies:

Address by the Honorable Franklin D. Roosevelt, President of the United States

From henceforth the 30th day of April will have a dual significance—the inauguration of the first President of the United States, thus beginning the executive branch of the Federal Government and the opening of the New York World's Fair of 1939.

Today the cycle of sesquicentennial commemorations is complete. Two years ago, in Philadelphia and in other communities, was celebrated the Constitutional Convention of 1787, which gave

was celebrated the Constitutional Convention of 1/87, which gave to us the form of government under which we have lived ever since. Last year was celebrated in many States the ratification of the Constitution by the original States. On March 4 of this year the first meeting of the First Congress was commemorated at a distinguished gathering in the House of Representatives in the National Capitol. On April 14 I went to Mount Vernon with the Cabinet in memory of that day, exactly 150 years before, when General Washington was formally notified of his election as first President.

President.

Two days later he left the home he loved so well and proceeded by easy stages to New York, greeted with triumphal arches and flower-strewn streets in the large communities through which he passed on his way to New York City. Fortunately, there have been preserved for us many accounts of his taking of the oath of office on April 30 on the balcony of the old Federal Hall. In a scene of republican simplicity and surrounded by the great men of the time, most of whom had served with him in the cause of independence throughout the Revolution, the oath was administered by the chancelor of the State of New York, Robert R. Livingston.

The permanent Government of the United States had become a fact. The period of revolution and the critical days that followed were over. The long future lay ahead.

LOOKED TO EXPANSION

In the framework of government which had been devised and in the early years of its administration, it is of enormous significance to us today that those early leaders successfully planned for such use of the Constitution as would fit it to a constantly expanding Nation. That the original framework was capable of expansion from its application to 13 States with less than 4,000,000 people to 48 States with more than 130,000,000 people is the best tribute to the vision of the fathers. In this it stands unique in the whole history of the world, for no other form of government has remained unchanged so long and seen, at the same time, any comparable expansion of population or of area.

It is significant that the astounding changes and advances in almost every phase of human life have made necessary so relatively few changes in the Constitution. All of the earlier amendments may be accepted as part of the original Constitution be-

ments may be accepted as part of the original Constitution because the Bill of Rights, which guaranteed and has maintained personal liberty through freedom of speech, freedom of the press, freedom of religion, and similar essentials of democracy, was already popularly accepted while the Constitution itself was in the

process of ratification.

There followed the amendments which put an end to the practice of human slavery and a number of later amendments which made our practice of government more direct, including the extension of the franchise to the women of the Nation. It is well to note, also, that the only restrictive amendment which deliberty the control of the Nation of the Nation.

only once has permanence of the Constitution been threat-end—it was threatened by an internal war brought about prin-cipally by the very fact of the expansion of American civilization

across the continent—a threat which resulted eventually and happily in a closer union than ever before.

And of these later years—these very recent years, indeed—the history books of the next generation will set it forth that sectionalism and regional jealousies diminished and that the people of every part of our land acquired a national solidarity of economic and social thought such as had never been seen before.

That this has been accomplished has been due, first, to our form of government itself and, secondly, to a spirit of wise tolerance which, with few exceptions, has been the rule. We in the United States and, indeed, in all the Americas remember that our population stems from many races and kindreds and tongues. Often, I think, we Americans offer up the silent prayer that on the continent of Europe, from which the American Hemisphere was principally colonized, the years to come will break down many barriers of intercourse between nations—barriers which may be historic, but which so greatly, through the centuries, have led to strife and hindered friendship and normal intercourse.

The United States stands today as a completely homogeneous nation, similar in its civilization from coast to coast and from north to south, united in a common purpose to work for the greatest good of the greatest number, united in the desire to move forward to better things in the use of its great resources of nature and its even greater resources of intelligent, educated manhood and womanhood, and united in its desire to encourage peace and good will among all the nations of the world.

FAIRS BORN OF UNITY

Born of that unity of purpose, that knowledge of strength, that Born of that unity of purpose, that knowledge or strength, that singleness of ideal, two great expositions, one at each end of the continent, mark this year in which we live. And it is fitting that they commemorate the one hundred and fiftieth anniversary of the birth of our permanent Government.

Opened 2 months ago, the exposition on the magic island in San Francisco Bay presents to visitors from all the world a view of the amazing development of our Far West and of the neighbors of the American continent and the nations of the isles of the Pacific.

Pacific.

Here at the New York World's Fair many nations are also represented—most of the nations of the world—and the theme is "The World of Tomorrow."

World of Tomorrow."

This general and, I might almost say, spontaneous participation by other countries, is a gesture of friendship and good will toward the United States for which I render grateful thanks. It is not through the physical exhibits alone that this gesture has manifested itself. The magic of modern communications makes possible a continuing participation by word of mouth itself. Already, on Sunday afternoon radio programs, no fewer than 17 foreign nations have shown their good will to this country since the 1st of January. of January.

BUILDING FOR PEACE

In many instances the chiefs of state in the countries taking part in the programs have spoken, and in every case the principal speaker has extended greetings to the President of the United States. In this place and at this time, as we open this New York World's Fair, I desire to thank all of them and to assure them that we, as a nation, heartily reciprocate all of their cordial sentiments.

All who come to this World's Fair in New York and to the expectation in San Preprince will receive the heartist of valences.

position in San Francisco will receive the heartiest of welcomes. They will find that the eyes of the United States are fixed on the future. Our wagon is hitched to a star.

But it is a star of good will, a star of progress for mankind, a star of greater happiness and less hardship, a star of international good will, and, above all, a star of peace.

May the months to come carry us forward in the rays of that

hope.

I hereby dedicate the New York World's Fair of 1939 and declare it open to all mankind.

Address by Hon. Herbert H. Lehman, the Governor of the State of New York

I am greatly honored in having the privilege of participating today in the dedication of this great fair.

Here we have living proof of the divine blessings, of material resources and spiritual strength which have been granted to our people. On these grounds there are exhibited the fruits of our industry, of our mines, and of our laboratories. But on every hand there is symbolized something far more precious, more typical of America than material progress—our faith in our destiny and our confidence in our future. Men elsewhere may doubt the days that lie ahead; here we accept adversity with hopeful and confident hearts. Our Nation was born in struggle and in sacrifice. It is not new for our people to surmount obstacles and bring order out of chaos. We shall do so again.

One hundred and fifty years ago on this very day the first President of the United States was inaugurated in this city. His illustrious successor—the thirty-second in the line of Presidents—is here with us today. It is a young nation that has had only 32 rulers. It is virile and imaginative; capable and resourceful. Free men everywhere look toward our land for leadership and guidance. Mr. President, we are proud that in these dangerous days they have not looked in vain.

looked in vain.

WORLD OF MUTUAL HELP SOUGHT

It is almost unbelievable, standing amidst this great pageant of material progress, that there are yet hidden from man two great

secrets of the social relationship in which man must live. One is the secret of how to distribute the fruits of the field, of the mill, of the laboratory, so that all may have a sufficiency of the goods of the world, goods for which they are willing to exchange the toil of their hands and the sweat of their brows. The other is the secret of living together in understanding and friendship, in tolerance and in good-will. I pray that some day—in the "world of tomorrow"—these secrets, too, will be revealed to us. It is not too hopeful to believe that the day will come when we will build a world in which men will seek to help their neighbors, not to harm them; a world of which the keystone will be justice, equality, and tolerance; a world in which right will ever be the master of might.

This fair will bring to our State a great army of visitors from every other State in the Union and from every other country on the face of the globe. We will learn from them, and I hope they may learn something from us. The exchange of ideas and views which come when people meet in cordial relationship will inevitably lead to a more sympathetic understanding of each other's philosophy and problems.

The fair, I am certain, will bring a clearer realization of our re-

The fair, I am certain, will bring a clearer realization of our resources and hopes and ideals as a nation. It will bring to our millions of visitors a better appreciation of the part that New York City and New York State play in the economic and social life of the

STATE'S HOSPITALITY OFFERED

The citizens of the State of New York are a hospitable people. They will seek during the months of the fair to show our visitors that New York wants nothing in her own self-interest which is against the interest of other peoples. We in this State believe that our larger interests lie with every other part of the Nation. This momentous undertaking has been conceived with broad vision and

momentous undertaking has been conceived with broad vision and has been executed with singular and signal success. It will be the means of demonstrating that all parts of our country are linked in a common interest—that what affects the happiness and prosperity of one part affects the happiness and prosperity of all.

We of New York want to share with the rest of the Nation whatever is good in our life and in our experience. We want to know what people in other parts of the country have done so that we, in turn, can profit by their experience and achievements. We will eagerly welcome to the State of New York all those who do us homor by coming to us from our own country and from abroad us honor by coming to us from our own country and from abroad. I can promise that they will be received by the people of the State of New York with heartfelt cordiality and that in whatever part of the State they may travel they will receive a warm and friendly

Address by Hon. F. H. LaGuardia, Mayor of the City of New York

Mr. President, distinguished guests, ladies, and gentlemen, on behalf of the people of the city of New York, I bid you welcome. As the host city, the people extend a cordial invitation to all our neighbors throughout the United States to honor us with a visit to this inspiring fair.

Among the many exhibits of science, industry, commerce, may I point to one exhibit which I hope all visitors will note, and that is the city of New York itself.

the city of New York itself.

Not what you will see in the city's exhibit, but our exhibit to the whole world is that in a city of seven and one-half million people, coming from every land and every country, and children of these people who have come from every country in the world, live here together in peace and harmony. And for that we claim we are most unselfish about it, and pray and hope that other countries may copy. All we do is to let every man and woman have a say in their

own government, and we have eliminated artificial stimulus of hatred. That is New York City's contribution to the world's fair.

And now, Mr. Whalen, please accept the thanks of the mayor and through him of the people of this city to you for the direction, and to you men out there who built this fair—go our thanks

and gratitude.

Mr. President, you are always welcome to New York City. In fact, you belong here. And I know that your greatest thrill must have been this morning as you were received by hundreds of thousands of people who waited your arrival and cheered you on the way to this fair.

We are indeed fortunate and should give thanks that we are living in a country that refuses to admit that out of all the marvelous things that you will find in this fair it is impossible for men and women to live properly. Yet the United States has another exhibit, not necessarily found in the various halls, and that is that in periods where other countries were suffering we built and constructed an ideal thoroughout the United States of the vision and the dignity of the leader of the Penyllic. the vision and the dignity of the leader of the Republic.

Finally, New York City will welcome our visitors with open arms not only today, the opening of the fair, but all through the fair and every day thereafter. The city of today greets the world of

tomorrow.

ADDRESS BY THE HONORABLE SIR LOUIS BEALE, K. C. M. G., C. B. E., COMMISSIONER GENERAL FOR HIS MAJESTY'S GOVERNMENT IN THE UNITED KINGDOM FOR THE NEW YORK WORLD'S FAIR 1939, ELECTED TO REPRESENT THE COMMISSIONERS GENERAL OF THE PARTICIPATING FOREIGN GOVERNMENTS

I have the great honor, on this memorable occasion, commemorating the inauguration—150 years ago—of the beloved first President of the United States, from whose great qualities of heart and mind all peoples have benefited, to speak on behalf of the foreign com-

missioners general to the New York World's Fair, and in their name to say, first, how much we have enjoyed working with the administrators of the fair and with their officials, and how much we have appreciated their cooperation and the spirit of harmony which has prevailed in all our relations.

Speaking with even greater emphasis, I must then express the pride and satisfaction of the nations represented at the fair at being associated with the people of the United States of America in this event of world-wide significance.

SINCERITY IN RESPONSES

The President of the United States invited the countries of the world to come to New York to play each their part in this historic parade of national achievement; they have responded with enthusiasm and sincerity to his gracious invitation.

There are here represented nearly 60 of the nations of the world. Every country, deeply sensible of the privilege of participation, is seeking to make fully and faithfully a contribution, national and patriotic, it is true, but a contribution worthy of this great ocasion, based on friendship and acceptable to the people of this great Nation—a contribution which shall play a real and important part in the magnificent international pageant which is now spread before us.

The word "friendship" denotes exactly and faithfully the spirit of foreign participation at the World's Fair, and I am persuaded that the spirit of friendship inspires all who are here responsible for any form of participation and will equally animate all who come as visitors from all quarters of the world.

AN "OUTSTANDING ACHIEVEMENT"

Those of you who have been able to make a tour through the fairgrounds at any time during the past few weeks will have been given a sure promise of a beauty which will gladden the eye and heart of every visitor. The majestic scale of the fair, the boil conception of its planning, and the masterly execution of the work, both in building and landscaping, have insured an outstanding achievement. achievement.

The fair was designed to show the advancement of human welfare

and the creation of a better and more abundant life, and its creators have never faltered in their steadfast purpose of pointing the way to a finer world of the future. In that purpose the foreign countries participating have joined wholeheartedly; so that, in very truth, the New York World's Fair cannot fail to be an instrument of the highest value in increasing the happiness and welfare of the propose of the world. peoples of the world.

With our highest esteem we, the commissioners general, salute the President and people of the United States of America and wish them every success in this great enterprise.

ADDRESS BY HON. GROVER A. WHALEN, PRESIDENT, NEW YORK WORLD'S FAIR 1939

FAIR 1939

That the world of tomorrow might not catch us unawares we have seen fit to create the New York World's Fair as an adventure along the frontiers of progress and world understanding.

On opening day, April 30, 1939, we have here, within the confines of a mere 1,216-acre tract, a fabulous display of works representing man's highest accomplishments. Small wonder, then, that the moment is one of deepest solemnity as we gather here for a moment of benediction upon what has been done and with a prayer in our hearts for what can be done.

These have been called "magic acres." We are here to regard them as modern acres, expressive not only of the scintillating minds of America, as projected into tomorrow, but as an expression from almost all of the world that the hopes and aspirations of America are in no way different from those of the rest of the world.

We have on these grounds the assurance that the equipment and

We have on these grounds the assurance that the equipment and knowledge of today, when alined by, and with, man's better nature, constitute the only alliance upon which Divine Providence will smile and lend spiritual aid.

Let our chief concern be, therefore, that the greatest possible number of persons see, and come to know, what has been wrought

humber of persons see, and come to know, what has been seen.

These works around about us shall speak for themselves. Their money cost has been great, but it is not their money cost that makes them great. Rather is it that they represent almost the sum total of all that man has produced since history began—that they sample the best of man's creative talent—that they spring from the surge within him toward betterment of existing conditions—and that they lend concrete evidence of faith in the future and of courage to go on in the face of many doctrines of futility. to go on in the face of many doctrines of futility.

REPRESENTATIVE OF MANY LANDS

Like these very ceremonies in the court of peace, by which we officially open the international exposition, the fair is the expression of many minds and the work of many hands of 60 nations. On behalf of the exposition, innumerable men and women of all nations, creeds, colors, and stations of life have given their best. Young people built this fair; people young in spirit and with the faith and courage of youth. They have dared to adventure along the frontiers of modern thought, modern production, and modern science, which take the place of geographic frontiers known to our forefathers.

forefathers.

Many a man is ready to admit that with the building of the fair he has grown in mental and spiritual stature.

Let any man who has directly or indirectly taken part in the creation of this exposition say to himself, "Of the fair I am proud, but I am more proud that I was not one of those who said it couldn't be done."

The New York World's Fair was conceived by the men and women of the city whose name it bears. It was caught up by the American people as providing expression for the past 150 years of their endeavor and of their ideals for the years to come. Because there is contagion in the vitality and ideals of the American people, the nations of the world in turn accepted the New York World's Fair as the means of fostering a philosophy of unselfishness, which alone can bring to us an era of prosperous happiness and harmony among men.

Thus it is that we meet here today as a congress of nations intent on the progress of the world.

Even on the opening day of the fair it is obvious that the exposition is a stimulant administered to world thought of conscientious and scientific development of all man's economic and socientific development of all man's economic and socientific development of the monthly still become resources. The fair demonstrates the world's willingness to develop higher standards of individual living and all the potentials of world peace. The fair represents the need man has for constructive work to occupy his mind and hands. And let it be remembered that when man does not build he destroys, if only time.

Never in the history of the world has there been a more hopeful

never in the history of the world has there been a more hopeful picture than the one presented here during the past year. These acres have seen no strife. They have seen exemplary cooperation among individuals, among industries, among States, and among nations. If the buildings, exhibits, and surroundings be considered as "lessons" or "words," they are words to take with all seriousness, for behind them are the ideals and prayers of 90 percent of the

globe's population.

The fair faces the rising sun. We have not been unaware of what has taken place in the world or what is taking place in the world. To us was entrusted the vision of an international exposi-

world. To us was entrusted the vision of an international exposition that might turn the course of humanity into easier high-roads. We looked deep into human history, less for precedent than for guidance along new ways. If we found it necessary to violate many precedents, we did so with the sure knowledge that in that very violation lay the way to true progress.

We looked back through 150 years of progress in business, industry, the arts, and social life, not merely to commemorate that period but that we might build more wisely toward the future. We have made tremendous strides since George Washington was inaugurated first President of the United States, but we should not rest content on our laurels of the moment. We shall go forward if we but maintain our faith and courage and hold to the high ideals that have guided us in the past.

have guided us in the past.

PROMISE HELD IN THEME

Three years ago, when the theme of the New York World's Fair was first promulgated, we announced that we would:

"* * gather together the genius and the imagination of the twentieth century to formulate replies to the living questions of our age which clamored for answers from living men and women."

The theme, as announced at that early day, continues:

"We are convinced that the potential assets, material, and spiritual of our country are such that if readily used they will make for a general public good such as has never before been known.

"In order to make its contribution toward this process the fair

In order to make its contribution toward this process the fair will show the most promising developments of production, service, and social factors of the present day in relation to their bearing

and social factors of the present day in relation to their bearing on the life of the great mass of the people. * * * "Thus, in presenting a new lay-out for a richer life, the fair will not only predict but may even dictate the shape of things to come." How well we have carried out our trust since these words were written in 1936 the world may judge during 1939.

The events of the past 3 years since that theme was written have neither tampered with the ideals of the fair nor dampened the ardor of its creators. Rather have they contrived to set the international exposition in perspective by setting it in contrast.

The exposition, as open today, demonstrates the will toward eventual cooperation among nations, using the tools of peace, namely, the ways and products of business and industry, of architecture

the ways and products of business and industry, of architecture and art, of education and science.

and art, of education and science.

The many buildings and exhibits, as presented in their splendid surroundings, represent a new display technique, it is true, but infinitely beyond that they represent the new attitude of industries and nations toward their world-wide social obligations.

There can be no doubt in the thinking mind about the future. We have in the world today startling examples of the destruction that may be worked by man's will. Fortunate is it indeed, then, that we have here at the New York World's Fair a joyful display of man's nature at work toward the goal of true utility and true beauty, be these of some such product as a lowly carpet sweeper or some such lofty concept as a social order typified by peace.

CHOICE OF PATHS OPEN

Let there be no mistake. There is a choice of paths obviously open to us. Who, other than those shackled by pure emotion, can hesitate over taking the high road for which the New York World's Fair is a blueprint, a blueprint drawn by 60 nations in the manner of science inspirited with humanity.

We must not pause long for words at the crossroads, for while words are good, examples are more effective. Let us continue with marketing and using the knowledge we already have. Use of that knowledge will speedily bring us greater knowledge for our avail in what George Washington called the "discernment and pursuit of the public good."

The fair commemorates the one hundred and fiftieth anniversary of Washington's inauguration as first President of the United States. While en route from Mount Vernon to New York City, scene of the inaugural, Mr. Washington was addressed by "the trustees and faculty of the University of Pennsylvania." In reply, the President elect wrote: the President-elect wrote:

"I can see hopes * * * that we are at the eve of a very enlightened era. The same unremitting exertions, which, under all the blasting storms of war, caused the arts and sciences to flourish in America, will doubtless bring them nearer to maturity when they shall have been sufficiently invigorated by the milder

when they shall have been sufficiently invigorated by the milder rays of peace."

We have here at the New York World's Fair exhibits on display of our progress toward the "maturity" mentioned by Washington. They clearly show that we have kept faith with our Constitution. The accomplishments of a century and a half have been sufficient to inspire creation of an international exposition that shall, in turn, renew faith, courage, and endeavor for all mankind.

We may not rest until the lessons of the New York World's Fair have become examples of benefits to civilization.

have become examples of benefits to civilization.

Address by Hon. Herbert H. Lehman, the Governor of the State of New York, Dedicating the Heroic Statue of George Washington by James Earle Fraser, Constitution Mall, New York World's Fair, 1939, New York City

World's Fair, 1939, New York City
On this very day and in this very city 150 years ago George
Washington was inaugurated as the first President of the United
States. He was a great soldier whose military genius was recognized throughout the world; he was a wealthy landowner who had
earned the respect and affection of his neighbors; he was a statesman whose leadership his fellows were glad to follow. He had
served his country as well in peace as he had in war.

I do not think, however, that Washington is dear to us only
because of his accomplishments, great as they were. It was because of his character that he has held the affection of the Nation,
beyond, I believe, any other American. He was more than a great
soldier, more than a wise statesman or rich landowner. He was a
loyal, humble, courageous, and sincere man.

loyal, humble, courageous, and sincere man.

There may or may not be historic truth in the popular cherrytree incident, but it is told and retold by a grateful people as a
symbol of Washington's sterling honesty. At Valley Forge he
divided his food with a drummer boy, and on the battlefield he urged no man to go where he would not dare to go himself. We like to recall the picture of Washington crossing the Delaware. There he stood erect, braving the winter elements, facing uncertainty and danger, amidst his troops. We finally like to think of him returning to Mount Vernon after laying down the burdens of the Presidency and thereafter eagerly serving his community in humble connective. humble capacity.
We do not recall Washington so much as a brilliant statesman

but as a man farsighted enough to plot a course that his country but as a man farsignted enough to plot a course that his country follows even to this day. Rejecting a crown, he secured for the new Nation a democracy in which all would have a voice in government. Never a politician, Washington still was able to direct the political thought of many divergent political groups into one common channel dedicated to the general good of his country. He gave us national pride, yet developed in us a distrust of conquest or imperialism. He gave us an undying determination to defend our Nation and our homes with unswerving loyalty, but to hate aggression and national selfishness.

defend our Nation and our homes with unswerving loyalty, but to hate aggression and national selfishness.

The things that made Washington great are the things that make for greatness today wherever they are found. Sometimes it is a greatness that is limited to a small sphere of life, since we cannot all be in high places. But always it makes for true Americanism and real citizenship. Washington was great because he was a real American; not a real American because he was great. Let us then, in dedicating this statue, dedicate ourselves also to the principles for which George Washington fought and by which

the principles for which George Washington fought and by which he lived. Those principles—loyalty, justice, tolerance, and lib-erty—are just as true a way of life today as they were 150 years

REPORT OF CEREMONIES AT REENACTMENT OF THE INAUGURATION OF GEORGE WASHINGTON AS FIRST PRESIDENT OF THE UNITED STATES UNDER THE CONSTITUTION

(Article from the New York Times, May 1, 1939)

Washington Inaugural Is Reenacted at the Fair—Inaugural Scene of 1789 Is Enacted—Statue of George Washington Is DEDICATED BY LEHMAN AS THOUSANDS LOOK ON-COACH TO BE ONE HUNDRED AND FIFTIETH ANNIVERSARY CEREMONY CONCLUDES PORTRAYAL OF THE TRIP FROM MOUNT VERNON

The great event in American history that the world's fair officially commemorates—the one hundred and fiftieth anniversary of George Washington's inauguration as first President of the United States—was reenacted on Constitution Mall yesterday in an impressive pageant that brought from thousands of applauding spectators new and hearty proof that Washington still lives in the hearts of his countrymen.

hearts of his countrymen.

In the presence of Governor Lehman, who dedicated the imposing 68-foot statue of Washington that dominates the Mall, a group of the country of t of costumed figures from the stately world of yesterday reproduced with historical fidelity the ceremony that took place in front of the present Subtreasury Building on Wall Street exactly 150 years

ago.

The ceremonies ended a pageant that began 2 weeks ago at the door of the historic manor at Mount Vernon, Va. On that day Denys Wortman, artist and cartoonist, stepped from the mansion, a reincarnated General Washington, and embarked on an 8-day ride by coach and horse to New York.

His 160-year-old colonial coach, drawn by four bay horses, clattered through the fair grounds yesterday afternoon in an incongruous contrast to the streamlined setting of the world of tomorrow. At the base of the huge statue the general and his costumed party stepped out of their coach and out of the past, and General Washington took the oath as President, reading again his inaugural address.

BAND SALUTES NEW PRESIDENT

A roll of drums and a flourish of trumpets from the smartly attired Seventh Regiment Band saluted the new President; a guard of honor presented arms; and some 8,000 onlookers who had crowded into the small plaza now known as Washington Square

crowded into the small plaza now known as washington square cheered wildly.

Governor Lehman and Grover Whalen, president of the Fair Corporation, hastened to congratulate President Washington, and the Governor then formally dedicated the statue, in which he said that Washington "gave us an undying determination to defend our Nation and our homes with unswerving loyalty, but to hate aggression and national selfishness."

"The things that made Washington great," the Governor said, "are the things that make for greatness today wherever they are

"The things that made washington great," the Governor said, are the things that make for greatness today wherever they are found. Sometimes it is a greatness that is limited to a small sphere of life, since we cannot all be in high places. But always it makes for true Americanism and real citizenship. Washington was great because he was a real American; not a real American because he was great."

Postitionaris in the greatness included several descendants of per-

Participants in the exercises included several descendants of persons who figured in the original inaugural ceremonies. Robert R. Livingston, who, as chancelor of the State of New York, administered the oath of office to Washington in 1789, was impersonated yesterday by a descendant of the same name.

AIDE IN ATTENDANCE

The general was attended by his aide-de-camp, Col. David Humphreys; by Charles Thomson, Secretary of the Continental Congress; and by his servant, "Billy," all of whom made the ride by coach from Mount Vernon. They were impersonated by Laurens M. Hamilton, a direct descendant of Alexander Hamilton, who represented Colonel Humphreys; Dr. William S. Horton, of Lynbrook, Long Island, as Mr. Thompson; and by Marshall Thomas, Negro waiter at the Century Club, who enacted the role of "Billy." They had arrived in New York by barge from Elizabeth, N. J., last Monday, on the anniversary of Washington's original arrival, and following the precedent he set 150 years ago, they devoted a week to a round of ceremonies in the city.

Yesterday they were guests of Messmore Kendall, president general of the National Society of the Sons of the American Revolution, at a luncheon at the Fairway Yacht Club, and they came to the fair grounds by speedboat from the club's pier on the Hudson River. Their coach was brought to the grounds by an Army motor van.

While the party prepared for the ceremonies in a hide-out on the fair grounds, detachments of National Guardsmen and members of the Regular Army permanently attached to Camp George Washington at the fair grounds formed a guard of honor beside the statue. The Seventh Regiment Band served as the representative of all New York National Guard bands.

WEARS SUIT OF BLACK VELVET

General Washington wore a magnificent suit of black velvet, a white lace jabot around his throat, and a black three-cornered hat. His suit was embellished with silver buttons and he wore silver buckles on his knee breeches and his shoes. His head was

silver buckles on his knee breeches and his shoes. His head was covered with a powdered white wig.

The other participants in the ceremony, all in authentic costume, included Francis Parsons Webb as Gen. Samuel B. Webb, commander of the famous Third Connecticut Regiment of the Continental Army; Cortlandt Otis as Samuel Otis, first Secretary of the United States Senate; L. I. Lincoln Adams as John Adams, first Vice President of the United States; Arthur Benson as Judge Egbert Benson, first Attorney General, Justice of the Supreme Court, and Members of both the Continental Congress and the Constitutional Convention; and George V. Henry as Richard Henry Lee, first United States Senator from Virginia.

All of these are descendants of the persons whom they portrayed

All of these are descendants of the persons whom they portrayed

yesterday.
Chancelor Livingston read the oath, and the general repeated it

Chancelor Livingston read the cath, and the general repeated it after him, his left hand on a huge crimson-bound Bible and his right hand upraised.

"Long live George Washington, President of the United States," loudly intoned the chancelor at the conclusion of the ceremony. The crowd roared, "Hurray for George." The trumpets rang out, and the drums rolled.

The 160-year-old coach, a treasured possession of the Franklin Institute of Philadelphia, will be on exhibition throughout the fair in Washington Hall.

The Townsend Plan

EXTENSION OF REMARKS

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

ARTICLE FROM THE NEW YORK TIMES OF DECEMBER 22, 1935

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Sunday, December 22, 1935:

[From the New York Times of December 22, 1935]

TOWNSEND THEORY COLLAPSED IN 1793—FRENCH FORERUNNER OF MODERN PLAN IS DISCOVERED HERE IN FORM OF PUBLIC DECREE—FULL PENSIONS AFTER 70—BUT NO ONE EVER RECEIVED ONE BECAUSE CURRENCY INFLATION LED TO COUP OF NAPOLEON

A historic forerunner of the Townsend plan was discovered here yesterday in a document 142 years old. It was a product of the French Revolution.

The document is an official copy of "Decree 1161 of the National Convention, June 28, 1793, the second year of the French Re-

public."
It begins: "The National Convention, having heard the report of its committee on public relief, decrees as follows:"
For destitute old age it provides:
"The indigent aged will be relieved when age no longer permits them to earn enough for their needs. Since the aid which the nation owes to the aged should be based on their need, it will increase as their strength diminishes.
"A citizen whose strength is prematurely exhausted and who is in need may claim relief by producing certificates from two health officers and the relief agency. Otherwise he will be presumed to be completely able to support himself until he is 60.

BASED ON A DAY'S PAY

"The aid will consist of a subsistence allowance, exempt from any drawback or attachment and not suspendable, at an annual rate which will be fixed by the higher relief administration every 2 years, based on the price of a day's work. The maximum aid may not in any division of the republic exceed 120 livres a year.

The French livre, which later collapsed under inflation and made way for the franc, had already begun to disintegrate when this relief decree was enacted; consequently its real purchasing power was uncertain. Research indicates, however, that 120 livres annually in 1793 would have a present purchasing power of about

"This pension," the decree continues, "will have three periods: When the aged arrives at his sixtleth year, the pension will commence at half-rate; at his sixty-fifth year, it will reach two-thirds; and after his seventieth birthday, he will receive the full current relief rate."

The pensioner had the option of receiving his subsistence allowance in his own home or the home of relatives or friends, or he could retire to a public institution. In the institution, he might not be put to any gainful work for the nation, "nevertheless there shall be made available for him, if he sees fit, the means of occupying himself in the manner most suitable to his interests and abilities; and the product of this voluntary activity will below. abilities; and the product of this voluntary activity will belong entirely to him."

PAYMENTS IN ADVANCE

Payments were decreed quarterly "and always in advance."

Pensioners under this act were required to wait 2 months after application, while their names were posted publicly in the locality, so that any citizen knowing their condition might have time to "make any remarks that seemed proper to them, if they were willing to set them down in writing." to set them down in writing."

After hearing the applicant, the general council of the arrondissement (township or borough) determined whether he was to be put on the relief list.

on the relief list.

This plan, which disappeared with the collapse of the French currency and the seizure of power by Napoleon, was considerably milder than the Townsend plan. The French revolutionaries did not retire their aged completely until the age of 70, whereas the Townsend plan proposes to do it at 60. The French provided an annual maximum equivalent to \$120, compared with the annual maximum of \$2,400 under the Townsend plan.

Both plans have in common the idea of a maximum and the admission that the real yield of the old-age pension is problematic. The French plan, recognizing what was happening to the currency, provided for a revision of the pension to keep it in accord with the price of a day's labor. The Townsend plan proposes to finance its pensions by taxes on sales, on incomes, gifts,

and inheritances, and while it names a \$2,400 maximum it provides that the sum actually paid out will be a pro rata share of whatever these taxes yield, divided among all the pensioners. The French made no mention of sources of the pension fund. The French set the word "maximum" in italic type in the plan of the revolution. In 1793 it was the favorite word of the legislators of the new National Convention. They spent most of that year decreeing the maximum prices at which the necessities of life could be sold, to keep the cost of living from rising out of the workman's reach as the inflated currency sank.

These laws, commonly termed "The Maximum" by historians, either paralyzed the supply of necessities or drove it underground, where "The Maximum" was disregarded in sales at the risk of the guillotine.

Within 2 years after the passage of this act the collapse of the currency and the disorders of the disillusioned public led Napoleon to give them his first "whiff of grape" in 1795 and to seize power definitely in 1799.

Some Thoughts on Mining Problems

EXTENSION OF REMARKS

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

EDITORIAL FROM THE PHOENIX (ARIZ.) GAZETTE AND LETTER FROM A SMALL-CLAIM OWNER

Mr. MURDOCK of Arizona. Mr. Speaker, I have asked consent to extend my remarks in the Record by inserting therein an editorial from the Phoenix Gazette and also a letter from a small-claim owner, each dealing with certain aspects of mining problems. I present the editorial first, as it proposes to facilitate mining development by changes in S. E. C. and R. F. C. regulations to make it easier for capital to be obtained. I am absolutely positive that the writer of this guest editorial has properly diagnosed the situation and that is the greatest need to help a sick industry throughout the Rocky Mountain area. Following is W. C. Broadgate's editorial:

> [From the Phoenix (Ariz.) Gazette] HELP THE SMALL-MINE OPERATORS! (By W. C. Broadgate, Prescott)

The rugged individualism of the typical small mining man is excellently illustrated by the fact that he has asked little from the Federal Government, gotten nothing, and is seldom heard to complain. It is high time he raised his voice and got something done for that sorely neglected citizen, the "forgotten miner."

The development of small mining properties has practically ceased, large mining operations are being stifled, and in consequence, taxes from this source are rapidly failing and the average citizen is feeling this in his own increased taxes without knowing the reason.

the reason.

Government regulations and the psychology of instability have choked off the small speculative money which developed the mines of the nineties and which was still available up to the war. This was the money which did the initial work on mining prospects, repaired caved tunnels and shafts, dewatered workings for sampling and in a thousand and one ways enabled the small miner to operate, and resulted eventually in large producers. Money must again be made available for these things if our mining industry is to survive. survive.

survive.

The Arizona Small Mine Operators Association has proposed a splendid plan, the appropriate legislation for which is now being introduced into Congress by Congressman Murrock and which, while it will not cost the general taxpayer one penny, will restore to the small miner his palmy days, put millions of dollars into immediate circulation throughout the West, and put to work every able-bodied man in the 11 Western States. This is known as the Mine Finance Commission, Small Metal Mine Loans, Class C, plan. Every citizen interested in the welfare of our State (and who is not?) should familiarize himself immediately with this plan and give the Arizona Small Mine Operators Association every conceiv-

give the Arizona Small Mine Operators Association every conceivable aid in having this measure enacted into law at this session of Put your shoulder to the wheel.

As I have so often remarked, there are many problems crying out for solution, and I fear that what we have thus far done is scarcely scratching the surface. During the last

2 years I have urged the House to extend a moratorium on mining-claim-assessment work. This session Congressman O'CONNOR of Montana has introduced such a bill, but in view of the adverse action of the other body and the known attitude of Members in this body I feel that the chances are against its enactment. However, I would like the membership to know how one Arizona claim owner feels about it, hence I am enclosing his letter. The letter follows:

CAVE CREEK, ARIZ., May 6, 1939.

Representative John R. MURDOCK,

House of Representatives, Washington, D. C.

MY DEAR MR. MURDOCK: The Cave Creek Council, Arizona Small
Mine Owners, goes on record as desiring the extension of moratorium on assessment work on mining claims for the following line of reasoning.

of reasoning.

In the vast majority of cases, assessment work is only a matter of form. No real work is done. It amounts to only a kind of inconvenience and penalty to the claim holder.

Due to depression, S. E. C. regulations, general conditions, etc., practically no opportunities have existed for selling mining claims or interesting capital in them during the past few years. Many of the present owners have considerable outlay of time, improvements, and head work tied up in their holdings but are unable to realize and hard work tied up in their holdings but are unable to realize anything at all for their past investment unless they can hold on

for awhile longer.

These claim owners have all been disillusioned about selling mining claims for fabulous prices and are now ready and willing to sell or lease their claims for whatever they can get.

On the other hand, the owner of a newly located mining claim is invariably optimistic and puts such a high price on his claim as to eliminate any chance of capital becoming interested in helping

to eliminate any chance of capital becoming interested in helping him to develop it.

There is not one unpatented mining claim in a thousand that has any cash value whatsoever. The very best of them require large expenditure with high risk of loss to prove them. None can be benefited by \$100 of assessment work even granting that it is systematically done over a period of years.

Another thing—in this day of automobile prospectors—there is practically no personal endeavor shown by a new mining claim locator. He drives out to the claim, looks straight up into the clouds for an hour or so, dreams of great riches descending upon him and exalted by his sweatless effort, turns around and returns satisfied to exalted by his sweatless effort, turns around and returns satisfied to his home. If he moves any rock at all, he does it with the seat of his pants when he accidentally slips and slides down the side of the

So why not let the poor devil that now holds the claims keep them for awhile longer?

Respectfully yours,

ALFRED STRONG LEWIS, Chairman, Cave Creek Council, A. S. M. O.

Words fail me to present adequately the tremendous importance of mining all through the West. Not only the precious metals-gold and silver-but even more useful metals, such as copper and the strategic minerals, are found in abundance when properly searched for. There has been little prospecting done during the last few years and new mines have not been opened up, so that the mining is done by a few great corporations. It may be that the prospector is often disappointed in his prospect, but unquestionably greater mines than have yet been developed lie untouched in the great West. I am not a mining man, but I know where there is a great copper mine 75 or 80 miles from the nearest railroad. Copper is indestructible, and the supply that is being added annually increases a total supply unless it is sold abroad as scrap copper. So indispensable is this red metal, not only in war but in peace, and especially in the building trades, that I feel it is unnecessary for us to pretend to have to conserve our copper. We must not listen to any siren voice attempting to persuade us to import copper on the basis of conservation. The same thing applies to tungsten and manganese, I feel sure.

I take off my hat to the great operations of the Phelps-Dodge Corporation, especially near Morenci, Ariz., and I want to see that sort of thing encouraged. At the same time, we are derelict in our duty if we do not encourage the old prospectors to comb the hills in search of other mines. I have lately introduced H. R. 6131 to bring about a revival of mining. When that is done the whole West will arise like magic. Stock raising and agriculture and every other line of industry will flourish. This is the far-reaching program for which the West longs and looks to the Seventy-sixth Congress for enactment.

James Aloysius and the Presidency

EXTENSION OF REMARKS

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

EDITORIAL FROM THE BINGHAMTON (N. Y.) PRESS OF MAY 4, 1939

Mr. MERRITT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial which appeared in the Binghamton (N. Y.) Press, Thursday evening, May 4, 1939:

[From the Binghamton (N. Y.) Press of May 4, 1939] JAMES ALOYSIUS AND THE PRESIDENCY

Ever since 1931 (and it started just about this time of year, too)
Postmaster General James Aloysius Farley has had a lot to do with
the Presidency of the United States. He wasn't postmaster general then and John J. Raskob was Democratic national chairman eral then and John J. Raskob was Democratic national chairman with definite ideas as to nominees. But Jim Farley was a good traveler, a persuasive pleader, an undiluted and undeluded promoter of the Rooseveltian cause. He traveled, he talked privately, he had plans and specifications for the then Governor of New York as the great hope of Democratic success after the party's long years in the wilderness, post-Wilson.

And so, when July of 1932 heated up the streets of Chicago, and national convention enthusiasm, there was Franklin D. Roosevelt with delegation votes which all the champagne baskets and blondes of the "princes of privilege," and all the persuasions of the "stop Roosevelt" bloc could not abate or after by one jot or little

tittle.

Will Rogers, chewing gum in the press section during that long night of crisis and ballot which preceded the break-down of the "stop Roosevelt" forces, called the turn rather neatly when he observed, nodding at demonstrating delegates in the aisles beyond the rail, "They think they know what they're doing out there, but the only fellow around here who really knows the answer is Jim Farley." It turned out like that when Jesse Jones and Bill McAdoo came through with the Texas and California delegations early next evening on the Garner swap.

And after that, of course, Jim went on doing quite a lot with the Presidency. It was his organization that elected Franklin D. Roosevelt in 1932. It was he who served as the whipping boy for the administration for the first 2 years thereafter. He took it well and kept on smiling, until the Washington newspapermen began to discover that even their editors back home were becoming impressed that as compared with some other people in the administration

cover that even their editors back home were becoming impressed that as compared with some other people in the administration James Aloysius was a quite regular fellow.

But it wasn't until after he had proven himself an utterly reliable political prophet in the 1936 election, when his organization and management sent Mr. Roosevelt to the White House again with all but two States of the Union that Mr. Farley actually moved into the political role which he now occupies. The styles in political villains had changed, for one thing. And there were so many broken promises around the landscape that the well-known fidelity of Jim Farley's word began to loom as a tower of strength. He never went off the gold standard of good faith, realized predictions, and fulfilled promises.

never went off the gold standard of good faith, realized predictions, and fulfilled promises.

That was all in his favor. It still is. And that is one of the reasons why a great many Democratic leaders began to think seriously about Jim Farley for the 1940 Presidential nomination even before last year's disastrous Presidential attempt at party purge in the senatorial nomination campaigns. Nobody had any illusions about that one. Every Democratic leader in the country knew that in the first place the national chairman did not approve of Presidential interference with State nominations, and that as knew that in the first place the national chairman did not approve of Presidential interference with State nominations, and that as between a "yes" man and a "yes, but—" man, he preferred an able Democrat. That didn't hurt Jim Farley either. And even when he went into Maryland with direct orders from the President, his friends in the press section of that invasion made the picture entirely clear as Jim couldn't have done it himself.

So what with one thing and another there isn't any escaping the fact that if Franklin Delano Roosevelt finally turns a deaf ear to present supplications of strictly new dealers that he run again, against the American tradition, Mr. Farley is very much in the spotlight as a potentiality. He probably realizes that. Much more subtle political situations have been entirely clear to him.

Moreover, he would be less than the extremely able politico he is,

Moreover, he would be less than the extremely able politico he is, and less than the amazingly human and red-blooded American he is, if he were not intrigued by the possibilities.

Of course he can't say anything on the subject for publication, and not much otherwise, even to his closest friends, unless and until Mr. Roosevelt says something like Calvin Coolidge said back

yonder in the Black Hills. Jim Farley plays the game according to the rules.

And the chances are that Mr. Roosevelt isn't hearing what a great many persons outside the White House hear every day. The very people who are pressuring him to go again would see to it that

he didn't hear those things.

But there's such a thing in politics as gratitude. The very least

Mr. Roosevelt could do, considering everything again, would be to make his decision known at some reasonably early date if only to avoid public and party confusion. We have the suspicion that Jim wouldn't ask "the Boss" to do anything more than keep his hands

But the third-termites wouldn't want that. If they can't con-But the third-termites wouldn't want that. If they can't convince Mr. Roosevelt that he should run again, they'll certainly try to convince him that he should go lock, stock, and barrel for somebody else. And that somebody else, you can bet your bottom dollar (present valuation 69 cents) won't be Jim Farley! They know what he thinks of them, even if he doesn't say so.

Therein, however, lies his real strength as a Presidential possibility, just as the chances of Republican success in 1940 lie largely in the determination of the strictly new dealers that if worst comes to worst they still won't take the best man the Democratic Party has to offer.

has to offer.

The Education Bill

EXTENSION OF REMARKS

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

RADIO ADDRESS BY HON. JOSHUA L. JOHNS, OF WISCONSIN, MAY 9, 1939

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following radio address made by Hon. Joshua L. Johns. Member of Congress from Wisconsin, over station WHA, Madison, Wis., May 9, 1939:

Wisconsin, over station WHA, Madison, Wis., May 9, 1939:

To the radio audience:
In this my second broadcast over station WHA I have chosen to discuss this evening what is known as Senate bill 1305 and House bill 1735, known as the education bill, introduced in both the House and Senate at this session of Congress.

This bill provides for the promotion of the general welfare through appropriation of funds to assist the States and Territories in providing more effective programs of public education. This legislation has been endorsed by practically all of the educational institutions of the United States. There has been some misapprehension as to what position the Government might take so long as it is furnishing a portion of the funds as to just how they should be distributed or used in the States. This, of course, is shared only by persons who are not familiar with the bill itself, because section 1 of the bill provides that the primary purpose of the act is to assist in equalizing educational opportunities, among and within the States, insofar as the grants-in-aid to the States are authorized will permit, without Federal control over the educational policies of States and localities.

The provisions of the act of course are to be so construed as to maintain local and State initiative and responsibility in the

The provisions of the act of course are to be so construed as to maintain local and State initiative and responsibility in the conduct of education and to reserve explicitly to the States and their local subdivisions the administration of schools, including institutions for the preparation of teachers, the control over the processes of education, the control and determination of curricula of the schools, the methods of instruction to be employed in them, the selection of personnel employed by the State and its agencies and local school jurisdictions, and insofar as consistent with the purposes for which funds are made available the determination of the best uses of the funds appropriated under the act.

It might be well to discuss briefly some of the reasons why this becomes necessary. I am satisfied that a large majority of the people, like myself, until I had given this matter careful study and thought, do not realize the conditions that exist in some parts of the United States and its Territories with reference to the inadequacy of means for the obtaining of an education.

quacy of means for the obtaining of an education.

The bill, first of all, is a good one, because the Federal Government, no less than the States, has a fundamental interest in the education of our citizens. Under a democracy, in the final analysis, there can be no national progress except through promoting the welfare of the men, women, and children of the Nation. The ideals and principles of American democracy call for equality of opportunity, the very foundation of which is equality of educational opportunity. After a thorough study and investigation, this bill was introduced on the basis of incontrovertible evidence that without

a reasonable amount of Federal assistance to the States for the support of education there would not be the faintest hope that any fair degree of equality of opportunity would or could exist in these United States. This conclusion was reached as a result of a wide and indefensible difference in educational opportunity both among and within the States. There is a great difference in the economic ability of the States to pay for educational services. There are great differences in the educational burdens to be borne by the several States. Almost invariably the States with the least per capita wealth and income have the largest number of children per capita wealth and income have the largest number of children in proportion to adult population. The Federal Government, as well as the States and local communities, has an interest in the maintenance of public education. We must not forget that we have a dual citizenship in this country, one as a citizen of the United States and the other as a citizen of our own respective

I am going to give you some of the figures which I am satisfied will convince you of the inequalities that now exist in educational opportunity among the several States and Territories. the average school term ranges from nearly $9\frac{1}{2}$ months in the highest State down to barely $6\frac{1}{2}$ months in the lowest States. The average length of term for all rural schools in the United States is a month less than in urban schools. The average rural pupil in the Nation attends schools less than 7 months per year, and in seven States, with large rural populations, the average number of days attended per year by rural pupils is less than 6 months. If high schools were universally available and attended, the high-school enrollment should constitute about 33½ percent of the total school enrollment. At the present time in the highest State the highschool enrollment is now 30.9 percent of the total enrollment, while in the lowest State it is only 10.6 percent. On the one hand, 7 States have over 27 percent of their total enrollment in high school, while on the other hand 8 States have less than 15

percent of their enrollment in high school.

It would be surprising, I know, to the radio audience that between 800,000 and a million children of elementary-school age are not enrolled in school at all, mainly because of lack of facilities in many scattered rural areas that are impoverished and isolated. For these children freedom and opportunity has proved to be chiefly For these children freedom and opportunity has proved to be chiefly freedom and opportunity to grow up in ignorance. In the United States there are still more illiterates than college graduates and about half as many illiterates as high-school graduates. There are in this country approximately 3,600,000 totally illiterate persons and about 15,000,000 other adults who cannot read a newspaper nor write a simple letter. In one State only 0.8 percent of the population over 10 years of age are illiterate, while in another State 14.9 percent are illiterate. The first State is about three times as able, financially, to support schools as the second, and spends about three times as much per capita for education.

PUBLIC LIBRARIES

The public library today is recognized as an important educational agency in our American democracy. Among the 3,100 counties in the United States only 400 have public libraries, and there are more than 1,000 without even a town or city library within their borders. About one-third of the people of the United States have access to good libraries. Another one-third have libraries, but very meager ones, chiefly in the smaller cities and larger towns. The remaining one-third have no public libraries of any kind. The remaining one-third have no public libraries of any kind. Most of these people live in rural areas and country towns in every section of the Nation. These people constitute 45,000,000 of America's citizens, of whom 39,500,000 live in rural areas. They do not have library services for much the same reason that they do not have adequate public-school or public-health services, namely, the poverty of local resources. The average annual exexpenditures per pupil for current operation of schools range from \$134.13 in the highest State down to \$24.55 in the lowest State. \$134.13 in the highest State down to \$24.55 in the lowest State. In this respect there are 10 States in which the average expenditure per pupil exceeds \$90, while there are 11 States that fall below \$45. The average annual salary per teacher in the highest State is \$2,414 and in the lowest State it is \$504. In these same two States the average salaries of rural teachers were \$1,337 and \$430, respectively. There are 11 States in which the average

\$430, respectively. There are 11 States in which the average annual salary exceeds \$1,500, while there are 9 States in which the average is less than \$750. There are 10 States that have in excess of \$300 per pupil invested in school property while 11 States have less than \$150, 6 States having less than \$90.

The differences in breadth of educational opportunity, resulting from the statistical data I have just given you are correspondingly great. Hundreds of rural schools can be found which are the merest shacks, in which children are huddled together in makeshift desks, using dirty and worn-out textbooks under the direction of teachers who themselves have hardly finished high school. One-fourth of the teachers in our one-room rural schools have never had a day of work in a school beyond the high school. In thousands of these schools it is virtually impossible to provide the health, welfare, guidance, and other services that children need in addition to instruction.

Of course, this is in contrast with other communities where there

of course, this is in contrast with other communities where there are public schools which would seem almost perfect, the buildings are the finest specimens of modern architecture, the teachers are well trained, well paid, and competently supervised, the children given individual attention, and where everything is done to foster their physical and mental development. Although equality of opportunity is a fundamental tenet of our democracy, inequality of opportunity is at present the dominant characteristic of our educational system when viewed from the national standpoint.

It is quite evident from the facts and figures which I have quoted to you that they indicate clearly that the schools of the United States, which have hitherto been regarded as the bulwark of democracy, may in fact become an instrument for creating those very inequalities they were designed to prevent. If, for a long period of years, each succeeding generation is drawn in disproportionately large numbers from those areas in which economic conditions are poorest, if the population reserves of the Nation continue tions are poorest, if the population reserves of the Nation continue to be recruited from economically underprivileged groups, and if the inability of the depressed economic areas and groups to provide proper education for their children is not corrected by aid from areas and groups more prosperous, the effect on American civilization and on representative political institutions may be disastrous. Of course, there is a large difference in the ability of the different States to support schools. In wealth per child enrolled in school the States range from \$21,582 in the highest State to \$2,819 in the lowest, there being 12 States that have in excess of \$12,500 in wealth back of each child, while 11 States have less than \$6,600 per child. With respect to income there are the same relative differences. The

With respect to income, there are the same relative differences. highest States has \$3,766 per child enrolled in school, as compared to \$495 in the lowest State. The 11 highest States have in excess of \$2,500 income per child, as compared to less than \$1,200 for the lowest 11 States. There is also a large difference in the relative number of children in the several States.

Almost invariably the smaller the per capita taxpaying ability in Almost invariably the smaller the per capita taxpaying ability in a State, the larger the number of children in ratio to the number of adults. For example, South Carolina, a poor State, has 739 persons 5 to 17 years old to each 1,000 adults 20 to 64 years old, the productive ages, while in California the ratio is only 319 to 1,000. Population experts have shown that it is from these poorer agricultural States whose high rates are tural States that the richer industrial States, whose birth rates are not sufficient to replace their population, receive a large part of their immigrations necessary to maintain a stable population and to staff their offices and industrial plants. It is well known that those sections of the Nation least able to support public schools are those sections of the Nation least able to support public schools are producing practically all of the Nation's future increase in population and a considerable percentage of the future population of our cities. These conditions occur because of the differences in birth rate in rural and urban areas. In seven largest cities the population of which consists chiefly of American stock, the birth rate is 40 percent short of the rate required to maintain a stable population. cent short of the rate required to maintain a stable population; in all cities having over 100,000 in population the deficiency in birth rate averages over 20 percent; and in the smaller cities the deficiency is about 8 percent. On the other hand, farm families are producing about 50 percent more children than required to replace the farm population, and the rural nonfarm families rear children at the rate of 30 percent greater than the number required to replace themselves.

A comparison of the proportionate number of children in the total population with the expenditure per pupil for education shows clearly that as a nation we are bestowing our best educational opportunities upon sections that have the fewest children, and upon children who in turn will produce the fewest children. Although this policy may not be intentional, it is a very successful

method of committing cultural and economic suicide.

There are two very good reasons why the richer States are better able to pay than the poorer States and should pay into the Public Treasury more funds for taking care of the children in those States not able to contribute so much toward the care and education of the children in such States. In the first place the superior taxpaying ability of many of the so-called rich States is due to the exploitation of the productivity of the poorer States. For example, the State of New York derives substantial revenue from stock-exchange transactions. These transactions result from orders arise the linear content of the country. ing in all parts of the country. This is only just one example. Others could be cited if time would permit. In the second place, much of the Federal taxes collected within certain States are neither paid nor borne by the inhabitants of those States. A good example of this fact are the tobacco taxes collected in Virginia, North Carolina, and Kentucky; the liquor taxes collected in Kentucky, Wisconsin, and Pennsylvania; the custom duties collected at the port of New York, constituting one-fifth of the Federal tax collections in that State; and corporation income taxes collected in New York, Delaware, Pennsylvania, and other States, frequently paid by corporations that merely have their business offices in those localities and whose stockholders that really pay the tax reside in every State in the Union.

Education has borne the brunt of retrenchment since the depression started in 1929. From 1930 to 1934 expenditures for all governmental purposes in the entire Nation increased 20 percent. Federnmental purposes in the entire Nation increased 20 percent. Federal expenditures increased nearly 110 percent; State expenditures decreased 5.8 percent, and local expenditures decreased 15.2 percent. During this same period expenditures for public education decreased 25.6 percent. In 1936, 2 years later, the last year for which official data are available, educational expenditures were still 18 percent below 1930. This decrease has occurred in spite of the fact that the public-school enrollment has increased nearly 700,000 since 1930, and all of this increase has been in the high school where the expense is heaviest. Since 1930 the high-school enrollment has increased over 1,575,000, or about 37 percent; but the total educational expenditures are now about \$350,000,000 less than in 1930. The curtailments in expenditures have been at the expense of pupils and teachers, the inevitable result being curtailed opportunities, overcrowded classes, and slashed salaries for teachers.

Just a word with reference to buildings that are needed for public

Just a word with reference to buildings that are needed for public schools. Since 1911, school enrollments have increased so much

faster than the construction of new school buildings that, according to engineers of Public Works Administration, the accumulated efficiency by 1934 was \$1,071,000,000. According to the same source, the total need for new schoolhouse construction is more than \$4,750,000,000.

Of course, we all realize that education reduces crime, raises the standard of culture, is associated with better health and increased longevity, and increases the wealth and income of the Nation.

Under the provisions of this bill, if enacted into law, there would

Under the provisions of this bill, if enacted into law, there would be appropriated money for the following purposes and in the following amounts:

(1) General Federal aid:		
1940	\$40,000,000	
1941	60, 000, 000	
1942	80,000,000

SOME AND BUILDING TO THE PARTY OF THE PARTY		30, 000, 000
Title IV, grants for cooperative educa-		
tional research and demonstration and		
for administration:		
1940	3, 000, 000	
1941	3, 375, 000	
1942	4, 260, 000	
1943	4, 860, 000	
1944	5, 460, 000	
1945	6,060,000	
mu v	STATE OF THE	26, 205, 000
Title V, education of children residing on		
Federal reservations and at foreign sta-		
tions (from 1940 to 1945, inclusive,		
\$3,000,000 per year):	0.460.000	
1940	2, 190, 000	
	3,000,000	
1941	3,000,000	
1942		
1942	3,000,000	
1942 1943 1944	3,000,000	
1942	3,000,000	18,000,000

On the basis figured out in the bill, with appropriations that will be made under it if the bill is passed, Wisconsin would receive from the first \$40,000,000 for general Federal aid under grants to States for the improvement of public elementary and secondary schools, \$649,596. This amount would come under title I of the act.

899, 705, 000

Grand total_

Under the apportionment of grants to States for 1939-40, titles I, II, and III, Wisconsin would receive under the total apportionment \$1,193,505; under title I, Elementary and Secondary Education, the sum of \$1,023,819; title II, Adult Education, the sum of \$119,462, and under title III, Library Service, the sum of \$50,224.

Of course, these figures are based upon the assumption that the bill will be passed in its present form. Whether the amounts will be reduced or increased will depend upon the action of the Congress.

There is a title V under the bill, which provides for the education of the children, and for which there is an appropriation of \$3,000,000 per year, beginning July 1, 1939, this appropriation to be spent under a declared policy to assure opportunity for education to Federal wards, other than those now provided for by law, and of Federal employees residing on Government reservations and at foreign stations, through cooperative agreement and utilization of the public educational facilities of the State. Of course, there are certain prescribed standards that will be required of the States in order to receive these appropriations, but they will not be harsh in any State that is interested in the education of its youth and will not have any trouble in securing their share of the funds in order to carry out their educational program.

I hope that the outline of this legislation has made it more clear

I hope that their education of this legislation has made it more clear to you, and, as a member of the Committee on Education in the House of Representatives, my hope is that it will pass both the House and Senate and will be signed by the President of the United States, because, in my opinion, it is going to be of great benefit to the Nation and its Territories as a whole.

French Club of the United States Naval Academy

EXTENSION OF REMARKS

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1939

ADDRESS BY ROBERT L. MOUTON, OF LOUISIANA, MAY 10, 1939

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following address delivered by Hon. Robert L. Mouton, of Louisiana (in French), before the members of the French Club of the United States Naval Academy at Annapolis, Md., Wednesday, May 10. 1939:

My dear young friends: When my gracious fellow Louisianian, your schoolmate, Roland Bienvenu, extended the invitation to address this group informally, I felt that a signal honor had been accorded me. So far as I am able to ascertain—and I believe my information is correct—the privilege of delivering an address, in French, to the Naval Academy French Club, never before has been accorded a Member of the Congress. And so I am sincere when I express my profound gratitude not only for this unprecedented honor, but for the opportunity also to meet with a group of young men who some day, in the not too far distant future, will guide the destinies of one of the arms of national defense—our Navy. And in being here today, I feel almost as though I am one of the family, because I have the honor of being an officer of the Marine Corps Reserve, a branch of the service with which I served during the World War and which has much in common with the Navy; in fact it may be that some of you young men, upon your graduation will select that branch of the service, as have many of those who went before you. And, without attempting to proselyte for the Corps, I can inform you that those who do affiliate with the Corps will be making no mistake.

I believe it appropriate and fitting to say to you boys that the United States Naval Academy makes available to you one of the finest educations that can be had in the world. Backed by such gloricus traditions, equipped with such vast facilities, administered by such a capable staff of officials, this institution has no peer in preparing young men for careers on the seas. Although history tells us that our Government was somewhat slow to recognize and appreciate the possibilities of a shore school for the proper training of young naval officers in the elements of their profession, I am sure that it is fully realized today by all concerned that the United States Naval Academy is a vital and important cog in our naval machinery and is indespensable to our success on the waters.

That you young men should be so fortunate as to be afforded the concretants to the strength his great seedemy, is truly a privilege.

That you young men should be so fortunate as to be afforded the opportunity to attend this great academy is truly a privilege of which you should be justly proud. Your ambition and industriousness, and, unquestionably, in some cases, heartbreaking perseverance, at having risen to the heights of successfully negotiating the rigid entrance requirements and carrying through subsequent difficult work, is to be admired and publicly commended, but, at the same time, it must be remembered that there are thousands upon thousands in the ranks of American youth of today who are likewise ambitious, capable and deserving, but who lack the opportunity to receive a coveted appointment to the academy. It would be well to remember this fact, when, during the dark hours of despair immediately preceding a crucial recitation or examination, a little extra determination is needed to prod

you into carrying on with the monotony of "cramming" (or "bon-ing" as you boys may call it here) so as to insure that two point five. You should feel tremendously proud of your chance to graduate from this great hall of learning, for more reasons than A graduate of the academy is accepted by all coming within his sphere, both in social and business sense, as having, figuratively speaking, been given the acid test—and accepted. He is a man of station. He walks along the highest pathroads in our modern everyday life. To descend to the vernacular, he is conmodern everyday life. sidered "the tops."

sidered "the tops."

A graduate of the academy is also happily circumstanced in yet another sense; he is definitely on the road to a successful career. Proper application to his duties and responsibilities, as well as to his conduct in both personal and official matters, will, in time, win him many promotions. He is in a profession where seniority is given due regard, where opportunities are waiting just ahead, where advancement, though perhaps slow and methodical to the impetuous, is nevertheless definite progression.

It is significant that I appear before you at a time when the subject of a more adequate national defense is occupying not only the attention of the Congress but of the Nation as well. And

only the attention of the Congress but of the Nation as well. And it is also significant that in the gigantic and very necessary project for national defense now before the Congress the role that the Navy will play is a most important one. There was a time, the Navy will play is a most important one. There was a time, you know, when it seemed to be the favorite indoor sport of the Congress (during Republican administrations, of course) to cut military and naval appropriations to the bone. Always, it seemed, when a new incumbent took office and had promises of economies in national expense to observe, a whack would be taken at the Army and the Navy. There was a time when whole flotillas of destroyers were tied up in the Philadelphia yard and elsewhere, because of lack of money to operate them. But apparently the Nation has awakened—even the pacifists and the isolationists— Nation has awarened—even the pacinsts and the isolationists—and the awakening has been rather rude. At one time we went merrily and blissfully along on the basis that we wished no harm to any other nation, and consequently no other nation desired to harm us; and that everything in the world was as quiet and peaceful as the proverbial "Sunday school Bible class" or the "Wednesday evening sewing circle." That was, of course, until the Mesers Muselini and Hitler and their partners in the Orient the Messrs. Mussolini and Hitler and their partners in the Orient came over the horizon and began to parcel the world out among themselves, and until these international bandits began working in our own Western Hemisphere; until their emissaries started to take away our trade in South and Central America and to foment discord throughout Latin America generally. Then, as the poets discord throughout Latin America generally. Then, as the poets say, "came the dawning"; people over here began to see things as they really are; began to feel that our ramparts were not so secure and that fast-flying bombers, based in South America, could make a shambles of our Panama Canal and of our eastern seaboard cities. Next came the so-called peace of Munich, when two of the great world democracies were intimidated shamefully; when one of the true democracies of Europe, Czechoslovakia, was partitioned and since has passed out of existence. Then it was that even the most hysterical of our pacifists, even the most conservative of our isolationists, saw that in discussions with the dictators, in controversies with international bandits, the most persuasive arguments were guns, planes, battleships, and mighty suasive arguments were guns, planes, battleships, and mighty armaments; and that if we were to retain the security of the Western Hemisphere our fleets of the air and of the seas must be second to none and our vigilance eternal and unremitting.

The world issue today revolves about two conflicting ideologies of

The world issue today revolves about two conflicting ideologies of government—democratic and totalitarian. The one that we know—democratic—envisions freedom; the other, that we abominate, mass slavery. It has been urged that the national-defense program is aimed at the preservation of democracy in this hemisphere. That is true, but it goes even further, as I view it. The issue so far as the need for more adequate national defense is considered on visions not only democracy but security. If we in this issue so far as the need for more adequate national defense is concerned envisions not only democracy but security. If we in this part of the world are to be secure in our homes, in our religious beliefs, in our legislative bodies, and in the form of government we adhere to, we must be able to defend ourselves; we must be ready and prepared to resist any and all attempts to destroy the institutions of government we cherish. We must be prepared to defend our coast lines in both oceans, and to do that we must have not one fleet but two fleets—one for the Atlantic and one for the Pacific; and each of these fleets must match, ship for ship, or better, the fleets of the totalitarian powers that operate in those oceans. Otherwise we must prepare ourselves for the inevitable—a peace in the Western Hemisphere equivalent to that of Munich.

Otherwise we must prepare ourselves for the inevitable—a peace in the Western Hemisphere equivalent to that of Munich.

I believe in viewing the present world situation realistically and practically and not through the rose-colored glasses of the pacifist. You can't walk up to an armed thug and say, "Please get out of my house. I don't believe in fighting. It's ungentlemanly." I need not elaborate on what would happen in such a case. The Nazi philosophy, annunciated time and again, glorifies the virtues of "blood and honor," "fearlessness and death," "heroism in battle," and "brutality." They regard the Christian virtues of humility, decency, mercy, charity, and others as unmanly. Mussolini, in October 1932. mercy, charity, and others as unmanly. Mussolini, in October 1932, said, "Fascism does not believe either in the possibility or the utility of perpetual peace."

Dictators have their people in a state of constant hysteria. They must have a succession of continuous conquests, bloodless or otherwise, to hold their sway over the masses that do their will. Their people must not be given time to think too much or too long about one single issue. They have set out the program-supremacy—and it must be adhered to; otherwise, they fall. they will keep going, they will march along the road to conquest,

plunder, and pillage so long as nations permit themselves to become too weak to defend their lands and their institutions. This must never happen here. We must see to it that, never again, in the history of this Government, will our national defenses be weakened by neglect, by political expediency, or by maudlin pacifism.

The Naval Academy offers to you young men a splendid education but it offers, as well, a splendid opportunity to serve your country. It is an institution that has behind it years of glorious tradition; tradition of men and ships that have helped carve in this hemisphere, the most powerful democracy in the world. Young men, yours is a glorious opportunity, one that should make your lot the envy of others your age in the Nation. Your Government has hand-picked you for a big job and asks in return loyal and faithful service. Your industry and zeal here at the academy is part payment for the opportunity offered you; your intelligent, courageous service with the fleets later will be further payment. Our battle fleets of tomorrow will be your responsibility. And with those fleets will be reposed the security not only of your own country, but of all the splendid democracies of the Western Hemisphere. So prepare for that day. Hit the books hard. Obey all of the regulations scrupulously, because you may recollect that one of the great military men of the world once said, "Before you can command, you first must learn to obey." And don't be impatient with your lot; don't grumble about the tribulations that come to everybody, at one time or another, not only here, but in every walk of life. Take them as they come—as any Navy man does—in your stride.

Believe me, shipmates, it has been a pleasure—a genuine pleasure, to be here today—to meet with you all. And as one Navy man to another, I close with the Navy toast, "Here's glad to be aboard!" The Naval Academy offers to you young men a splendid educa-

Dr. William Thomas Lopp

EXTENSION OF REMARKS

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

Mr. DIMOND. Mr. Speaker, William Thomas Lopp, one of the great and good men of Alaska, died after a brief illness at his home in the city of Seattle, Wash., on April 10, 1939. The 1938-39 issue of Who's Who in America gives the following concise summary of his life and work:

following concise summary of his life and work:

Lopp, William Thomas, educator, explorer; born at Valley City, Ind., June 21, 1864; son of Jacob Conrad and Lucy (Trotter) L.; B. A. Hanover (Ind.) College, 1888; A. M., 1911; LL. D., 1925; married Ellen Louise Kittredge, of Westboro, Mass., August 22, 1892; children: Lucy Alaska (deceased), Dwight Thomas, Sara Louise, Katharine Kittredge, Weyana, Irene Frances, Mary, Alice Marguerite. Principal of public schools, Valley City, Ind., 1884-85, 1887-88; assistant principal of high school, Winchester, Ind., 1888-89; principal of public schools, New Amsterdam, Ind., 1889-90; missionary teacher, Cape Prince of Wales, Alaska, 1890-92; superintendent, United States Teller Reindeer Station, Port Clarence, Alaska, 1893-94; missionary teacher and reindeer superintendent, Cape Prince of Wales, 1894-95, 1896-1902; superintendent of Government schools (native) and reindeer, northern district of Alaska, 1904-5, 1906-9; Chief of Alaska Division, United States Bureau of Education, 1910-23, and superintendent of education of natives of Alaska, 1923-25; reindeer expert for Hudson Bay Co., 1925-27, covering Baffin Land and Norway; made survey of Eskimo reindeer industry in northwest Alaska for Indian Rights Association, summer of 1936. Was in charge of deer herd in Point Barrow relief expedition, under Captain Jarvis, 1897-98; with aid of 7 Eskimos, drove 400 reindeer from Cape Prince of Wales to Point Barrow, 750 miles, route law cores, traceberges, see of Ketchelye School, 1800-1800, drove 400 reindeer from Cape Prince of Wales to Point Barrow, 750 miles, route lay across treacherous ice of Kotzebue Sound (50 miles wide) and wind-swept Arctic coast; has traveled over entire coast region from Point Barrow to Pacific Ocean with reindeer, and greater part of interior of Alaska with does; author of "endless chain" plan for distribution of reindeer, resulting in the natives of Alaska becoming owners of more than 600,000 reindeer, valued at \$2,000,000. Congregationalist. Member of Delta Tau Delta. Author of White Sox, a story of the domestication of reindeer. Home: 4738 Ninth Avenue NE., Seattle, Wash.

But the real story of Dr. Lopp which lies in his character and achievements immeasurably transcends the cold and brief outline given in the foregoing biographical sketch. For it is not too much to say that this man served and saved, for his time at least, almost an entire people, the Eskimos of Alaska.

When Dr. Lopp first went to Cape Prince of Wales, Alaska, in 1890, as a teacher and Congregational missionary, he found the native Eskimos of Alaska in a desperate condition, barely able to eke out a miserable and precarious existence by fishing and hunting and trapping. The ample food supply of the earlier days of the Territory had been depleted and in places well-nigh exhausted by the inroads of the white men, and the caribou and the seals and the whales, which had furnished a plentiful supply of food and clothing for the natives, had in many places almost reached the vanishing point. Dr. Lopp knew of the use of reindeer by the inhabitants of Siberia and those of Northern Europe and he conceived the plan of having reindeer brought to Alaska for the use of the Eskimos. Almost simultaneously the same thought occurred to Capt. M. A. Healey, commander of the revenue cutter Bear which cruised frequently in Alaska waters and in the Arctic. Both Dr. Lopp and Captain Healey presented the plan to Dr. Sheldon Jackson, then General Agent of Education in Alaska with headquarters in Washington, D. C. Dr. Jackson, in turn, asked Congress for an appropriation with which to bring Siberian reindeer to Alaska for use by the Eskimos.

When the subject was first presented to Congress it met with the same kind of ridicule and derision and opposition which recently confronted the proposal to appropriate money for carrying out the Reindeer Act in the purchase of the reindeer and reindeer range equipment owned by others than natives of Alaska and devoting the property so purchased with all other reindeer in Alaska to the use of the natives. Congress at first refusing to support the project, Dr. Jackson obtained a small amount of money from private sources and thus a few reindeer were transported to Alaska. During the winter of 1892–93 Congress appropriated \$6,000 toward the reindeer enterprise and thereafter annual appropriations were made by Congress, at first for the transportation and purchase of reindeer for Alaska, and afterward for the care and assistance in the education of the natives

in the use of reindeer until the present time.

With the increase in the number of deer, problems arose as to ownership, grazing, and herding, and the resultant confusion was so great that it was found necessary to place in charge of all activities concerning reindeer someone who was intimately familiar with the subject and who had a sympathetic understanding of the needs of the Eskimos. The choice fell upon Dr. Lopp, and no better selection could possibly have been made. Dr. Lopp drafted the rules and regulations, which were adopted by the Government, for the ownership, care, and use of the reindeer by the natives. Those rules and regulations were so eminently fair and reasonable and just that the natives cooperated wholeheartedly. Thus the reindeer increased from year to year and were equitably distributed among the natives who could use them and who would care for them, and the specter of starvation which had haunted the natives for years was at last

From 1906 to 1925 Dr. Lopp had charge of the Reindeer Service in Alaska and in that capacity his accomplishments for the native people of Alaska were notable and outstanding. He consecrated himself to the service of the people in his charge. He was not a distant and aloof executive, who could be reached only through making an appointment with his secretary, but quite the contrary. He lived with his Eskimo friends and he loved them. He traveled the reindeer ranges winter and summer from one herd to another, always a friend, counselor, and guide in the interests of the natives. The natives loved him as a wise and beneficent father. He is still held in affectionate remembrance among them. In fact, their name for him was "Tom Gorrah" which in the Eskimo language means, "Tom, the Good." He often expressed his affection for the Eskimos referring to them as the pleasant, kindly, smiling people as, indeed, they are, for the Eskimos are surpassed in generosity and hospitality by no other people in the world.

Under Dr. Lopp's wise guidance the reindeer were domesticated and herded by the Eskimos. Indeed, we all realize now that Dr. Lopp's plan of careful and constant herding and domestication of the deer is the only one that can possibly succeed. Under the tutelage of Dr. Lopp the reindeer increased vastly in numbers and were well distributed over

the range so that no part of the range was overgrazed or depleted.

One incident in the life of Dr. Lopp well illustrates his capacity and courage. In the winter of 1897-98 the news reached Washington, D. C., that eight whaling vessels and 265 men had been frozen in the Arctic Ocean and that the men were living in dire distress at Point Barrow. The Secretary of the Treasury authorized a relief expedition and placed in charge the late Capt. T. H. Jarvis, of the Revenue Cutter Service, a most capable officer. Lieutenant Jarvis was directed to get in communication with Dr. Lopp, who was then at Cape Prince of Wales. It was in the depth of winter and the Arctic was hermetically sealed. The revenue cutter Bear found its passage barred even as far south as Nunivak Island so there was only one way to get aid to the men in distress at Point Barrow and that was overland. Lieutenant Jarvis left his vessel and proceeded to Cape Prince of Wales, where he met Dr. Lopp and his wife and then explained the situation. Dr. Lopp, encouraged by Mrs. Lopp, decided without hesitation to give every possible assistance to the expedition. Accordingly, the party was organized and on February 3, 1898, it left Cape Prince of Wales with 448 deer, 18 sleds, and 3 native herders on the perilous trip to Barrow over a tractless waste of 700 miles. The journey was completed in 55 days when the expedition with the deer reached Barrow. After a short rest Dr. Lopp made the return journey to his home at Cape Prince of Wales, reaching there on May 3. Considering the nature of the country, the hazards of the journey, and the difficulty of driving reindeer, the accomplishment of Dr. Lopp and Lieutenant Jarvis and the three native herders in making the journey to Barrow with 448 reindeer for the relief of starving seamen has seldom been surpassed.

Unfortunately, as the years passed white men acquired reindeer and those reindeer, too, multiplied and increased and occupied the ranges, and the governmental authorities in Washington, over the vigorous objections and protests of Dr. Lopp, determined that the practice of herding and caring for reindeer was unnecessary and that all of the reindeer should be turned out on the ranges to graze with no more attention than was involved in making roundups once a year for the marking of the young deer. Dr. Lopp knew that disaster was involved for the natives in that policy but his objections were overruled and finally in 1925 he

was separated from the Reindeer Service.

The evil results which have flowed from the failure to follow Dr. Lopp's advice as to the reindeer can scarcely be overestimated. Left to themselves without herding or any attempt at domestication, many of the reindeer have become little different from wild animals. In fact, many of them have "gone caribou," that is to say, they have mingled and wandered off with the caribou and are lost to the Eskimos or to anyone else except the casual hunters. With the cessation of herding, the reindeer have fallen an easy prey to the wolves and the coyotes, and those predatory animals, through the abundance of a good food supply, have increased enormously in number and are threatening the extinction of the reindeer herds. As long as the reindeer are herded they are protected from the wolves and coyotes, and those predatory animals, being left without a source of food, do not increase in any great numbers. A multiplication of the wolves and coyotes will have a disastrous effect upon the other wildlife of the country and has already seriously depleted the game of that part of Alaska which is used as range by the reindeer.

The error of the Government officials and others in rejecting the advice of Dr. Lopp with respect to the care and herding of reindeer would be unbelievable if it had not happened. The whole mode and manner of living of the Eskimos was altered for the worse, their morale was seriously shaken, and the entire industry, if it may be called that, built up through the use and care of reindeer, was forced close to destruction by the initiation and stubborn insistence upon a policy which never had and never has been successful with respect to reindeer anywhere in the world. And so Dr. Lopp was required to stand aside and see the results of his great and beneficent

work, the results of his years of labor and thought and care and unselfish devotion to the welfare of the natives, disregarded and cast aside and all but ruined. We may say with Napoleon:

It was more than a crime; it was a mistake.

Fortunately, he lived long enough to see the mistake admitted, even if it has not been corrected, for in the record of the House hearings for the Department of the Interior appropriation bill for the fiscal year 1940 is contained the statement of Mr. J. Sydney Rood, acting superintendent of the Alaska Reindeer Service, in which he says, emphatically and definitely, and without qualification, that herding of the reindeer must be reestablished if they are to be saved; and he points out the alarming depletion of many of the herds of reindeer through the depredation of the wolves and coyotes and from other causes.

Had Dr. Lopp been retained in charge of the Alaska Reindeer Service, or had his policies been adhered to, there would have been no need to pass the Reindeer Act of September 1, 1937. The present chaotic condition on the reindeer ranges is the direct result of the error of administrative officers of the Government made years ago. It is not yet too late to correct that error if the Reindeer Act is carried out.

Back of all of the public service of Dr. Lopp there wasthere must have been-a deep and abiding love of his fellow man. Nothing else would supply a motive for his life and his public service. The Eskimos of Alaska owe Dr. Lopp a great debt, for he served them and saved them. The people of Alaska and of the United States owe him an equal debt for his unselfish service to these mild, kindly, and generous citizens of Alaska, and to mankind.

Cotton Pulp Bill, H. R. 5991, and the Solution of the Surplus Cotton Problem

EXTENSION OF REMARKS

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

RADIO ADDRESS BY HON. HAMPTON P. FULMER, OF SOUTH CAROLINA, ON MAY 10, 1939

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting herein an address delivered by me over the National Broadcasting Network last evening:

It is generally conceded that a national emergency exists in the cotton industry, in that we have a surplus of over 13,000,000 bales of cotton, an extra year's crop, an emergency that is having an appalling effect not only upon the South, but other industries, employment, pay rolls, profits, and upon the social stability of the

New extended uses of cotton, on a large scale, have failed to develop over a 12-year period of extensive and expensive research. A great many people stress the importance of regaining our

foreign markets. If we will face the real facts, you can come to no other con-clusion than that our cotton market for export is definitely and

permanently reduced.

I do not mean by this that we will not continue to export some cotton; but we should face the facts and endeavor to work out some constructive program whereby the cotton industry of the South may be able to continue as one of the most important industries of the United States, an industry that affects the lives of millions of people, one that has a determining factor in many lines of business. lines of business.

WHY WE ARE LOSING OUR FOREIGN MARKETS

What are the real facts?

During the past 12 years foreign consumption of foreign-grown cotton has increased from 10,000,000 to 16,000,000 bales, while in the United States, during the same period, our consumption has remained steadily around 7,000,000 bales annually.

However, this is not the whole story, for during recent years production and consumption of synthetic fibers have increased by the equivalent of about 2,800,000 bales annually.

In 1938 alone the world output of synthetic fibers totaled the equivalent of about four and one-half million bales of cotton.

Some days ago, when Secretary Wallace appeared before the Agricultural Committee, I asked him a question as to the replacement of our own cotton by synthetic fibers during the past few years, and he stated: "About four and one-half million bales."

As stated, we have spent millions in research for the purpose of finding new uses for cotton, and in the improvement of qual-

As stated, we have spent millions in research for the purpose of finding new uses for cotton, and in the improvement of quality, staple, method of baling, marketing, etc., but, as stated some days ago on the floor of the House, we have not gotten results.

If you will make a thorough investigation, getting the real facts from those who are actually acquainted with just what they are doing in foreign cotton-growing countries, you will find that they have made wonderful strides along the line of increased production per acre, quality of cotton, every bale properly graded, in the method of baling and marketing, having installed high density gin compression, net weight selling of cotton, all of which we in the United States have failed to do, costing the cotton farmers and the cotton industry millions of dollars annually.

It is a well-known fact that this is one of the major reasons why we are losing our cotton markets.

why we are losing our cotton markets.

We all know that we have too much cotton at this time, and the only way the cotton problem can be solved is to get rid of the surplus cotton.

Not only that, but we must create an outlet for all future surpluses, so that the country may be spared the jitters every time God is good to the South by giving to us a bountiful cotton crop.

It is very sad, but nevertheless true, that up to this good hour no constructive solution has as yet been submitted which will solve the surplus cotton problem.

solve this surplus cotton problem.

I am not going to take the time to discuss the many bills that have been offered during this session, which had for their purpose

have been offered during this session, which had for their purpose the solving of this serious problem.

However, I do want to refer to Senator Byrnes' proposal known as the barter program.

This calls for bartering our cotton for war materials under a contract under which the foreign country dealing with us, under such a program, must agree that whatever cotton they accept in exchange for their products must be held for a period of 5 years. Suppose we are able to exchange, for instance, 2,000,000 bales of our cotton for tin, rubber, and other war materials.

This certainly will not settle the surplus-cotton problem, or in any way tend to constructively formulate a program which we certainly must have if the cotton industry of the South is to continue.

continue.

The second proposal is the export-subsidy plan.

Under this plan it may be possible, if the subsidy is large enough to be attractive, to dispose of some two or three million bales of cotton.

However, no one, even the Secretary of Agriculture, can contend that this will solve our surplus-cotton problem, or the maintaining of a satisfactory solution of the cotton-production and marketing problem.

When the Secretary of Agriculture came out with his wheat-subsidy plan, I immediately communicated with him about sub-sidizing cotton, realizing that our cotton problem was much

subsidy plan, I immediately communicated with him about subsidizing cotton, realizing that our cotton problem was much graver than the wheat problem.

The Secretary wrote me a very strong letter, giving various good reasons why a subsidy on cotton would not work, as in the case

of wheat

This caused me to give some serious thought to the cotton-subsidy plan, and I know of no way of more forcibly expressing my own views at this time, than to quote to you from the speech delivered by Secretary Wallace at Fort Worth, Tex., on September

delivered by Secretary Wallace at Fort Worth, Tex., on September 30, 1938. I quote only two paragraphs:
"Unlike wheat, however, an outright export subsidy does not appear to be called for in the case of cotton. The reason is that none of the cotton-exporting countries competing with us is using this method, whereas in the case of wheat the use of this method by other countries has forced us to do likewise. If used on a large scale and over a period of time, export subsidies employed by competing countries are mutually self-defeating. They amount to an international price war that is bound to be destructive in the end."

Further quoting the Secretary: "I believe it is far better for the competing countries to get together and work out trade arrangements on a sensible and equitable basis. This old world has got to give up its policies of dog-eat-dog and learn to live and let live * * "."

Still quoting the Secretary: "* * * If consumption of American cotton is to be subsidized, the subsidies ought to be applied to domestic consumption rather than exports. Back in the twenties, American loans to foreign countries, which were never paid, were, in effect, generous gifts of cotton and other farm products to those countries. But if any gifts of cotton are going to be made under the present administration, our own people ought to come first. Why not, for once, give our own consumers and our own workers a break? * * *"

a break? * * *"

I am wondering if there is a Member of Congress, in either House, or any other citizen of the United States, knowing that we have millions of people unemployed, millions of people, in the

words of the President, "Ill-clad, ill-fed, and ill-housed," who will disagree with this sound, constructive, and patriotic statement made by Secretary Wallace.

It is my firm belief that anyone interested in solving this serious problem, and who knows anything about the marketing of cotton, realizes that every bale of cotton that we subsidize for export will take the place of cotton that would otherwise be exported, and, after all is said and done, we will wake up facing the same serious, unsolved cotton problem.

If cotton under the cotton-subsidy program is taken from the surplus cotton, now in the hands of the Government, certainly, it would tend to depress the price of spot cotton this fall, and would be the means of driving at least 5,000,000 additional bales

of the 1939 cotton into the loan program.

If we are to subsidize for export cotton from this year's crop, everyone should realize that, while we would be giving to foreign countries our perfectly good American cotton, at a reduction of from ten to twenty dollars per bale, it would tend to advance the price of cotton in this country at the expense of the consum-

ing public.

This, however, would not be so bad if this export subsidy program would tend to definitely solve the cotton problem, which, as

we all know, it will not.

Under normal conditions we expect to produce 12,000,000 bales of cotton this year. Taking the usual 7,000,000 for home consumption, leaving 5,000,000 for export, suppose under the subsidy we would export 5,000,000, what is going to become of the 13,000,000 surplus that we will still have on our hands, 11,000,000 of which will still be in the hands of the Government, costing millions of dollars annually in carrying charges?

The question—what to do about it—what is the solution?

In that, as stated, an emergency exists, apparently, there is but one visible remedy for the dilemma, and that is a large substituted use of our cotton.

stituted use of our cotton.

We consume colossal quantities of wood pulp, of which we have only a limited domestic supply. Both cotton and wood pulp are

basically cellulose.

A joint consideration of these two economic problems should

develop the answer to the crisis.

COTTON-PULP BILL

My bill, H. R. 5991, provides for an internal-revenue tax on pulp products not containing a small proportion of cotton in percentages fixed under the act.

The percentages are as follows:

The percentages are as follows:

Five percent in newsprint and paperboard.

Ten percent in other paper.

Fifteen percent for rayon, cellophane, and plastic.

The bill authorizes the Secretary of Agriculture to acquire at market price through the Federal Surplus Commodities Corporation cotton from the carry-over in excess of 5,000,000 bales for the purposes of this ect. purposes of this act.

Cotton so acquired shall be designated "Pulping surplus cotton."
Such cotton shall be acquired in such quality, quantity, at such time, and in such manner as the Secretary of Agriculture may

LOW-GRADE COTTON

Lowest grade and shortest staple of cotton being just as valuable for pulping as the better grades, the utilizing of the short-staple, low-grade cotton for this purpose would tend to increase the price of the better grades.

This cotton shall be made available by the Secretary to domestic and foreign processors of cellulose pulp (subject to the tax imposed in this bill) at a price equal to 6 cents per pound.

EXCISE TAX

Quoting from section 5 (a):
"There shall be levied, collected, and paid upon the first domestic processing of cellulose pulp, whether domestic or imported, taxes at the following rates:

"(1) In the case of cellulose pulp, having a value of \$20 or less

per ton, 45 percent of such value;

"(2) In the case of cellulose pulp having a value of more than \$20 per ton, but not more than \$110 per ton, 45 percent of such value minus one-third of 1 percent for each dollar by which such value exceeds \$20 per ton, and fractions of a dollar in proportion;

"(3) In the case of cellulose pulp having a value of more than \$110 per ton, 15 percent of such value.
"(b) Such tax shall be paid by the processor."

Under section 6 of this bill, we provide a compensatory import tax upon any article processed or manufactured wholly or partly from cellulose pulp and imported into the United States from any foreign country

ADMINISTRATION SIMPLE AND INEXPENSIVE

If you will read this bill very carefully, you will note that the administration of same will be very simple and inexpensive in comparison with every other temporary proposal.

As to the effect on the pulp-products industries, this proposal would not unduly hinder sales for the reason in supplying surplus cotton at reduced prices to pulp converters who seek exemption from the excise tax the Government shares in the additional expense

incurred, and the surplus cotton at reduced prices would be consumed in this country.

CUT RELIEF ROLLS AND COMPETITION IN FARM SECTIONS

Solving this problem would tend to put the unemployed to work, increase purchasing power in the South, as well as in all other farming sections of the United States, by continuing to grow cotton, instead of forcing the South on a competitive basis with other farming sections of the country.

PAPER AND NEWSPRINT

It may be of interest to you to know that the net annual consumption in this country of paper and paper board alone is around 12,000,000 tons, not counting other pulp items, such as rayon and

The annual import of newsprint, practically all coming from Canada, duty-free, amounts to around 3,000,000 tons annually.

THIS IS A NATIONAL PROBLEM

May I state this is not the cotton farmer's problem or the prob-lem of the cotton industry as a whole. This, as previously stated, is a national problem that concerns, or should concern, every section of this great Republic and every citizen, regardless of whatever line of business engaged in.

It is a known fact that unless we can solve this problem it will be useless to continue to spend and, in a great many instances, waste millions of the taxpayers' money, most of this money coming from other sections of the country than that of the South.

MY PROPOSAL

Believing that it would serve the best interest of all concerned, that is, we should get rid of this tremendous surplus of cotton over the shortest period possible and, realizing that it would take 4 years under this act to consume our present surplus, I am going to suggest to you just what I would do if I had my way about it.

In the first place, I would pay farmers the full parity price to which they are clearly entitled, in line with the tariff policy on that portion consumed in the United States, which they have

on that portion consumed in the United states, which they have been denied all of these years.

Knowing that at this time it would be rather hard to appropriate sufficient money to do this without raising additional revenue under some taxing program, I would appropriate a sufficient amount to pay at least 75 percent of parity, which would be about 12 cents per pound, and withdraw the loan privileges, thereby having the cotton of this year's crop go on the market in an orderly way for home consumption and for export.

It would be definitely understood that none of the present.

It would be definitely understood that none of the present surplus would be placed on the market unless we could proceed immediately to distribute between now and the cotton-harvesting time next fall in an orderly manner about 500,000 bales of cotton.

TWO-YEAR PROGRAM

I would then proceed to consume the rest of the cotton, as follows, over a 2-year program:

		Bales
3,000,000	bales annually under this act	6,000,000
1,000,000	bales annually for relief	2,000,000
1,000,000	bales annually for crop insurance	2,000,000
2,000,000	bales for bartering war materials	2,000,000

12,000,000 Total__

Under this program the 6,000,000 bales sold to the pulp people would be the lowest-grade cotton at 6 cents per pound. The relief cotton would be at the expense of the Government, and certainly I had rather do this for our own people than to export our perfectly good cotton under a subsidy program in the interest of foreigners.

We would secure full value for the 2,000,000 bales under the

we would secure full value for the 2,000,000 bales under the barter program, and we would receive full market value for the 2,000,000 bales under the crop-insurance program.

This crop-insurance cotton would be given to farmers where they have cotton and cottonseed losses, as in the case of wheat insurance, instead of cash payment, which would not be at the expense of the Government, for the reason that the price of this cotton would be fully reimbursed with cotton insurance cash premiums premiums.

If this program were carried out, in 2 years' time we would be placed on an orderly production and marketing procedure, and, I believe, on a 15,000,000-bale production basis.

THREE TO THREE AND ONE-HALF MILLION ANNUALLY

Referring again to the bill, you can readily see that in using the small percentage of cotton, as provided for in the bill, we would be able to use from three to three and one-half million bales of cotton annually, and, as recovery advances, naturally, the amount of cotton for this purpose would increase as the years

In closing, it is my firm belief that this bill is in the best interest of the American people. I hope it will meet with the friendly consideration, not only of the Congress but the various groups of people who are, or who should be, deeply interested in the welfare of this country.

Treasury Regulation Relative to Sales of Sugar

EXTENSION OF REMARKS

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

RESOLUTION OF THE BOARD OF DIRECTORS OF THE MIDDLE TENNESSEE INDEPENDENT MERCHANTS ASSOCIATION

Mr. BYRNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Be it resolved by the board of directors of the Middle Tennessee Independent Merchants Association in called meeting, That—
Whereas said board is of the opinion and feels that the Honorable Guy T. Helvering, Commissioner of Internal Revenue, crable Guy T. Helvering, Commissioner of Internal Revenue, through his agents and subordinates, is discriminating and abusing his discretion in the application of Public Resolution No. 41, the same being Joint Resolution No. 373, and Treasury Regulation No. 17, in that he is requiring some of the wholesale sugar dealers in the middle district of Tennessee to render a correct return in such form and manner as the Commissioner shall require on sales of sugar and is not requiring other wholesale dealers to make reports and is requiring some of the retail merchants in the middle district of Tennessee to render a correct return on all sales middle district of Tennessee to render a correct return on all sales in excess of 50 pounds, others in excess of 200 pounds, while others are not required to report at all; and

Whereas said board is further of the opinion that the said Commissioner's discrimination is in restraint of trade and is injurious to the business of said wholesale dealers and retailers:

Now, therefore, be it

Now, therefore, be it

Resolved by the board of directors of the Middle Tennessee Independent Merchants Association, That we go on record as being opposed to Public Resolution No. 41 as it is now drawn and urge that said regulation be repealed or amended so as to take from the Commissioner the discretion now given; be it further

Resolved, That copy of this resolution be forwarded to both the United States Senators from Tennessee and to the Congressmen

from the middle district of Tennessee.

com the middle district of Tennessee.

Adopted March 7, 1939.

Hall, Russell England, J. R. Stephens, S. F. Waters, H. T. Hamilton, Grant Roy, Edward Rust, Russell Hampton, Farrar Chrisman, E. M. Patterson, Jr.

The Nation's Industries

EXTENSION OF REMARKS

HON. CHESTER H. GROSS

OF PENNSYLVANIA IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

ADDRESSES OF W. S. SHIPLEY, PRESIDENT OF THE YORK ICE MACHINERY CORPORATION OF YORK, PA., AND OTHERS

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from a York. Pa., newspaper:

YORK PLAYS IMPORTANT ROLE IN UNITED STATES INDUSTRY-MANU-FACTURERS SPEAK AT ROTARY'S INDUSTRIAL DAY OBSERVANCE-TAXES A HEAVY BURDEN

York's importance in industry was emphasized at the industrial day observance of the York Rotary Club in the main ballroom of the Hotel Yorktowne at noon today. More than a score of manufacturers were guests of the organization at the meeting and heard four of their colleagues comment upon the part industry plays in the life of a nation and the use of the city's diversified products in all countries of the world. The speakers were W. S. Shipley, president of the York Ice Machinery Corporation; Beauchamp Smith vice president and general manager of the S. Morehamp Smith vice president and general manager of the S. champ Smith, vice president and general manager of the S. Morgan Smith Co.; Warren C. Bullette, president of the Brandt-Warner Co.; and William J. Fisher, vice president and general manager of the A. B. Farquhar Co., Ltd.

Shipley used as his subject the Nation's Industries. In part

he said:

"Industry is and always must be the economic foundation and lifeblood of the nation and community in which it functions. To be successful it must operate in harmony with the hopes, To be successful it must operate in narmony with the hopes, aspirations, and ideals of the people whom it serves. Industry is not something added or injected into the life of the people. It is that portion engaged in satisfying their physical wants. American industry has played a large part in the development of our country. It has aided materially in making the United States of America truly a government of the people, by the people, and for the people. the people.

we are to continue the great progress to a better living for all of our people there must be an united effort between commerce, farming, labor, and Government. American industry was created by the American people. In return, industry has created for the American people the highest standard of living in history. Industry is so large a part of the national life that all records depend on it.

people depend on it.

people depend on it.

"Industrial products mark the difference between a bare existence and the ever-higher standard of living that has been enjoyed by each succeeding generation of Americans. To many, industry has made available the better things of life that once could be enjoyed only by the few. These accomplishments of industry have been brought into being by no wave of the magic wand. Rather, they are the result of hard work, invention, research, and the necessity to serve."

YORK DIVERSIFIES PRODUCTS

In commenting upon the many uses of York products, Mr. Smith said: "Many York products find their way to foreign shores. There are branch sales offices of York industries in Canshores. There are branch sales offices of York industries in Canada, England, France, and Germany, and there are sales representatives in many European countries, in practically every Central and South American nation, and in South Africa, Australia, and the Orient. One plant located in York ships alone its products the Canada and Canada a

ucts to 33 foreign nations.
"A world traveler can find some York industrial products almost anywhere he may choose to go. The bank in Tokyo may have a York vault door. He may visit an office in Shanghai, a hotel in London, or a moving-picture theater in Rio de Janeiro and enjoy York air-conditioning. The milk he drinks before he retires in Moscow or his 'gin or tonic' on a hot afternoon in Singapore may have been cooled with York-made machinery. The screens of his hotel windows in Panama may have been made in York. The electricity for his hotel reading lamp in Manila or Sao Paulo, Brazil, may have been produced in a generator driven by a hydraulic turbine manufactured in York. The axle in his automobile in New Zealand or the farm machinery he passes in a field in Holland possibly were made in York. The water he drinks in

in Holland possibly were made in York. The water he drinks in Bogota may have been brought in from the mountains through an aqueduct controlled by York-built valves.

"Artificial teeth manufactured in York are shipped to nearly every important foreign country. York chains are widely used in South America. Goods packed in cartons using York paperboard are shipped to many foreign nations. York-made ore crushing mills operate north of the Arctic Circle in Siberia and near the Equator in Ecuador. There are York-made cooling machines at the bottom of a gold mine 1½ miles deep at Johannesburg, South Africa, and hydraulic turbines supplying power for a copper mine barely 3 miles above the sea in the Peruvian Andes. These are only a few examples to illustrate the wide distribution of York products.

"When a sales executive enters his office in York in the

"When a sales executive enters his office in York in the morning, he never knows what the day has in store for him. He may have to entertain a customer from New York, Shanghai, or Cape Town. to entertain a customer from New York, Shanghai, or Cape Town. His telephone rings and he does not know whether he is being called from York, Mexico City, or Sidney, Australia. He may find himself hurrying from that office in the afternoon to catch a train for New York to keep an appointment the following morning or to board an airplane at New Cumberland for an overnight flight to Los Angeles, where an important customer will be waiting for him at 9 a. m. He dictates letters to all parts of the world, possibly an air mail letter carrying important sales proposal to China with \$16 worth of stamps on the envelope, or a letter to Chile congratulating his agent there for the order he has just received for an ore-crushing mill. In short, York industry is in constant touch with the whole world market and York's labor, merchants, doctors, and lawyers depend directly or indirectly in part on our industrial sales throughout the world."

TAXES BLIGHT INDUSTRY

TAXES BLIGHT INDUSTRY

Referring to the blight of taxes on industry, Mr. Bulette said, in part: "It is sadly interesting to see how taxes have affected York's industry and that of the Nation. As an example I cite the instance of one York manufacturer who, in the year 1928, paid out in total taxes \$89,000; and in 1937, \$594,000; an increase of 650 percent. Yet the total business in 1937 was only 9 percent greater than in 1928. In 1928 dividends of the concern were paid to its stockholders, but since 1931 it has paid none."

Unwise taxation was cited by the speaker as having these blighting effects. It penalizes thrift and discourages the initiative of management; it robs the worker's pay envelope; taxes levied on pay rolls as social-security and unemployment compensation are a direct incentive to unemployment; confiscation of profits causes

direct incentive to unemployment; confiscation of profits causes taxes to force capital to seek other investments and industry is stagnated; excessive taxes which add from 5 to 20 percent to the cost of industry's products seriously retard sales and consumption of products, and lessened consumption means less production and in turn less employment, and this vicious circle continues."

INDUSTRIAL RELATIONS

Commenting on relations between employer and employee, Mr.

Commenting on relations between employer and employee, Mr. Fisher said, in part:

"In the many years that I have been intimately connected with industry and watched the growth of our industrial establishments, there has not only been improvement in design of products, production facilities, and methods but equal consideration was given to improvement in wages, working conditions, health and safety of employees, and the whole gamut of items which we now place in the category of industrial relations.

"As a matter of fact, the preservation of our great democracy under which we enjoy the freedom of religion, freedom of speech, and freedom of press, is dependent upon how well we can live together, and how well we conduct ourselves in our human relations.

"It is admitted that during this period of growth and even today, some employers do not practice good principles of human relations, but is it fair to condemn all because of the bad judgment in human relations of a few? The chiselers were with us in the past; they are with us now, and will be with us in the future. Human nature seems to be the same now, as it was centuries expected. turies ago.

"Many plants are now carrying their industrial-relations program into the social life of the employees, and this creates a good and friendly relationship among them, and toward the company, but we all recognize that the most important consideration in the relation of employer and employees is wages, hours, safe, sani-

the relation of employer and employees is wages, hours, safe, sanitary, and pleasant working conditions.

"In York, like in most other cities, these important phases have improved with the industrial growth of our city, which in turn has raised the standard of living. As proof of this you only have to look at some of the sections of our city now, as compared with a few years ago. Furthermore, go to any of our plants during working hours and see the number of automobiles, either in the parking lots or surrounding the plants, which is an indication that York has kept pace with the American way of life.

"It is the hope, I am sure, of all of us, that we will be permitted to carry on in our industrial relations in such a way that as employer and employees we will be able to go forward together, arm in arm, for the common good of this community."

A Plea for Public Medicine

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1939

ADDRESS OF DR. CLIFFORD HALVORSEN, STAFF PHYSICIAN, WESTERN STATE HOSPITAL, FORT STEILACOOM, WASH.

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a very interesting address delivered by Dr. Clifford Halvorsen, on the subject of Public Health and Medicine.

The Western State Hospital, with which Dr. Halvorsen is connected, is headed by Dr. W. N. Keller, M. D., a graduate of Princeton University and one of the leading mental hospital executives in the United States. Under his masterly direction this institution has attained a splendid reputation for humane treatment of the inmates and unusual competence in every field of institutional care. Under the encouragement of Dr. Keller many splendid young men of brillant attainments and remarkable precocity, have been encouraged to develop their talents. Dr. Halvorsen is one of these young men who has already made his mark in the medical field.

His address is as follows:

SCIENCE IS UNIVERSAL

Science Is Universal.

Like the other cultural contributions to our national development, modern science has brought to us certain offerings which are of high ethical value. The whole material setting of civilized life has been altered by the combined efforts of those who have advanced science and applied it. Science is the great instrument of social change, all the greater because its object is not change but knowledge. Its silent position in this dominant function is the most vital of all the revolutions which have marked the development of modern civilization. Science works in the open. The scientist as opposed to the quack is against secrecy and exclusiveness. The scientist invites all men to share his methods and

the results. Where the point at issue is a matter of fact which can the results. Where the point at issue is a matter of fact which can be settled by observation and experiment, people are less likely to lose their tempers than when they resort to philosophies and where conviction is largely a matter of personal opinion. It is no longer polite to regard people as wicked because their views differ from your own. A democracy needs the spirit which constantly puts questions without fear. Progress requires the will to doubt and to challenge sanctified assumptions bravely. Customs and institutions need no longer be regarded as handed down forever perfect and therefore beyond the reach of improvement. In a world thoroughly humanized, men survive in the process of helping others to survive. survive.

THE TREND TODAY IS TOWARD EXPANDED PUBLIC HEALTH

For years organized medicine has sanctioned Government-controlled health measures as provided by schools, cities, counties, States, and Federal agencies in the form of city health clinics and hospitals, county tuberculosis preventoriums, sanatoriums, isolation hospitals, State mental and general hospitals. The Federal Government's Public Health Service, leprosoriums, drug-addict colonies, Army and Navy medical departments have been developed by public demand and governmental necessity. Through governmental legislation and by the insistence of organized medicine the public has endeavored to protect itself with a huge array of laws, regulations, and standards against pseudo-scientific quackery practiced by cultists. Public interest in health has been aroused by organized medicine as representative of all licensed physicians, as well as by numerous public and charitable organizations.

Such organizations have approached health through preventive

well as by numerous public and charitable organizations.

Such organizations have approached health through preventive and curative avenues and have touched every stratum of our social scale, as it should. Disraeli has said, "Public health is the first duty of a statesman. It is the foundation on which reposes the happiness of the people and the power of the country." Theodore Roosevelt once remarked that "The conservation of vital resources is the first duty of the Government," and referring to the medical man who places profit before service as "the dollar doctor." Sir William Osler asks of the medical profession, "Are we members of a craft, trade, or union? The master word of medicine is work." Dr. Lyman Willium speaking as a physician of national prominence. Dr. Lyman Wilbur, speaking as a physician of national prominence, states, "National health is a national problem." Since the public faces an expenditure of approximately \$10,000,000,000 annually in loss of man-power and ill health, this fact alone makes disease, with its cause, prevention, and cure, of vital public interest.

PROTECTION OF NATIONAL VITALITY

The question is decidedly not who shall have medical care. not a question of who shall profit by disease. It is a question of the conservation and protection of the national vitality. In our democracy the poor and albeit ignorant require as much doctorpatient interrelationship and benefit of scientific knowledge as the sad-but-true wealthy minority. The fee system has spoiled many doctor-patient interrelationships. Once the money question is removed, the relationship becomes more natural and human. Many patients cannot afford expensive examinations and treatment and most general practitioners have neither the special knowledge or the equipment to render such service in their offices.

or not such service in their omees.

Dr. Richard C. Cabot, of Harvard Medical School, says: "We would never put a judge on the bench under conditions such that he might be influenced by pecuniary considerations. Suppose that if a judge were to get \$5,000 in case he handed down a certain decision and he got nothing if he decided the other way. We allow the private practitioner to face this kind of temptation. * * * * The greatest single curse in medicine is the curse of unprecessory. the private practitioner to face this kind of temptation. * * * The greatest single curse in medicine is the curse of unnecessary operations, and there would be fewer of them if the doctor got the same salary whether he operated or not. I am not accusing the medical profession of dishonesty, but I am saying that we should be defended from unfair temptation. I maintain that to have doctors working on salary would be better for doctors as well as for patients."

The struggle against public education is still going on in the minds of approximately 2½ percent of the Nation's adult population. Socialized education with salaried educators, public-financed buildings and equipment, has reduced costs to the individual. The student, moreover, does not choose his teacher. The teacher is on contract at a fixed salary. There is nothing to prevent teacher or student to perfect themselves in any chosen field to any chosen heights. Who is there to say education is more valuable than health? The public has decided that education shall be compulsory and that every American is entitled to it.

REDUCED COST OF MEDICAL CARE WOULD BE VERY BENEFICIAL

Whenever in this country better service has been supplied on more convenient terms of payment Americans have bought more of this service, to the mutual benefit of producer and consumer. Reduction of overhead by unit systems has reduced cost of medical care. Aggregation of specialists with special equipment has reduced care. Aggregation of specialists with special equipment has reduced health costs for the patient, but the restriction of such units to large cities has increased the price of health. The present disorganized methods of public education on medical subjects, raising of public funds, competitive fee-fixing methods is wasteful of energy and money for the physician and the public. The Ingham County Medical Society of Michigan recently fostered an antisyphilis drive. For 60 days the members took blood samples from all patients seeking treatment. At the end of that time 7,600 specimens were examined, compared to 1,770 for the previous 2 months. Thus the physicians found 2.4 percent positive cases. Out of 183 cases, 100 were unsuspected. The stimulus of concerted action

LXXXIV—App——123

under special provision for extra-laboratory costs thus brought to light a disease for which special forms of treatment are highly beneficial. The deficit of medical care is not in the amount of work to be done but in the agents sufficient to do the work.

DEMONSTRATED NEED FOR PREVENTIVE MEDICINE

Approximately 30 percent of men between 21 and 30 years of age called to the colors in the first draft for the World War were declared unfit for service. Of these 114,500, or 15 percent, were unsuited for civil activities of productive type. Of the total rejected 10 percent had severe veneral disease or tuberculosis. Another 12 percent had nervous and mental trouble, one-half of which were competed with through disorders. A national computer with the percent percent had nervous and mental trouble, one-half of which were competed with through disorders. other 12 percent had nervous and mental trouble, one-half of which were connected with thyroid disorders. A national committee investigating the national health estimated 20,000,000 people in the United States are in need of adequate medical care. The committee on physical welfare for the New York City schools found 66 percent of the children in need of general medical or surgical attention, 44 percent required dental care, 38 percent had large glands in the neck indicating disease processes, 18 percent had tonsilitis. Translated into money values based upon potential earning, production, and purchasing power such ill health increases the deficit of national economy.

WHAT THE WAGNER BILL WILL DO

To correct this waste the Wagner bill for the national health program is now pending in the United States Congress. It provides for: (1) Maternal and child health services; (2) services for crippled children; (3) grants to States for maternal and child welfare; (4) public health; (5) grants to States for nospitals and health centers; (6) grants to States for medical care; (7) grants to States for temporary disability compensation; (8) rules for the determination of the financial status of States. All expenses are to be met by general taxation—Federal and State. The bill proposes to unite and develop research, prevention, and treatment, and includes the training of personnel. This service administered by physicians of qualifications equal to State and Federal standards set up by the leaders in medicine will reach every American. It will provide medical care for all conditions at minimal cost. It will provide a way for compulsory health insurance for the individual and the Nation. To correct this waste the Wagner bill for the national health pro-

THE A. M. A. OPPOSES GROUP MEDICINE

The house of delegates of the American Medical Association is divided on the issue. Outstanding members are definitely against all group or cooperative medical practice for the following reasons:

1. State control now would be a radical and costly experiment at a time when the Nation can least afford it.

2. All the fine traditions of private practice would be swept

away.
3. Close relationship between physician and patient would be spoiled.

Physicians would be so involved in clerical details they would have no time for careful diagnostic and research work.

5. Politicians would dictate to medical men, and public-health officials would change with each election.6. Laws would not allow for the use of oncoming discoveries.

THE CASE FOR STATE MEDICINE

To these objections Dr. Henry Ernest Sigerist, professor of Johns Hopkins Institute of the History of Medicine, answers in this

1. State control of medical care is not a radical departure. Sixty percent of all hospital beds are now owned and operated by the

Government.

2. If the \$6,000,000,000 now lost through loss of manpower, and the additional \$3,500,000,000 spent annually for medical bills was distributed rationally, little more than this amount would be required to provide adequate medical care for the entire population.

3. To say that salaried physicians lose their incentive to do good 3. To say that salaried physicians lose their incentive to do good work is an insult. Koch, Pasteur, Gorgas, Reed, Welch were all salaried men. So are the workers in the Mayo clinic, the Rockefeller Institute, and 15 percent of this Nation's physicians who work in governmental institutions. Great medical discoveries have been made by salaried physicians connected with commercial firms and various public institutions, Federal, State, and county.

4. Few people today are free to choose their own physician. Dispensely patients farmers and some city dwellers have to accept the

pensary patients, farmers, and some city dwellers have to accept the physician available.

5. The fact that a doctor is a member of an organized group does not spoil the physician-patient relationship. The doctor moves ahead by the results he produces. Results are measurable by the patronage enjoyed as in the educational field. The popular physician testionship the solventifically become as well as groupsthetic in the solventifically becomes a solventifically because the solventifi sician is scientifically honest as well as sympathetic in his attitude.

6. The existing forms of cooperative medicine endeavor to bridge

the gap now existing between hospitals and the individual by bring-

the gap now existing between hospitals and the individual by bringing the practitioner into closer contact with a health center. These centers make possible time-saving diagnoses through the use of modern equipment and aggregation of specialists.

7. It will be serious if governmental control brings improper politics into medicine. But corruption and inefficiency do not need to enter Government activity. The United States Public Health Service has never been touched by the breath of scandal. Many States have honest health departments free of political skullduggery, which handle medical and administrative details efficiently.

The Federal Government's program indicates a desire to work in harmony and to collaborate with State health agencies already recognized by organized medicine.

recognized by organized medicine.

Would it be beside the point to add that doctors associated with governmental medical activities need not be exempt from a pension system after progressive, faithful duty? Many doctors seem to fear the net effect of all plans for cooperative and state medicine will cut the income of the medical profession. Assurance of a retirement income would remove such objections. The average net income for doctors at the present time in paid-up bills is slightly less than \$3,500 per year, and 80 percent of them are on 24-hour duty. This income is the work interest of an average \$10,000 investment in the income is the work interest of an average \$10,000 investment in the physician's education for the practice of medicine and surgery. Very few doctors ever become wealthy through the practice they have Very few doctors ever become wealthy through the practice they have chosen. Very few physicians can afford vacations or take time for post-graduate study. If he is not working at his art, he is thinking about it, whether private or group physician.

In closing may I ask some questions?

1. Does the public rebel against state control of safety on the highway, for our homes, and our Nation?

2. Does the majority of our citizens rebel against compulsory public education?

public education?

3. Do we insist upon maintaining custodial institutions for individuals whose disease may have been prevented by compulsory

4. Does the public want to continue to pay well over \$1,000,000 a day for the care of preventable mental illness alone?

Some of these questions are already answered. Others are in the process of being answered. There will be further questions we will have to answer in the future and for which compulsory health insurance is the answer. These social-medical problems will be solved either under the leadership or helpful cooperation of the American Medical Association or without it. Let us sincerely hope for the good of all concerned that it is with the blessings of organized medicine.

Wage and Hour Law

EXTENSION OF REMARKS

HON. J. WILL TAYLOR

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

ARTICLE BY GUS W. DYER

Mr. TAYLOR of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by a well-known political economist, Gus W. Dyer:

UNSEEN EFFECTS OF WAGE LAW

(By Gus W. Dyer, professor of economics and sociology, Vanderbilt University)

The average man thinks of the industrial life of this country as confined almost exclusively to a group of big factories and medium-sized factories, located in big cities or big industrial centers. Conditions in these big industries are the foundation for practically all of the labor legislation at Washington.

The public in general is under a delusion that the big industries have driven out practically all of the small factories. The few left are not considered worthy of consideration in labor legislation. As a matter of fact the big industries have not driven out the small factories. The small factories make up a very large part of our industrial life today.

small factories. The small factories make up a very large part or our industrial life today.

In 1929, 210,954 factories of all types were in operation in this country. Over 7,000 of these factories employed no wage earners, 53,524 employed from 1 to 5 wage earners, 53,524 employed from 6 to 20 wage earners, and 25,022 employed from 21 to 50 wage earners. The total number of wage earners employed in these small factories was 1,838,847. The average number of wage earners in the 174,313 was 1,689,847. The average number of wage earners in the 174,313 small industries in operation was 10.

These little factories that give employment to nearly 2,000,000 people are located in cities, towns, villages in the rural sections,

Among them we find sawmills, grist mills, feed mills, chair factories, furniture factories, mattress factories, textile factories, sheet-iron industries, clothing factories, overall factories, etc.

tories, sheet-iron industries, clothing factories, overall factories, etc.

The wages of each employee are determined by the productivity of the worker. Each gets the market value of his services. The skilled get high wages; the unskilled, the untrained, the slow, the inefficient get relatively low wages. But all are paid by the same standard—the standard of their productive capacity. With two or three members of a family at work, even at low wages, the family is able to maintain its independence and respectability.

A serve laws expectability of these small industries are located in

A very large proportion of these small industries are located in small towns, villages, and rural communities. There are 13,433 small towns in this country that have populations of 2,500 and less. Over 10,000 towns have populations of less than 1,000. The combined population of these small towns is 9,183,035. This is a population greater than the combined populations of Boston, St. Louis, St. Paul, Buffalo, Baltimore, Cincinnati, Pittsburgh, New Orleans, Dallas, Houston, Indianapolis, and Chicago. Yet little thought is given to the life and problems of these little towns.

Few of those who are operating these small industries are mak-

Few of those who are operating these small industries are making much above a simple, decent living. These industries are in no condition to absorb any extra business cost. The productivity no condition to absorb any extra business cost. The productivity of labor is a definite, fixed quantity that can be determined definitely on the market. The labor in an industry must produce the value of the wages paid or the industry is doomed. These small industries have no reserve out of which to pay continuous losses. A minimum wage of 40 cents an hour or \$3.20 a day for 8 hours would mean the elimination of all workers who cannot produce the minimum, and this would, perhaps, mean the elimination of over one-half of the workers in the small industries, and the closing of a very large proportion of these industries. It is doubtful if the serious results of the minimum wage on these industries would ever reach the newspapers. ever reach the newspapers.

The 13,433 small, independent, self-supporting, self-respecting communities in which small business lives and thrives are the very heart of real American life and American ideals. If left alone they will take care of themselves under American constitutional industrial freedom. It is little less than a crime for an absentee, centralized government to make it illegal for honest, upright, zens to offer millions of workers in these towns an opportunity to work and support their families by their work. It is far worse for a government to force these people to join the ranks of the dependents and the mendicants.

Shall America Establish Concentration or Detention Camps or Stockades Wherein to Intern Human Persons?

EXTENSION OF REMARKS

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

REMARKS OF HON. JOSEPH A. GAVAGAN, OF NEW YORK

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Hon. Joseph A. Gavagan relative to the bill H. R. 5643:

Mr. Speaker, ladies and gentlemen of the House, I can recall no other instance during my service in this House when a piece of proposed legislation involved to such great extent vital American principles of jurisprudence and government. Reduced to its simplest meaning, this bill would authorize the Secretary of Labor to order the arrest and detention, not in penal institutions, however, of all aliens previously ordered deported, but whose deportation cannot be carried out because the country of origin refuses to issue the necessary visas or consents. In other words, in those cases where the foreign country refuses to accept the alien the Secretary of Labor is empowered by order to arrest, intern, or otherwise detain the alien.

To my mind the principles involved in this proposed legislation are so serious that I have given time and consideration to their study and have reached the conclusion that I cannot, in accordance with my oath to maintain and support the Constitution, vote for

this bill.

The world today is in a disturbed state, mental and moral. All governments and all people seem to tread life's pathway in fear and dread, not knowing what the morrow may bring. Governments repudiate forthwith the written word; the geographical limits of a nation are changed overnight; there seems to be an absolute void of principle to guide men and peoples. Time-honored principles

of national conduct and action are forsaken, and men and nations seem to grope in darkness

seem to grope in darkness.

I rejoice, however, that the United States of America has a written constitution to guide her pathway. In all times of our history since its adoption, our Constitution has been our guidepost in the solution of our problems of government. I know and realize in the solution of our problems of government. I know and realize that my colleagues of the House of Representatives have the same reverence and respect for the Constitution. We too often, I think, look upon the Constitution as a grant of power to the Federal Government, and forget that while it contains grants of power, it also contains denials of power. The oft-repeated phrase in the Constitution—"the Congress shall not"—is an example of this denial of power to the Congress and the Federal Government.

I have many times expressed the belief that the provisions of our Constitution when the congress are considered.

I have many times expressed the belief that the provisions of our Constitution were the result of serious deliberation and consideration; that, as finally adopted, each provision rested upon some fundamental and historic principle of government. Each provision was deliberately agreed upon because of the compelling force of some moral or historical truth. After an experience of a century and a half we stand forth as the hope of mankind, the last citadel of human liberty. The exigencies of the moment, no matter how compelling or seemingly justifiable, can never sanction surrender of basic principle. There is one truth that guides me to a determination of my vote on this bill, the truth that liberty is indivisible; in other words, universal—it applies to all, no matter what be the class or condition. If the criminal may be condemned without a trial today, perhaps tomorrow the innocent may be so condemned. Our distinguished colleague the gentleman from Utah [Mr. Murdock] during debate on this bill ably expressed this truism when he declared:

"If today the ungrateful alien may be imprisoned without due

"If today the ungrateful alien may be imprisoned without due process of law, who may say that tomorrow may not see the re-building of the Bastille? Once we begin to tear down the temple of equal justice, we have destroyed its symmetry. It can only exist as a whole. If one part is torn away, the rest will surely fall. It is not so long ago that our greatest citizen said, "This Nation cannot endure half free and half slave.' Let the echo of those words remind us that when equal justice is denied to one, citizen or alien,

innocent or guilty, it is no longer equal, it is no longer justice."

The drafters of this bill, by the provision that certain classes of aliens shall be detained "not at hard labor," artfully and skillfully attempt to avoid the provisions of section 1 of the thirteenth amendment to the Constitution, wherein it is provided—

"Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their

The very attempt to so avoid the provisions of the thirteenth amendment should tell its own story, in spite of the drafters' art

In my opinion, the provision of the bill empowering the Secretary of Labor to imprison certain aliens subject to deportation, prevented because of the refusal of foreign countries to accept them, is in direct contravention of section 9, article I, of the Constitution, and clearly unconstitutional. This section, among other things, provides that "No bill of attainder or ex post factor law shall be passed."

Imprisonment or the distraint of liberty or freedom of action is in the nature of things penal. The ex post facto effect of a law cannot be evaded by giving a civil form to that which is essentially criminal.

This bill seeks to further imprison or distrain certain classified persons, without trial, simply and solely because of a previous criminal record; it is an attempt to impose new and additional punishment for old crimes—the debts for which to society have long since been paid—is clearly ex post facto and hence unconstitutional.

The Supreme Court of the United States since time immemorial has held that "every law that changes the punishment and inflicts a greater punishment than the law annexed to the crime when committed" is an ex post facto law and within the prohibition of

the Constitution.

Mr. Speaker, it is my deliberate judgment that this bill is uncon-Mr. Speaker, it is my deliberate judgment that this bill is unconstitutional and hence void; accordingly, I am compelled by my oath of office to vote against it. Aside, however, from its unconstitutionality, the bill, in my judgment, constitutes a grave departure from those principles of American freedom and liberty we hold so dear. Our forefathers understood the meaning of restraint and denial of liberty, the curtailment of freedom, alien and sedition acts, and all those types of makeshift legislation which at times of stress and storm governments pass to serve the exigencies of the moment. History proves, however, that when the exigencies of the moment pass, the restraints remain to throttle freedom and enmesh justice. Such has been the sad story of manking when none were justice. Such has been the sad story of mankind when none were found to sound liberty's clarion call. The great Burke paraphrased it well when he declared, "The people never give up their liberties but under some delusion."

Mr. Speaker, we are living in an age of stress and storm; nations and individuals are heedlessly grasping straws of delusion; might, power, and force seem the theme of our time; yet we know they shall not triumph. We should strive midst the storm to guard our citadel of liberty, always mindful of the admonition that "the condition upon which God hath given liberty to man is eternal vigilance."

APPENDIX TO THE CONGRESSIONAL RECORD

The Romance of Mother's Day

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

ARTICLE BY EARLE W. GAGE

Mr. BARKLEY. Mr. President, next Sunday will be Mother's Day. It has been established and set aside by Congress. We shall probably take an adjournment or recess over the week end so that a number of Senators who desire to visit their homes and their mothers may be permitted to do so.

I have ascertained that among the 96 Senators there are 21 whose mothers are still living. On their good fortune I congratulate them. I myself am happy to be one of the 21 whose mothers still live.

A very interesting article has been sent to me, which is to appear tomorrow in a publication called "The Friend," published in Dayton, Ohio. The article was written by Mr. Earle W. Gage, of Ashville, N. Y., and is entitled "The Romance of Mother's Day." Mr. Gage traces the celebration of some form of Mother's Day back to ancient Greece and Rome. He also mentions the interesting fact that in 1887, 52 years ago, a school teacher in Henderson, Ky., whose name was Miss Sasseen, first began the observance of Mother's Day. Various States, through their Governors, issued proclamations from time to time, and during the World War Congress adopted a resolution setting aside the second Sunday in May for that observance.

I ask unanimous consent that this very interesting article be printed in the Appendix of the RECORD. I am sure all Senators will find interest in reading it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> [From the Friend, Dayton, Ohio, of May 14, 1939] THE ROMANCE OF MOTHER'S DAY (By Earle W. Gage, Ashville, N. Y.)

The very earliest recorded formal mother worship lies in the tales of the ceremonies by which Rhea, the "great mother of the gods," was worshiped in Asia Minor. In this worship it was not so much the tender maternal aspect which claimed attention as the contractive of mother back was represented as power and majesty of motherhood. Rhea was represented as traversing the mountains in a chariot drawn by lions, and the ceremonies in her honor were marked by wild dances and even The lion, the oak, and the pine were sacred to wilder music.

her.

The worship of Rhea was introduced into Rome through Greece
The worship of Rhea was introduced into Rome through Greece about 250 B. C. Ceremonies were held on the Ides of March, when people made offerings in the temple, and the occasion was known as the feast of hilaria.

With the advent of the Christian Era the festival still retained its old form, but made a further advance and became infused with a new spirit. The development of observance by the church of a new type celebration became a custom on mid-Lent Sunday for the faithful to visit the churches in which they were baptized,

bearing gifts for the altar.

From this festival of worship in honor of the church there grew the observance of mothering day, or Sunday, though the successive steps in this development are not now clear. It is certain, however, that long ago, when young men and maldens were bound out ever, that long ago, when young men and maldens were bound out as apprentices and as servants, mid-Lent Sunday was set aside for them to visit their mothers, taking for them some little present, such as a cake or a trinket. A young person engaged in such a pilgrimage was said to be going "a mothering" from which the day came to be known as Mothering Day.

There is no unbroken line of descent to the present observance from the holiday when English apprentices and servants went a-mothering, though the modern festival is perhaps the most conspicuous and deliberate effort a nation ever made in honor of motherhood.

FOUNDER OF MOTHER'S DAY

The record of events leading up to the final designation of Mother's Day in the United States indicates that Miss Mary Towless Sasseen, of Kentucky, was the originator of the idea. A school teacher, Miss Sasseen started as early as 1887—52 years ago this year—setting apart one day which she called Mother's Day. She came of a distinguished Kentucky family and was born in the

city of Henderson, which was also the birthplace of John James Audubon, world-famous naturalist.

After she had observed Mother's Day in her own school for sev-After she had observed Mother's Day in her own school for several years, Miss Sasseen started a campaign to make its observance national, and issued a pamphlet for use of schools in 1893, two of which are now on display in the Henderson Historical Society, On the title page the pamphlet bears this inscription: "Lovingly dedicated to my mother in the hope that April 20 (her birthday) be annually celebrated as Mother's Day."

Supply this reason existed these to Miss Supply the page of the contract of the co

Surely, this was an original idea to Miss Sasseen, as her opening paragraphs declare: "Having by experience learned how much one can teach a child regarding the lives and works of the poets by our system of Authors' Days, it suggests itself to me that by celebrating Mother's Day once a year, much of the veneration, love

and respect due to parents might, by song, verse, and story, be included in the next generation.

"By Mother's Day I mean a day on which parents shall be invited to the school and a program presented, the recitations being on the subject of mother, the songs referring to the home."

Not long after the issuance of this pamphlet, Miss Sasseen made a trip to Springfield, Ohio, to visit her sister, and there they were able to introduce Mother's Day into the schools of that city. The Teacher's Manual of 1890 provides for the observance of the day. Prof. Carey Boggess, who was then superintendent of Springfield's schools, recites the events leading up to this successful school holiday and program. Miss Sasseen traveled as far as possible, preaching the gospel of Mother's Day, and about 1900 retired, when she married Judge Marshall Wilson and went to Florida to make her home.

MISS ANN JARVIS PICKS UP TORCH

Six years later she passed away, her campaign for Nation-wide observance being carried on by others, among them Miss Ann Jarvis, of Philadelphia, who finally succeeded in having Senator Burkett, of Nebraska, introduce a bill in Congress designating the second Sunday in May as national Mother's Day. This date was selected because Miss Jarvis' mother was born on that date.

KENTUCKY LEGISLATIVE RESOLUTION

The Kentucky State Legislature, conversant with the facts concerning the origin of the day, adopted the following resolution: "Whereas Mary Towles Sasseen, who was born and reared and was for many years a teacher in the public schools of Henderson, Ky., observed Mother's Day in the schools of Henderson as early as 1887 and earnestly labored in Kentucky and other States to have said observance become general; and
"Whereas said Mary Towles Sasseen was the originator of the idea

of Mother's Day celebration: Therefore be it

"Resolved by the General Assembly of the State of Kentucky, That
the people of Kentucky, through their chosen representatives in
legislature, hereby acclaim Mary Towles Sasseen as the originator of
the celebration of Mother's Day; and be it further

"Resolved, That full credit should be given said Mary Towles Sasseen for her splendid work in attempting to bring to the minds of children everywhere the full admiration, respect, and love due all mothers."

MEMORIAL TO FOUNDER

In the peaceful, shaded Henderson cemetery stands a white marker erected by the county historical society bearing this inscrip-tion: "Mary Towles Sasseen in 1887 founded Mother's Day."

But great credit is due Miss Ann Jarvis for her part in carrying on the torch handed her by Miss Sasseen. At the time she resided in a little Virginia community. The superintendent of the local Sunday school requested that she arrange a memorial service for her deceased mother, who had been a moving spirit in the com-

"While carrying out this congenial and sacred duty there came a realization to me of the growing lack of consideration for absent mothers among worldly minded, busy, grown-ups—of the thoughtless neglect of home ties and of loving consideration engendered by the whirl and pressure of modern life, the lack of respect and deference to parents among children of the present generation, of the need of a reminder of the loving, unselfish mother, living or dead," Miss Jarvis explained. And thus the Mother's Day idea came into existence, later to be expanded to include an outward demonstration of the latent love and gratitude to mothers by a gift, words of appreciation, an act of kindness, or a letter on the next of exempted. the part of everybody.

OKLAHOMA ISSUED FIRST PROCLAMATION

The distinction of issuing the first Mother's Day proclamation belongs to the State of Oklahoma. Miss Jarvis had met with sympathetic response from the Governor, who set aside the first observance on May 12, 1910, requesting the people of the new State

"Each citizen, whether old or young, rich or poor, happy or sorrowful, remember her whose love passeth human understanding, and remembering, manifest to the world your love and gratitude by wearing a carnation in honor of the dearest of all mothers and, wearing it, think of her and love her."

CONGRESS ESTABLISHES MOTHER'S DAY

The idea grew as popular sentiment was awakened. State after State adopting the plan, Congress was finally asked to set aside Mother's Day as a national holiday, and President Woodrow Wilson, amid the clouds of a world war, affixed his signature to the joint resolution which get forth. resolution which set forth:

"Whereas the service rendered the United States by the American mother is the greatest source of the country's strength and inspiration; and
"Whereas we honor ourselves and the mothers of America when we

do anything to give emphasis to the home as the foundation head

of the state; and
"Whereas the American mother is doing so much for the home, for moral uplift, and religion, and hence so much for good government and humanity: Therefore be it
"Resolved, That the President of the United States is hereby

authorized and requested to issue a proclamation calling upon the Government officials to display the United States flag on all Government buildings, and the people of the United States to display the flag at their homes or other suitable places on the second Sunday in May, as a public expression of our love and reverence for the mothers of our country."

TRIBUTE TO MOTHER

What a world of sentiment is expressed in the word "mother." What tender emotions it stirs in those whose mothers are among the living. What a flood of sweet memories it brings to those whose mothers have passed on: Memories of tender caresses that softened the pain of some childhood hurt; of reassuring embraces that dissipated clouds of disappointment and brought the sunshine again; of soft lullables at twilight that soothed the aches in tired

again; of soft fullables at twilight that solthed the aches in tired little bodies.

"Mother" is the last word uttered by the hardened criminal as he goes to meet his Maker; of the soldier as he breathes his last amid the shambles of the battlefield; of king, commander, humble peasant as they start off on the journey of eternity. It is the first word we learn to lisp when we start life; the last we gasp as we

depart from life.

This because mother love is deathless, eternal. It knows no bounds; no limitations. It reaches all the way from earth to heaven. It is the finest and most inspiring of all emotions that influence the mind of man. It is the golden bridge that makes the passage between life and eternity the easier.

Mother love is the greatest of all loves, because it is tempered with pity and understanding. It forgives the error of the wayward child even before it is committed. Through the ages it has been the symbol of mercy and devotion, of self-effacement, of sacrifice, of patience and fortitude.

Mother's Pav is an occasion when the whole world is kin, when

Mother's Day is an occasion when the whole world is kin; when all races and all creeds kneel and worship at the common shrine of motherhood. It transcends even the great holidays; holidays set apart for glorification of heroes and heroic deeds. There never was an act of heroism, there never was a valorous deed that could match or even compare with the life work of the humblest little mother.

On Mother's Day millions of sons and daughters pray that the golden flame of mother's deathless love for mankind may burn on eternally; that not alone on this holiday we may pay them reverance but on every day every year prove to them that their devotion and their sacrifices have not been in vain.

American Defense Society

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CARO-LINA, MAY 6, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by me on last Saturday, May 6, in New York City, at the Hotel Astor, under the auspices of a patriotic organization of American citizens known as the American Defense Society.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I would be entirely ungrateful were I not to Mr. Chairman, I would be entirely ungrateful were I not to publicly acknowledge my deep appreciation of your very kind introduction to this splendid audience today. May I say that I am inspired in the thought that I stand now not far from that very spot upon which the Father of our Country stood 150 years ago when he assumed the obligations which he gladly undertook as the first President of the United States. And I, for one, am only sorry that he is not with us today in order that his words of wisdom might at this hour reach the ears of every single American mother and father, when he advised that we of the United States of America, then but recently created and founded, stay clear of foreign entanglements and embredlements that might lead to were foreign entanglements and embroilments that might lead to war.

I would that he were here at this hour. But I am going to state unhesitatingly that I am comforted in the thought that we have within the confines now of this, the greatest Nation upon the face of the earth, outstanding patriots who dare to express frankly and courageously their respective opinions in reference to this and that subject of interest to the American people.

And as here, ladies and gentlemen, I stand, I see sitting not far from this festive board the Honorable Bainbridge Colby [applause] who was Secretary of State in the Wilson Cabinet, and who, only a few days ago, appeared in Washington and delivered there a statement that I only wish every single American—particularly, those who would lead us into war—would have an opportunity

of reading.

I was invited here today to talk particularly in reference to the I was invited here today to talk particularly in reference to the question of immigration and unemployment; but, as a matter of fact, I am going to take the privilege of referring, it but briefly, to the chaotic condition that we find existing at this hour throughout the entire world. I was encouraged in the fore part of this week when I observed through the columns of the Washington press one morning that the President of the United States had said to the gentlemen of the fourth estate that he was not, for some time, going to make any comments upon foreign affairs. That, to my sight, was indeed encouraging. And I had, in truth and in fact, hoped that his suggestion, by way of a statement of that sort—or advice, one might say—would be followed by all who are interested in keeping our country out of any foreign embroilments.

I was in hopes that our newspapers would cease to print so much; that our executives, whether affiliated with the Federal Government or with the respective Commonwealths of the Nation, would follow the advice of the President of the United States. But I have learned, to my regret, that they have not followed his

advice.

And I can very readily understand that, because the majority of the newspapers in the country today—at least, those that I am provided the opportunity of seeing from day to day and time to time—have not been in accord with Mr. Roosevelt relative to collective security insofar as domestic collective security is concerned. But on the other hand, I might add, it has appeared to me that the press of the country has been generally with the President in his theory of collective security from the standpoint of internationalism. When I picked up the paper this morning—I have one now before me—I observed that five out of the seven columns on the front page were taken up with matters pertaining to European affairs. I have another paper before me, printed here in New York. I observe that one, two, three, four, five out of seven columns on the front page are headlined with matters pertaining to European affairs.

I observe in one column of one paper that Governor Baldwin, the chief executive of the State of Connecticut, has stated—at least, he is so reported through the columns of the morning press—that he is desirous of equipping a full regiment of men to handle the anti-aircraft guns, and that he hopes that we will not become involved in war, but that, if we do, he wants Connecticut to be prepared, because it is the arsenal of America.

I wish that records would guit talking about war. I want to say

in war, but that, if we do, he wants Connecticut to be prepared, because it is the arsenal of America.

I wish that people would quit talking about war. I want to say to you unhesitatingly that, in my humble opinion, those today who are injuring this country more than any other class are those who are constantly frightening the American people. Why, I observed only a few days ago that a youngster in California was so afraid that he was going to be called into war, drafted, that he committed suicide. The American people have the war jitters, and we are more concerned today about what is going to take place in Europe than are the Europeans themselves. We are actually more concerned about what is going to become of our poor brothers across the sea than we are concerned about what is going to become of the millions of God-fearing, honest men and women who are today walking the streets in search of employment.

I say that we have gone crazy. This war talk has given us the jitters. I sometimes think, my friends, that, on the one hand, it would be well if the American masses could be provided with sleeping powders in order, at least for a while, that they would not hear so much about war in Europe, that has so thoroughly upset your country; and, on the other hand, I wish sincerely that these same masses of America might be provided with injections of something that would awaken them to the perils in this country.

Today when I was motoring by taxicab from the hotel at which I am storpning to the Astor from which point I now speek I en-

Today when I was motoring by taxicab from the hotel at which I am stopping to the Astor, from which point I now speak, I encouraged conversation with the taxicab driver in reference to war, and he embodied in his answer the future of the world's fair, in which he stated that he hoped to God Hitler would not attack New

York until after the fair was over.

My friends, in reference to Hitler, may I say that as long as he continues to go east, away from the United States, I am satisfied. And I am going to suggest here today, since the stop So-and-so movements have been inaugurated with such eminent success, I desire the privilege of suggesting that the American people start a

movement to stop Stalin.

I heard of that fellow when I was in Russia in 1933; but for the past 2 years I have not heard his name over the radio, and it has been difficult for me to discover his printed name in a magazine or any sort of publication, and I was fearful of his life.

I the results of standard of the results in the state of the name of the results of the results of the results of the results of the name of the results of the results

I, like you, am desirous of stopping Stalin in raising to the surface the temples of worship. I, like you, am desirous of stopping Stalin from destroying God's own temples. I, like you, am desirous of stopping God's greatest enemy. I am desirous of stopping that man who brought about the murder by slow starvation of more than 3,000,000, perhaps 4,000,000, people in the Ukraine,

north of Odessa, in 1933 and 1934, which statement has never been denied. I, like you, am desirous of stopping every movement that

is un-American.

Is un-American.

And I want to say in defense of that eminent, that fine, patriotic statesman, the former Secretary in the Wilson Cabinet, Bainbridge Colby, here today that there is no such thing as Democratic Americanism, there is no such thing as Republican Americanism; there is just one thing, and that is Americanism. And all within the confines of these United States of yours must band together for the nurses of saying America, for Americans.

connines of these United States of yours must band together for the purpose of saving America for Americans. In passing I direct these few words particularly to the ears of the mothers of America. To them, more than to any other group, is due some comfort—at least in words. American mothers have been frightfully unhappy on account of the fact that this country itself has been disturbed for fear that we would be drawn into the

war, drawn into European troubles.

I want to say to you mothers who are here today, and I likewise I want to say to you mothers who are here today, and I likewise want to reach the ears of those mothers who honor me by listening in at this hour, that the United States of America will not participate in any European war. And I, for one, declare to you that as long as I am privileged to serve the people of my great Commonwealth of North Carolina in the upper House of the Congress of the United States, I swear that I shall never cast a vote in that Congress to send the son of an American mother across the turbulent waters of the Atlantic to save again an ungrateful people for the so-called democracy of Europe.

And I say in that connection that we had better interest ourselves

in saying the democracy of the United States of America. If you do not interest yourselves in that for yourselves, certainly you should for your own flesh and blood—your sons and daughters. Otherwise we will wake up one bright morning and find that we are living in a different sort of government provided us than that under which we are now living.

My friends of America, I observe, if I may say it again, through the columns of the press that an effort is being made to bring the Soviet Union into an alliance as a part of that chain being welded for the protection of certain sections of the world. I want to say to you that, in my opinion, the mothers of America will never permit their sons to don a uniform and shoulder arms in the trenches to save the democracy of Stalin and the Soviet Union.

Let us interest ourselves in saving America—and, in that connection, I come to my subject, if you please, pertaining to immigration restrictions and to the deportation of alien criminals and undesirables. We have been spending your money in Washington by the billions—I have voted with others, with your approval, appropriations totaling into the billions—in order that you might be provided with an adequate national defense; and you have wel-comed those appropriations, because you have been frightened to the degree that many of you feel that we will be attacked from abroad within a few weeks.

abroad within a few weeks.

Why, you know as well as I do that our danger is not from without, but the danger is from within. You remember, in 1928, when your own fellow citizen of the city of New York, the Honorable Al Smith, was the Democratic nominee for the Presidency of the United States, our friendly enemies said, "If you put him in the White House, he is going to move out and bring the Pope over and put him there; and the only thing is that Al does not know whether he will take a room at the Hamilton Hotel or the Raleigh."

And they believed it.

There is just about as much chance of anybody in Europe attacking your country as there was chance of Al Smith's bringing the Pope over here in 1928. But I voted for those appropriations because I knew that it would appease the American citizens, because cause I knew that it would appease the American citizens, because the majority of American citizens have been led to believe that they will perhaps be attacked within a very brief period of time. But, anyway, the majority of the American people are desirous of having an adequate national defense. They want to feel safe; and I believe in keeping our powder dry, as do you.

But, my friends, why make expenditure of billions of dollars to protect yourselves from the enemy from without, when you are not making any appropriations or making any effort to defend your country from within? You operators of the observation planes.

country from within? You operators of the observation planes, my dear Major, can locate without difficulty the position of the enemy's cannon. That is true, is it not? But I say that if to-morrow your country should unfortunately become engaged in war, you would find within your midst from four to seven million potential enemies and spies, because there are within your midst between four and seven million aliens. And if war were declared, you would not know where to locate them, who they were, or what they were doing; but all the time those four to seven million enemies, aliens, spies, would be boring from within, destroying the very founda-

spies, would be boring from within, destroying the very foundations of your Government.

And I therefore say that the Congress of the United States should pass a bill, which I have introduced there in the Senate, requiring the mandatory registration and fingerprinting of every alien in the United States, in order that we may ascertain for ourselves whence they came, where they are, and what they are doing. This is the only country upon the face of the earth that does not keep track of those from foreign shores residing temporarily or permanently within their borders, and it is a shame. I cannot too frequently repeat that our danger is from within. My friends, objections have been raised to fingerprinting; but may I call to your attention the fact that the President of the United States was fingerprinted years ago when he was Assistant Secretary of the Navy, as you know. May I call attention to the fact that only a

few days ago the President of the United States submitted voluntarily to fingerprinting, and likewise the Vice President of the United States?

May I state that down in my Commonwealth of North Carolina, in the queen city of Charlotte, where the first Declaration of Independence was drafted and signed on May 20, 1775, more than 10,000 boys and girls submitted voluntarily to fingerprinting for their own respective protection? And may I then direct your attention to the golden coast of the West, in the city of Berkeley, where recently more than 25,000 residents of that lovely section of the country when it the country when it is the country in the city of Berkeley.

submitted voluntarily to fingerprinting?

It is for the benefit of those who are fingerprinted; and, as you all know, during the World War every one of the 4,400,000 under arms know, during the World War every one of the 4,400,000 under arms and in uniform at the close thereof, on November 11, 1918, were fingerprinted, and every member of the Army, the Navy, the Marine Corps today submit gladly to fingerprinting for their protection. The only ones who today are objecting to being fingerprinted are the aliens themselves. They are telling you what kind of laws you should have your representatives enact in the United States, and they are getting away with it. I will tell you why. They are getting away with it because the minorities in this country of yours are in control, for the very reason that the minorities are organized, and they are working night and day, and they have the money to spend, while the masses of Americans are asleep at the switch. asleep at the switch.

That is why I stated at the outset that I only wished that they might be injected in order that they could awaken to the dangers confronting them at the crossroads which we are approaching extremely rapidly. There must be a showdown in this country. There will be. I have introduced a bill in the Senate that would bar all immigration to your shores for the next 10 years, or until such time as every single American citizen today out of employ-

such time as every single American citizen today out of employment has been provided with an opportunity to earn a living. I insist upon the passage of that bill. I hope that it will reach the floors of Congress—the floor of the lower House and that of the Senate—at least in order that we may ascertain where every single Member of the Congress of the United States stands, in order that we may know whether he is for the American people or

whether he is for those from foreign shores.

Here we are, devoting all of our time and making expenditure of all of our energy upon how to save the democracy of Great Britain, how to save the democracy of socialistic France, how to save the democracy of our beloved anarchists of Russia, where, on the other hand, we should be devoting our time and our energy to the people of the United States of America, who have been neglected.

Unfortunately and unhappily for me at this hour, I must call your attention to the fact—as you, a moment ago, my dear Major, mentioned—that there are today in the United States more than 11,000,000 people out of employment, many millions of whom have not had any employment of any nature whatsoever for many years past—God-fearing men and women walking the streets in earnest

oh, my heart was touched last night when down this great white way of the world I strolled, feasting my eyes upon the magnificence way of the world I strolled, leasting my eyes upon the magnificence of the electric signs of your tremendous boulevard, watching the thousands upon thousands who passed; and, at that corner referred to as the center of the world, Forty-second and Broadway, I saw standing in rags an aged mother endeavoring to sell a few little boxes of chiclets; and there she stood. I paused and made purchase of one, and I made inquiry of her as to how many she had sold, and she said that within the hour she had only been to sell two.

Millions of mothers and their children and their sons, looking for employment, and they cannot find it, and we—God, we ought to be ashamed of ourselves, spending our time and attention, devoting our energies, to how we can save those abroad who owe us billions upon billions of dollars now.

Think of those 11,000,000 men and women, and mark you, my friends, there are 26,000,000 men and women who are employed only part time, and that you can well believe if you will recall in your respective minds that only a few weeks ago an advertisement was inserted in the classified columns of one of your local newspapers calling, or offering positions to, 16 women at \$15 or \$16 or \$16 women at \$15 or \$1 a week, instructing them to call on a morning of a certain date. The night before we are told by the press thousands packed your Seventy-sixth Street Armory—young girls of high-school age to those beyond the half-century mark, thousands of women and unfortunately out of employment, seeking an opportunity to find employment.

In addition to those 11,000,000 entirely out of employment, in

In addition to those 11,000,000 entirely out of employment, in addition to the 26,000,000 people working only part time, you have 3,000,000 upon the W. P. A. rolls, many of whom are taking their orders from the Workers' Alliance, and another million who would like to get on the W. P. A. rolls, and many of those upon the W. P. A. rolls—the great majority—are unfortunate men and women who had to cast aside pride and seek the aid of the Government through no fault of theirs.

In addition to that, there are 300,000 young men in the C. C. C. camps of your country, and an equal number who would like to be admitted to those camps in order that they might be clothed and sheltered and fed and provided with funds sufficient to send at least the larger portion to their daddies and to their mammies. In addition thereto, my friends, there are 4,000,000 people upon the rolls of your respective governments—4,000,000 working for

your Federal Government, your 48 respective State Commonwealths, your 10,000 incorporated cities, towns, and hamlets, your more than 3,100 counties, and your thousands upon thousands of political subdivisions to be found throughout the length and

breadth of your land.

breadth of your land.

Summing that all up, with no prospect for the future, don't you think we have gone crazy—when I say that we are giving too much time and too much attention to matters beyond the seas? If I wanted to make friends with you, I would endeavor to curry favor by providing your ears with sugared words, by bringing to you only good news. But I am not endeavoring to curry favor with any individual, group, or collection of people. All in God's world that I am endeavoring to do is to do my part as a humble American citizen who hails from one of the greatest States in the Union, that gave you a first Declaration of Independence.

I care not what anybody thinks about me. I care not what anybody says about me. They can say anything, they can print anything, and I don't care a tinker's damn so long as I am provided with the opportunity of aiding in the task of awakening the American people who love their country and who want to preserve it for their sons and daughters.

I seek no office. I have no political ambitions, and, thank God, I

I seek no office. I have no political ambitions, and, thank God, I can speak as I choose. And I shall continue to do so, so long as you and I find the country of our forefathers endangered. And

My friends, no one knows how many million aliens there are in this country. I contend that there are from four to seven million. Those who oppose me in certain suggested matters pertaining to legislation say that I am wrong, that there are only about 3,000,000. Well, if there are only 3,000,000, there are 3,000,000 too

many

When I employ the word "alien," I use it advisedly, because I refer to that man or woman from foreign shores who here has lived and who has not ever made application for American citizenship. That man or woman who comes from foreign sections of the world and becomes an American citizen is just as good as you or I, and just as much of an American citizen, the only difference being that fortunately we were born here, and unfortunately they did not have any say-so in the matter.

not have any say-so in the matter.

I am speaking of those millions who have been here for years, and who have never thought enough of the protection of the flag to make application for naturalization. They are the ones to whom I refer, and I say that your jails and penitentiaries, in many sections, are filled with alien criminals. They need to be taken out and sent back to the countries whence they came, in order that you taxpayers may be spared the further expense of continuing their maintenance in the form of shelter, clothing, food, and education. It is not fair to the American people to continue them.

and education. It is not fair to the American people to continue them.

Now I come in partial conclusion to a resolution in which you are interested, in which you mothers are vitally interested. I have reference to a resolution introduced by my good friend, a man for whom I have deep affection and admiration—none other than the senior Senator of the great Empire State of New York; and, in speaking of this resolution, I pray you not, for once, infer that I would reflect in the slightest degree upon Bob WAGNER.

Our offices are just across the hall from one another. Many, many has been the time that delegations of school children have visited his office. They do from their respective States. They are always desirous of meeting their Senators; and, many times, when there they go, and Senator WAGNER is not present on account of the fact that he is about the busiest man in Washington, I invite those children across the hallway to my offices, provide them with little booklets pertaining to the historical things of interest in the Capital, and with cards with my signature admitting them to the gallery in order that they may take a little memento home.

That is how much I think of Bob. But Bob has introduced a bill that would permit to enter this country, over a period of 2 years, 20,000 refugee children under 14 years of age, from Germany, Czechoslovakia, Austria—those portions recently acquired by Germany itself.

by Germany itself.

I wish to say, firstly, that I am in sympathy with the orphans of the world. My heart goes out to the little urchins that we find scattered throughout the length and breadth of our land,

find scattered throughout the length and breadth of our land, and there is nothing to me that appeals more deeply to the heart than a motherless child, fatherless child, an orphan child, because I think that a mother is the greatest institution in all the world. And to me, a simple woman of the hills of western North Carolina, my mother is next to God. My heart goes out to the unfortunate little boys and girls of all the earth who have lost their mothers and their fathers.

But, my friends, my first sympathies are for the orphans of America. And that is why I am going to oppose the Wagner resolution. That is why, if necessary, I will filibuster until the cows come home. As I have said, if I may be permitted to repeat, I am in sympathy with those unfortunate children of Germany, Czechoslovakia, Austria, but my heart is larger; my heart beats in sympathy for the million orphans of China, since the Japanese started their march northward in 1931 for the purpose of making conquest of Manchukuo, with its 120,000,000 of people. Today, more than 1,000,000 Chinese have been murdered—combatants and noncombatants and frail old men and unprotected women and innocent children. and innocent children.

I am in sympathy with the orphans of China. My heart, in-deed, further beats for the little black orphans of Abyssinia.

Down yonder in the South, we have a lot of colored people. Down yonder in the South, some of those colored people have been with some of our families for years. In my own home, where I reside with my mother in the countryside, 5 miles from the little Queen City of the mountains—visited by you, Judge Nott, and many times by my honorable friend here—we have an old Mammy Foster. She has been with my mother for 25 years. And then we had a boy, Walter Aikens, as black as coal, and his teeth as bold and as white as the sea shells. They were devoted, both, to my mother. mother.

I remember that 2 years ago Walter was murdered, and I cried like a baby. A black man, but I cried like a baby because he was like a baby. A black man, but I cried like a baby because he was devoted to my mother and always so attentive. He was killed and he left a little boy, Walter—a little black fellow. I will always try to look after him, because Walter was always so devoted to my mother and was always so good to all of us. And I remember now so well and so vividly—I fashion it in my mind—whenever I would go home I would step off the train and there would be Walter—"Mr. Robert, I sure am glad to see you." I miss his smile; I miss his handshake his handshake.

So I say my sympathies are, too, with the little black orphans of Abyssinia or Ethiopia. It spreads throughout the world for the orphan children; but I say to you that my first sympathies are with the orphans of America, where there are thousands upon thousands today undernourished, today improperly and not comfortably clothed.

Those little boys and girls whom Senator Wagner would bring to your midst are only 14 years of age now, but, my friends, I remind you of the fact that within 3 or 4 years they will be big boys and big girls and they will be competing with your sons and daughters—and don't forget it.

And don't forget that the admission of 20,000 does not stop there.

And don't forget that the admission of 20,000 does not stop there. It means that eventually their folks—whether mothers or fathers, or perhaps both mothers and fathers, because they are not of necessity orphans, as are the Chinese and the Ethiopians—their fathers and mothers were killed in Ethiopia—their fathers and mothers were killed by the hundreds of thousands in China—don't forget that within a few years there will be another bill before your Congress of the United States providing for the admission of their fathers and mothers, providing for the reuniting of the families upon your shores. upon your shores.

I know that to be a fact, because I have had that experience in Washington. And innumerable times have I suggested that they reunite those families upon their foreign shores, but in every instance they want to reunite them here on our shores.

It has been broadcast that there would be no danger, because every single child who comes here under that resolution, if passed, will have become a public charge for the research that wall today.

will never become a public charge for the reason that well-to-do people in finance in your city and others have undertaken to underwrite them by way of guaranteeing by bond, secured by property, that those 20,000 children will never become public charges. But, my friends, let me venture this: If times in this country do not get any better the ones who make the bonds will be on relief themselves and the bonds will not be worth a damp. selves and the bonds will not be worth a damn.

I could at length continue to speak with you in reference to these matters in which we are interested, but, in view of the fact that I am tonight to address the members of the Medical Society of the District of Columbia in Washington at their annual banquet, I must forego the opportunity of speaking with you further.

I want to say, in conclusion, that I am, indeed, more than grateful to you for your kind, courteous attention. I have enjoyed being with you, and if I have contributed anything to those matters in with you, and if I have contributed anything to those matters in which you are entirely and generously interested my time has been well spent. In conclusion, let me say this: I hope, if I am so fortunate as to have you reflect upon any word or words that I have uttered here today, that you will bear in mind that in my heart of hearts there is no hatred for anybody upon the face of the earth; and may I add, if you will pardon a personal reflection, of all the people in this country and abroad that I know, I do not hate a single person upon the face of the earth because hate ages the person who hates, and the person you do hate does not know anything about it. Hate makes you old very quickly and I want to live a long time. to live a long time.

But I have spoken out of my heart in the interest of my fellow Americans. I think that we should take care of America first. I think that we should keep our noses out of other people's business. I think that we should quit criticizing the rest of them and tend to our own knitting because, folks, it is going to be a long time before you get back to normalcy. Think about it now. Don't get mad at me for bringing you the truth. I have found that the truth pays. It may not at the time, but it pays good dividends. It is going to be a long time, and you do not have to be any prophet to reason thusly.

How so? With millions upon millions out of employment, what is there to bring you right back to where you were prior to the

is there to bring you right back to where you were prior to the crash in October of 1929? Prepare for a long siege. But in so doing remember that a discontented people will sometimes become an erratic and a radical people. Let us hold our balance. Let us endeavor to do everything possible to preserve the principles of our great country; and, above all, let us remember at times the words of Washington, when that great man, possessed of foresight, said, "Let us keep out of any foreign entanglements or embroilments." Let us tend to our business here at home. I thank you.

APPENDIX TO THE CONGRESSIONAL RECORD

Dairy Farming in Pennsylvania

EXTENSION OF REMARKS

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. C. HALE SIPE

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on May 9 by the Honorable C. Hale Sipe, a member of the State Senate of Pennsylvania.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, there is no more enjoyable life than that of a farmer when he has a chance to make a living and lay aside a little money for a rainy day. When he has this chance he has the hope of a serene old age and there is no frightful strain upon his mind. Then his ear sits in the vast amphitheater of Nature and hears the first songbird in the spring and the last one in the autumn, and his heart is as free from care as that of the feathered songster. Then he gazes upon the flocks and herds on the smiling fields, over which sweep the sunshine and the shadow, with no shadow upon his soul. Then he sees the undulations on his meadows and grain fields like the undulations on the billows of the ocean with no billows of despair raging on the sea of his soul. Then he hears the pleasant rain upon the rustling corn with no rain of tears of despair welling

rain upon the rustling corn with no rain of tears of despair welling from his honest eyes.

It is the happy lot of the Pennsylvania farmer to go into partnership with nature in one of the most beautiful sections of the world. In the summer he gazes on templed hills and mountains clothed in living green, where majestic rivers roll their winding way between. In autumn days, when summer's work is done, he gazes on purple hills and mountains, dozing in a hazy sun. The scenic grandeur and majesty of the hills and mountains of Pennsylvania impose lofty thoughts upon the farmer's soul if his soul is free from haunting thoughts upon the farmer's soul if his soul is free from haunting

despair.

There is something about the life of a farmer that makes him love the good earth, mother of us all. And so we have in eastern Pennsylvania farm homesteads that have been in the same family for more than two centuries—homesteads where many generations have lived where their fathers lived, and died where their fathers died. The present owners of these ancient farms are bound to them by mystic cords of love and affection—golden cords that I hope will never be severed.

never be severed.

Even in my part of the State there are farm homesteads which have remained in the same family for more than a century. It is may fortune to own, live on, and operate an ancient farm that has been in my family 143 years. Often I turn the lights low in my library at midnight and muse on the recollections and hallowed associations of the 143 years of family history of these ancient acres. Often I stroll in the moonlight and in imagination see the acres. Often I stroll in the moonlight and in imagination see the honest faces of fathers and mothers and the smiling faces of boys and girls who in the far, dim years quenched their thirst with the sweet, cool, limpid waters of the blue-slate spring, which still gushes forth its life-giving waters, sweet, cool, and clear as in the days of yore.

Tilling these fertile and ancient acres, living amid the ghosts and shedows of other days it is but natural that I should have a strong

shadows of other days, it is but natural that I should have a strong hope that all our Pennsylvania farmers may be able to make a liv-

nope that all our Pennsylvania farmers may be able to make a living, be able to save a little money for a rainy day, be able to retain ownership of their farms, and to hand these farms down to their children without their going under the sheriff's hammer.

The Pennslvania farmers have a background as heroic and historic as that of any other group beneath the folds of the beautiful banner of the free. Without their services the Revolutionary War would have been doomed to failure and the War between the States would have resulted in a shattered and broken Union. They kept Washington's Army from starting at Valley Forge when Congress. Washington's Army from starving at Valley Forge when Congress failed. Inured to the warwhoop of the Indian and the whistle of bullets in Pennsylvania's pre-Revolutionary Indian wars, the Pennsylvania farmers received that discipline in hardship which made them the backbone of Washington's Army and enabled him to lead the American arms to victory through the 8 years of fire and blood of the Revolutionary War.

the American arms to victory through the 8 years of fire and blood of the Revolutionary War.

The Revolutionary general was himself the greatest farmer in America in his day and, like the Pennsylvania farmers, loved his homestead with an undying love. After his abundant labors as the first President of the United States, he retired to his beloved Mount Vernon to end his days in glory and in peace. He called his broad acres his "vine and fig tree," his "goal of domestic enjoyment." "I would rather be at Mount Vernon," he said, "than at the seat of the Government, surrounded by the dignitaries of every newer in Furone."

every power in Europe."

I repeat that I have a strong hope that the Pennsylvania farmers will be able to retain their farms and hand them down to

their posterity.

But I see little hope of the Pennsylvania milk-producing farm-ers being able to retain ownership of their farms very long unless the hard-boiled, cold-blooded, greedy milk monopoly can be curbed and forced to give these farmers a more just share of the consumer's dollar. Testimony brought out in the investigation of the milk situation indicates that the average price paid the Pennsylvania farmers for their milk over the State is less than 3 cents

sylvania farmers for their milk over the State is less than 3 cents a quart, while the milk monopoly sells it to the consumers at anywhere from 11 cents to 13 cents a quart. It is not a pleasant thought for Pennsylvania farmers that the milk-producing farmers in Hitler Germany receive twice as large a share of the consumer's dollar as the Pennsylvania farmer receives.

Nor is it a pleasant thought for the Pennsylvania farmer that while the cold-blooded milk monopoly has been battering down farm income for years, the monopoly in the meantime is growing more wealthy and more powerful and the salaries of monopoly executives have been mounting skyward. A good example is the National Dairy Products Corporation, which, according to the Federal Trade Commission, paid its president a salary of \$108,000 in 1935 and by 1938 had boosted his salary to \$150,460.

A few days ago the newspapers quoted the president of the National Dairy Products Corporation as saying that there should be a

A few days ago the newspapers quoted the president of the National Dairy Products Corporation as saying that there should be a certain price level in the milk industry. Evidently he thinks there should be two levels—one for the monopoly and its executives as high as the heavens, and one for the farmers as low as the deepest depths of perdition. The milk monopoly, its lawyers and lobbyists, the milk control board, and the Governor have done much to increase the distance between these two levels—the monopoly, its lawyers, and lobbyists persuading the milk control board to adopt the monopoly's view, and the Governor approving the outrageous the monopoly's view, and the Governor approving the outrageous orders of the milk control board in the face of the abundant and rosy promises which he made the farmers when running for office.

rosy promises which he made the farmers when running for office. Some Democratic politicians have endeavored to excuse the milk control board for planting despair in the hearts of our farmers, and some Republican politicians have endeavored to excuse the much-promising Governor. Some have said the Governor did not understand the situation, but he has had abundant chance and abundant time to understand the situation in western Pennsylvania since he approved the outrageous order of the Pittsburgh area in the early days of his administration. But even the densest mind ought to be able to see that promises which are diametrically opposite to performance lay him open to the charge that the promises were made with reckless abandon and for the mere purpose of getting votes. pose of getting votes.

I have a suggestion to make to the Pennsylvania farmers. They should no longer permit such promising and ranting politicians to herd them into rival political camps and thus destroy their effectiveness in matters vitally pertaining to their own interests. In other words, the farmers should organize just as completely as labor

other words, the farmers should organize just as completely as labor has organized, and thus be able to drive into political oblivion blathering and ranting politicians who make them campaign promises that they have no intention of keeping and do not keep. The farmers should divorce themselves from whatever political prejudice they may have, keeping in mind that one of the greatest victories that any man can win is the victory over his prejudices.

I repeat that the milk control board's orders, which the Governor has approved, are driving the Pennsylvania farmers to despair. I further say that if the metropolitan press would carry even a fair amount of the testimony that has been produced at the hearings of the milk investigating committee thus far there would soon be such a revulsion of feeling throughout Pennsylvania that hearings of the milk investigating committee thus far there would soon be such a revulsion of feeling throughout Pennsylvania that the farmer would get the justice that is due him. But the metropolitan press, for some reason or other, pays little attention to the matters brought out at these hearings. Here is Pennsylvania's greatest industry flat on its back, and with no hope of better days, yet the metropolitan press, instead of carrying a reasonable part of the messages of the farmer to the people of Pennsylvania, fills its pages with long accounts of legislative happenings that are only poppycock in comparison to the seriousness of the situation in which the Pennsylvania farmer finds himself.

The Pennsylvania farmer's life has been and is a battle with monopolies and trusts. The Dairy Feed Trust gouges him. The Farm Machinery Trust gouges him. The Milk Trust hammers the life out of his income, while the Coffin Trust waits at the foot of the hill—at the end of the trail—to receive his battered body when life's fitful dream is o'er.

Communists in America

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

ARTICLES FROM THE WASHINGTON POST OF MAY 12, 1939, AND THE BALTIMORE SUN OF MAY 12, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Congressional

RECORD two newspaper clippings. One is an article from the pen of Mr. Westbrook Pegler, a nationally known columnist, entitled "Treacherous Minority," appearing in the Friday, May 12, issue of the Washington (D. C.) Post, owned and published by Mr. Eugene Myer; the other article is dated New York, May 11, 1939, and is from the New York Bureau of the Baltimore Sun, with the headlines-

Browder pledges Communist support to Roosevelt in 1940. Radical leader says if President doesn't run his party will back avail-

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 12, 1939] FAIR ENOUGH-TREACHEROUS MINORITY

FAIR ENOUGH—TREACHEROUS MINORITY
(By Westbrook Pegler)

It is often said that "red" baiters exaggerate the menace of communism in this country, because the Communists poll a small vote and because there are, practically speaking, none of them in the communities between the seabcards, which are made up of native Americans. These arguments are true, but they defeat their own purpose, because no group so small and unrepresentative of native American sentiment deserves the disproportionate influence which Communists possess in the National Government.

If the Communists are as weak in numbers as they angrily insist they are, it is a betrayal of the Americans who did elect the New Deal to permit any of them to hold influential positions in the Government. They received no endorsement from the voters, and they

were repudiated before the election. They have no more standing than members of the Nazi anti-American Bund, with whom they have everything in common but a label, and the leaders of the administration have a duty to discredit and repel them as vigorously as they would a representative of the Hitler sedition and sabotage.

FRIENDLY ATTITUDE SHOULD BE HALTED

It is, therefore, not the number of Communists, avowed and furtive, which requires frequent reminders, but the friendly and encouraging attitude of the Government toward so small and treacherous a minority. It must be observed that communism and Communists never are rebuked by anyone speaking for the administration and that Mr. Ickes, on two occasions, has appeared as the honor guest of professional organizations which are conspicuously troubled by communistic disturbances in their ranks. It is easy to believe that Mr. Ickes is not in great demand as a guest of genuinely American groups, but even that famous frugality which twice impelled him to become an illegal, semicharity case

in a Government hospital while drawing \$15,000 a year and perquisites would not entirely explain his eagerness to tear meat with members of the Stalin conspiracy. He would not be a gracious guest of an organization containing a Nazi unit, although he might show up for the sake of the meal, but he can manage to be cordial in the company of Communists.

OFFICIAL TOLERANCE OF COMMUNISTS HIT

This attitude of the Secretary of the Interior is, in round numbers, the attitude of the whole Washington administration toward the Nazis and the Communists, respectively. It indicates a preference or tolerance for communism by a government which was elected on the Democratic, not the Communist, ticket.

It need not be said that if the Nazi bund were to start an organization of W. P. A. workers, demanding a tithe of their wages for a Hitler fund to be used against the American form of Government, calling sit-down strikes on Government work, sabotaging the national relief and recovery program, and discriminating against ment, calling sit-down strikes on Government work, sabotaging the national relief and recovery program, and discriminating against genuine Americans in the distribution of public jobs, the New Deal would kick the conspiracy to pieces in a week. On the basis of performances to date the New Deal might break off diplomatic relations with Germany and deport or imprison the fuehrer of the anti-American bund, but it must be noted that when the Communists do this there is no official displeasure. Indeed, the displeasure falls upon those Americans who have the temerity to expose the plot, and the very act of exposing a conspiracy against expose the plot, and the very act of exposing a conspiracy against the American form of government is held by some to be an act of sabotage against the New Deal.

NO MOVE AS YET TO PURGE COMMUNISTS

The identity of communism and nazi-ism need not be argued in detail here, having been demonstrated many times. Yet a Communist, or a "fellow traveler" who frankly admires Stalinism and advocates it here is not embarrassed in the New Deal.

Last fall Mr. Roosevelt, Harry Hopkins, Secretary Ickes, and some others tried to purge some Americans who were not Communists, whatever their faults, and the Communists endorsed the effort.

Not yet, however, has there been any move to purge the Communists. And any proposal to that effect would be denounced as an attempt to discredit a government elected on the Democratic ticket by a nation whose Communists boast that their number is insignificant.

[From the Baltimore Sun of May 12, 1939]

BROWDER PLEDGES COMMUNIST SUPPORT TO ROOSEVELT IN 1940— RADICAL LEADER SAYS IF PRESIDENT DOESN'T RUN HIS PARTY WILL BACK AVAILABLE LIBERAL

New York, May 11.—The Communist Party of the United States will support President Roosevelt for a third term in 1940, Earl Browder, general secretary of the party, said tonight at the opening of the ninth annual convention of the Young Communist League at Madison Square Garden.

League at Madison Square Garden.

If Mr. Roosevelt does not run, Mr. Browder said, the Communists will support the Democratic Party if that party nominates a liberal of the Roosevelt faction. Should a conservative Democrat be nominated, such as Vice President John N. Garner, Mr. Browder said, the Communists will oppose him and join with "the radical one-third of the electorate" for the formation of a new third party.

party.

Mr. Browder's statement was an indication that the Communist Party would not run its own Presidential candidate in 1940. In the 1936 election Mr. Browder was one of the nominees opposing the reelection of President Roosevelt, although the principal campaign slogan at that time was "defeat Landon."

paign slogan at that time was "defeat Landon."

Mr. Browder's discussion of national politics was based on the assumption that there is traditionally in America a three-way alinement of political forces, with one-third of the Nation consistently Republican, one-third consistently Democratic and one-third in the "popular, progressive, and radical" groups. It is this last group, Mr. Browder stated, that was responsible not only for Mr. Roosevelt's victory but for the victories of numerous other candidates of both matern parties. candidates of both major parties.

The present administration in Washington, Mr. Browder held, was based on a coalition of Democrats and Progressives.

Address to Catholic University Students

EXTENSION OF REMARKS

HON, DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. JAMES E. MURRAY, OF MONTANA, MAY 4, 1939

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the junior Senator from Montana [Mr. Murray] delivered at a dinner of the Catholic University Student Chapter of the American Society of Civil Engineers on the evening of May

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel highly honored to be invited by the Catholic University student chapter of the American Society of Civil Engineers to

participate at this dinner.

While not an engineer myself, throughout my practice as a a lawyer I have had an intimate association with engineers and have a very high respect for the accomplishments of the profession. In litigation involving technical engineering problems we must always have the advice and assistance of engineers—in the preparation of cases in the cross-examination of witnesses and in the solution of difficult and intricate questions arising in our highly modernized life of today—questions which are too obscure and confusing for the lay mind without expert aid.

The civil engineer must be thorough, accurate, and reliable in his every act. He must never be in error. A mistake by an engineer is always inexcusable and indefensible, and to the great credit

of the profession their mistakes are rare indeed.

We are relying on the engineer today more than ever in the solution of the perplexing problems of the world, both in peace and in war. This is true in America in a greater degree than anywhere else. The engineer also takes the lead both in prosperity and in adversity.

Among the disguised blessings of the great depression which lately enveloped this Nation have been the magnificent contributions toward recovery made by American engineers. It may seem anomalous for one to say that anything of a blessed nature could emanate as a byproduct of a widespread and dangerous economic depression, and yet, in my opinion, this is no rhetorical exaggeration, but is the plain and actual truth.

but is the plain and actual truth.

Well-planned construction programs made possible by the recovery measures of the Congress of the United States during the past 6 years have produced some of the most remarkable engineering feats in the history of the world. The public-works programs of the early civilizations of Rome, Greece, China, and Egypt resulted in towering engineering structures, many of which have made their mark in the world's history—the Pyramids of Egypt, the Great Wall of China, and the famous temples of Athens. The building activities of the middle centuries brought forth the magnificent cathedrals of Europe, to be followed in a later period by those celebrated engineering projects, the Suez Canal and the rail-road tunnels of Switzerland. road tunnels of Switzerland.

In our own country we have witnessed such accomplishments as the Erie Canal, the great transcontinental railroads, John Roeb-ling's Brooklyn Bridge, the subways and skyscrapers of Manhattan, the modern American highways, and the Panama Canal. And now, within the brief space of half a decade, Government engineers, working with thousands of other engineers throughout the Nation, have produced unique and outstanding examples of professional skill, including the Grand Coulee Dam in the basin of the Columbia River; the Fort Peck Dam on the Missouri River, which will create the largest artificial lake in the world, having a shore line of 2,500 miles; the Triborough Bridge in Greater New York; the Moffat tunnel in Colorado; the Chicago Sanitary District's gigantic dis-posal plan; and the overseas toll highway to Key West; to mention only a few of the thousands of modern marvels of useful engineering works.

There is another side to the relationship between engineers and our Federal recovery program to which I direct attention. The depression threw thousands of highly trained engineers out of employment. Also thousands of young engineers, because of the economic collapse, faced a world which offered no opportunity for a start in life. Through the Federal Public Works Administration, the Works Progress Administration, the Bureau of Public Comments of these ends of these contracts of these sends of these contracts of these sends of these contracts. Roads, and other Government agencies, thousands of these engineers have been engaged in useful, productive work. Moreover, the projects subsidized and sponsored by these agencies have created a vast amount of private employment outside the Government projects, all of which has been of great benefit and help to the engineering profession and others who benefit from engineering work.

The national program of public works, while thus furnishing employment for trained engineers and experts in various lines, has at the same time produced assets for our country which will be of vast importance to the Nation in the years to come. I think be of vast importance to the Nation in the years of come. I think it is safe to say that our country has made greater progress in useful engineering works during the depression than it would have attained in 50 years of prosperity under former conditions. In carrying out this great public program of engineering construction our Government has been most fortunate in having

upon its roster engineers of outstanding ability and training. I refer to those highly efficient officers of the Army Corps of Engineers, the career engineers of the Bureau of Reclamation in the Department of the Interior, the engineers of the Department of Agriculture, including those of the Bureau of Public Roads, and other engineers and experts scattered throughout the many bureaus agencies of our Government.

When President Roosevelt launched this great recovery program of public works in 1933, the call went out across the country for engineers to plan, supervise, and construct these thousands of public projects in order to create employment, stimulate business, and overcome the dangerous condition that confronted our country as a result of the sudden collapse of our economic system. engineers of the country answered that call for service.

I do not hesitate to assert that what they have accomplished will stand as an enduring monument to their ingenuity, their ability, and their integrity. They have demonstrated to America once more and their integrity. They have demonstrated to America once more their capacity to do things on a gigantic scale.

I think the record of accomplishment in engineering and con-

I think the record of accomplishment in engineering and construction work by the P. W. A. is entitled to the highest commendation. Established in 1933, it has accomplished in the highest degree its intent and purpose. To date it has produced 34,500 projects, costing \$5,900,000,000. These projects created 1,675,000,000 man-hours of direct employment at construction sites; 4,189,000,000 man-hours of labor behind the lines in the Nation's industrial plants and in transportation. As a result of pay rolls spent locally plants and in transportation. As a result of pay rolls spent locally, it is estimated that an additional 3,350,000,000 man-hours of labor have been created in supplying consumers goods.

For the construction of these 34,500 projects there has been a steady and continuous flow of material orders to industry for steel, steady and continuous now of material orders to industry for steel, cement, brick and tile, stone, marble, lumber, plumbing supplies, hardware, etc., for a total of \$2,300,000,000. And with the 1938 program approaching the peak anticipated this coming summer, this expenditure for material will be close to \$3,000,000,000.

This, I am sure you will agree, is a remarkable record. In addition to furnishing employment to overcome the dangerous conditions that threatened our records we have greated these valuables.

tions that threatened our people, we have created these valuable national assets which should command the approval and admiration

of every intelligent, patriotic citizen.

It is obvious that this great undertaking could never have been accomplished except with the scientific aid and cooperation of the accomplished except with the scientific and and cooperation of the engineering profession of our country. Due to the serious collapse in private industry, P. W. A. was fortunate in securing the services of many of the Nation's outstanding engineers and architects. While many of these men have returned to private practice because of improved conditions, the Division has always been able to maintain a very high standard of personnel.

Practically all branches of the engineering profession were called on for the makes up of the Engineering Division. Civil sentiary

Practically all branches of the engineering profession were called on for the make-up of the Engineering Division. Civil, sanitary, bridge, highway, electrical, hydraulic, power, marine, and many other types of engineers found themselves members of the Public Works Administration. This wide variety was necessary because of the very nature of the P. W. A. program. It, from the start, embraced every possible kind of public works, including construction, repair, and improvement of public highways, streets, and parkways; grade-crossing eliminations; public buildings, such as schools, hospitals, courthouses, city halls, institutions, and publicly owned facilities, such as bridges, tunnels, docks, viaducts, waterworks, sewage- and refuse-disposal works, electric power and light plants,

flood control, irrigation and reclamation works, dams and canals, as well as community buildings, stadiums, recreational centers, armories, and auditoriums

On the shoulders of this staff of men of wide training and experience has rested great responsibility. It has been up to them to see that the technical aspects of every P. W. A. project were sound and practicable. It has been up to this Division to coordinate the work of thousands of local officials to insure construction of the projects on sound structural and economic principles and in ac-cordance with local and State laws and the Federal legislation authorizing the program. The Division has also been charged with authorizing the program. The Division has also been charged with the responsibility of following through, step by step to completion, every project receiving P. W. A. financial assistance. This has involved the study of preliminary designs prior to the allotment of Federal funds, the review and approval of the detailed plans and specifications prepared by the architect or engineer selected by the community, the supervision of the award of construction contracts to responsible bidders, the supervision and inspection of the construction work to make sure that it measured up to contract requirements, and the careful control of the expenditure of all requirements, and the careful control of the expenditure of all funds on the project.

But this work has not all been done in Washington. As the technical and construction branch of P. W. A., the Engineering Division, has become a body Nation-wide in scope. There is a regional engineer and staff in each of the several regional offices of P. W. A., a small staff in Washington for direction, control, and review, and a field force of engineer inspectors who are assigned to the various projects during the construction period. The Dito the various projects during the construction period. The Division is so organized that it may be readily expanded or contracted as the needs of the program require. At the present time the Division has a total force of 4,500—approximately 3,500 of whom are engineer inspectors and clerical assistants on duty at the site

of projects under construction.

Perhaps you will be interested to know how a local community Perhaps you will be interested to know how a local community makes application for a P. W. A. project and the procedure used in getting it under way. The Public Works Administration has never dictated for one moment to any community as to what kind of projects it shall apply for. All of the non-Federal projects that have received P. W. A. funds have originated in and been applied for by the communities themselves.

Originally the Public Works Administration set up an administrative office in each State of the Nation. This has been changed. We now have the country divided into regions and an administration.

We now have the country divided into regions and an administrative office is set up in each of the several regions to take care of the activities of the P. W. A. originating in the several States comprised within the region.

The local community, city, county, or other subdivision of the State seeking a project, files its application with the regional office. The application must set out the project sought, show the legal authority of the applicant, and comply with certain requirements so as to advise the P. W. A. of the feasibility of the project, its usefulness, and the financial ability of the applicant to comply with the requirements. This application constitutes the first contact of the local community with the P. W. A.

Almost immediately the engineers enter the picture. When the application is received in the regional office it is promptly reviewed by the engineering section. The proposed project is analyzed from an engineering standpoint to determine whether it is technically and economically sound, reasonable in cost, properly designed in accordance with sound, standard practices, and in the case of applications involving loans to determine that the revenue-producing aspects of the proposed project would produce a necessary income to retire the loan in the period specified.

In cases where, in the opinion of the examining engineer, the estimates of cost are materially too high or too low, on the basis of existing conditions, the estimates are revised accordingly. The project is, of course, also examined in the legal and financial divisions, where it must pass muster as to legality and financial soundness before it can be approved.

When the application reaches the Washington office the field recommendations are then reviewed. After approval by the President a contract between the Federal Government and the local authorities is drawn up stating definitely the purpose, the estimated cost, and the extent and nature of allotment, the date for starting and completing construction of the project, and any special conditions.

When the applicant accepts the contract, a date is set by the regional engineer for the submission of complete plans and specifications for the construction of the project. The local share of the estimated cost of the project is deposited in a construction account and the applicant submits the name and address of the architect or engineer whom it had engaged to prepare the plans, specifications and contract documents. specifications, and contract documents.

Next the applicant presents to the regional engineer informa-tion as to the amount of funds available and a complete list of a number of contracts into which it intends to divide the work schedule showing the sequence for the award and the letting of the contract. After the regional engineer reviews this information he sets up a control estimate for use in all future construction work on the project. After completing the examination of all documents and plans, they are returned to the applicant with recommendation for such changes as are deemed desirable for con-formance of P. W. A. requirements. formance of P. W. A. requirements.

Then comes the advertisement for bids by the applicant. The proposed award of contracts are submitted to the regional office and passed on by the regional engineer. Any dispute on the pro-posed awards is reviewed and the matter settled.

Just prior to the start of construction, the regional engineer assigns an engineer inspector to the project to not only represent

assigns an engineer inspector to the project to not only represent the Government but to work in close cooperation with the engineer and architects retained by the local communities.

In discussing non-Federal projects I have alluded to some of the larger ones such as the Triborough Bridge in New York, the Chicago Sanitary District project, and others. But these large projects, of course, are the exception. While the individual cost ran into millions in those special cases, the average cost of a non-Federal project has been slightly over \$250,000. To date P. W. A. has allotted funds for 7,000 schools, 1,529 sewer systems, 2,421 water systems, 288 power projects, 379 bridges and viaducts, 632 courthouses and city halls, 180 penal institutions, and hundreds of other types of useful public works. In each case, regardless of the size and cost, the same cooperation between the engineers of P. W. A. and those retained by the cities, counties, and States has existed. has existed.

In addition to the P. W. A. program which I have explained, you, of course, know of the tremendous program of the Works Progress Administration. I will not have the time to explain in detail that stupendous undertaking of the Federal Government to furnish a prompt work-relief scheme for the millions of unemployed and destitute citizens during the depression. Naturally the W. P. A., like the P. W. A., depended on the engineering profession for the scientific direction of the program. In the W.P.A., therefore, we find an engineering set-up somewhat analagous to that in the P. W. A. While the programs are not identical, the W. P. A. did undertake a tremendous program of construction work with a view of furnishing employment throughout the

work with a view of furnishing employment throughout on country.

The character of the work carried on by the W. P. A., of course, was largely of a type that enabled it to employ manpower to a much larger degree than the P. W. A. I cannot take the time to explain that program now, but it is a subject that every engineer should naturally be interested in. It performed a great piece of work for the Nation. It improved the streets, parks, and public playgrounds; it built bridges, roads, sewers, local water-supply reservoirs, sewage facilities, country schoolhouses, and various public works of a kind that could be undertaken, having always in consideration the reduction of unemployment rolls in the various communities. It put millions of men and women to work throughout the Nation almost overnight and relieved a most dangerous strain upon our democratic system. It turned the Nation back

out the Nation almost overnight and relieved a most dangerous strain upon our democratic system. It turned the Nation back from the brink of bankruptcy and despair.

The recovery construction program of P. W. A. and W. P. A. was also an answer to a cryling need on the part of every section of the country for more and better schools and hospitals, adequate sewer and water facilities, additional recreational areas for an everincreasing outdoor-minded public. It has virtually "lifted the face of America."

of America.

A very important outcome of this huge program fostered and promoted by the engineers has been a higher standard of construction. For example, fireproof and earthquake-resistant construction is now a requisite on all school buildings over two stories in height and fire-protection measures are required in all school buildings. It is believed that serious losses, both in life and property value, will be avoided in buildings constructed under the high standards set and followed by the Government and the locally retained consulting engineers.

In regard to waterworks, the requirement that all sources of supply be approved both as to quantity and quality, and wherever possible by public-health officials has resulted in systems which are sounder, on an economic basis, and far better from the standpoint of public health. Likewise, in sewerage systems the engineers have taken care to see that they are constructed in accordance with the best standards of public health and that no system is built which removes a nuisance from one community at the expense of another by dumping it into a river to flow down to the next town.

The working partnership that has existed between individual consulting engineers and engineering firms throughout the country and P. W. A. for the past 6 years has certainly been one that has proven of benefit to the country at large. It has produced a deep-rooted confidence of the American public in the Government and its work. This is borne out by the fact that there are on hand in Washington today 5,000 additional applications for as many P. W. A. projects but for which there are no funds at present

available.

In times of military stress the American engineer has always proved his worth as a patriotic citizen and as a soldier and has brought fame and glory to his profession. In normal times of peace the American engineer, whether engaged in Government or private work, has done his job so well that in the matter of engineering structures the United States today stands head and shoulders above all the nations of the world.

We cometimes hear criticism of this hype spending program

shoulders above all the nations of the world.

We sometimes hear criticism of this huge spending program which I have discussed. Critics love to dwell upon the unbearable and crushing burden of the public debt which has been created. I assert it cannot be successfully denied that this program was necessary and justifiable from every standpoint. At the time of its inception our Government was facing a complete break-down of our industrial system. It wisely took the right course. It alleviated the immediate distress and started our country back on the road to more prosperous times. It does not of course, constitute road to more prosperous times. It does not, of course, constitute a cure for the deep-rooted ills of our economic system, but I assert that it did rescue our country from the most dangerous conditions that ever threatened it. I challenge anyone to say that this program was not justified and that these funds of the American people were not properly and wisely expended.

people were not properly and wisely expended.
What did we accomplish with the program? First and most important, we achieved maintenance of democracy; we restored the confidence of our people in their form of government. Second, we conserved the physical and spiritual welfare of our people. Third, we enriched our environment with vast public improvements, such as roads, bridges, sewers, schools, hospitals, recreation facilities, and the like Fourth we brought about a recovery in our ties, and the like. Fourth, we brought about a recovery in our national income.

Since our debt has not been incurred wastefully, but has been wisely invested in public improvements and in the conservation of our most precious asset—our human resources; since the debt increase can be taken care of by working out a rational tax policy; and since the debt burden is by all standards and comparisons a very moderate one, what is there left to weep about for our children and our children's children? The great point to remember is that we have given our children a country salvaged from ruin—a house that has been put in order. If by some occult manipulation we could consult the opinion of our children 30 years hence, and if we could sak them which they would prefer a debtless government. could ask them which they would prefer—a debtless government and a country in ruins, or a government in moderate debt and a country restored through wise governmental investment—does anybody doubt what their answer would be?
In conclusion, I say to the young American engineers of today:

Your predecessors helped to build our Nation and to make it great. May you go forward with the great tradition you have inherited and help to rebuild our Nation on a sound and enduring basis.

The Right to Work

EXTENSION OF REMARKS

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. H. STYLES BRIDGES OF NEW HAMPSHIRE, ON MAY 10, 1939

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Record an able address delivered by my colleague the senior Senator from New Hampshire [Mr. BRIDGES] over the radio on May 10, 1939, from Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, I speak to you tonight as a citizen of our great Republic who is interested only in bringing to your attention a matter of vital national concern. In all openmindedness and with heavy emphasis I submit that the most impor-tant national issue before us today is the right of American workers

The right of our workers to work at jobs of their own choosing is fundamental. The right of workers and all other citizens to be free from any coercion or intimidation in the exercise of their American

from any coercion or intimidation in the exercise of their American birthright is essential under our system of government. I submit to my listeners tonight that the right to work is part and parcel of the Constitution of the United States of America, our Bill of Rights.

For many weeks I have carefully weighted the factors prompting me to make this appeal. Could I have been convinced that it was unnecessary, I would not be speaking at this time. For it should not be necessary to defend the right to work. Neither should it be necessary to defend the right of the American worker to the full protection of our Government from coercion or intimidation in the tection of our Government from coercion or intimidation in the performance of his work.

Ladies and gentlemen, I have followed with keen interest the pro and con of all public and press discussions and hearings in connec-tion with amendment and revision of the National Labor Relations Act, better known as the Wagner Act. Is or is not this Wagner Act. Act, better known as the Wagner Act. Is or is not this Wagner Act a just and true piece of American legislation? Should or should not it be amended? The Committee on Education and Labor of the United States Senate is now considering that question.

I publicly charge that present application and interpretation of the Wagner Act represents an unintentional blot in the annals of our legislative history. Bearing this in mind, I submit that, regardless of the actual language incorporated in the act, its amendment is necessary. I further charge that we cannot have any solid national recovery program unless we first approach this vital question. Approach it with an open mind. In other words, it is necessary that we consider first what is best for our country.

The time has come for Republicans and Demograts and other

The time has come for Republicans and Democrats and other political groups to forget their party prejudices. This issue is above party politics and above personalities. The time has come for all of us here in Washington to gather around a table and hear those for and those against any particular program in true American fashion. Our decisions must be guided by our unbiased judgment. All of us can well seek the guidance of that Almighty Power so needed in our legislative halls today. Our emotions should not sway us. Those who oppose amending the Wagner Act should not be classified as saints. Neither should those who favor amendments be classified as devils. After a personal and conscientious analysis of this whole subject, I state to the American public tonight that I firmly believe it is our solemn duty to amend the National Labor Relations Act.

With a great feeling of humbleness, therefore, as well as with

deep sincerity, I hereby appeal to Senator Wagner, the gentleman who initiated and fathered the present legislation.

I appeal to all Republicans and Democrats.

I particularly ask the attention of Mr. John L. Lewis, head of the Congress of Industrial Organizations, and Mr. William Green, president of the American Federation of Labor.

I appeal to business, large and small, and to all workers in this

I appeal also to that all-important and valuable medium of free expression, the American press. I ask the press if they will print in their papers the full text of this address so that those who may

in their papers the full text of this address so that those who may not be within sound of my voice will be able to read a full and complete copy of this speech in their daily paper.

Finally, I appeal to each and every citizen in America. I ask each and every one of you to study carefully that which I am about to say and to reply to me here in Washington or otherwise make known to the American public in a tolerant and unbiased manner whether or not you agree with the importance of the contention I am about to raise. I ask those who might not feel as I do to point out to me and to the American public wherein I am wrong.

am wrong.

The case I present to you is as follows:

Some weeks ago, in the midst of the present Senate hearings on the Wagner Act, I received a letter from an employees' association the Wagner Act, I received a letter from an employees' association of New York City. The letter was from some workers in a concern doing business throughout the country. The moment that I saw the phrase, "employees' association" used in this letter, I could not help but think of the oft-used offense of many people today wherein and whereby such groups are immediately dismissed under the charge of being employer-dominated. This aspersion has become the common reply of those who do not want to hear the truth. I do not refer to these particular workers tonight for any other reason except to lay the facts before you and to show why I charge openly that the right of American citizens to work on jobs of their own free will and choosing, without molestation from any source is now an issue. The fundamental

to work on jobs of their own free will and choosing, without micelestation from any source, is now an issue. The fundamental American right to work is now in danger.

This particular group of definitely established and nondominated citizen workers to which I have referred have had amicable and happy relationships with their employers for over 12 years. When problems arose those workers were only too happy to approach their bosses with them. The workers tell me that their employers

When problems arose those workers were only too happy to approach their bosses with them. The workers tell me that their employers were always willing to help them solve their problems.

Likewise, when their bosses had problems of their own they, in turn, naturally took them up with the workers, and these workers always gave whatever cooperation possible. In other words, these workers were appreciative of their jobs and of their treatment. They were satisfied with their wages, with their hours, and with all other conditions of their employment. Their bosses likewise were satisfied with the loyalty, spirit, and effort of these employees. These employees further realized that in order to have a weekly pay check the business of their employers must be permitted to pay check the business of their employers must be permitted to make a reasonable and legitimate profit. In a day when we all read and hear so much about bad business, bad employers, and bad labor it is indeed gratifying to realize that relationships such as these still do exist.

In 1934, 1 year before the Wagner Act came into existence, these

In 1934, I year before the Wagner Act came into existence, these workers formed their own little association. It was formed solely for mutual benefit to themselves and their employers. It was formed of their own free will and accord.

In 1935, after the Wagner Act became a law, these workers were compelled to discontinue this happy relationship. They had to cease discussing their problems with their bosses. Likewise their employers were refrained, by the application and interpretation of the Wagner Act, from discussing their problems with the workers.

The picture begins to cloud.

Today we all know that there is a dual labor movement in this on one side stands the American Federation of Labor, on the other the Congress of Industrial Organizations. Every business-man, every worker, and surely every citizen knows this.

We also know that, insofar as the Wagner Act is applied to local we also know that, insolar as the wagner Act is applied to local and national questions of labor and industrial relationships, there are only two labor parties and two groups of workers considered—sometimes only one. We also know that in this bitter fight now being waged between these two rival labor unions quarter is neither asked nor given. Under such a condition it is quite evident that asked nor given. Under such a condition it is quite evident that the public interest suffers. When the public interest suffers we all know that the normal flow of our business and commerce is endangered. Workers become idle. Industries shut down. The very economic structure of the country becomes increasingly undermined.

Now, I ask why American industry, American workers, and the American public must be the "goats" in this fight? It is quite obvious that labor, industry, and the general public are caught in the middle. Most decidedly it is not good policy for these two great labor unions to continue their personal battle. Up to this moment,

however, although the lifeblood of our economic security is being daily annihilated, we have done absolutely nothing to make it known that this sort of thing should not and cannot continue.

I hardly think that my listeners will now fail to understand why it is that in New York City the C. I. O. saw fit to assume what it to state in New York City the C. I. O. saw it to assume what it considered its lawful prerogative. It proceeded to distribute literature of its own phraseology in and to the workers of this employees' association to which I have referred. In practically all of this literature is printed a clause similar to this: "Bear in mind that under the Wagner Act you are protected in choosing a union of your own free will."

Now, when the New York local C. I. O. saw that the distribution of its literature did not bring about the sought-after result, namely, the taking over of these American citizen workers, it requested that

of its literature did not bring about the sought-after result, namely, the taking over of these American citizen workers, it requested that a mass meeting be held of all these employees—employees who already belonged to their own personal association.

At this meeting a leader of this C. I. O. union was to attend and personally appeal to these workers to join this particular C. I. O. union. The employees' association, in true American fashion, granted this request, granted it even though they could see no bona fide justification for it. They were quite happy in their own sphere of existence. They did not want to annoy anyone, and they did not want anyone to annoy them. Their only interest was to keep their jobs, continue to receive their weekly pay checks, and provide for their wives, children, and homes.

It is very interesting to note that seven C. I. O. union officials appeared in a body at this particular meeting of this employees' association. One spokesman for the C. I. O. was all that had been expected. Each of the seven made his appeal and did his best to sell C. I. O. to these American workers. Specially prepared ballots were produced. In this enlightened day of labor politics it is not surprising to find that these C. I. O. ballots failed to contain the one and only specific question at issue, namely, Did or did not those workers want to join a C. I. O. union? Despite this series of self-assumed Wegner Act liberties, the record shows that 97 of the 102 employees present voted to remain as they were. They were forced to write in their desire and wish, and they expressly did so.

Was it not natural for these workers to feel that this election expressly did so.

Was it not natural for these workers to feel that this election

Was it not natural for these workers to feel that this election had settled the question in an American manner and that henceforth they would be free from trouble? The C. I. O., however, did not take this point of view. C. I. O. pickets soon began to walk up and down in front of the various stores in which these workers earned their daily bread. C. I. O. pickets announced to the world that this particular store and company was unfair to organized labor. This was untrue. As a result of this picketing it followed quite naturally that business began to fall off. When business began to fall off, the security of these workers began to be jeopardized

Ladies and gentlemen, something far more important then took Ladies and gentlemen, something far more important then took place. We became confronted, as a Nation, with the problem of the right to work the American way. These workers became desperate. Seeking any relief possible it was quite natural for them to make an appeal to the New York State Labor Mediation Board. In making this appeal they ran the risk of being misjudged. Labor groups and Wagner Act agencies try to discourage such appeals. This they do by saying to the public, "Pay no attention to them. They are a company-dominated union."

When these workers appealed to the State Labor Board they were when these workers appeared to the State Labor Board they were informed that it was impossible to do anything for them. Why? They were told that because they had bargained successfully with their employers and because there was no labor dispute or other dispute present, the State labor board had no official power to take up their case.

They were further informed that it was useless to appeal to the National Labor Relations Board because it, too, was powerless to intervene or grant relief under the Wagner Act.

May I point out at this time, ladies and gentlemen, that this unlawful picketing, this deliberate un-American choking of business, this systematic indirect blackmail has continued for more than 3 years. It is still in effect today.

What are these workers to do? What are the millions of others like them in America to do? Should not the Wagner Act be

like them in America to do? amended to afford them relief?

In recent weeks this C. I. O. local has seen fit to take further unlawful steps, namely to intimidate and threaten the employers with letters, boycotts, etc., not only in New York City, if you please, but in stores located in other parts of the Nation. This is not an isolated case of which I speak.

is not an isolated case of which I speak.

After I received this letter of appeal and investigated the facts, I appeared before the Senate Committee on Education and Labor. This was on Monday, April 24. I there introduced for the committee's record the letter that I had received, and I also made a statement. At that time two of these workers gave their testimony. It will be of interest to the American public to know that during all of this hearing Chairman J. Warren Madden, of the National Labor Relations Board, was present. The records show that when he was questioned on the matter he admitted that under the Wagner Act the National Labor Relations Board had no power to intercede or give relief in a case like this. The picketing and loss of business to the employer and loss of security to the workers still continue. To all of you within sound of my voice tonight and to all whom I have directed this statement of facts I submit that this presents a serious and vital American question.

this presents a serious and vital American question.

I believe in labor unions. I believe in collective bargaining. I believe in the right to strike. I grant willingly the right of any worker in America to join any union he so desires, provided he is

not coerced or intimidated or forced into so doing. I say to the American people, and to Mr. Lewis and the C. I. O. in particular, that this right is an American prerogative against which there is no argument. It is just and fair that we grant these proper powers and rights to such groups as comprise both the A. F. of L. and the C. I. O., which groups approximate around 7,000,000 people. But we should immediately take any and all necessary steps to protect the thirty or forty million workers in this country who might not desire to join either of these labor movements or any other labor move-ments. We should take steps to put a stop to any and all of these illegal and un-American activities that some labor organizations

illegal and un-American activities that some labor organizations have engaged in and are now engaged in.

It is quite an easy matter in cases like this, to propound a lot of questions and insert a lot of issues that are far outside of the basic point I raise tonight. Do not just say that a case like this is purely a local matter. Or that a case like this is one which the injured workers should take to court and secure necessary relief via the injunction route. I admit this can be done. But I most emphatically and seriously point out that this costs time and money. It is not always easy for workers earning their daily bread to find time and money.

I further point out that if the Wagner Act was intended to lessen strife in industry and to protect all workers; if the Wagner Act means that no discrimination is to be shown toward any worker in this country, how is it that such activities as I have discussed are tolerated? Or was it intended that the Wagner Act was to be a tool of any one labor organization and operate to the detriment of the great mass of American workers?

Do such activities as these lessen industrial strife? Do they

Do such activities as these lessen industrial strife? help the vital flow of our business and commerce? safeguard the right of American workers to work in an American way? By what authority can any union proceed in such manner? From whence does such license of self-granted authority come? Why should it be necessary for innocent workers and innocent employers to spend their money and their time in court merely to establish the fact that such activities are unlawful and un-

If the Wagner Act fails to protect all workers and lessen the burden of industrial strife, is it too much to ask that it be amended so that any and all persons so motivated will be prohibited from following unlawful courses? It's undoubtedly true that an aroused American public today is not attacking the written law law for the course of the protection of the course of the cour ten language of the Wagner Act as much as its application and interpretation. But that is no reason why all, Republicans and Democrats alike, should not see the justice of my appeal and join to add to the Wagner Act whatever language is necessary to protect, once and for all, the right of an American worker to pick tect, once and for all, the right of an American worker to pick a job of his own choosing and be protected in his right to work when of his own free will he elects not to join any union. Such right and such protection are fundamental American principles. The evidence on this particular case is in my office here in Washington. It is in the records of the Senate Labor Committee. Any-

one who might feel that I am not speaking with a full knowledge

of all circumstances can see the proof.

Ladies and gentlemen, I am extremely grateful for your kind Ladies and gentlemen, I am extremely grateful for your kind attention. I am especially hopeful that my sincere appeal will be answered. If there are some who might justifiably feel that I am wrong, I welcome their advice. We have traveled a long, long way to build up this United States of America. Freedom of speech, freedom of press, and all the other liberties guaranteed by our Constitution have made our growth possible. But I point out in all sincerity that it is such questions as I have raised here tonight that are making many workers in this country ask themselves just what it means to be an American citizen. In trying to solve questions such as these I plead for tolerance, guidance, and unbiased judgment on the part of each and every one of us.

We stand today as a nation at the very crossroads. Let us seek guidance and help from the Power Above, who watches so well over us all. It is my sincere conviction that if I had not spoken as I have this evening on the question that I consider a basic part of our republican form of government I would be derelict to the duty of the office I hold. I would most certainly be a poor recipient of the benefits that have been bestowed upon me by a country in which I am proud to live and of which I am thankful to be a small part.

I am proud to live and of which I am thankful to be a small part.

I thank you.

Senator Robert R. Reynolds

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

EDITORIAL BY CARL GOERCH

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the Congressional RECORD an editorial from the pen of Mr. Carl Goerch, editor and publisher of The State magazine at Raleigh, N. C., entitled "Senator ROBERT REYNOLDS," together with a telegram which I received this morning from Los Angeles, Calif., as a result of my 41/2-hour speech upon the floor of the Senate yesterday, May 11, on a question of personal privi-

I desire to add that this telegram is merely one of a large number of communications, telephone calls, and personal calls which I have received today in particular reference to my address of yesterday.

There being no objection, the editorial and telegram were ordered to be printed in the RECORD, as follows:

> [From The State, Raleigh, N. C.] SENATOR ROBERT REYNOLDS

A year ago the voters of North Carolina elected a United States Senator. They decided to bestow this distinction upon ROBERT RICE REYNOLDS, of Asheville, whom they had similarly honored 6 years before.
"Our Bob" was a popular hero. In 1932 he defeated that grand

old campaigner, Cameron Morrison. In 1938 he ran against Congressman Frank Hancock and won without any great amount of

difficulty.

But today, instead of being a popular hero, Senator Reynolds is being condemned from one end of North Carolina to the other. The very people who had praised his many fine qualities a few years ago are now denouncing him for everything they can think of. They are calling him pro-Hitler and are intimating that he is a traitor to his country and to our principles of government. "Down with Reynolds" seems to be one of the popular slogans of the day. And may we say in this connection that we have never seen citizens of North Carolina display such silly, absurd, uncalled-for sentiments as are being manifested today in this connection.

Call Bob Reynolds a playboy if you want to. Say that he lacks the qualifications of a statesman if you so desire. Label him almost anything else that may come to your mind. But when you try to cast aspersions upon his patriotism, you are barking up the wrong tree.

wrong tree.

The idea of saying that REYNOLDS is pro-Hitler is just about as reasonable as saying that Governor Hoey is a candidate for dog catcher in Hanging Dog Township, Cherokee County. He has never said anything and has never written anything that could be used in designating him as a supporter of any of the tenets of government which Hitler has sponsored. He has consistently fought the introduction of foreign "isms" into our Government. He is a recognized foe of all aliens and of all dictators. He is a Democrat if there ever was one. if there ever was one.

if there ever was one.

REYNOLDS a supporter of Hitler? Anyone who would believe that would believe that the New York World's Fair is now in progress in Bertie County. Of all the silly, asinine things we ever have heard, this just about climaxes them all. And yet we have read a dozen or more editorials in North Carolina newspapers and we have heard scores of citizens express themselves along this line. Victims of malicious propaganda, which was started in northern publications, they have deliberately permitted themselves to be blinded and deceived. deceived.

Pause and think for a moment. What has REYNOLDS ever said or written that could be used against him in this connection?

He has traveled all over the world. Last year he went to Europe and visited Italy, France, Germany, England, and other countries. He viewed conditions first-hand. Most of those people who are now denouncing him so bitterly have never set foot on foreign soil. Senator Reynolds came back from his trip abroad. He said, among other things, that he found the German people happy; that there were no evidences of unemployment; and that everything seemed to be moving along nicely in that country.

Immediately there was an unroar particularly in the North Our

Immediately there was an uproar, particularly in the North. Our own people, here in North Carolina, joined the pack and began denouncing the very man for whom they had voted less than a year ago.

Of all the dirty, scandalmongering, malicious things we have ever heard of, this attack on Senator Reynolds is the worst. Those newspapers and individuals who have joined the pack of hounds that are baying at his heels ought to be everlastingly ashamed of themselves.

What is wrong with some of our people, anyway?

A year or more ago they were denouncing Senator Balley for everything they could think of. They called him a traitor, too, and said that he ought to be removed from office.

Now they have shifted their attack and are bringing it to bear

upon Senator REYNOLDS.

We stood by BAILEY because we believed his ideas concerning the economic progress of our country were sound.

We stand by Reynolds because we are convinced that the campaign being waged against him today is just as unsound and just as uncalled for as was that which was waged against Balley.

Once more: send us a single quotation Bob Reynolds has made that could justifiably be used in classifying him as endorsing the policies of Hitler, and we'll gladly take back everything we have just said.

Los Angeles, Calif., May 12, 1939.

Senator ROBERT REVNOLDS.

Senate Office Building, Washington, D. C .:

Your stand on Senate floor heartily commended by Los Angeles Vindicators, and merits the warm-hearted applause of all red-blooded Americans. There are too many shyster columnists in this country subservient to and presumably in the pay of organized minorities. Warmest personal regards.

Los Angeles Unit, Vindicators, By Dr. Wilson.

Washington's New Airport

EXTENSION OF REMARKS

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

EDITORIAL FROM THE WASHINGTON POST

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Washington Post of May 7, 1939, entitled "Our New Airport," dealing with the progress of the Gravelly Point Airport in Washington, D. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 7, 1939]

OUR NEW AIRPORT

It is difficult for many Washingtonians to believe that work on Gravelly Point Airport is going forward with a burst of speed. After 10 years of delay in starting construction of this model aircraft terminal, all restraints appear to have been removed. Within another year the large area on the south bank of the Potomac now being built up by dredging operations should be almost ready for planes to take off.

The Civil Aeronautics Authority recently reached complete agree-ment with the National Capital Park and Planning Commission and

The Civil Aeronautics Authority recently reached complete agreement with the National Capital Park and Planning Commission and the Fine Arts Commission upon relocation of the Mount Vernon Boulevard in the vicinity of the airport site. Designs for the airport buildings are being prepared. And dredges are daily pouring from 50.000 to 75,000 cubic yards of sand, gravel, and mud into the low area where most of the runways will later be built.

The rapid progress now being made unfortunately does not mean that all problems connected with the airport have been solved. Protests are being made against the proposed location of an administration building for the Civil Aeronautics Authority on the site. The House has passed a bill providing for elimination of any administration structure from the airport project, and Senator Greson, one of the prominent sponsors of the Gravelly Point development, is supporting that position. He rightly believes that this site should be reserved for air-terminal service and not utilized for Government buildings. It is urged, with a good deal of logic, that housing of the C. A. A. on the airport is no more essential than accommodation of the I. C. C. at Union Station.

Obviously the C. A. A. needs a building of its own where all of its branches can be brought under one roof. But such a structure could be located on any one of many more appropriate sites than the airport. Already the project is marred to some extent by the laboratories of the Bureau of Public Roads built near the site. While these are not in the line of any runway they might constitute a hazard in case of emergency or in blind flying. And the same would doubtless be true of an administrative building large enough to accommodate the C. A. A.

The question of locating this proposed office building ought to be carefully reviewed along with the cost of the project. Present

The question of locating this proposed office building ought to be carefully reviewed along with the cost of the project. Present indications are that the airport may cost as much as \$10,000,000. which is far more than any congressional group contemplated spending for this purpose. To safeguard the airport development against possible adverse action in Congress, as well as to avoid unnecessary outlays, further scrutiny of the plans from the viewpoint of cost is also desirable. British Propaganda Exposed

EXTENSION OF REMARKS

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

EDITORIAL FROM PITTSBURGH SUN-TELEGRAPH

Mr. JOHNSON of California. Mr. President, I ask unanimous consent that there be inserted in the RECORD an editorial entitled "British Propaganda Exposed," published in the Pittsburgh Sun-Telegraph.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Pittsburgh (Pa.) Sun-Telegraph] BRITISH PROPAGANDA EXPOSED

The American people are greatly indebted to and should be greatly appreciative of Senator Gerald P. Nye, of North Dakota, for his astounding revelation of the carefully laid plans of foreign propagandists to involve the United States in the next European war.

Senator Nye has put into the Congressional Record a chapter from a British volume which deals frankly with the means which will be pursued to get the United States into "the next war" on the side of England and her allies.

While it is certainly no news to us now, this book offers a valu-

While it is certainly no news to us now, this book offers a valuable reminder of how the United States was made "a propaganda able reinfluer of how the Orlicut states was made a propagandists battlefield" during the World War and how British propagandists finally won a victory over German propagandists by swinging us into a conflict in which we had no vital concern.

The important thing that the book reveals is that the British intend and expect to do the same thing again if England again

As casually as if the American people were being invited to a tea party, at which their presence was necessary for the success of the occasion, this British author, Sidney Rogerson, writes:
"In the next war, as in the last, the result will probably depend upon the way in which the United States acts and her attitude will reflect the reaction of her people to propaganda properly complied." applied."

And with a confidence in our gullibility which belittles our national intelligence as well as our ability to read the plain lessons of our recent history, he boasts:

of our recent history, he boasts:

"Since on paper our case toward neutrals appears to lack a mainspring, it will behoove us to manufacture what we can and press it everywhere we can—a task of making bricks without straw, at which we showed ourselves to excel in the last war."

While admitting that the American people are no longer so naive as to believe the "atrocity" stories which they once swallowed hook, line, and sinker, the British opinion is that we are still ripe for the old gag about "saving the world for democracy," as this amazingly frank passage attests:

"Fortunately, with America our propaganda is on firm ground. We can be entirely sincere, as our main plank will be the old democratic one.

We can be entirely sincere, as our main plank will be the old democratic one.

"We must clearly enunciate our belief in the democratic form of government and our firm resolve to adhere to it."

The book from which Senator Nyz quotes was permitted to circulate only briefly in this country, and according to him the copy which he chanced to read in a university library is the only one now extant in the United States.

However, due to his patriotic vigilance, the parts of it dealing with the vital interests of the United States are now a record of

Congress.

It is pictured as one English purpose to form and direct American opinion in support of England in advance of war by keeping English propagandists constantly in our midst.

That part of the program has been in full operation for years. English literary figures and lecturers have made a beaten path from shore to shore of the American continent preaching the English viewpoint and seeking American sympathy for every English aim, ranging all the way from defaulted debts of the last war to our participation in the next war.

participation in the next war.

Another English purpose is to lead us into Europe's next war through the back door by involving the United States in war with

In proof of this is the following quotation from Rogerson's book, which Senator Nye read into the Congressional Record:
"The position will naturally be eased if Japan were involved, and

this might and probably would bring America in without further ado.

ado.

"At any rate, it would be a natural and obvious object of our propagandists to achieve this, just as during the Great War they succeeded in embroiling the United States with Germany."

Here is British diplomacy and intrigue in its fullest flower.

England, and not the United States, has interests and investments in the Orient which might be worth going to war to save.

England, and not the United States, is a world empire, vulnerable in Asia as well as in Europe.

England cannot afford to divide her armed forces between Asia and Furone.

and Europe.

Therefore, the utilization of American armed forces to defend

British interests and investments in the Orient is the ultimate aim and purpose of English diplomacy and intrigue.

It is no mere prediction and no idle threat that the United States will become "a propaganda battlefield" in the event of war in Europe.

It is already that.

If the ancient adage about being "forearmed if forewarned" is true, then Senator NyE has done his country an enormous service.

Movement of Industries from One State to Another

EXTENSION OF REMARKS

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Friday, May 12 (legislative day of Monday, May 8), 1939

EDITORIAL FROM THE COLUMBIA (S. C.) STATE

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Should Government Move Industry from One Region to Another?" published in The State, of Columbia, S. C., in the issue of May 10,

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From The State, Columbia, S. C., May 10, 1939]

SHOULD GOVERNMENT MOVE INDUSTRY FROM ONE REGION TO ANOTHER?

Apparently the Reconstruction Finance Corporation agreed tentatively to make a loan to a Massachusetts textile corporation for the building of a new plant at Spartanburg, S. C. The present New England plant, according to the story, would then be abandoned.

Naturally, New England Senators, Congressmen, Governors, and others, when they heard of the plan, leaped to prevent the making of a Government loan that would take from their region one of its industrial plants; and there is no good reason to criticize the New Englanders for what they are trying to do in this case. Offi-cials and private citizens of the Southeast would fight hard to clais and private chizens of the Southeast would ight hard to stop Government if it were financing the removal of industry from this to some other region. If our political leaders failed to fight in such a cause, we, the people, would blow their official heads off at the next election. Right or wrong, that would be the

off at the next election. Right or wrong, that would be the popular attitude.

This newspaper works as hard as it knows how to work for the development of South Carolina. It feels an upward surge of pleasure when any locality in South Carolina lands a sound new industry. But this newspaper cannot cheer with unrestrained joy when government begins the dangerous policy of financing the removal of industry from one region to another. This newspaper cannot see that it is government's proper business to develop the removal of industry from one region to another. This newspaper cannot see that it is government's proper business to develop one region at the expense of another. The fact that national policy has at times been unfair to the Southeast does not change the moral factors involved. This newspaper believes in national fairness as policy and principle, and in natural regional development. It doubts the wisdom of making deliberate errors in efforts to balance previously made errors. For example, the National Government has been unfair to one of the South's products—oleomargatine, but this prosperser does not suggest that correction he at -but this newspaper does not suggest that correction be attempted by discriminating henceforth against butter. Merely remove the discrimination against a cottonseed-oil product.

But that is high-ground stuff. Let's come down to the bog of politics and look at this proposed and opposed R. F. C. loan that would benefit one region, and perhaps hurt another. If that kind of business is done by a Democratic administration, friendly to the industrial development of the South, will not the same kind of business be done by a Republican administration, indifferent to the South? If we grab while our grabbing is good, they will grab when their turn comes. This is a matter of survival and selfishness; not one of emotional hostility between regions.

One hears the next migration of the textile industry will be westward, to the Mississippi and beyond. If that migration develops, and if Government takes a hand in it by lending money to the migrants, the Southeast will be as deeply aroused as New England is now, and will fight as New England is fighting.

Economic conflicts between regions are inevitable. Such conflicts may increase in intensity as the Southeast expands in agriculture and in industry. The role of the National Government is to adopt rules for fair and natural competing, and to act as umpire while the struggles are on. But that Government should never have favorites among the regions.

In democracies, majorities rule, and favoritism, if it is practiced, is likely to be mainly in the interest of the majorities. The Southeast east and the Southwest are mimorities.

is likely to be mainly in the interest of the majorities. The Southeast and the Southwest are minorities.

Flood-Control Appropriation

EXTENSION OF REMARKS

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1939

Mr. ELLIS. Mr. Speaker, I rise in favor of the amendments to add \$25,000,000 to the flood-control appropriation.

The remarks of the gentleman from New York [Mr. TABER], who has just preceded me, are very interesting, but the fact remains that we are just now beginning the program of flood control in this Nation. It is not a matter of increasing the appropriation.

Let us see where we stand. By the Flood Control Acts of 1936, 1937, and 1938 the Congress authorized the construction of flood-control projects that would cost a total of \$1,148,-877,000. Appropriations were not authorized in that amount, however, and herein lies a most important factor to be considered. In those bills the Congress set up another figure, a much lower figure, a figure of only \$698,877,000, which is the total authorization for all appropriations. In other words, the cost of projects authorized is \$450,000,000 larger than the appropriations authorized for the same projects.

No one seems to be able to explain why this difference. To say the least, it is most deceiving because the practical result is that we all think we have a lot of projects authorized in our districts which are, in fact, not authorized at all.

Here is how it works. The White River Basin in Arkansas and Missouri, in which most of my district lies, for instance, has six projects authorized: At Norfork on the North Fork River, at Lone Rock on the Buffalo River, at Greers Ferry on the Little Red River, at Water Valley on Eleven Point River, at Bell Foley on Strawberry River, all in Arkansas, and at Clearwater on the Black River in Missouri. No appropriation was made for any of these. It would cost approximately \$75,000,000 to construct all of them. The language of the act is as follows:

For the initial and partial accomplishment of said plan there is hereby authorized \$25,000,000 for reservoirs; the reservoirs to be selected and approved by the Chief of Engineers.

The War Department construes this to mean that in no event can more projects be begun than can be completed within the \$25,000,000. Then only two of them can be begun until we enlarge the authorization. Actually, therefore, we have an authorization for only two projects, though the act authorizes the construction of six. The point worth considering here is that in this program the Congress has evidently not been willing to assume responsibility for its own children. It has created projects on paper but has refused to give them even an authorization for an appropriation to go forward.

PROJECTS YET UNAUTHORIZED

The picture is really darker than it might appear from the above figures. The Congress began these authorizations only 3 years ago. Many of the choice sites as yet have not been included. It will be observed that not a single one of the White River Basin projects listed above is in the main channel of the river. A comprehensive survey of the White River was begun in 1928, pursuant to section 1 of the River and Harbor Act of 1927, and section 10 of the Flood Control Act of 1928, the survey completed, and the report, signed by Patrick J. Hurley, Secretary of War, made to the Congress in 1932, containing a general plan for the improvement of the river. This report was later ordered printed and became House Document 102 of the Seventy-third Congress, first session. The engineers in this voluminous report located three projects in the main channel of the river, the first and smallest being at Beaver in Carroll County, the next at Table Rock in Missouri, and the third at Wildcat Shoals, between Baxter and Marion Counties in Arkansas. These three reservoirs, in addition to a storage capacity of 5,058,700 acre-feet for flood control, would produce annually 1,000,000,000 kilowatt-hours of electricity. For some mysterious reason not one of these three projects was included in the Flood Control Acts of 1936, 1937, or 1938. It is, therefore, evident that when these other desirable projects throughout the Nation are added to the total projects authorized, the amount required for construction will far exceed \$1,148,877,000.

AMOUNT OF \$110,000,000 INSUFFICIENT

It is also evident that the Budget Director in setting up a figure of \$110,000,000 is driving at the total of appropriations authorized instead of the projects authorized. It is only reasonable that next year a new flood-control bill will be enacted as law, adding many more of these desirable reservoirs, and then the Budget Director's figures would be entirely out of line.

General Schley, Chief of United States Engineers, in testifying before the Appropriations Committee—page 107 of the hearings—stated:

We could spend economically in carrying forward the new work authorized by Congress in the next fiscal year (1940) \$195,000,000 for flood control.

While I think it is also evident that the Chief of Engineers is driving at the low figure of appropriations authorized instead of projects authorized, his figure comes much nearer fitting into the long-range program than that of the Budget Director.

Anticipating that the Appropriations Committee would likely write into this bill (H. R. 6260) the figure of the Budget Director, a group of us have held several meetings in an effort to arrive at a reasonable figure to submit by way of amendment for an increase. Yesterday this group decided to fight for a \$25,000,000 increase in the flood-control item. We arrived at this figure after conferring with the President and with the majority leader [Mr. Rayburn]. I do not mean that the President agreed to this amendment but he did agree that this amount might be used for this purpose from the 1940 relief appropriation; therefore he agreed to the merit of it.

Members of the Appropriations Committee have been quoted as saying that probably in behalf of no other bill has there been as much interest manifested. Many Members of Congress, including myself, appeared before the committee in an appeal for an increase. My statement appears at pages 202 to 207 of the hearings.

Early this morning I went to the Appropriations Committee room and obtained a copy of this bill, which was printed during the night, a copy of the report and a copy of the hearings. I was favorably surprised to find the \$25,000,000 increase written into the appropriation; but 2 or 3 hours later I was again surprised when I learned that the whole Committee on Appropriations had rejected the subcommittee recommendation and had ordered the bill reprinted with the increase stricken. We are asking that they be again added to the bill.

WHERE WOULD THE MONEY GO?

Of course, the Army engineers are not bound by their estimates, but General Schley submitted to the subcommittee—table 10, page 92, of the hearings—a statement showing the proposed application of funds, if the Budget figures are adopted. This statement includes the Norfork Reservoir on the North Fork River in Baxter County, in my district, to cost an estimated total of \$11,327,000, and to have a tentative allocation of \$100,000 for the next fiscal year. I called General Schley this morning, and he told me that we should be able to get some dirt started moving on this project within a year, contingent upon the engineers being able to hurry the designs, or upon an increased appropriation over and above the Budget estimate.

General Schley also submitted to the committee a statement—table 18, page 116, of the hearings—in which he sets out that with an increase of \$20,000,000 over and above the Budget estimate they could profitably allocate additional funds to the Norfork Reservoir for the next fiscal year to the extent of \$300,000, making a total of \$400,000. This project is typical of most of the others with similar status. In other words, we must have the increase to really get started. An increase of \$25,000,000, as we are now proposing, would even raise this figure. We think this is very conservative in view of General Schley's further statement—table 16, page 10, of the hearings—that they could profitably expend \$1,300,000 on this project in the fiscal year 1940. This, of course, was anticipating an appropriation of the full \$195,000,000.

PROJECTS UNDER CONSTRUCTION

Sixty-nine projects are now under construction throughout the Nation, but not even one in my State, even though Arkansas, next to Louisiana, suffers the heaviest average annual flood loss of any State. Approximately \$80,000,000 of whatever appropriation we make will be required to carry on the work already under way. New projects will be begun only from appropriations above this figure.

VALUE OF FLOOD CONTROL

The enlarged Gobi Desert and the ancient City of Babylon will stand forever as monuments to a careless liquidation of our greatest resource, the soil. From a great fertile plains region the Chinese expanded the desert by permitting their top soil, century after century, to wash into the sea. No one Chinaman, perhaps, observed much change in his own lifetime, but we have the benefit of history. So, also, the Babylonians, beginning way back at the end of the third millennium B. C., built some six great cities, one upon the other, in the rich and fertile Euphrates Valley, carrying on a careless agriculture until finally their soil disappeared to the point that there was no longer sufficient humus to hold the moisture, the vegetation faded out, and a whole civilization vanished. Though admittedly it will be centuries, unless we do something about it, the same result is inevitable here in America.

We have been the last of so-called civilized countries to adopt extensive practices of conservation. By permitting our top soil to gradually wash away and blow away, by plowing up the plains and cultivating hillsides that should have ever remained in forest or pasture, we have gradually built the dust storms and the droughts and the floods. We must now set about to unbuild them.

Mr. H. H. Bennett, Chief of the Soil Conservation Service, tells us that two hundred 40-acre farms are lost in the United States every 24 hours by erosion, that 3,000,000,000 tons of soil per year are washed into the sea, and that 100,000,000 acres

of agricultural lands have already been totally destroyed or | seriously damaged

The flood losses in my State from overflow waters alone are greater than the fire losses. Seven thousand square miles of the alluvial valley in the White River-and there is no better land in the world-are flooded every 2 or 3 years. At the height of the 1927 flood the White River emptied 440,000 cubic feet of floodwaters per second into the Mississippi. This amounted to approximately one-fifth of the floodwaters passing that point.

All 69 of the projects under construction and the 91 projects which the engineers propose to begin will help immensely to put an end to an era of soil destruction. Every single one of them has been determined by the engineers to be economically justified, which means that in the end they will cost the people nothing. Furthermore, there are many byproducts of flood control that help to reduce the cost.

WATER POWER

A large percent of the projects to be commenced upon the adoption of these amendments will be power producers.

One of the greatest needs of my State is cheap power. The Norfork Dam alone will produce 217,043,000 kilowatthours of current annually. There is not only a ready market but a demand in Arkansas for many times this amount. The White River drainage basin alone comprises 28,000 square miles-more than two-thirds the size of the celebrated Tennessee Basin. The Ozark region of the White River Basin consists chiefly of small farms, and there is no good reason why every farm home in this whole territory should not be thoroughly electrified from this power that has been for centuries wasting itself to the sea-and electrified at a price which the farmers can afford to pay. This same cheap current can be used to grind the limestone and phosphate, abundantly stored in this region, into cheap fertilizers so badly needed on all the farms. The development of other minerals and of small industries depends upon this program.

Our known sources of power, chiefly coal, oil, and gas, are becoming extremely limited, and I think there is some duty on the part of this generation to conserve these deposits for our own children and the generations that shall follow them. Every kilowatt-hour produced from water power is actually wealth created, because a definite amount of coal or oil or gas has been conserved.

Nothing has been done in the T. V. A. country that cannot be done here.

One of our greatest handicaps in the White River Basin is high freight rates. Navigation means low freight rates. The river can be made navigable, in conjunction with the floodcontrol program, at least as far north as Cotter, or a distance of more than 300 miles. It is difficult to conceive of anything more beneficial to my district than navigation into the heart of the Ozarks.

RECREATIONAL ADVANTAGES

Every reservoir created by these dual-purpose dams forms a great recreational center which also adds to the total wealth of any community. Give us water in the Ozarks and they will rival Florida and California as a tourist attraction.

CONCLUSION

The adoption of these amendments will give to many parts of the Nation that have thus far been left out of major New Deal developments an opportunity to share for all time in these newly created assets. Measured in terms of flood losses eliminated, cheap water power produced, aids to navigation, irrigation and recreation possibilities, not to mention the benefits from labor, the sale of materials, and increased purchasing power in our communities, each one of these dams will add materially to the permanent wealth of the people and will stand as monuments to the future happiness of generations yet unborn.

The amendments were adopted on a roll call by a vote of 182 to 153.

LXXXIV—App——124

Congress Should Pay 1935-36 Cotton Certificates

EXTENSION OF REMARKS

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

Mr. PATMAN. Mr. Speaker, many resolutions have been passed by organizations of farmers favoring the passage of H. R. 193, providing for the full payment of the 1935-36 cotton certificates. The Bowie County (Tex.) Agricultural Association has recently passed a resolution that explains the proposal more fully and the reasons for its enactment than any other resolution I have received. It is as follows:

Whereas it is known that in Bowie County there exists a surplus whereas it is known that in Bowle County there exists a surplus of certain tax-exemption cotton certificates issued under the Bankhead Cotton Act for the crop year 1935–36. Furthermore, it is known that there exists a surplus of said certificates in proportion throughout the State of Texas and the Southern States;

Whereas such surplus of said certificates are in possession of those farmers who either by reason of drought or unusually nega-tive crop conditions or because of compliance with the acreagereduction program of the Bankhead Cotton Act could not utilize all of said certificates;

Whereas said certificates are in possession of those farmers, who in compliance with the request of the Secretary of Agriculture refused to sell or transfer said certificates below par value of same;

Whereas since redemption of these certificates would furnish a needed asset to those farmers who by reason of drought or acreage reduction produced a short crop of cotton which resulted in a shortage of income;

Whereas a bill was introduced in the House of Representatives of the United States of America by Hon. WRIGHT PATMAN, of Texas, the purpose of which bill is to provide for redemption of these certain cotton certificates issued under the said Bankhead Cotton

Whereas said bill was dated January 3, 1939, and labeled H. R. 193 in the first session of the Seventy-sixth Congress;

Whereas this bill provides:

"That upon application to the Secretary of Agriculture by any producer of cotton to whom tax-exemption certificates for the crop year 1935-36 were issued under the Cotton Control Act approved April 21, 1934, the Secretary is authorized and directed to pay, out of appropriations made pursuant to this act:

"(a) To any such producer who transferred certificates originally issued to him for the crop year 1935-36 to a certificate pool established under such act for the exchange of certificates, the difference between the amount heretofore received by him for the certificates he transferred and an amount ascertained by multiplying 4 cents by the number of pounds of lint cotton represented by such certificates: and

"(b) To any such producer, to whom certificates for the crop year 1935-36 were originally issued, an amount ascertained by multiplying 4 cents by the number of pounds of lint cotton represented by the uncanceled certificates originally issued to him which such producer surrenders to the Secretary and which he at no time transferred to any pool or to any other person.

"SEC. 2. As used in this act, the term 'producer' includes the heirs legal representatives of a producer. A transfer to such heirs or or legal representatives of a producer. A transfer to such heirs or legal representatives shall not be considered a transfer within the meaning of section 1 (b).

"Sec. 3. The Secretary is authorized to utilize the personnel services and facilities of the Agricultural Adjustment Administration in carrying out this act.

"SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out this act."

Whereas the Bowie County Agricultural Association is an organization of 551 farmers in Bowie County, Tex.; and
Whereas the Bowie County Agricultural Association in regular business meeting on this 17th day of April 1939 deems it absolutely imperative that a positive action be taken in regard to said bill H. R. 193 not only because of the added income provided by same to those farmers who now hold said certificates but in order to keen faith with these agreesaid farmers. Now therefore be it keep faith with these aforesaid farmers: Now, therefore, be it

Resolved, That the Bowie County Agricultural Association, with all of its auxiliaries, by unanimous vote of the entire membership assembled, go on record as favoring said bill H. R. 193 in its entirety, also be it further

Resolved, That the president of the Bowie County Agricultural Association be instructed by the association to present this resolu-tion to the Congressmen of district No. 1 of the State of Texas and to the Senators of the State of Texas in Washington, D. C., and demand positive action regarding said bill H. R. 193.
L. M. Day,
C. O. Moser, Jr.,
E. G. Arnold,

Executive Committee of the Bowie County Agricultural

There is more interest manifested in this proposal every day. This payment should be made not only because it is a just and honest debt but, as stated in the resolution, in order to keep faith with the farmers.

The United States Chamber of Commerce Resolves and Pontificates

EXTENSION OF REMARKS OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

EDITORIALS FROM THE PHILADELPHIA RECORD AND FROM LABOR

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD I include two editorials from leading publications. These editorials treat of the official action of the United States Chamber of Commerce convention in the city of Washington and the formal resolutions adopted by it. The editorials pay their respects to the findings of the chamber of commerce and refute them. Particularly are these editorials impressive, as they point out the lack of constructive offerings in the chamber of commerce program and graphically set forth that the only articles in the agenda of the chamber were criticism and complaint against some New Deal endeavor.

It would appear that the objective of the august chamber of commerce is to return to the remarkable days of 1930 and 1931 when prosperity was just around the corner; when we were still laughing in recollection of President Hoover's promise of two chickens in every pot and two cars in every garage. These are the times to which the chamber would return us: when veterans were driven out of the Capital city of the Nation by the use of bayonets and tear-gas bombs when they asked for social assistance; when banks were failing by the score every month; when breadlines characterized every industrial city and soup kitchens were crowded to beyond capacity; when business confidence in the Republican Party was so low that every time President Hoover made a speech the stock market would crash to further depths within an hour thereafter.

PAEONS OF HATRED AND VENOM

Mr. Speaker, I have listened daily in the House of Representatives for constructive and progressive offers from my Republican colleagues, but I have listened in vain. We have had a congeries of lugubrious croakings about unbalanced Budgets; we have had a plethora of demands to restore business confidence, we have had sung ad nauseam hymns of hate of President Roosevelt; we have heard thinly disguised attacks upon the President of the United States, inferentially charging that he was disloyal to the American institution. We have heard our Republican brethren stigmatizing the President as a war monger-as one who mercilessly and with diabolical cunning was planning deliberately to land this country in another European war.

REPUBLICANS POUR ON THE VITRIOL

I have heard with dismay repeated reflections upon the W. P. A. I have heard statements that the W. P. A. is Communist riddled and is saturated with the poisonous philosophy of Stalin. I have heard responsible figures declare solemnly that the W. P. A. was made up of chiselers, slickers, and malingerers. I have heard on this floor the President's family reviled and charges that his sons had cheated in their income tax and that his wife was guilty of questionable conduct in accepting payment for radio broadcasts. I have heard criticism, carping and captious, directed at the President's program. Day after day I have sat here while our Republican brethren continued their incessant chatter of vitriolic partisanship and personal venom. Let us have some constructive offerings by our conservative friends. What would they propose as an alternative; what agencies would they abolish; how would they economize; where would they lop off? They are startlingly unspecific; they are amazing in their generalities.

DENUNCIATIONS AND JEREMIADS

Now comes the august Chamber of Commerce of the United States with the same old twaddle-a "you can't do this," "you should avoid that," "you should eliminate this," "you should destroy that." In God's name, Mr. Speaker, are there no proposals offered to replace what has been tried? The alternative, then, is to go back to the very conditions which created the hard times of 1930, to go back to the untrammeled business-controlled monopoly and Wall Street domination of government.

The editorials are as follows:

[From the Philadelphia Record of May 8, 1939] THE RECORD AWARD FOR 1939

To the United States Chamber of Commerce goes the record award for 1939, consisting of a piece of cheese cake 3¾ inches by 5½ inches. This award is conferred in recognition of the chamber's monumental achievement in passing 28 anti New Deal resolutions in

33 minutes flat. Not even the Liberty League ever showed anything approaching that record, and for sheer anti-Rooseveltism it makes the National Association of Manufacturers and even the American Newspaper Publishers' Association rate as also-rans.

Publishers' Association rate as also-rans.

It should be said, too, that the quality of the resolutions was in keeping with their quantity. No higgling, wiggling, or niggling. They came right out and demanded:

1. Abandonment of the W. P. A.

2. Repeal of the Wage and Hour Act.

3. Emasculation of the Wagner Act.

4. Reduction of Federal tayes by turning relief over to the States.

Reduction of Federal taxes by turning relief over to the States municipalities.

Reduction of taxes in States and municipalities. 5. 6.

An end to Federal spending for recovery. Curtailment of farm relief.

Repeal of New Deal monetary policy.
 Restriction of social security.

10. Promotion of trade with China even if it might involve the Nation in war.

Fortunately, every thoughtful citizen knows the United States Chamber of Commerce no more represents real American business

than a chiseling loafer represents the American workman.

We are quite sure that businessmen—as distinguished from the professional misrepresentatives of businessmen—have little desire to restore the conditions obtaining in 1933, when the country enjoyed(?) all the freedom to wreck its economic system that the Chamber of Commerce resolutions demand.

Many businessmen, indeed, are worried because the New Deal and Democratic leaders in Congress are taking too much advice from such people. They are alarmed, for example, by yesterday's head-

"Two hundred thousand being laid off W. P. A.; 12,800 get dismissal notices in New York."

Businessmen don't want to lose those 200,000 customers.
Or do we have the Chamber of Commerce wrong?

Is it offering 200,000 jobs to those fired W. P. A. workers? Are the

jobs waiting?

Speak up, gentlemen. We can't afford to give our prize cheese cake to the wrong outfit.

(From Labor (official publication of Railroad Brotherhoods) of May 9, 1939]

FEDERAL TAXES NOT "MURDERING INCENTIVE"

Among many complaints voiced by speakers at the United States Chamber of Commerce convention in Washington this week was the declaration that Federal taxes have "murdered incentive" by taking so much money from industry that businessmen are disBusiness trots out that alibi on all occasions to shift the blame for lack of recovery from private industry to the Government. But it is sheer "bunk." Here are some actual figures for 1937, the last year covered by official reports:

The total profits of eight big cement companies were \$8,006,385

and their total income taxes were only \$875,079, or about 10 cents on each dollar of profits. Incidentally, most of the cement industry's profits were made on business provided by Uncle Sam.

The 20 big oil companies made total profits of \$643,970,479 and paid total income taxes of \$81,817,646, or only 12 cents out of each

The six big sugar refiners had \$11,756,895 total profits and paid \$1,881,090 total income taxes, or 16 cents on each dollar.

Other industries made similar reports of actual profits and tax

The ordinary citizen would grab at the chance to get millions of dollars in profit and pay only from 10 to 16 cents of each dollar to Uncle Sam. But businessmen insist they are "discouraged" when asked to do so.

The Underground Pneumatic Mail Tubes Speed Delivery

EXTENSION OF REMARKS

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

ARTICLE FROM THE BROOKLYN (N. Y.) CITIZEN OF APRIL 28, 1939

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Brooklyn Citizen of Friday, April 28, 1939:

[From the Brooklyn (N. Y.) Citizen of April 28, 1939]

SYSTEM OF UNDERGROUND PNEUMATIC MAIL TUBES CUTS TIME TO MINIMUM

A maze of pneumatic underground mail tubes will be one of the marvels of the World of Tomorrow—an era in which time will be marvers of the world of Tollorrow—an eta it which the will be annihilated in the delivery of written messages and parcels to an even greater extent than the miracles which are accomplished today in our Postal System. A central post office in the locality may act as a clearing house and the mail could be shuttled around the country through subterranean passages in such time that it will make today's age of speed look like the "horse and buggy" days of

By next year, if certain legislation is approved by Congress, world's-fair visitors may secure their mail at the grounds as quickly as the Manhattan Island businessman receives his incoming out-of-town mail. Sponsored by Representative Eugene Keogh, the legislation calls for a pneumatic-tube connection between the Grand Central Station at Forty-fifth Street and Lexington Avenue, Manhattan, the Long Island city post office, the Flushing postal station, and the postal station which will be used for the service of the visitors from the opening day. from the opening day.

from the opening day.

This proposal for the conveyance along underground tubes by high compressed-air pressure would provide for such construction along the lines of the subterranean tube service currently in operation between Brooklyn and Manhattan. Started in 1898, this system encompasses over 27 miles of double tube and feeds 23 postal stations, each equipped with 2 receivers and 2 transmitters. Seventeen hundred carriers average a total distance of 100,000 miles per day on an operating schedule of 18 hours a day.

At the same time that the world's fair gets the benefit of this system of cheating time in mail delivery, another may be under construction connecting the general post office in this borough, Manhattan, and Floyd Bennett Field. The distance is about 10 miles, and mail transportation between the three points would take approximately 4 minutes. The bill providing for this system was also introduced by Representative Kroch in anticipation of the airport being used as an air-mail terminal.

The underground pneumatic tube will be in the World of Tomorrow a truly effective realization of the ancient Greek quotation, "Neither snow, nor rain, nor heat, nor gloom of night stays these

"Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds."

Heavy Cloud of More Taxation Hangs Over the Average Citizen

EXTENSION OF REMARKS

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

ARTICLE FROM THE WASHINGTON SUNDAY STAR OF MAY 14,

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of May 14:

[From the Washington Sunday Star of May 14, 1939]

HEAVY CLOUD OF MORE TAXATION HANGS OVER THE AVERAGE CITIZEN— DAY OF RECKONING FOR DEFICIT SPENDING SEEN AS FORESHADOW-ING LOWER EXEMPTIONS FOR INCOME-TAX PAYERS

(By Arthur A. Ballantine, former Under Secretary of the Treasury)

A German tax decree raised income taxes of single persons 12½ percent, but contained the merciful provision that such persons were not to pay a total of more than 55 percent of their income, or married persons of certain classes more than 45 percent. The rate on the income of corporations, which has been steadily increased, was placed at 40 percent. At that German taxes are estimated to equal only about two-thirds of the national expendi-

The normal income tax in Great Britain stands now at 27½ percent, with certain abatements in the lower brackets of income. For 1939-40 the aggregate of Government expenditures in Great Britain is estimated at 31 percent of the national income. Of this total, huge additional expenditures for national defense are in

total, huge additional expenditures for national defense are in themselves equivalent to about 14½ percent of the national income. In France, also, taxes are shoving sharply upward.

These developments have a message for everyone in this country, whether he has a job or is on relief. How deep is the tax gatherer to reach into the pocket of the average man, John Smith? What is the effect of taxes on his living costs and his job?

The offhand reaction of most of us is that heavy taxes are a worry to the very prosperous or rich. The German or British John Smith certainly would not say that. And John Smith here is waking up to tax realities, present and impending.

RICH GET SOAKED

Of course it is true that the rich are now "soaked." The Federal income tax, including the normal tax of 4 percent and the surtax reaches a top rate of 79 percent—a rate some 20 percent higher than the top rate of Great Britain. When an income reaches \$80,000 the tax rate applying to the next block of income becomes 55 percent, and at \$100,000, \$32 percent.

tax rate applying to the next block of income becomes 55 percent, and at \$100,000, 62 percent. This is without including anything for State income taxes, now reaching 8 percent in New York.

For the fiscal year 1937 the number of individuals paying income taxes in the United States was but 3,310,201. The total personal income tax paid was \$1,142,200,000, but the amount paid on incomes of less than \$5,000 was only \$78,000,000, and the total amount paid on incomes of \$10,000 or less was only \$161,000,000. Nearly a billion of the total tax paid was paid by incomes of \$10,000 or

The present distribution of the Federal income-tax burden has very distinct meaning for Mr. John Smith and his future as a

taxpayer.

The top rates of income tax are now so high that there is no chance of increasing the tax yield through further boosting of the rates—the only possibilities of increase is through lowering the top rates.

ENTERPRISE DISCOURAGED

The top rates are now so high that the flow of taxable income tends to dry up through discouragement of enterprise and the virtual impossibility of building up any large savings. The recipient of a large income has no incentive to put his money into new ventures or the enlargement of old ones that develop more employment. Since such a taxpayer bears all the losses, having but limited rights to offset them against income and retains but a small portion of any gains, his cue is to play safe, and he does so. The rich are "soaked" again in the estate taxes. While the Federal estate tax on a \$100,000 net estate is but \$4,200, the tax on a \$500,000 estate is \$80,400. On a million-dollar estate \$211,000, and the top rate reaches 70 percent. The late Senator Couzens is

reported to have left an estate of \$33,500,000, practically all in tax-exempt securities. The Federal tax on this was reported as \$20,000,000, reducing the net to \$13,500,000.

While the yield of the Federal estate tax rose to \$382,000,000 in 1938, these taxes will in the end be a dwindling source of income. Big estates are not being built up, and those that were big steadily cut down by successive taxes—without regard to market vicissitudes.

It should be observed, too, that the effect of the extreme tax rates It should be observed, too, that the effect of the extreme tax rates is to tend to make the owners of large estates put their property, so far as is possible, in forms in which it can be readily liquidated so as to meet the tax. That means taking capital out of active employment making for jobs. It does not do much good for the owner of a large estate to divide it up while living, for the gift tax is three-quarters as much as the estate tax. So here we have another factor operating against the employment of Mr. John Smith.

UNITED STATES JOHN SMITH BETTER OFF

Getting back to the income-tax situation of John Smith himself, he is certainly well off as compared to the German or English John Smith. If single, he pays no Federal income tax at all on an income of \$1,000 or less. If married, he pays none unless his income exceeds \$2,500. He enjoys a further exemption of \$400 for each child. On an income of \$3,500, if married and having one child, he pays but \$24, and on a \$5,000 income only \$168. In sharp contrast, the German having an income of only \$300 is reported to pay \$33 if single and \$24 if married. On \$1,200 he pays \$145 single or \$120 married, and on \$2,000 pays \$272 or \$232, according to his marrital status. to his marital status.

The Englishman (married and with one child) with an income of \$2,500 pays \$90.41, and on a \$3,500 income he pays \$300.40, and on \$5,000, \$640.51. Under the new tax schedule just introduced, a \$10,000 income on a married person (without children) carries a total tax of \$2,373; a \$15,000 income, \$4,071; and at \$25,000 the total

tax of \$2.373; a \$15,000 income, \$4,071; and at \$25,000 the total tax equals about one-third of the income.

These facts about the present income tax sound pleasant to the American John Smith. Yet a little consideration shows that he is nevertheless paying very substantial taxes, mostly in the form of the added cost of what he buys—the hidden tax. This burden cannot be accurately measured, yet can be realized when it is perceived that the total tax bill in the United States for 1938 reached nearly \$14,000,000,000, equivalent to about 22 percent of the estimated national income. national income.

John Smith must bear in mind that, of the total income of the Federal Government, only a little over two-fifths comes from income taxes; the balance from a wide variety of miscellaneous taxes or

exactions.

Estimates made, as indicated above, in some cases carry the tax burden to over 12 percent of every dollar spent out of modest incomes, equivalent to \$228.60 a year out of an income of \$150 a month. The probability of this is that these estimates are conservative.

"BENDS" MAY FOLLOW

While the present hidden-tax burden on John Smith is considerable, he is perhaps adjusted to it. When you tell him about it, he may feel no worse than he would if you were to tell him that he lives under a weight of atmosphere of 16 pounds to the square inch. But that isn't all; suppose you were to tell him that this pressure is likely to run up to 32 pounds or more. He could then see that this pressure might give him the "bends."

The sad truth is that the present taxes do not come anywhere near paying the bills of the Federal Government. The deficiency in Federal revenue, officially estimated for this fiscal year, is around \$25,000,000,000,000,more than it used to cost back in 1928 and 1929 to

\$3,600,000,000-more than it used to cost back in 1928 and 1929 to run the whole Government and also make heavy payments to the sinking fund for the reduction of the Government debt. And this huge deficit follows others for the past 8 years, bringing the total up to some twenty-seven billions, met, of course, by borrowing and piling up the Government debt. What does that mean to John Smith? Must he pay more and have his job further endangered?

Some in high positions, and some having academic standing, now say that the Government deficits can go on indefinitely. These are prophets of a new era in Government finance, a happy era in which debt begets prosperity, and never has to be paid or reckoned with. The history of nations affords little support for this alluring idea. "DEBT ALIBIS" CHANGE

At first the piling up of Government debt was excused as a necessity of the emergency. Then it was justified as a temporary step toward recovery and relief. Now comes the theory that piling up the debt is a necessary permanent device, always building up the national income.

The new justification lies in the idea of treating certain Federal expenditures as producing "assets," to be capitalized in a properly constructed Federal balance sheet, and hence not to be considered as creating deficit.

There is a basic difficulty with this idea. The Government always has to pay out real money for all that it spends. Unless the "assets" to be capitalized will actually turn into cash or produce net revenue, they do not help solve the Government's financial problem. The Government must just go on borrowing and taxing to meet the expenditures. Counting on the assets simply postpones the day of reckoning.

the day of reckoning.

Necessary as expenditures for these purposes are, we cannot be blind to their financial effect. And now, to make matters more difficult, we have also the greatly enlarged expenditures for national

defense.

In the end the only safe, practicable course will be for the Federal Government to make its revenues and expenditures balance. Government bonds are the ultimate support of banks, insurance companies, and security funds. How can they continue indefinitely to be good if the Government cannot succeed in making both ends meet?
What does this mean for John Smith?

BALANCING ONLY COURSE

Undoubtedly Federal expenditures will have to be cut. No one has shown how to balance Federal expenditures of between eight and nine billions a year—the present rate. Certainly these expenditures will have to be held down, and that in the face of imperious new demands. Some of these are most appealing, like the public-health program, to cost ultimately nearly a billion a year. Yet if additional expenditures are taken on too soon they are likely to wreck the whole financial structure. Some stand must be made to wreck the whole financial structure. Some stand must be made against heavy State and local expenditures.

The most probable tax development in the offing is a real broadening of the base of the income tax. This would take the form of lowering the exemptions so as to reach incomes below \$1,000 in the case of single persons, and perhaps as low as \$1,500 in the case of the married, with a sharp stiffening of the rates up to the high brackets. We might not be taking as much as 10 percent on the very small incomes, as in England and Germany, with sharply increasing percentages beyond that, but we may approximate such rates.

Such increases in the present income tax will hurt John Smith. They will also reduce his immediate purchasing power and tend to check industry and still further restrict the creation and utilization of capital for new enterprises. Yet they may be inevitable, so greatly have Federal expenditures increased.

It is small wonder that taxpayers everywhere finally are becoming active. Their associations multiply and become militant. They are right in insisting that the tax problem be dealt with candidly and vigorously. Financial salvation is at stake not only for John Smith but for the country.

The Federal Tax Burden

EXTENSION OF REMARKS

HON. WILLIAM E. HESS

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, APRIL 27, 1939

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Robert A. Taft, of Ohio, at the Bureau of Advertising dinner, New York City, April 27, 1939:

I greatly appreciate the honor of this invitation to address the American Newspaper Publishers' Association. All newspapermen are deeply interested in the problems we are considering in Washington, and, of course, the gentlemen in Washington are deeply interested in the views of the publishers, for, in spite of some criticisms from exalted sources, we know that there is no body of men in America more representative of the American voter or more

influential in creating his opinions.

The difference between a politician and an editor, as I have seen it, is that the politician is usually anxious to discuss the past, to point with pride to the past record of his party, and condemn the past wickednesses of his opponents. The editor does not care much about the past, but he is intensely interested in the question what the politician is going to do next; and so tonight I am not going to discuss how we got into the situation where we seem to be today, but what that situation is, and what can be done to change it.

The papers have been so full of foreign news, and the Government has been so much more interested in foreign affairs than they have in domestic affairs, that everybody except the unemployed and the businessman seem to have forgotten the situation in this

country. But it is just about the same as it was a year ago today. Its principal characteristic is the vast expansion of government activities into all kinds of fields where government never operated before. This expansion has been undertaken for a variety of reasons, many of them forced by circumstances beyond anyone's control. Nearly all the activities have been undertaken to cure actual or supposed economic inequalities. Some are accepted, others seem unnecessary.

THE GIANT TAX BURDEN

But the net result is that the total expenses of local, State, and Saturational Governments in the year 1938 have reached approximately \$18,000,000,000, or nearly 30 percent of the national income. The taxes levied, which fall \$4,000,000,000 short of paying those expenses, amounted in 1938, nevertheless, to \$13,700,000,000, 22 percent of the national income. This is more than twice the burden which existed before the depression, and it creates new problems which seriously

threaten the entire welfare of the country. It may be interesting to analyze the new activities which have caused this tremendous

increase in expense.

The first group, and the largest, is that which gives direct financial assistance to the lower-income groups—direct relief, work relief, old-age pensions, unemployment insurance, and subsidized tousing. The general principle of assisting those who are not able to earn a reasonable wage under our present economic system has been accepted by all parties. The method and amount of such financial assistance is substantially in dispute.

A second group of less expensive measures have been designed

to help the weaker groups to organize themselves, with Govern-ment help or under Government direction, to obtain a better ment help or under Government direction, to obtain a better deal in their bargaining with other elements of the population. Such are the National Labor Relations Act, protecting the right of collective bargaining; the farm cooperative and marketing ac-tivities; the Federal Housing Administration, guaranteeing home trivities; the Federal Housing Administration, guaranteeing mortgages up to 90 percent of the cost of the home; the Home Loan banks, stimulating home building through building and loan associations; and the Securities Exchange Commission, protecting unorganized investors in the purchase of securities. These measures seem to me the most constructive toward securing a permanent readjustment of relative position, without trying to upset all laws of supply and demand, and without any overwhelming expense to the Government.

ECONOMIC PLANNING?

A third group of measures may be called economic planning: measures to fix or manipulate prices, particularly in agricultural commodities and coal; measures like the N. R. A. and certain minor revivals of that extinct regulation of business activity. In general, I believe that all price-fixing measures have failed in their general purpose, because sooner or later they inevitably try to set aside the natural law which controls prices and the relative position of different industries. Some measures, like the T. V. A., the Rural Electrification Administration, and some of the activities of the W. P. A., involve direct Government entrance into business, in competition with existing industry, and a considerable Government expense. A third group of measures may be called economic planning: siderable Government expense.

Finally a large expense is involved in public works, and the granting of money to States and local subdivisions for local public works. This program has been enlarged on the theory that it would furnish relief and stimulate recovery, in spite of the fact that public works as a relief measure was thoroughly discredited in England and is vastly too expensive to solve the present extraordinary unemployment. It has also been pursued on the theory that Government spending would stimulate recovery. This same theory has led to the constant expansion of the other measures, theory has led to the constant expansion of the other measures, and a recklessness regarding the expense of their administration which accounts largely for the tremendous deficit today. It is obvious that the whole theory of recovery through Government spending is as completely discredited, both by logic and experience, as any economic theory can be.

as any economic theory can be.

The position of the lower income groups is probably better than it would be without the humanitarian measures described in the first group, although it is not as good as it was in 1928, when unemployment was almost nonexistent. But the danger of the present situation is obvious. It involves a perfectly tremendous burden of taxation so great that the Government does not dare impose taxes to pay the full weight of Government expense. There is no longer any sudden emergency, and yet the Federal Government's deficit this year, and next year also, will be at least \$4,000,000,000.

The tremendous burden of taxation discourages the very incentive

The tremendous burden of taxation discourages the very incentive The tremendous burden of taxation discourages the very incentive required to resume industrial progress and put men back to work in the United States. Taxation amounts to \$317 a year for each employed person in the United States, and would amount to \$450 a year if we were paying our bills. The average workman today pays 20 percent of his income in taxes and in increased prices due to taxes, for when taxation goes over 10 percent of the national income, it is no longer possible to get it from the rich or the large corporations.

"SOAK THE RICH"

A soak-the-rich tax bill might raise half a billion dollars, but a A soak-the-rich tax bill might raise half a billion dollars, but a 5-percent pay-roll tax is taking a billion and a half dollars out of American industry today. A pay-roll tax is like a sales tax—tt goes into the cost of every product which labor goes into, and that is every product which the average workman buys. You can't get the money out of the rich because if you confiscated all incomes over \$10,000 a year, you would get somewhere around \$7,000,000,000, and today you need \$18,000,000,000. There is only one way to get the money, and that is through volume taxation, through the taxation of every individual even down to those on W. P. A. It means that the average workman can only choose what he will spend 80 percent of his income for, and the Government spends the other 20 percent for him. for him.

for him.

This tax burden, both on industry and on workmen, threatens to stop all progress in America. Our system and our success have been based on individual initiative, and the constant incentive given to men to work and save, and spend their time and money in building up this little enterprise or that big enterprise, with the promise that they will provide a better living for themselves, a better education for their children, and a better provision for their family after death. If that incentive is removed, if no man can look forward to anything except an old-age pension, we are never going to resume the progress which built up America to be the greatest and the most prosperous nation in the world.

I don't know how far the increase of Government activity can go, but I feel convinced that 30 percent is too high, and that if the Government ever gets to the point where it is spending 50 percent of the national income, private incentive will be so dead percent of the national income, private incentive will be so dead that we can look forward to a completely socialized state. Another danger arising from this tremendous increase in Gov-

Another danger arising from this tremendous increase in Government activity is the centralization of power, which threatens to destroy State and local self-government. The kind of Government activity we have embarked upon cannot be conducted without subordinating State and local self-government. Purely local affairs, like relief and public works, are operated from Washington. Local labor troubles are handled by a National Labor Relations Board examiner, sent out from Washington. Now it is proposed that schools be financed from Washington. I believe myself that a democratic government, connect be long maintained. schools be financed from Washington. I believe myself that a democratic government cannot be long maintained unless the people have a direct voice in the way their local affairs are conducted, even if those local affairs have some national aspect. The truth is the average citizen has little to say about what the Washington Government may do, whereas he can make his voice clearly heard in his city council or his local school board.

Another danger of the present situation is almost too obvious. We cannot go on indefinitely with a Federal deficit of \$4,000,000,000,000 a year. It leads inevitably to national bankruptcy. Nations which

We cannot go on indemnitely with a Federal deficit of \$4,000,000,000 a year. It leads inevitably to national bankruptcy. Nations which fail to balance their budget in the end are forced into a position where they must repudiate their debts, usually through inflation of the currency. Already our burden for interest is over a billion dollars a year. If interest rates became normal, it would be 50 percent higher. When the people are looking for a convenient method of reducing taxes, this tax burden to pay the extravagances of past administrations will seem heavy indeed, and a very tempting inscripting to pay only bills with paper more than the second of the control of the con ing incentive to pay our bills with paper money.

Ing incentive to pay our bills with paper money.

How can we meet these dangers and still retain the essential advantages of present policies? I believe we must assure to the lower-income groups a respectable standard of living; that we must continue relief, old-age pensions, unemployment insurance, subsidized housing. But we must administer these laws in a spirit of economy, because, after all, the people benefited will be even more benefited by a stimulation of private industry to cure the present unemployment situation. Relief expenditures may amount to \$4,000,000,000 a year, but if business activity can be restored so that it produces the average income per person which we enjoyed in 1928, we would increase our income by \$25,000,000,000, and most of those receiving relief would benefit much more than and most of those receiving relief would benefit much more than they do from relief.

Much can be accomplished by a change in the spirit in which these laws are administered. There has been too much of the theory that you can improve the condition of the lower-income groups by taking it away from those who are better off, by soaking the rich, and that any well-to-do man is a crook until he is proved innocent. This certainly was the spirit of the National Labor Relations Board, of the Power Commission, and to some extent even of the Securities and Exchange Commission. I am convinced that amendment of the National Labor Relations Act would not be necessary today if the act had been administered in an impartial manner

manner.

Taxation has been used as a punitive measure instead of a measure to secure revenue. The making of a profit has been regarded too much as a crime against society. I am quite convinced that many of the complaints of businessmen against petty annoyance and bureaucratic administration could be removed by a friendly administration of the laws fully within their spirit.

SOME CONSTRUCTIVE SUGGESTIONS

In the second place, I believe that laws attempting to regulate directly wages and prices, in cases in which there is no oppression, should be repealed. We should protect businessmen against monopoly and unfair competition; we should protect unorganized labor against sweatshop wages by minimum-wage laws, but we should competely abandon efforts to fix prices and wages in other cases. No government ever has succeeded in resisting permanently the effect of the law of supply and demand. Sooner or later controlled prices have collapsed, at great expense to the government, and usually with more disaster to the producer than if there had never been any such control. While such price fixing continues it completely discourages individuals from entering actively into the industries where such controls exist, because such individuals can industries where such controls exist, because such individuals can no longer look to their own efforts for success, but are utterly at the mercy of arbitrary government action. We should repeal the price-fixing and production-control features of the farm plan and the Guffey Coal Act.

In the third place, I believe that the relief and social-security laws should be administered with the constant thought in mind that the many or relief should have no advantages.

that the man on relief should have no advantage over the man who is earning his own way in private industry and saving the money to take care of his old age. The man who has acquired his own home should certainly be better off in old age than the man who has saved nothing and receives an old-age pension. The man who has saved nothing and receives an old-age pension. The housing program is important, but certainly it should not result in a man who earns a lower income reaching a position where he is better off than a man whose ability or diligence makes his services more valuable and who has put his earnings into his own home.

own home.

Each relief agency has only been interested in improving the condition of its particular wards. There has been little appraisal of the whole standard of living possible in a country producing as the United States is producing today. As far as the Federal Government is concerned, I believe that all relief agencies should be

concentrated under the direction of the Social Security Board; that through the State agencies they should coordinate the employment agencies, the payment of unemployment insurance, the furnishing of direct and work relief, and the payment of old-age

pensions.

Further, we should turn back the administration of relief and other local activities to the States, and as far as the States can handle the expense, we should hand back the expense to the States. Relief expense is still too heavy, and in turning back work relief to local administration to handle in conjunction with the direct relief which localities already handle, a Federal grant of at least two-thirds of the cost will have to be made. It is doubtful whether we should continue the tremendous reserve plan of the Social Security Act, or make it optional and supplemental to the State old-age pension. Certainly the pay-roll tax burden should be reduced.

The time for Federal financing of local public works has certainly come to an end, although, of course, a reasonable public-works program to cover works in which the Federal Government has a direct interest, like flood relief, river and harbor work, and the like, should continue in a reasonable sum.

BALANCE THE BUDGET

There should be no further extension of Federal activity until the Federal Budget is completely balanced. We have an example today in the effort to pass the general education bill, proposing to distribute \$200,000,000 a year to States to assist their paying for primary and secondary education. Education is a local matter, and has always been so considered. In general, it has been well done by the States, and the people in each locality have more interest in education than any other subject. They are more willing to pay taxes for that purpose than any other purpose. They are determined to run their own schools. The argument that the States are unable to finance public education is certainly met by the fact that the Federal Government is also unable to finance public education, because no one can devise a Federal tax system to raise \$9,000,000,000 without choking all industry.

tion, because no one can devise a Federal tax system to raise \$9,000,000,000 without choking all industry.

And finally we must undertake a general reduction of the expense of all present Federal activities. I feel very strongly that the policy I have suggested and a general economy drive in every department of the Government can reduce Federal expense by at least two and a half billion dollars. The Federal Budget can and should be reduced to approximately six and one-half billion dollars. If it is, and there is any reasonable improvement in business, we should succeed in attaining a goal where the expense of Federal, State, and local government does not exceed 20 percent of the national income. The attaining of such a goal is essential if we wish to retain an American system dominated by free and competitive enterprise and individual initiative.

They say it cannot be done, and certainly anyone in Congress

enterprise and individual initiative.

They say it cannot be done, and certainly anyone in Congress can appreciate the difficulties of doing it. I have served on the Appropriations Committee, and I see one appropriation bill after another come before the committee and go through with little possibility of reducing expense. The policy of administration has already been established by Congress by law, and if we wish to save money, we must first establish in many cases a fundamentally different and more economical policy before appropriations can be reduced. That requires positive action, and today the divisions of political groups are such that while Congress probably will not authorize any expansion of Government activities, it is not likely to reverse any existing policy.

to reverse any existing policy.

Congress is not the kind of body to develop an all-inclusive policy and take a broad view of the entire situation. A group of more than 500 men find it difficult enough to concentrate on one issue at a time without trying to fit a hundred policies together.

Nearly every one of the projects for Government activity is attractive and desirable in itself. There is hardly one for which a magnificent argument may not be presented, and if that project is considered without any relation to the entire picture, Congress is likely to adopt it.

Its likely to adopt it.

The newspapers lay great emphasis on the influence of pressure groups in Congress. Undoubtedly they do have more influence in Washington, where we are less able to check their actual power against public opinion at home, than they have with local governments. But many of these projects brought forward by pressure groups are desirable, if considered without reference to the whole

groups are desirable, if considered without reference to the whole financial situation.

I do not see much opportunity for any great change in Government policy during the next year, but I do think that the great majority of Congressmen and Senators realize that the present condition cannot continue. Minor corrections in policy are being constantly proposed and given serious consideration. There is no disposition on the part of either Republican or Democrat to abandon the principle of assistance to lower-income groups when our economic system fails to provide them with a decent and respectable living. But with a deficit of \$40,000,000,000, the Nation today is getting something for nothing, and no one has ever succeeded in doing that for long. The publishers of this country can do no in doing that for long. The publishers of this country can do no better task than bring home to the people that a nation, like an individual, cannot go on living beyond its income without facing ruin; that the burden of supporting people who do not earn their own living must rest on the millions who do earn their own living; and that every effort should be made to hold that burden down as

much as possible.

The Executive has always assumed the responsibility for coordinating an entire program and presenting a balanced Budget, and Congress has been the body favoring expansion. Now that we have an Executive who does not assume that responsibility, it might be

possible to set up a small committee in Congress to consider the whole fiscal policy of the Government and restrain extravagance. But there is no assurance today that such a committee could command the support of a majority of Congress. But unless we are prepared to wreck the United States, we must find someone to say to the people and to Congress that the Government has certain limitations beyond which it cannot tax without choking all industry and that the expenditures must be brought within that limitation.

Our policy from now on must be to face realities, to reduce the Our policy from now on must be to face realities, to reduce the swollen activities of the Federal Government constructively and with the preservation of its best objectives; particularly to reduce it by building up the responsibility of State and local government for State and local activities, for only thus can we preserve the true processes of democracy in a vast nation like the United States. We must continue to correct the abuses of our present system, but most of them can be corrected without powing out buildings of dellars. of them can be corrected without pouring out billions of dollars; but in 1932 President Roosevelt pointed out that the danger of governments engaging in social reform lay in unsound finance. "Too often in recent history," he said, "liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this denoter."

W. P. A. Foibles

EXTENSION OF REMARKS

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

RADIO ADDRESS BY HON. DEWEY SHORT, OF MISSOURI, MAY 13, 1939

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on Saturday last:

My fellow Americans, since March 4, 1933, the Federal Government has spent for relief purposes of all descriptions more than \$21,000,000,000. All that money has been borrowed and added to ment has spent for relief purposes of all descriptions more than \$21,000,000,000. All that money has been borrowed and added to our national debt which has been doubled since then. No one begrudges a dollar that has gone to some poor person actually in need, and certainly the money that has been spent on public improvements that were needed and are of a permanent and useful nature is money well spent. Far too much of the relief dollar, however, does not get to the person for whom it was intended. We spend \$1 and then spend \$2 more to find out where the first dollar went. While there have been commendable activities we should not blind our eyes to the inefficiency, waste, extravagance, and often graft and corruption that has permeated the different relief agencies. Tonight I want to discuss briefly the W. P. A., since this agency alone has spent more than six and one-half billion this agency alone has spent more than six and one-half billion

As a squanderer of the taxpayers' hard-earned money the W. P. A. should be rated 100 percent plus. Since its inception this governmental agency has embarked upon some of the most ridiculous and wasteful enterprises, under the guise of humanitarianism, as is evidenced by official pronouncements, press reports, personal affidavits, etc., in many parts of the country. The record of this agency, in many respects, is amusing and ridiculous as well as disgusting and disheartening.

gusting and disheartening.

Prior to the present year W. P. A. had approved upward of 175,000 different schemes, none of which in the final analysis can be classed as vitally essential or necessary to the continued welfare of our people. Among such projects are the following:

The establishment of maids' training schools to train young women for general domestic services. According to W. P. A. reports, 517,945 families on relief were furnished with the services of hired girls, without cost, and these domestics served on 3,473,473 occasions. occasions

The construction of a bear house at Highland Park Zoo in Pittsburgh, Pa., at a cost of \$294,848, so that the bears might enjoy the more abundant life, while many unfortunate human beings were ill-fed, ill-clad, and ill-housed. And remember the New Deal claims that "we planned it that way."

that "we planned it that way."

Construction of a grand stand at the State fair grounds in West Allis, Wis., at a cost of \$878,715, so that visitors at this fair might enjoy the more abundant life, while the ill-fed, ill-clad, and ill-housed could—well, get along as best they could under the "we planned it that way."

Employment of 10,778 persons in December 1936 on mosquito-control projects in the States of New York, Illinois, Connecticut, Massachusetts, Rhode Island, New Jersey, and Delaware, when those States were under a cover of ice and snow. Oh, those poor mosquitoes.

mosquitoes.

Raking leaves across roads and streets, and then raking them back again. Anything to keep the leaves moving. New Deal

efficiency.

Counting of trees, lampposts, rats, and cockroaches in various localities. This, of course, for the uplift and welfare of the tax-payers, whose money was thus wantonly wasted and scandalously squandered.

squandered.
Assisting in building lakes where it will benefit and increase the value of property held by prominent politicians.

Using W. P. A. labor and materials for private construction of roads, bridges, etc., as evidenced by various press reports of arrests and indictments of W. P. A. officials in many States. Of course, we do not presume that this "was planned that way."

The W. P. A. exhibit building at the New York World's Fair is an outstanding example of the inefficiency of management of that agency. Albert Stevens, expert for the Procurement Division, Treasury Department, testified on May 2 before the House Subcommittee on Appropriations, investigating W. P. A. expenditures and ury Department, testified on May 2 before the House Subcommittee on Appropriations, investigating W. P. A. expenditures and activities, that the W. P. A. building at the New York World's Fair is going to cost \$544,000, whereas Col. Francis C. Harington, W. P. A. Chief, estimated the cost at \$250,000. In other words, W. P. A. spends twice as much on construction jobs as private contractors. This building, of course, should never have been erected, as it will not tend to serve any real beneficial purpose to the Government, but rather to serve the vanity of those responsible for its erection. Instead of trying to curtail the activities of W. P. A. and end them as quickly as possible, those in high command are doing everything in their power to glorify the W. P. A. The real objective of this whole program should be to rehabilitate our unfortunate unemployed people in order that they might be in position to take care of themselves. Many of the higher-ups in W. P. A., wanting to hold their easy jobs at fat salaries, are bound together to perpetuate W. P. A. in its present form. They are making their careers upon the misery of the masses and are thriving off the suffering and want of the people. Under the cloak of ing off the suffering and want of the people. Under the cloak of philanthropy these wolves in sheeps' clothing would prosper and promote themselves by continuing people on relief when they could actually find jobs in private industry. When W. P. A. ceases, the big shots will be without a job.

As another example of careful planning, the statue of Lincoln As another example of careful planning, the statue of Lincoln that was constructed at a cost of \$4,000 to the Government, and which was to be displayed in the Federal building at the New York World's Fair, was taken out the day before the fair was officially opened and completely destroyed. Mr. Louis Slobodkin, a New York sculptor, was paid \$2,000 for his work, and a like amount was spent by the Government for enlarging, casting, and construction of the pedestal. Imagine the broken-hearted Mr. Slobodkin, when he took his wife on the opening day of the fair to see his statue of our martvred President, only to learn fair to see his statue of our martyred President, only to learn that it had been carted away and destroyed under the orders of Theodore T. Hayes, executive assistant of the United States World's Fair Commission, who said the statue "was too big, far too high, and hid all the lighting." Could it be that "we planned it this way."

it this way"?

A few words about the Federal theater project.

The Federal theater project was started in 1936 in order to give relief to unemployed actors and theater technicians, etc. That year it cost slightly over \$7,000,000; in 1937 its cost was fifteen and a half million dollars; in 1938 it was a little over eleven and a half million dollars, and for the fiscal year 1939 until the month of

half million dollars, and for the fiscal year 1939 until the month of February it cost seven and a half million dollars.

This makes a total of \$41,715,597 so far spent on the Federal theater project. Its main activities have been to put on a series of plays, of which the following is a partial list: Bill of Divorcement; The Bishop Misbehaves; The Boudoir Diplomat; Be Sure Your Sex Will Find You Out; Cheat and Swing; Cheating Husbands; Correspondent Unknown; Companionmate Maggie; Just a Love Nest; The King and the Chorus Girl; Lend Me Your Husband; Love 'Em and Leave 'Em; Old Captain Romeo's Four Wives; Ruling Passion; Suppressed Desires; Three Ways to Rob a Lady; and Up in Mabel's Room.

Could any more suggestive or salacious titles be found for

Could any more suggestive or salacious titles be found for plays to parade before the American public? Are the people of this country to be taxed to support such vulgar and villianous ac-

The expense of the Federal theater project is appalling. It is running at the rate of \$10,000,000 a year, and at present giving employment to approximately 8,145 persons.

There are 21 projects now under way with anywhere from one to dozen or more companies in each project. The average wage for the Nation as a whole is \$91 a month. Some 25 of the workers received salaries in excess of \$250 a month.

Of the eight-thousand-odd Federal theater project workers, approximately 3,500 are in New York City and about 1,500 in California. The third largest group is in Chicago.

The best known offering of the Federal theater project at present is the Mikado, which is now being played in New York City by a group of unemployed Negroes brought at Government expense from Chicago (incidentally, while on the road, employees of the Theater Project receive the security wage plus transportation expense and plus subsistence allowance).

In the hearings on the Federal theater project the fact was brought out that a private producer offered to engage the entire cast of the Mikado, which had been in rehearsal for 5 months, as presented by the Federal theater project, at a scale of salaries to be double that which they were at present receiving. This offer, however, was contingent on the guaranty by the Federal theater project that it would not produce its own version of the Mikado in New York while this private version was being produced. The Federal theater refused to give this guaranty, and the hundred members of the cast thereby lost the chance of getting jobs in private industry. The New Deal is in the show business. And what a show!

The annual cost of the legitimate New York stage, which accounts for approximately 90 percent of the American theater as it now operates apart from Little Theaters, Community Players, and the like, is approximately \$2,750,000. This sum would cover the average yearly production cost of the New York legitimate stage apart from musicals. It is apparent then, that the present cost of the Federal theater project would not only produce all the plays put on Broadway in an average year, but keep them running for about 6 weeks each which is considerably longer than the average Broadway run. It would be cruel to compare the qualities of the

Broadway run. It would be cruel to compare the qualities of the plays given by the private theaters with the plays produced by the Federal theater project.

The tremendous cost of this useless Government project is the least evil. Serious charges have been made before the House Committee Investigating Un-American Activities (commonly called the Dies committee) that the Federal theater project in New York City has spread communistic and subversive propagands aimed at the destruction of both our capitalistic economic system and our republican form of Government.

The Federal writers' project has also employed cynical columnists to portray the virtues of communism and to condemn not only the judiciary of the United States but many of our long-cherished

judiciary of the United States but many of our long-cherished American activities.

Perhaps the most shocking activity of all is that of the Federal arts project. The proprieties of radio do not permit me to enter into any extended discussion of this project, but I may say, I believe, that certain documentary evidence placed before the investigating committee would not be tolerated in a good American home.

These are only a few examples and instances of wasteful spend-
